This table is being revised to: (1) incorporate the revised trip setpoint for the second level undervoltage protection relays, and (2) to correct the allowable value for second level undervoltage protection. The present Technical Specification allowable value for second level undervoltage protection is in error as it does not reflect an allowance for line loss due to cable length (about 0.7 percent). However, the present trip setpoint for the second level undervoltage protection system (equal to or greater than 91 percent) provides sufficient margin to account for these losses. The new trip setpoint of greater than or equal to 91.6 percent is based on the results of detailed analyses of the Salem Generating Station electrical distribution system transient response characteristics. Those analyses indicate that, at the Public Service Electric and Gas (PSE&G) bulk power system minimum expected value of 505 KV and for a LOCA on one Salem Unit and a concurrent orderly shutdown of the other Unit, vital bus voltage will recover to a worse case value of about 92.9 percent. The minimum allowable trip value and trip setpoint are derived using the 90 percent minimum motor terminal voltage requirement as a starting point, and then applying appropriate allowances as provided in Regulatory Guide 1.105.

The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards consideration if operation of the facility in accordance with the proposed amendment would not: (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety.

1. For Item 7.b of Table 3.3-3, the licensee has analyzed the proposed amendment to determine if a significant hazard exists:

1) The proposed changes do not involve a significant increase in the probability of occurrence or consequences of an accident previously evaluated. The failure analysis [performed by the licensee] demonstrates that no single failure results in the existence of an unanalyzed condition. Additionally, the second level undervoltage protection system does not provide an input to the Reactor Protection System nor can it cause any one of the incoming 500 KV sources to be isolated from the Salem Station electrical distribution system. All equipment used in the system will be seismically qualified. Therefore, the probability of occurrence of an accident remains unchanged.

The second level undervoltage system is required to protect against those events (e.g. bulk power system degradation) which result in a degraded voltage at the vital buses but which do not result in a complete loss of voltage. The modified system continues to satisfy this requirement as previously discussed. Additionally, by eliminating the ability to transfer between SPTs, the potential for damage to safety related motors from frequent starts is eliminated. The increased redundancy in the SEC logic inputs provides greater assurance that the system will perform its intended function. Therefore, the consequences of previously analyzed accidents remain unchanged.

2) The proposed changes do not create the possibility of a new or different kind of accident from any accident previously evaluated. As demonstrated in [the failure analysis], no single failure will result in the existence of an unanalyzed condition. The second level undervoltage system does not provide any input to the Reactor Protection System nor can it cause any one of the incoming 500 KV sources to be isolated from the Salem Station electrical distribution system. The modified design eliminates the possibility of flip-flopping of the vital buses between offsite power sources and thereby assures the availability of all safety related equipment.

3) The proposed changes do not involve a significant reduction in a margin of safety. The changes to the second level undervoltage system maintain the existing margin of safety by eliminating the transfer between offsite sources, thereby assuring that the integrity of safety related electrical equipment is maintained. The additional redundancy provided in the revised design enhances the overall reliability of the system and further assures that the system function will be completed.

The staff has reviewed the licensee's significant hazards consideration determination analysis for the changes associated with Item 7.b of Table 3.3-3 and concurs with the licensee's determination that the proposed changes do not involve a significant hazards consideration.

2. With respect to the proposed change to Item 7.a of Table 3.3-3 and Item 7.b of Table 3.3-4, the Commission has provided guidance concerning the application of its standards set forth in 10 CFR 50.92 by providing certain examples (51 FR 7751). One of the examples, (i), of an amendment likely to involve no significant hazards consideration relates to "A purely administrative change to technical specifications: for example, a change to achieve consistency throughout the technical specifications, correction of an error or a change in nomenclature."

Another example, (ii), of an amendment likely to involve no significant hazards consideration relates to "A change that constitutes an additional limitation, restriction, or control not presently included in the technical specifications, e.g., a more stringent surveillance requirement."

(a) Item 7.a of Table 3.3-3

The change from 3 to 1 per bus is a change in nomenclature. There are 3 buses, each equipped with a shutdown channel so the change to 1 per bus meets example (i).

(b) Table 3.3-4, Item 7.b, Allowable Value

The current Technical Specifications do not take into account the line loss (voltage drop) because of cable length. This change will correct that and therefore, meets example (i).

(c) Table 3.3-4, Item 7.b Trip Setpoint

Changing the value from greater than or equal to 91 percent to greater than or equal to 91.6 percent is a more stringent requirement. Therefore this change meets example (ii).

Based on the above the staff proposes to determine that the changes to Table 3.3-3, Item 7.a and Table 3.3-4, Item 7.b do not involve a significant hazards consideration because they change the nomenclature, correct an error or provide a more stringent requirement.

Local Public Document Room location: Salem Free Public library, 112 West Broadway, Salem, New Jersey 08079

Attorney for licensee: Mark J. Wetterhahn, Esquire, Conner and Wetterhahn, Suite 1050, 1747 Pennsylvania Avenue, NW., Washington, DC 20006

NRC Project Director: Walter R. Butler

Public Service Electric & Gas Company, Docket Nos. 50-272 and 50-311, Salem Generating Station, Unit Nos. 1 and 2, Salem County, New Jersey

Date of amendment request: January 26, 1989 and May 22, 1989

Description of amendment request: By letter dated January 26, 1989, the licensee proposed to withdraw the wording in their June 23, 1988 letter, of Surveillance Requirement 4.1.3.4.a (no change from current Technical Specifications).

By letter dated May 22, 1989, the licensee proposed to modify Surveillance Requirement 4.1.3.4 and 4.1.3.5 by adding a footnote as follows: **For power levels below 50 percent one hour thermal "soak time" is permitted. During this soak time, the absolute value of rod motion is limited to six steps.

This is applicable prior to verification of rod positions.

The original request, dated June 23, 1988, was noticed on January 11, 1989 (54 FR 1024).

Basis for proposed no significant hazards consideration determination: The licensee's January 26, 1989 letter withdrew a proposed change in Surveillance Requirement 4.1.3.4.a that would have replaced "Within 15 minutes prior to withdrawal of any rods in control banks A, B, C or D during an approach to reactor critically (sic)" with "Within 15 minutes prior to withdrawal of any control bank during an approach to reactor critcally (sic)". Because this change was not discussed in the licensee's June 23, 1988 application the licensee was asked to justify the change. The licensee chose to withdraw the change. Therefore, no change is being proposed to this section.

The original application would have, among other things, deleted any reference to a waiting period before rod position verification after rod motion. Because individual rod position indication is subject to thermal transients, it is important that thermal equilibrium be achieved before rod position verification at power levels below 50 percent. In their May 22, 1989 letter, the licensee opted to include a footnote to Surveillance Requirements 4.1.3.4 and 4.1.3.5 to allow a one-hour thermal soak period before rod position verification to allow thermal equilibrium to be reached at powers below 50 percent. Also, during the soak time rod motion would be limited to six steps absolute. For powers above 50 percent, rod motion is expected to be small and will not induce significant thermal transients.

In the initial application the licensee had determined that the proposed change did not constitute a significant hazards consideration. The staff reviewed the licensee's analysis and concurred with the licensee's determination that the proposed amendment did not involve a significant hazards consideration. The staff had proposed to determine that the proposed amendment involves no significant hazards consideration [54 FR 1024 dated January 11, 1989].

The licensee has reviewed the original Significant Hazards Consideration and determined: The proposed changes do not affect the previously submitted Significant Hazards Consideration.

The staff has reviewed the licensee's analysis and concurs with the licensee's determination that the proposed amendment change does not involve a significant hazards consideration and the original significant hazards consideration remains valid. Therefore, the staff proposes to determine that the proposed amendment involves no significant hazards consideration.

Local Public Document Room location: Salem Free Public Library, 112 West Broadway, Salem, New Jersey 08079

Attorney for licensee: Mark J. Wetterhahn, Esquire, Conner and Wetterhahn, Suite 1050, 1747 Pennsylvania Avenue, NW., Washington, DC 20006

NRC Project Director: Walter R. Butler

Tennessee Valley Authority, Dockets Nos. 50-259, 50-260 and 50-296, Browns Ferry Nuclear Plant, Units 1, 2 and 3, Limestone County, Alabama

Date of amendment requests: June 20, 1989, as supplemented by letter of July 25, 1989 (TS 271)

Description of amendment requests: The proposed changes would delete Technical Specification (TS) 3.10.B.1.b.2 and 3.10.B.1.3 which currently allow reactivity additions without continuous core monitoring. Other proposed changes would correct certain identified deficiencies, thereby, resulting in more conservative controls during fuel load and bringing the Browns Ferry TS into consistency with the staff's guidance in the Standard Technical Specifications for Boiling Water Reactors (NUREG-0123).

Basis for proposed no significant hazards consideration determination: The Commission has provided Standards for determining whether a significant hazards determination exists as stated in 10 CFR 50.92(c). 10 CFR 50.91 requires that at the time a licensee requests an amendment, it must provide to the Commission its analyses, using the standards in Section 50.92, on the issue of no significant hazards consideration. Therefore, in accordance with 10 CFR 50.91 and 10 CFR 50.92, the licensee has performed and provided the following analysis:

1. This proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

The design basis accident during core alterations is the dropping of a fuel assembly. Since these changes increase the monitoring requirements for core alterations and there is no new fuel handling activity introduced that was not previously allowed by the current technical specifications, there is no increase in the probability or consequence of the dropped assembly accident. These changes do not increase the probability or consequences of a control rod removal error or a fuel rod assembly insertion error. There is no increased probability or consequences of an accidental reactivity insertion or an inadvertent criticality.

2. This proposed change does not create the possibility of a new or different kind of accident from any previously evaluated.

These TS changes result in improved monitoring requirement during core alterations that would add reactivity. There are no new activities required during core alterations due to these proposed changes which could introduce any new or different accident. The deletion of the two options of loading fuel without continuous SRM monitoring will require the use of fuel load chambers (FLCs) during part of the fuel loading. FLCs have been used during 13 previous fuel loadings at BFN. The proposed clarification of the TS allowing the SRM count rate to decrease below 3 cps during the special conditions specified for complete core unloading do not change the intent of the current TS. The Control Rods are fully inserted in the core and are electrically disarmed and cannot be moved. Therefore, no reactivity can be added by control rod movement. In addition, any fuel movements would be to remove a fuel assembly from the reactor core. In either case, no core alterations will be made that would increase core reactivity. All other changes are more conservative than the current TS requirements on core alterations, including normal control rod movement. Therefore, the possibility of a new kind of accident is not created.

3. This change does not involve a significant reduction in the margin of safety.

The only margin of safety applicable to fuel loading is the requirement for having 0.38 percent delta K shutdown margin. The proposed changes are conservative by requiring continuous SRM monitoring during core alterations which could add reactivity. In addition, the requirements for control rod withdrawal with the vessel head removed will be considered as a core alteration which is also more conservative than the current TS. The use of SRMs for core monitoring during core alterations is not taken credit for in any margin of safety as defined in the TS bases. Since these proposed TS changes are more restrictive, they will not result in the reduction of any margin of safety as defined in the TS bases.

The staff has reviewed the licensee's no significant hazards consideration determination and agrees with the licensee's analysis. Therefore, the staff proposes to determine that the application for amendments involves no significant hazards considerations.

Local Public Document Room location: Athens Public Library, South Street, Athens, Alabama 35611.

Attorney for licensee: General Counsel, Tennessee Valley Authority, 400 West Summit Hill Drive, E11 B33, Knoxville, Tennessee 37902.

NRC Assistant Director: Suzanne Black

Virginia Electric and Power Company, Docket Nos. 50-338 and 50-339, North Anna Power Station, Units No. 1 and No. 2, Louisa County, Virginia

Date of amendment request: July 24, 1989

Description of amendment request: The proposed change would modify the Administrative Controls Section of the Technical Specifications (TS) which identifies the membership composition of the Station Nuclear Safety and Operating Committee (SNSOC) by adding the Superintendent-Engineering to the list of members.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards considerations if operation of the facility in accordance with the proposed amendment would not: (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety.

The licensee has reviewed the proposed change in accordance with the requirements of 10 CFR 50.92 and has determined that the request does not involve significant hazards considerations in that it would not:

(1) Involve a significant increase in the probability or consequences of an accident previously evaluated, because the [change reflects] administrative considerations and [does] not change the plant design or operation. Presently, provisions made in the Technical Specifications for the appointment of alternate members to the SNSOC may be utilized with regard to the Superintendent-Engineering. The proposed change merely allows the augmentation of the pool of members readily available to convene meetings of the SNSOC; or

(2) Create the possibility of a new or different kind of accident from any accident previously evaluated, because, as above, plant design or operation is not affected by [the] proposed [change], or

(3) Involve a significant reduction in a margin of safety, because neither plant design or operation is affected. [The] proposed [change does] not alter the function, alternates, meeting frequency, quorum, responsibilities, authority, or records of the SNSOC as defined by the Administrative Controls of the Technical Specifications.

Based on the staff's review of the licensee's evaluation, the staff agrees with the licensee's conclusions as stated above. Therefore, the staff proposes to determine that the proposed amendments do not involve significant hazards considerations.

Local Public Document Room location: The Alderman Library, Manuscripts Department, University of Virginia, Charlottesville, Virginia 22901.

Attorney for licensee: Michael W. Maupin, Esq., Hunton and Williams, P.O. Box 1535, Richmond, Virginia 23212.

NRC Project Director: Herbert N. Berkow **Washington Public Power Supply System, Docket No. 50-397, Nuclear Project No. 2, Benton County, Washington**

Date of amendment request: June 15, 1989

Description of amendment request: The licensee has completed the installation of a wide range neutron flux monitoring system as required by license condition 2.C.(16) Attachment 2, Item 3(b). The amendment request is to put the operability requirement for this wide range flux monitoring system into Technical Specification Table 3.3.7.5-1, "Accident Monitoring Instrumentation." Surveillance requirements for the wide range monitor would be put into Table 4.3.7.5-1, "Accident Monitoring Instrumentation Surveillance Requirements." Under accident conditions the wide range monitoring system will replace three other neutron flux monitoring systems. Requirements for the average power range monitor (APRM), the intermediate range monitor (IRM), and the source range monitor (SRM) would be removed from these two tables.

The licensee has also requested a change to the Action Statement to be implemented in the event of inoperability of the wide range flux monitoring system. The current action statement to be applied when the neutron flux monitors are inoperable would require repair or shutdown within a specified time. The proposed action statement would allow use of an alternate sampling method instead of shutdown in the event of inoperability of the wide range system. The alternate sampling method would utilize the APRM, the IRM, and the SRM.

By letter dated November 18, 1986 the licensee notified the NRC that the installation of the wide range monitoring system would take place during the 1987 refueling outage and requested that the technical specifications be revised to incorporate the requirements for this new system. Notice of consideration of issuance of this amendment was published in the **Federal Register** on April 8, 1987 (52 FR 11377). The licensee experienced a number of difficulties in demonstrating the environmental qualifications of the system and asked to defer action on the November 1986 request. Because of the significant lapse in time, on May 17, 1989 the NRC notified the licensee that the November 18, 1986 request was being denied. Subsequently the licensee resolved the environmental qualification problems.

The June 15, 1989 amendment request seeks the exact changes sought in the November 18, 1986 request. The licensee declared that the statements made in the 1986 letter are still accurate and applicable including their arguments supporting the determination of no significant hazards. Therefore, the November 18, 1986 letter will be

considered as part of the amendment request.

Basis for Proposed No Significant Hazards Consideration Determination: The Commission has provided standards for determining whether a significant hazards consideration exists as stated in 10 CFR 50.92. A proposed amendment to an operating license for a facility involves no significant hazards considerations if operation of the facility in accordance with a proposed amendment would not: (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; (2) Create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) Involve a significant reduction in a margin of safety.

The licensee has determined and the staff agrees, that the requested amendment per 10 CFR 50.92 does not:

(1) Involve a significant increase in the probability or consequences of an accident previously evaluated because the equipment installed will not provide input to any safety systems relied upon in the licensing bases accident analyses. The change in action statements does not significantly increase the probability or consequences of an accident previously evaluated because the redundant APRM, IRM, and SRM monitors presently in use will be available should the wide range monitors be declared inoperable.

(2) Create the possibility of a new or different kind of accident than previously evaluated because the equipment provides monitoring only and merely provides another display that indicates neutron flux or power levels in addition to the existing devices currently relied upon. The change in action statements does not create the possibility of a new or different kind of accident because the equipment provides a monitoring function only and has adequate redundancy with the existing APRM, IRM, and SRM monitors so that no new or different kind of accident is credible.

(3) Involve a significant reduction in a margin of safety because no safety margins are affected. This wide range monitoring equipment provides a passive monitoring function only and is not part of any plant safety related system, thus safety margins will not be affected. The change in action statements does not involve a significant reduction in margin of safety because the existing redundant monitors provide adequate backup given the remote possibility that both wide range monitors become inoperable.

Based on the above considerations the Commission proposes to determine that the requested change to the WNP-2 Technical Specifications involves no significant hazards considerations.

Local Public Document Room location: Richland City Library, Swift and Northgate Streets, Richland, Washington 99352.

Attorneys for licensees: Nicholas S. Reynolds, Esq., Bishop, Cook, Purcell and Reynolds, 1400 L Street, NW., Washington, DC 20005-3502 and G.E. Doupe, Esq., Washington Public Power Supply System, P.O. Box 968, 3000 George Washington Way, Richland, Washington 99352.

NRC Project Director: George W. Knighton

Yankee-Rowe Nuclear Power Corporation, Docket No. 50-029, Yankee-Rowe Nuclear Power Station, Bolton, Massachusetts

Date of amendment request: July 24, 1989

Description of amendment request: The proposed amendment consists of two proposed changes: (1) The proposed amendment modifes Table 3.2-1 of Technical Specification 3.2.4 to substitute a limit on the operating loop average temperature for the current limit on cold leg temperature. The proposed average temperature limit will allow greater operational flexibility during part-load operation and will maintain DNB margins to be bounded by full power conditions. (2) The proposed amendment removes the word "Exxon" from the last paragraph of Technical Specification Base 3/4.2.4.

Basis for proposed no significant hazards consideration determination: The Commission has provided standards for determining whether a significant hazards consideration exists (10 CFR 50.92(c)). A proposed amendment to an operating license for a facility involves no significant hazards considerations if operation of the facility in accordance with a proposed amendment would not: (1) involve a significant increase in the probability or consequences of an accident previously evaluated; (2) create the possibility of a new or different kind of accident from an accident previously evaluated, or (3) involve a significant reduction in a margin of safety.

The licensee has evaluated the proposed amendment against the standards in 10 CFR 50.92 and has determined the following for the first proposed change:

(1) An increase in temperature will not increase the probability of an accident. The main steam line break is the only licensing analysis affected by the change. The reanalysis of this event has shown that the consequences remain acceptable. Therefore, there is not a significant increase in the probability or consequences of a previously analyzed event.

(2) An increase in temperature will not result in a new failure mechanism which could initiate an accident. Therefore, the proposed change will not create the possibility of a new or different type of accident from any previously analyzed.

(3) The steady-state DNBR margin has been evaluated at part-load conditions with the increased cold leg temperatures allowed by this change. The DNB performance at reduced load is bounded by the limiting full power condition. The transient licensing analyses were also evaluated, with the main steam line break being the only affected event. Reanalysis of this transient has shown that the results will remain acceptable. Therefore, this change will not result in a significant decrease in safety margins.

For the second proposed change: This change is editorial in nature and would not:

(1) Involve a significant increase in the probability or consequences of an accident previously analyzed.

(2) Create the possibility of a new or different kind of accident from any previously analyzed.

(3) Involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee's no significant hazards consideration determination and agrees with the licensee's analysis. Based on this review, the staff therefore determines that the proposed amendment does not involve a significant hazards consideration.

PREVIOUSLY PUBLISHED NOTICES OF CONSIDERATION OF ISSUANCE OF AMENDMENTS TO OPERATING LICENSES AND PROPOSED NO SIGNIFICANT HAZARDS CONSIDERATION DETERMINATION AND OPPORTUNITY FOR HEARING

The following notices were previously published as separate individual notices. The notice content was the same as above. They were published as individual notices either because time did not allow the Commission to wait for this biweekly notice or because the action involved exigent circumstances. They are repeated here because the biweekly notice lists all amendments issued or proposed to be issued involving no significant hazards consideration.

For details, see the individual notice in the **Federal Register** on the day and page cited. This notice does not extend the notice period of the original notice.

Philadelphia Electric Company, Public Service Electric and Gas Company, Delmarva Power and Light Company, and Atlantic City Electric Company, Docket Nos. 50-277 and 50-278, Peach Bottom Atomic Power Station, Unit Nos. 2 and 3, York County, Pennsylvania

Date of amendment request: August 26, 1988

Brief description of amendment request: This amendment revises the Technical Specification Limiting Conditions for Operations (LCO) and Surveillance Requirements (SRs) for the Containment Cooling System (CCS) in TS 3/4.5.B and would revise related requirements for diesel generator (DG) testing in TS 3/4.5.F and the associated Bases.

Date of publication of individual notice in **Federal Register:** July 28, 1989 (54 FR 31395)

Expiration date of individual notice: August 28, 1989

Local Public Document Room location: Government Publications Section, State Library of Pennsylvania, Education Building, Commonwealth and Walnut Streets, Harrisburg, Pennsylvania 17126.

Virginia Electric and Power Company, Docket Nos. 50-338 and 50-339, North Anna Power Station, Units No. 1 and No. 2, Louisa County, Virginia

Date of amendment request: July 12, 1989, as supplemented July 26, 1989

Brief description of amendment request: The proposed amendments would revise the North Anna Units 1 and 2 Technical Specifications by revising the definition of slave relay testing and by clarifying the test requirements for Engineered Safeguards Features (ESF) slave relays.

Date of publication of individual notice in **Federal Register:** August 9, 1989 (54 FR 32729)

Expiration date of individual notice: September 8, 1989

Local Public Document Room location: The Alderman Library, Manuscripts Department, University of Virginia, Charlottesville, Virginia 22901.

NOTICE OF ISSUANCE OF AMENDMENT TO FACILITY OPERATING LICENSE

During the period since publication of the last biweekly notice, the Commission has issued the following amendments. The Commission has determined for each of these amendments that the application complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

Notice of Consideration of Issuance of Amendment to Facility Operating License and Proposed No Significant Hazards Consideration Determination and Opportunity for Hearing in connection with these actions was published in the **Federal Register** as indicated. No request for a hearing or petition for leave to intervene was filed following this notice.

Unless otherwise indicated, the Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments. If the Commission has prepared an environmental assessment under the special circumstances provision in 10 CFR 51.12(b) and has made a determination based on that assessment, it is so indicated.

For further details with respect to the action see (1) the applications for amendments, (2) the amendments, and (3) the Commission's related letters, Safety Evaluations and/or Environmental Assessments as indicated. All of these items are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document rooms for the particular facilities involved. A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Director, Division of Reactor Projects.

Commonwealth Edison Company, Docket Nos. 50-454 and 50-455, Byron Station, Units 1 and 2, Ogle County, Illinois; Docket Nos. 50-456 and 50-457, Braidwood Station, Unit Nos. 1 and 2, Will County, Illinois

Date of application for amendments: May 22, 1989

Brief description of amendments: These amendments modify Technical Specification 5.3.2 to allow the use of hafnium, or silver-indium-cadmium, or a combination of both, as the absorber material in the rod control cluster assemblies.

Date of issuance: July 17, 1989

Effective date: July 17, 1989

Amendment Nos.: 30 for Byron and 19 for Braidwood

Facility Operating License Nos. NPF-37, NPF-66, NPF-72, and NPF-77. The amendments revised the Technical Specification.

Date of initial notice in **Federal Register:** June 28, 1989 (54 FR 27224). The Commission's related evaluation of the amendments is contained in a Safety Evaluation dated July 17, 1989.

No significant hazards consideration comments received: No.

Local Public Document Room location: For Byron Station, the Rockford Public Library, 215 N. Wyman Street, Rockford, Illinois 61101; for Braidwood Station, the Wilmington Township Public Library, 201 S. Kankakee Street, Wilmington, Illinois 60481.

Commonwealth Edison Company, Docket Nos. 50-295 and 50-304, Zion Nuclear Power Station, Unit Nos. 1 and 2, Lake County, Illinois

Date of application for amendment: June 13, 1989

Brief description of amendment: These amendments modify Sections 4.0.3 and 4.0.4, General Surveillance Requirements, of the Technical Specifications for Zion Station. In addition Section 3.3.1.F, Relief Valves, is revised to include exception to General Limiting Condition 3.0.4.

Date of issuance: August 1, 1989

Effective date: August 1, 1989

Amendments Nos.: 117, 106

Facility Operating License No. DPR-39. Amendment revised the Technical Specifications.

Date of initial notice in **Federal Register:** June 28, 1989 (54 FR 27225). The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated August 1, 1989.

No significant hazards consideration comments received: No

Local Public Document Room location: Waukegan Public Library, 128 N. County Street, Waukegan, Illinois 60085.

Consumers Power Company, Docket No. 50-155, Big Rock Point Plant, Charlevoix County, Michigan

Date of application for amendment: February 6, 1987 as supplemented November 2, 1987.

Brief description of amendment: This amendment modifies paragraph 2.C.(5) of the license to require compliance with the amended for a "call-in" program for off-duty guards from their residences. This Plan was amended to conform to the requirements of 10 CFR 73.55.

Date of issuance: July 28, 1989

Effective date: July 28, 1989

Amendment No.: 98

Facility Operating License No. DPR-6. The amendment revises the Technical Specifications.

Date of initial notice in **Federal Register:** October 19, 1988 (53 FR 40983). The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated July 28, 1989.

No significant hazards consideration comments received: No.

Local Public Document Room location: North Central Michigan College, 1515 Howard Street, Petoskey, Michigan 49770.

Consumers Power Company, Docket No. 50-155, Big Rock Point Plant, Charlevoix County, Michigan

Date of application for amendment: May 25, 1989 and supplemented on June 30, 1989

Brief description of amendment: This amendment revises Section 3.7(d), (e) and (f) to depict the requirements of 10 CFR Part 50, Appendix J and NUREG-0123, Standard Techncal Specifications for General Electric Boiling Water Reactors and to remove the 24 hour duration requirement to reduce the impact of diurnal effects by using an NRC approved "Total Time" or Point-to-Point method described in ANSI N45.4-1972 and Bechtel Topical Report BN-TOP-1, Rev. 1.

Date of issuance: July 31, 1989

Effective date: July 31, 1989

Amendment No.: 99

Facility Operating License No. DPR-6. The amendment revises the Technical Specifications.

Date of initial notice in **Federal Register:** June 28, 1989 (54 FR 27227). The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated July 31, 1989.

No significant hazards consideration comments received: No.

Duquesne Light Company, Docket No. 50-412, Beaver Valley Power Station, Unit No. 2, Shippingport, Pennsylvania

Date of application for amendment: August 11, 1988

Brief description of amendment: The amendment revises the supplemental leak collection and release system (SLCRS) flow rate from 59,000 cfm to 57,000 cfm, reflecting an approved change to the design basis of the SLCRS. This is a partial response to the licensee's application.

Date of issuance: August 2, 1989

Effective date: August 2, 1989

Amendment No. 19

Facility Operating License No. NPF-73. Amendment revised the Technical Specifications.

Date of initial notice in **Federal Register:** October 5, 1988 (53 FR 39168). The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated August 2, 1989.

No significant hazards consideration comments received: No

Local Public Document Room location: B. F. Jones Memorial Library, 663 Franklin Avenue, Aliquippa, Pennsylvania 15001.

Georgia Power Company, Oglethorpe Power Corporation, Municipal Electric Authority of Georgia, City of Dalton, Georgia, Docket Nos. 50-424 and 50-425, Vogtle Electric Generating Plant, Units 1 and 2, Burke County, Georgia

Date of application for amendments: April 5, 1989

Brief description of amendments: The amendments modified the Technical Specifications to delete footnotes that are no longer applicable.

Date of issuance: August 8, 1989

Effective date: August 8, 1989

Amendment Nos.: 21 and 2

Facility Operating License Nos. NPF-68 and NPF-81: Amendments revised the Technical Specifications.

Date of initial notice in **Federal Register:** May 17, 1989 (54 FR 21308). The Commission's related evaluation of the amendments is contained in a Safety Evaluation dated August 8, 1989.

No significant hazards consideration comments received: No.

Local Public Document Room location: Burke County Library, 412 Fourth Street, Waynesboro, Georgia 30830

Georgia Power Company, Oglethorpe Power Corporation, Municipal Electric Authority of Georgia, City of Dalton, Georgia, Docket Nos. 50-424 and 50-425, Vogtle Electric Generating Plant, Units 1 and 2, Burke County, Georgia

Date of application for amendments: April 6, 1989

Brief description of amendments: The amendments modified Technical Specification 4.5.2.h.1)b) to increase for Unit 1 the maximum total charging pump flow rate with a single pump running.

Date of issuance: August 8, 1989

Effective date: August 8, 1989

Amendment Nos.: 22 and 3

Facility Operating License Nos. NPF-68 and NPF-81: Amendments revised the Technical Specifications.

Date of initial notice in **Federal Register:** May 31, 1989 (54 FR 23314). The Commission's related evaluation of the amendments is contained in a Safety Evaluation dated August 8, 1989.

No significant hazards consideration comments received: No.

Tennessee Valley Authority, Docket Nos. 50-327 and 50-328, Sequoyah Nuclear Plant, Units 1 and 2, Hamilton County, Tennessee

Date of application for amendments: December 22, 1988 (TS 88-34)

Brief description of amendments: The amendments modify the Sequoyah Nuclear Plant, Units 1 and 2, Technical Specifications (TS). The changes remove inappropriate testing requirements associated with the auxiliary building gas treatment system (ABGTS) and add a new requirement on the automatic isolation of the auxiliary building ventilation exhaust. Surveillance requirements for ABGTS activation exist in Section 7, "Plant Systems," and Section 9, "Refueling Operations," of the TS. The ABGTS test requirement associated with the auxiliary building ventilation monitoring system (ABVMS) was deleted from both Section 7 and Section 9. The ABGTS test requirement associated with a Phase A containment isolation signal was deleted from Section 9 but remains in Section 7. The ABGTS test requirement associated with the high radiation signal from the spent fuel pool monitors was deleted from Section 7 but remains in Section 9. A new requirement was added to Table 4.3.9 of Specification 3.3.3.10, "Radioactive Gaseous Effluent Monitoring," to demonstrate automatic isolation of the auxiliary building ventilation exhaust any time the ABVMS (radiation monitor) indicates measured levels above the alarm/trip setpoint. The requirement was in Sections 7 and 9 as part of the ABGTS actuation test for a high radiation signal from the ABVMS but was deleted. Also, two typographical errors in the Unit 1 Specification 3.3.3.10 have been corrected.

Date of issuance: August 3, 1989

Effective date: August 3, 1989

Amendment Nos.: 122, 111

NOTICE OF ISSUANCE OF AMENDMENT TO FACILITY OPERATING LICENSE AND FINAL DETERMINATION OF NO SIGNIFICANT HAZARDS CONSIDERATION AND OPPORTUNITY FOR HEARING (EXIGENT OR EMERGENCY CIRCUMSTANCES)

During the period since publication of the last biweekly notice, the Commission has issued the following amendments. The Commission has determined for each of these amendments that the application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

Because of exigent or emergency circumstances associated with the date the amendment was needed, there was not time for the Commission to publish, for public comment before issuance, its usual 30-day Notice of Consideration of Issuance of Amendment and Proposed No Significant Hazards Consideration Determination and Opportunity for a Hearing. For exigent circumstances, the Commission has either issued a **Federal Register** notice providing opportunity for public comment or has used local media to provide notice to the public in the area surrounding a licensee's facility of the licensee's application and of the Commission's proposed determination of no significant hazards consideration. The Commission has provided a reasonable opportunity for the public to comment, using its best efforts to make available to the public means of communication for the public to respond quickly, and in the case of telephone comments, the comments have been recorded or transcribed as appropriate and the licensee has been informed of the public comments.

In circumstances where failure to act in a timely way would have resulted, for example, in derating or shutdown of a nuclear power plant or in prevention of either resumption of operation or of increase in power output up to the plant's licensed power level, the Commission may not have had an opportunity to provide for public comment on its no significant hazards determination. In such case, the license amendment has been issued without opportunity for comment. If there has been some time for public comment but less than 30 days, the Commission may provide an opportunity for public comment. If comments have been requested, it is so stated. In either event, the State has been consulted by telephone whenever possible.

Under its regulations, the Commission may issue and make an amendment immediately effective, notwithstanding the pendency before it of a request for a hearing from any person, in advance of the holding and completion of any required hearing, where it has determined that no significant hazards consideration is involved.

The Commission has applied the standards of 10 CFR 50.92 and has made a final determination that the amendment involves no significant hazards consideration. The basis for this determination is contained in the documents related to this action. Accordingly, the amendments have been issued and made effective as indicated.

Unless otherwise indicated, the Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments. If the Commission has prepared an environmental assessment under the special circumstances provision in 10 CFR 51.12(b) and has made a determination based on that assessment, it is so indicated.

For further details with respect to the action see (1) the application for amendment, (2) the amendment to Facility Operating License, and (3) the Commission's related letter, Safety Evaluation and/or Environmental Assessment, as indicated. All of these items are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room for the particular facility involved.

A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Director, Division of Reactor Projects.

The Commission is also offering an opportunity for a hearing with respect to the issuance of the amendments. By September 22, 1989, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR Part 2. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) the nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's

Nuclear Reactor Regulation,

(IPEEE) (Open)—A briefing and

Saturday, September 9, 1989, Room P-

property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of the contentions which are sought to be litigated in the matter, and the bases for each contention set forth with reasonable specificity. Contentions shall be limited to matters within the scope of the amendment under consideration. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

Since the Commission has made a final determination that the amendment involves no significant hazards consideration, if a hearing is requested, it will not stay the effectiveness of the amendment. Any hearing held would take place while the amendment is in effect.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1-(800) 325-6000 (in Missouri 1-(800) 342-6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to (*Project Director*): petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to the attorney for the licensee.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the Atomic Safety and Licensing Board, that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)-(v) and 2.714(d).

Consolidated Edison Company of New York, Docket No. 50-247, Indian Point Nuclear Generating Unit No. 2, Westchester County, New York

Date of application for amendment: August 3, 1989.

Brief description of amendment: The amendment raises the maximum allowed service water system inlet water temperature from 85° F to 90° F and raises the allowable containment air temperature from 120° F to 130° F.

Date of issuance: August 7, 1989

Effective date: August 7, 1989

Amendment No.: 143

Facility Operating License No. DPR-26: Amendment revised the Technical Specifications.

Public comments requested as to proposed no significant hazards consideration: No. The Commission's related evaluation of the amendment, finding of emergency circumstances, and final determination of no significant hazards consideration are contained in a Safety Evaluation dated August 7, 1989.

Local Public Document Room location: White Plains Public Library, 100 Martine Avenue, White Plains, New York 10610.

Power Authority of The State of New York, Docket No. 50-286, Indian Point Unit No. 3, Westchester County, New York

Date of application for amendment: August 4, 1989

Brief description of amendment: The amendment revises Technical Specification 3 to permit the plant to operate with a service water temperature above 90° F with containment air temperatures up to 130° F for up to seven hours before reaching the hot shutdown condition via normal operation procedures.

Date of issuance: August 11, 1989

EFfective date: August 11, 1989

Amendment No.: 87

Facility Operating License No. DPR-64: Amendment revised the Technical Specifications.

Public comments requested as to proposed no significant hazards consideration: No. The Commission's related evaluation of the amendment, consulation with the State, and final determination of no significant hazards consideration are contained in a Safety Evaluation dated August 11, 1989.

Local Public Document Room location: White Plains Public Library, 100 Martine Avenue, White Plains, New York 10601

Attorney for licensee: Mr. Charles M. Pratt, 10 Columbus Circle, New York, New York 10019.

Dated at Rockville, Maryland, this 16th day of August, 1989.

For the Nuclear Regulatory Commission

Steven A. Varga,

Director, Division of Reactor Projects-I/II, Office of Nuclear Reactor Regulation

BILLING CODE 7590-01-D

Generic Letter (GL) 89-10, Safety-Related Motor-Operated Valve Testing and Surveillance; Meeting

SUMMARY: The United States Nuclear Regulatory Commission (USNRC) is planning to hold three public meetings to discuss Generic Letter (GL) 89-10, "Safety-Related Motor-Operated Valve Testing and Surveillance." The purpose of these meetings is to discuss the guidance contained in Generic Letter 89-10 with operators of commercial nuclear power plants and near term operating license applicants of nuclear power plants. The NRC staff plans to make a brief presentation on the contents of the Generic Letter at each meeting. However, the main focus of these meetings will be to discuss questions received from licensees and applicants.

DATE AND LOCATION: These meetings will be held from 10:00 a.m.–5:00 p.m. on the following dates at the following locations:

September 18, 1989: O'Hare Marriott, 8535 West Higgins Road, Chicago, IL 60631, (312) 693-4444.

September 20, 1989: Registry Hotel, 3203 Quebec Street, Denver, CO 80207, (303) 321-3333.

September 26, 1989: Holiday Inn Crown Plaza, 1750 Rockville Pike, Rockville, MD 20852, (301) 468-1100.

FOR FURTHER INFORMATION CONTACT: Thierry M. Ross, U. S. Nuclear Regulatory Commission, Office of

Nuclear Reactor Regulation, Washington, D.C. 20555. Telephone (301) 492-3016.

SUPPLEMENTARY INFORMATION: These meetings are intended to be workshops where technical personnel from nuclear power plants or utility corporate offices may obtain information on expected responses to the Generic Letter. In order to assist NRC staff in preparing for these meetings, individuals planning to attend are requested to forward questions on the Generic Letter to their respective NRC Project Manager and to indicate the particular meeting they will attend. As time permits, additional questions will be solicited from the audience. Opportunities will be provided for the public to ask questions although priority will be given to nuclear utility personnel.

Dated at Rockville, Maryland this 16th day of August 1989.

For the Nuclear Regulatory Commission.

Thierry M. Ross,

Project Manager, Project Directorate III-2, Division of Reactor Projects-III, IV, V and Special Projects, Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-M

Advisory Committee on Reactor Safeguards; Meeting Agenda

In accordance with the purposes of sections 29 and 182b. of the Atomic Energy Act (42 U.S.C. 2039, 2232b), the Advisory Committee on Reactor Safeguards will hold a meeting on September 7-9, 1989 in Room P-110, 7920 Norfolk Avenue, Bethesda, Md. Notice of this meeting was published in the **Federal Register** on July 26, 1989.

Thursday, September 7, 1989, Room P-110, 7920 Norfolk Avenue, Bethesda, Md.

8:30 a.m.–8:45 a.m.: Comments by ACRS Chairman—The ACRS Chairman will report on items of current interest.

8:45 a.m.–12:00 Noon: Maintenance of Nuclear Power Plants (Open)—The Committee will review and report on the proposed NRC policy statement and an associated draft regulatory guide related to maintenance programs at nuclear power plants.

1:00 p.m.–1:45 p.m.: Severe Accident Risks (NUREG–1150) (Open)—The Committee will meet with the NRC staff representatives to discuss the NRC staff's resolution of ACRS comments included in its report of May 9, 1989 regarding proposed use of NUREG–1150, Severe Accident Risks: An Assessment for Five U.S. Nuclear Power Plants.

1:45 p.m.–4:15 p.m.: Individual Plant Examination for External Events (IPEEE) (Open)—A briefing and discussion with representatives of the NRC staff and the nuclear industry will be held regarding the status of the IPEEE program.

4:30 p.m.–5:30 p.m.: Industrial Sabotage (Open/Closed)—The Committee will review and report on a proposed resolution of Generic Issue A-29, Nuclear Power Plant Design for Reduction of Vulnerability to Industrial Sabotage.

Portions of this session will be closed as necessary to discuss information related to security provisions at nuclear power plants.

5:30 p.m.–6:15p.m. Accident Severity Scale (Open)—A briefing and discussion regarding proposed accident severity scale for use in the public announcement of nuclear power plant events and accidents will be held.

Friday, September 8, 1989, Room P-110, 7920 Norfolk Avenue, Bethesda, Md.

8:30 a.m.–11:30 a.m.: Seabrook Nuclear Power Station, Unit 1 (Open)—

The Committee will review and report on the proposed off-site emergency preparedness for full power operation of the Seabrook nuclear power plant.

11:30 a.m.–12:00 Noon: Future ACRS Activities (Open)—The Comment will discuss anticipated ACRS subcommittee activities and items proposed for consideration by the full Committee.

1:00 p.m.–3:00 p.m. and 3:15 p.m.–4:15 p.m.: EPRI Requirements for Advanced Light Water Reactors (Open)—A briefing and discussion will be held regarding the status of the NRC review of the proposed EPRI Requirements for Advanced LWRs.

4:15 p.m.–5:15 p.m.: Improved RHR Capability for Residual Heat Removal Capability in LWRs (Open)

A briefing and discussion will be held regarding the NRC staff evaluation of the implementation of requirements pursuant to the NRC generic letter regarding this matter, including, in particular, the strictures pertaining to containment closure.

5:15 p.m.–5:45 p.m.: Advance Pressurized Water Reactors (Open)—A briefing and discussion will be held regarding the status of the NRC staff review of Westinghouse and Combustion Engineering standardized nuclear power plants.

5:45 p.m.–6:30 p.m.: Preparation of ACRS Reports to NRC (Open)—The Committee will discuss proposed ACRS reports regarding items considered during this meeting.

Saturday, September 9, 1989, Room P-110, 7920 Norfolk Avenue, Bethesda, Md.

8:30 a.m.–9:15 a.m.: Appointment of ACRS Members (Open/Closed)—The Committee will discuss qualifications of candidates proposed for nomination as ACRS Members.

Portions of this session will be closed as appropriate to discuss information the release of which would represent a clearly unwarranted invasion of personal privacy.

9:15 a.m.–12:00 Noon: Preparation of ACRS Reports to NRC (Open)—The Committee will continue the discussion of the proposed ACRS reports to NRC regarding items considered during this meeting.

1:00 p.m.–1:45 p.m.: Subcommittee Activities (Open)—The Committee will discuss the status of assigned ACRS subcommittee activities, including activities of NRC regional offices.

1:45 p.m.–2:30p.m. Miscellaneous (Open)—The Committee will complete discussion of items considered during this meeting.

Procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on October 27, 1988 (53 FR 43487). In accordance with these procedures, oral or written statements may be presented by members of the public, recordings will be permitted only during those portions of the meeting when a transcript is being kept, and questions may be asked only by members of the Committee, its consultants, and Staff. Persons desiring to make oral statements should notify the ACRS Executive Director as far in advance as practicable so that appropriate arrangements can be made to allow the necessary time during the meeting for such statements. Use of still, motion picture and television cameras during this meeting may be limited to selected portions of the meeting as determined by the Chairman. Information regarding the time to be set aside for this purpose may be obtained by a prepaid telephone call to the ACRS Executive Director, Mr. Raymond F. Fraley, prior to the meeting. In view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with the ACRS Executive Director if such rescheduling would result in major inconvenience.

I have determined in accordance with subsection 10(d) Pub. L. 92-463 that it is necessary to close portions of this meeting as noted above to discuss information the release of which would

BEST COPY AVAILABLE

represent a clearly unwarranted invasion of personal privacy (5 U.S.C. 552(c)(6)) and Safeguards/Security Information applicable to specific nuclear facilities (5 U.S.C. 552b(c)(3)).

Further information regarding topics to be discussed, whether the meeting has been cancelled or rescheduled, the Chairman's ruling or requests for the opportunity to present oral statements and the time allotted can be obtained by a prepaid telephone call to the ACRS Executive Director, Mr. Raymond F. Fraley (telephone 301/492-8049), between 8:15 a.m. and 5:00 p.m.

Dated: August 21, 1989.

John C. Hoyle,

Advisory Committee Management Officer.

[FR Doc. 89-20012 Filed 8-22-89; 9:11 am]

BILLING CODE 7590-01-M

SECURITIES AND EXCHANGE COMMISSION

[New, Form 5, File No. 270-323; Rev., Form 4, File No. 270-125, Rev., Form 3, File No. 270-126]

Forms Under Review by Office of Management and Budget

Agency Clearance Office—Kenneth A. Fogash, (202) 272-2142

Upon written request copy available from: Securities and Exchange Commission, Public Reference Branch, Washington, DC 20549-1002

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") has submitted for OMB approval amendments to Forms 3 and 4, as well as a new Form 5, which will restructure the manner in which transactions and holdings by persons subject to section 16 of the Securities Exchange Act of 1934 are reported. The amendments should reduce the number of filings on each form. With respect to Form 3, the Commission estimates that approximately 9,656 respondents would be effected at an estimated one-half burden hour per response. Form 4 would be filed by 69,162 persons annually at an estimated one-half burden hour per response. Form 5 would be filed by 40,500 persons at one burden hour per response. The estimated average burden hour are made solely for purposes of the Paperwork Reduction Act and are not derived from a comprehensive or even a representative survey or study of the costs of the Commission's rules and forms.

Direct general comments to Gary Waxman at the address below. Direct any comments concerning the accuracy of the estimated average burden hours for compliance with the Securities and Exchange Commission rules and forms to Kenneth A. Fogash, Deputy Executive Director, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549-6004 and Gary Waxman, Clearance Officer, Office of Management and Budget (Paperwork Reduction Project 3235-0104, 0287, and 0362), Room 3208, New Executive Office Building, Washington, DC 20503.

Dated: August 17, 1989.

Shirley E. Hollis,

Assistant Secretary.

[FR Doc. 89-19850 Filed 8-22-89; 8:45 am]

BILLING CODE 8010-01-M

[File No. 22-19572]

Application and Opportunity for Hearing; Delta Air Lines, Inc.

August 17, 1989.

Notice is hereby given that Delta Air Lines, Inc. (the "Company") has filed an application pursuant to clause (ii) of section 310(b)(1) of the Trust Indenture Act of 1939 (hereinafter referred to as the "Act") for a finding by the Securities and Exchange Commission (the "Commission") that the trusteeship of Citizens and Southern Trust Company (Georgia), National Association (the "Bank") under ten indentures (the "1989 Indentures") to be qualified under the Act relating to the 1989 Equipment Trust Certificates, Series A through J, under seven indentures dated October 25, 1988 (the "1988 Indentures") that were qualified under the Act relating to 1988 Equipment Trust Certificates, Series A through G, and under an indenture dated January 1, 1988 (the "Other Indenture") that was not qualified under the Act because the securities were exempt from registration under the Securities Act, is not so likely to involve a material conflict of interest as to make it necessary in the public interest or for the protection of investors to disqualify Bank from acting as trustee under the aforementioned indentures.

Section 310(b) of the Act provides in part that if a trustee under an indenture qualified under the Act has or shall acquire any conflicting interest (as defined in the section), it shall within ninety days after ascertaining that it has such conflicting interest, either eliminate such conflicting interest or resign. Subsection (1) of that section provides, with certain exceptions stated therein, that a trustee under a qualified indenture shall be deemed to have a conflicting interest if such trustee is trustee under another indenture of the same obligor.

The Company alleges:

(1) Pursuant to the 1988 Indentures, the Company has issued $253,471,000 aggregate principal amount of 1988 Equipment Trust Certificates, Series A through G, (the "1988 Certificates") and pursuant to the Other Indenture, the Company has outstanding $44,900,000 aggregate principal amount of its Development Authority of Clayton County Special Facilities Adjustable Tender Revenue Refunding Bonds, Series 1988 (Delta Air Lines, Inc. Project) (the "Bonds"). The 1988 Certificates were registered under the Securities Act of 1933 (the "1933 Act") and the 1988 Indentures were qualified under the Act. The Bonds were exempt from registration and the Other Indenture was not qualified under the Act.

(2) Pursuant to the 1989 Indentures, the Company will issue $285,963,000 aggregate principal amount of its Equipment Trust Certificates, Series A through J (the "1989 Certificates"). The 1989 Certificates will be registered under the 1933 Act and the 1989 Indentures will be qualified under the Act.

(3) The Company is not in default under the 1988 Indentures or the Other Indenture. The Company's obligations under the 1989 Indentures, the 1988 Indentures and the Other Indenture are general, wholly unsecured obligations and rank *pari passu inter se.* Each of the 1988 Indentures and 1989 Indenture is separately collateralized by a security interest in different aircraft and the lease relating thereto. The Other Indenture is secured by payments made pursuant to a Loan Agreement and Promissory Note.

(4) The provisions of the 1988 Indentures, the Other Indenture and the 1989 Indentures are not so likely to involve a material conflict of interest as to make it necessary in the public interest or for the protection of investors to disqualify the Bank from acting as Trustee under said Indentures.

The Company has waived notice of hearing, hearing and any and all rights to specify procedures under the Rules of Practice of the Commission in connection with this matter. For a more detailed statement of the matters of fact and law asserted, all persons are referred to as said application which is on file in the Office of the Commission's Public Reference Section, File Number 22-19572, 450 Fifth Street NW., Washington, DC 20549.

Notice is further given that any interested persons may, no later than September 10, 1989 request in writing that a hearing be held on such matter stating the nature of his interest, the reasons for such request and the issues of law or fact raised by such application which he desires to controvert, or he may request that he be notified if the Commission orders a hearing thereon. Any such request should be addressed: Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. At any time after said date, the Commission may issue an order granting the application, upon such terms and conditions as the Commission may deem necessary or appropriate in the public interest and for the protection of investors, unless a hearing is ordered by the Commission.

For the Commission, by the Division of Corporation Finance, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

[FR Doc. 89-19844 Filed 8-22-89; 8:45 am]

BILLING CODE 8010-01-M

[Rel. No. 35-24941]

Filings Under the Public Utility Holding Company Act of 1935 ("Act")

August 17, 1989.

Notice is hereby given that the following filing(s) has/have been made with the Commission pursuant to provisions of the Act and rules promulgated thereunder. All interested persons are referred to the application(s) and/or declaration(s) for complete statements of the proposed transaction(s) summarized below. The application(s) and/or declaration(s) and any amendments thereto is/are available for public inspection through the Commission's Office of Public Reference.

Interested persons wishing to comment or request a hearing on the application(s) and/or declaration(s) should submit their views in writing by September 11, 1989 to the Secretary, Securities and Exchange Commission, Washington, DC 20549, and serve a copy on the relevant applicant(s) and/or declarant(s) at the address(es) specified below. Proof of service (by affidavit or, in case of an attorney at law, by certificate) should be filed with the request. Any request for hearing shall identify specifically the issues of fact or law that are disputed. A person who so requests will be notified of any hearing, if ordered, and will receive a copy of any notice or order issued in the matter. After said date, the application(s) and/or declaration(s), as filed or as amended, may be granted and/or permitted to become effective.

QMT Holding Company, Inc. (70-7274)

QMT Holding Company, Inc., ("QMT"), an Illinois corporation, 607 East Adams Street, Springfield, Illinois 62739, has filed an application and amendments thereto pursuant to sections 3(a)(1), 9(a)(2), and 10 of the Act. The latest amendment was filed on May 24, 1989. A notice in this matter was previously issued on September 11, 1986 (HCAR No. 24189).

QMT requests an order of the Commission (1) approving QMT's proposed acquisition of all of the outstanding shares of common stock of Central Illinois Public Service Company ("CIPS"), an Illinois corporation, and the indirect acquisition of 20% of the outstanding shares of capital stock of Electric Energy, Inc. ("EEI"), also an Illinois corporation, through CIPS' ownership of these shares, and (2) granting QMT and its subsidiary companies, upon consummation of the proposed transaction, an exemption under section 3(a)(1) of the Act from all provisions of the Act except section 9(a)(2).

QMT was incorporated by CIPS on July 11, 1986, for the purpose of acquiring all of CIPS' common stock. QMT proposes to acquire all of CIPS' common stock by exchanging shares of its authorized common stock for all of the currently outstanding shares of CIPS common stock ("Stock Exchange"). QMT currently owns no utility assets and is not a holding company under the Act. QMT states that the purpose of the reorganization is to provide the flexibility and capability to make investments in other business ventures.

CIPS is a public-utility company and an exempt holding company by reason of filing exemption statements pursuant to rule 2 under the Act. It is principally engaged in the generation, transmission, distribution, and sale of electricity in central and southern Illinois to approximately 306,000 customers in 550 communities and adjacent suburban and rural areas. CIPS also furnishes natural gas service to approximately 157,000 Illinois customers in 257 communities and adjacent suburban and rural areas. CIPS' total operating revenues for 1988 were $616,188,000, of which $499,486,000 (81%) was from electric service and $116,702,000 (18%) was from gas service. CIPS does not provide electric or gas service outside of Illinois. As of December 31, 1988, CIPS had outstanding 34,171,873 shares of its common stock, no par value. CIPS also had 920,000 shares of preferred stock, $100 par value, outstanding as of this date.

CIPS owns 20% of the capital stock of EEI, which owns a 1,000 MW generating station at Joppa, Illinois. EEI was organized in 1950 by CIPS and several other public-utility companies ("Sponsoring Companies") primarily to supply a substantial portion of the electric power requirements of a federal atomic energy installation ("Installation") at Paducah, Kentucky, now administered by the Department of Energy ("DOE"). The Commission, taking notice of the Installation's importance to national defense, approved CIPS' acquisition of the capital stock of EEI in *Central Illinois Public Service Co.,* 32 S.E.C. 202, 204 (1951), and *Electric Energy, Inc.,* 38 S.E.C. 658, 660 (1958). All of the electricity sold by EEI is purchased by DOE and the Sponsoring Companies, and those sales are EEI's only sources of revenue. EEI does not sell electricity to private consumers and does not have any equity securities outstanding in the hands of the public. EEI had outstanding at December 31, 1988, $34,200,000 in short-term and long-term notes under two revolving credit agreements with banks.

CIPS' investment of $2,042,561 in its 20% interest in EEI is 0.12% of CIPS' total assets as of December 31, 1988. During the 12-month period ending December 31, 1988, CIPS received $2,248,619 as its share of EEI's net income, which amounted to 2.6% of CIPS' net income for that period.

QMT and CIPS intend that, as a result of the Stock Exchange, QMT will own all the outstanding common stock of CIPS. CIPS will continue to own 20% of the capital stock of EEI. Holders of CIPS preferred stock and first mortgage bonds will continue as security holders of CIPS. CIPS intends to submit the Stock Exchange to its share holders for their approval.

The proposed Stock Exchange was approved by an initial order of the Illinois Commerce Commission ("ICC"), dated October 7, 1987; however, consideration of other issues, including the issue of "compensatory payments" to CIPS from nonutility affiliates, resulted in a reopening of the case. The ICC issued its final order, which approved the transaction, on April 26, 1989. QMT filed its latest amendment on May 24, 1989, following receipt of the ICC's final order. The Federal Energy Regulatory Commission issued an order approving the transaction under the Federal Power Act on November 30, 1988.

Ohio Power Company (70-7633)

Ohio Power Company ("Ohio Power"), 301 Cleveland Avenue, SW., Canton, Ohio 44702, an electric utility subsidiary of American Electric Power Company, Inc., a registered holding company, has filed a declaration pursuant to sections 6(a) and 7 of the Act and Rules 50 and 50(a)(5) thereunder.

Ohio Power proposes to issue and sell through December 31, 1990, up to $100,000,000 aggregate principal amount of its First Mortgage Bonds ("Bonds"). The Bonds, which shall be offered from time to time in one or more series, will have maturities ranging from five to thirty years, with expected redemption protection for a period not to exceed 5 years. Interest rates and the price to be paid to Ohio Power for the Bonds will be determined by competitive bidding. If market conditions should not be propitious for the sale of the Bonds on a competitive bidding basis, Ohio Power proposes, subject to further authorization by the Commission, either to place the Bonds privately with institutional investors or to negotiate with underwriters for the sale of the Bonds.

Ohio Power states that the proceeds realized from the sale of the Bonds, together with any other funds which may become available to Ohio Power, will be used to refund Ohio Power's 12¾% Series First Mortgage Bonds due 2013 prior to their stated maturity (or to retire short-term indebtedness issued for such purpose), to repay other short-term indebtedness at or prior to maturity, to reimburse Ohio Power's treasury for expenditures incurred in connection with its construction program and for other corporate purposes.

Alabama Power Company (70-7673)

Alabama Power Company ("Alabama"), 600 North 18th Street, Birmingham, Alabama 35291, a wholly owned subsidiary of The Southern Company, a registered holding company, has filed a declaration pursuant to section 12(d) of the Act and Rule 44 thereunder.

Alabama proposes to sell to Chemical Waste Management, Inc. ("Chemical Waste") certain distribution facilities for a sale price of $139,972.97. Alabama will obtain from its first mortgage bond Trustee a release of the Facilities from the lien of Alabama's first mortgage indenture.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

Shipping Coordinating Committee; Meeting

The U.S. Shipping Coordinating Committee (SHC) will conduct a public meeting at 1000 on Monday, 11 September 1989 in Room 2415 of U.S. Coast Guard Headquarters, 2100 Second Street, SW., Washington, DC in preparation for:

1. The upcoming 6th and final session of the International Maritime Organization (IMO)/United Nations Conference on Trade and Development (UNCTAD) Joint Intergovernmental Group of Experts (JIGE) on Maritime Liens and Mortgages (London, 25–29 September 1989);

2. The 61st session of the IMO Legal Committee (London, 28–29 September 1989); and

3. The anticipated 3rd session of the Intergovernmental Talks hosted by the United Kingdom on the question of liability and compensation related to maritime carriage of hazardous and noxious substances (HNS) (London, 21–22 September 1989).

By way of background concerning the IMO/UNCTAD JIGE, since 1986 this body has been considering possible changes in existing international treaties relating to maritime liens and mortgages and to vessel arrest. In view of progress to date, a new draft maritime liens and mortgages treaty will probably be finalized by this September. Consequential revisions to the 1952 Convention on the Arrest of Seagoing Ships may also be developed.

On 20 June 1989, the U.S. submitted a position paper for the sixth JIGE session. In further preparation for the upcoming negotiating session, a final reading of both the latest draft of the new Maritime Liens and Mortgages Convention and the 1952 Arrest Convention will be conducted at the public meeting.

With respect to HNS liability and compensation, the IMO Legal Committee resumed work on this subject in 1987 in an effort to develop an international HNS regime which will prove more acceptable than that which was considered but not adopted at a 1984 Diplomatic Conference. It should be noted that implementation of an international HNS regime would have significant impacts on a wide range of U.S. interests related to the maritime and chemical industries, government and the environment.

Recent negotiating developments indicate a continuing strong international desire to expedite this HNS work. In light of this desire, in addition to the anticipated intergovernmental talks, HNS liability and compensation may also be discussed at the IMO Legal Committee's two-day 61st session. U.S. positions concerning the preferred approach to development of the proposed new international HNS regime are currently being developed, and progress will be discussed at the 11 September 1989 public meeting.

The foregoing topics will be discussed extensively at the open SHC meeting. The views of the public, and particularly those of affected maritime commercial and environmental interests, are requested.

Members of the public are invited to attend the 11 September 1989 SHC meeting, up to the seating capacity of the room.

For further information or to submit views concerning any of the topics to be discussed at the SHC meeting, contact either Captain Jonathan Collom or Lieutenant Commander Frederick M. Rosa, Jr., U.S. Coast Guard (G-LMI), 2100 Second Street, SW., Washington, DC 20593, telephone (202) 267–1527, telefax (202) 267–4163.

Dated: August 14, 1989.

Thomas J. Wajda,

Chairman, Shipping Coordinating Committee.

BILLING CODE 4710-07-M

[Public Notice CM-8/1299]

Shipping Coordinating Committee; 16th Session of Assembly and Associated Bodies; Meeting

The Shipping Coordinating Committee, (SHC), will conduct an open meeting at 9:30 a.m. on Monday, October 2, 1989 in Room 2415, at U.S. Coast Guard Headquarters, 2100 Second Street SW., Washington, DC 20593. The purpose of the meeting is to finalize preparations for the 16th Session of Assembly and associated bodies of the International Maritime Organization, (IMO), which is scheduled for October 9–20, 1989 at the IMO Headquarters in London. The purpose of the meeting is to discuss the papers received and the draft U. S. Positions for the 16th Session.

Inter alia, the items of particular interest are:

—Reports of the various Committees
—Reports on Diplomatic Conferences
—28th Session Marine Environment Protection Committee (re: Amendment to Annex V; MARPOL 73/78)
—Report on the implementation of Resolution A.500 (XII)

—Approval of appointment of the new Secretary-General
—Work Programme and Budget
—Arrears of Contributions

Members of the public may attend these meetings up to the seating capacity of the room. Interested persons may seek information by writing: CAPT M. C. Grace, U. S. Coast Guard (G-CI), 2100 Second Street SW, Washington, DC 20593 or by calling: (202) 267–2280.

Dated: August 11, 1989.

Thomas J. Wajda,

Chairman, Shipping Coordinating Committee.

BILLING CODE 4710-07-M

Director General of the Foreign Service and Director of Personnel

[Public Notice 1124]

State Department Performance Review Board Members

In accordance with section 4314(c)(4) of the Civil Service Reform Act of 1978 (Pub. L. 95–454), the Executive Resources Board of the Department of State has appointed the following members to the State Department Performance Review Board register.

John P. Boright, Director, Office of Nuclear Technology and Safeguards
Mark M. Lowenthal, Office Director, Office of Strategic Forces Analysis, Bureau of Intelligence and Research
Michael J. Matheson, Deputy Legal Adviser, Office of the Legal Adviser
Michele E. Truitt, Director, Office of Consular Fraud Prevention Programs
Joyce Fleischman, Deputy Inspector General, Department of Interior
Gene Richardson, Assistant Inspector General for Investigations, Agency for International Development
Kenneth Hunter, Deputy Assistant Secretary for Personnel
Gloria Gaston-Shapiro, Public Member

Dated: August 11, 1989.

Kenneth Hunter,

Deputy Assistant Secretary for Personnel.

BILLING CODE 4710-15-M

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

[Order 89-8-35; Docket 46343]

Application of Ryan International Airlines, Inc. for a Fitness Redetermination

AGENCY: Department of Transportation.

ACTION: Notice of order to show cause.

SUMMARY: The Department of Transportation is directing all interested persons to show cause why it should not (1) find Ryan International Airlines, Inc., fit, willing, and able to resume interstate and overseas cargo air transportation, subject to conditions; and (2) reissue the carrier's sections 401 and 418 certificates of public convenience and necessity to reflect the change in name from PHH Air, Inc., to Ryan International Airlines, Inc.

DATES: Persons wishing to file objections should do so no later than September 1, 1989.

ADDRESSES: Objections and answers to objections should be filed in Docket 46343 and addressed to the Documentary Services Division (C-55, Room 4107), U.S. Department of Transportation, 400 Seventh Street SW., Washington, DC 20590, and should be served upon the parties listed in Attachment A to the order.

FOR FURTHER INFORMATION CONTACT: Delores King, Air Carrier Fitness Division (P-56, Room 6401), U.S. Department of Transportation, 400 Seventh Street SW., Washington, DC 20590, (202) 366–2343.

Dated: August 17, 1989.

Samuel W. Fairchild,

Deputy Assistant Secretary for Policy and International Affairs.

BILLING CODE 4910-62-M

Federal Aviation Administration

Aviation, Marine and Land Radionavigation Users Conference

AGENCY: Federal Aviation Adminstration (FAA), DOT.

ACTION: Notice of conference.

SUMMARY: An Aviation, Marine and Land Radionavigation Users Conference will be conducted in Washington, DC on November 16 and 17, 1989. The purpose of the conference is to present to the users and suppliers of navigation equipment the opportunity to comment on current plans and policy for federally provided systems which satisfy aviation, marine, inland waterway and land radionavigation requirements.

Date, Time and Place: November 16 and 17, 1989 beginning 9:00 am each day at the Crystal Gateway Marriot Hotel, 1700 Jefferson Davis Highway, Arlington, Virginia. November 16 will focus primarily on marine and land requirements. November 17 will focus primarily on aviation requirements.

Further Information: For aviation information contact Thomas H. Higgins, Advanced Systems Design Service, Federal Aviation Administration, Department of Transportation (ADS-110), 800 Independence Avenue SW., Washington, DC 20591, (202) 267–9844. For marine and land information contact David C. Scull, Office of Research and Technology, Research and Special Programs Administration, Department of Transportation (DRT-20), 400 7th Street, SW., Washington, DC 20590, (202 366–4355.

SUPPLEMENTARY INFORMATION: Each day the meeting will open with an overview of the federal radionavigation planning process, the federal Radionavigation Plan, and current plans and policy for Federally operated radionavigation systems. This information relates to the selection of a future mix of radionavigation systems as required by the Federal Radionavigation Plan. An opportunity will be provided for organizations or individuals representing the users and suppliers of radionavigation systems to participate in the meeting and make their comments to representatitives of FAA, Coast Guard, RSPA, Maritime Administration and other government agencies participating in the conference.

Issued in Washington, DC on August 10, 1989.

Jerry W. Bradley,

Manager, Requirements & CNS Concepts Branch.

BILLING CODE 4910-13-M

Radio Technical Commission for Aeronautics (RTCA); Special Committee 135—Environmental Conditions and Test Procedures for Airborne Equipment; Meeting

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. Law 92–463; 5 U.S.C. App. I), notice is hereby given for the fifteenth meeting of RTCA Special Committee 135 on Environmental Conditions and Test Procedures for Airborne Equipment to be held September 19–21, 1989, in the Society of Automotive Engineers Headquarters, 400 Commonwealth Drive, Warrendale, Pennsylvania 15096, commencing at 9 a.m.

The agenda for this meeting is as follows: (1) Chairman's remarks; (2) introduction of attendees; (3) approval of the fourteenth meeting's minutes, RTCA Paper No. 270–89/SC135–302; (4) review the fifth draft of the proposed revision to DO–160B/ED–14B, RTCA Paper No. 269–89/SC135–301 (section reviews will be coordinated by assigned Change Coordinators); (5) review completion schedule for revised draft; (6) review new proposal for section 22.0, "Lightning Induced Transient Susceptibility"; (7) other business; (8) date and place of next SC-135 meeting and future joint meetings of SC-135/WG-14; and (9) joint plenary meeting with ISO/TC 20/SC 5 (last day of 3-day meeting, September 21, 1989).

Attendance is open to the interested public but limited to space available. With the approval of the Chairman, members of the public may present oral statements at the meeting. Persons wishing to present statements or obtain information should contact the RTCA Secretariat, One McPherson Square, 1425 K Street, NW., Suite 500, Washington, DC 20005; (202) 682-0266. Any member of the public may present a written statement to the committee at any time.

Issued in Washington, DC, on August 16, 1989.

Geoffrey R. McIntyre,

Designated Officer.

BILLING CODE 4910-13-M

Manufacturing Inspection District Office at Dallas-Fort Worth Airport; Opening

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Information Notice.

SUMMARY: This Notice announces that the Manufacturing Inspection District Office (MIDO) will be moving from the Fort Worth Regional Office to the Dallas-Fort Worth (DFW) International Airport. This move involves moving the office for six employees approximately 20-miles. Additional space is needed to accommodate present personnel and increased staffing that is anticipated for a tiltrotor certification program and for increased production surveillance activities. The present office space cannot be expanded to accommodate increased staffing and the DFW location will allow a more centralized location in which to better serve the public.

OPENING DATE: September 1, 1989.

ADDRESSES: Federal Aviation Administration, DFW MIDO-42, DFW Business Center, Suite 325, DFW International Airport, Texas 75261.

FOR FURTHER INFORMATION CONTACT: Mr. Anthony Merrill, Manager, Manufacturing Inspection Office, ASW-180, Rotorcraft Directorate, Aircraft Certification Service, Fort Worth, Texas 76193-0180, telephone No. (817) 624-5180 or FTS 734-5180.

Issued in Fort Worth, Texas.

James D. Erickson,

Acting Manager, Rotorcraft Directorate, Aircraft Certification Service

BILLING CODE 4910-13-M

DEPARTMENT OF THE TREASURY

Public Information Collection Requirements Submitted to the Office of Management and Budget for Review

Date: August 17, 1989.

The Department of Treasury has submitted the following public information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1980, Pub. L. 96-511. Copies of the submission(s) may be obtained by calling the Treasury Bureau Clearance Officer listed. Comments regarding this information collection should be addressed to the OMB reviewer listed and to the Treasury Department Clearance Officer, Department of the Treasury, Room 2224, 1500 Pennsylvania Avenue, NW., Washington, DC 20220.

Internal Revenue Service

OMB Number: New

Form Number: 8818

Type of Review: New Collection

Title: Record of Redemption of College Savings Bonds Issued After 1989

Description: If an individual redeems U.S. Savings Bonds issued after 1989 and pays qualified higher education expenses during the year, the interest on th bonds is excludable from income. The form can be used by the individuals to keep a record of the bonds cashed so that he or she can claim the proper interest exclusion.

Respondents: Individuals or households

Estimated Number of Respondents: 25,000

Estimated Burden Hours Per Response/Recordkeeping: Recordkeeping, 7 minutes; Learning about the law or the form, 3 minutes; Preparing the form, 15 minutes.

Frequency of Response: Other (kept by taxpayers)

Estimated Total Recordkeeping/Reporting Burden: 20,500 hours.

OMB Number: 1545-0126

Form Number: 1120F

Type of Review: Revision

Title: U.S. Income Tax Return of a Foreign Corporation

Description: Form 1120F is used by foreign corporations that have investments, or a business, or a branch in the U.S. The IRS uses Form 1120F to determine if the foreign corporation has correctly reported its income, deductions and tax and if it has paid the correct amount of tax.

Respondents: Businesses or other for-profit

Estimated Number of Respondents: 18,000

Estimated Burden Hours Per Response/Recordkeeping: Recordkeeping, 100 hours, 55 minutes; Learning about the law or the form, 29 hours, 34 minutes; Preparing the form, 55 hours, 47 minutes; Copying, assembling, and sending the form to IRS, 6 hours, 42 minutes.

Frequency of Response: Annually

Estimated Total Recordkeeping/Reporting Burden: 3,600,000 hours

OMB Number: 1545-0892

Form Number: 8300

Type of Review: Revision

Title: Report of Cash Payments over $10,000 Received in a Trade or Business

Description: Anyone in a trade or business who, in the course of such trade or business, receives more than $10,000 in cash or foreign currency in one or more related transactions must report it to the IRS and provide a statement to the payor. Any transactions which must be reported under Title 31 on Form 4789 is exempted from reporting the same transaction on Form 8300.

Respondents: Farms, Businesses or other for-profit, Federal agencies or employees, Small businesses or organizations

Estimated Number of Respondents: 8,300

Estimated Burden Hours Per Response/Recordkeeping: 18 minutes

Frequency of Response: On occasion

Estimated Total Recordkeeping/Reporting Burden: 9,127 hours

OMB Number: 1545-0956

Form Number: 5500EZ

Type of Review: Revision

Title: Annual Return of One-Participant (Owners and Their Spouses) Pension Benefit Plan

Description: Form listed in item 4 is an annual return filed by a one-participant or one-participant and spouse pension plan. The IRS uses this data to determine if the plan appears to be operating properly as required under the law or whether the plan should be audited.

Respondents: Farms, Businesses or other for-profit, Small businesses or organizations

Estimated Number of Respondents: 50,000

Estimated Burden Hours Per Response/Recordkeeping: Recordkeeping, 10 hours, 17 minutes; Learning about the law or the form, 1 hour, 4 minutes; Preparing the form, 2 hours, 13 minutes; Copying, assembling, and sending the form to IRS, 16 minutes.

Frequency of Response: Annually

Estimated Total Recordkeeping/Reporting Burden: 691,000 hours

Clearance Officer: Garrick Shear (202) 535-4297, Internal Revenue Service, Room 5571, 1111 Constitution Avenue, NW., Washington, DC 20224.

OMB Reviewer: Milo Sunderhauf (202) 395-6880, Office of Management and Budget, Room 3001, New Executive Office Building, Washington, DC 20503.

Lois K. Holland,

Departmental Reports Management Officer.

BILLING CODE 4810-40-M

Customs Service

[T.D. 89-80]

Guidance for Interpretation of Harmonized System

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Notice giving guidance on use of certain documents to Interpret Harmonized Tariff Schedule of the United States.

SUMMARY: Since the entry into force of the Harmonized Tariff Schedule, much interest has been generated in the international trade community as to the weight accorded by Customs to various types of documents by the Customs Cooperation Council. This document sets forth Customs views regarding these documents.

FOR FURTHER INFORMATION CONTACT: Paul Giguere, Director, International Nomenclature Staff, U.S. Customs Service, 1301 Constitution Avenue NW., Washington, DC 20229 (202-566-8530).

SUPPLEMENTARY INFORMATION:

Background

Pursuant to section 1204 of Public Law 100-418, the Omnibus Trade and Competitiveness Act of 1988, the Harmonized Tariff Schedule of the United States (HTS) was implemented effective as to merchandise entered or withdrawn for consumption on or after January 1, 1989.

Since the implementation of the HTS, Customs has been urged to take into consideration a host of documents as background documentation in the classification of goods. These have included, not only the Explanatory Notes to the Harmonized System (HS), but such documents as reports of the Nomenclature Committee (the committee that administered the Customs Cooperation Council Nomenclature), letters from the Secretariat of the Customs Cooperation Council (CCC) and rulings and regulations from other Customs administration. All of these matters are urged on Customs as an indication of the intent of the Harmonized System Committee (HSC) in drafting the system, or, sometimes, on the grounds that Customs has an obligation to interpret the HTS in uniformity with the interpretation of the CCC or that of other Contracting Parties to the Convention on the Commodity Description and Coding System (the Convention).

This notice explains Customs position on the various documentation that is available and gives an overall assessment of the weight that should be accorded to the various documents.

Uniformity in the interpretation of the international system, the HS, is not a function of Customs. Customs is charged with the administration and interpretation of the HTS, the tariff enacted by Congress. The function of maintaining the uniform application of the HS resides with the HSC per Article 7 of the Convention. It is fundamental that the United States did not give up sovereignty when it acceded to the Convention. There is, as such, no obligation on Contracting Parties for uniform application of the HS. There is, however, an obligation on Contracting Parties to "not modify the scope of the sections, chapters, headings or subheadings of the Harmonized System." Consequently, Customs takes background documentation into consideration so that classification rulings do not so modify the system.

The Committees

An understanding of the documentation issued by the CCC requires some background into the various committees that dealt with the HS. The HS was drafted by a committee known as the HSC. Unfortunately this is the same name as the committee formed under the Convention, and this has produced some confusion. Four committees have dealt with the HS: (1) The HSC which existed from 1973 to 1983; (2) the Interim HSC; (3) the HSC formed under the Convention; and (4) the Nomenclature Committee.

The drafting Harmonized System Committee: The HSC which was charged with drafting the HS met in 31 sessions from June 1973 to June 1983. Its reports are designated: Summary Record of the xx Session of the Harmonized System Committee and its Working Party.

The Interim Harmonized System Committee (IHSC): This committee met in 9 sessions, jointly with the Nomenclature Committee, from 1983 till the Convention went into force on January 1, 1988. It drafted the HS Explanatory Notes and reviewed the Compendium of Classification Opinions. Although it had no particular legal standing it did make proposals for amending the HS.

The Harmonized System Committee: The committee formed under the Convention. It is the committee currently charged with the administration of the Convention. It meets twice a year and held its first session in April 1988.

The Nomenclature Committee: The committee formed to administer the Customs Cooperation Council Nomenclature (CCCN) (first known as the Brussels Tariff Nomenclature), the nomenclature which is replaced by the HS. Because the Nomenclature Committee had agreed to amend the CCN to conform to the HS, it reviewed the work of the HSC to see if it found it acceptable for purposes of the CCCN.

The Documents

Explanatory Notes

The status of the Explanatory Notes (ENs) to the HS is specifically addressed in the report of the Joint Committee on the Omnibus Trade and Competitiveness Act of 1988. It is there stated:

> The Explanatory Notes constitute the Customs Cooperation Council's official interpretation of the Harmonized System. They provide a commentary on the scope of each heading of the Harmonized System and are thus useful in ascertaining the classification of merchandise under the system.
>
> The Explanatory Notes were drafted subsequent to the preparation of the Harmonized System nomenclature itself, and will be modified from time to time by the CCC's Harmonized System Committee. Although generally indicative of proper interpretation of the various provisions of the Convention, the Explanatory Notes, like other similar publications of the Council, are not legally binding on contracting parties to the Convention. Thus, while they should be consulted for guidance, the Explanatory Notes should not be treated as dispositive.

This is a clear statement of the intent of Congress in adopting the HS as a basis for the U.S. Tariff. The status outlined by the Joint Committee of Congress applies only to the ENs and "similar publications of the Council." In that connection Customs would point out that the only similar publication of the Council is the Compendium of Classification Opinions.

Among the international conventions administered by the CCC, the HS is a replacement for the former CCCN. There were ENs to the CCCN and they are sometimes cited in requests for rulings. The CCCN ENs have no value in interpreting the HS. They are the ENs to a different system; one which is now virtually nonexistent since most nations have adopted the HS.

It should also be noted that the ENs are a dynamic instrument reflecting the intent of the Contracting Parties on the application and interpretation of the HS. They will be amended from time to time and may thus reflect a change in interpretation. Customs believes they should always be consulted.

Classification Opinions

The CCC publishes a Compendium of Classification Opinions. These opinions represent decisions by the HSC on the classification of various products that were presented to the HSC for consideration. When a classification question is presented to the HSC, the Committee will frequently draft an opinion to be published in the Compendium. However, that is not always the case. Sometimes the decision of the HSC is converted into an amendment to the ENs, and sometimes it is merely reported in the report of the session of the HSC when the decision was made. The decision is included in the Compendium when it is thought to be particularly instructive.

When a decision of the HSC is published in the Compendium it should receive the same weight as ENs. They constitute the official interpretation of the HS in consideration of a particular issue placed before the HSC.

There was also a Compendium of Classification Opinions under the CCCN. The Interim HSC reviewed that Compendium and adopted into the HS Compendium a number of the CCCN opinions. Approximately 20 percent of the CCCN opinions were carried over to the HS. The remainder were discarded, some because they were outdated, some because their substance had been incorporated into the HS ENs and some because they were thought to be erroneous under the HS. Opinions reported in the CCCN Compendium have no validity under the HS for the same reasons the CCCN ENs are not valid under the HS.

HSC Reports Prior to July 1983

The HSC prior to 1983 was tasked with drafting the HS. This required numerous decisions and these are reported in the Summary Records of the HSC sessions. The Summary Records of HSC sessions are a resource in ascertaining the intent of the Committee in the drafting of any particular text. Because the sessions were long and rather involved, the deliberations of the Committee are reported only in summary form. The Summary Records do contain reports on a number of decisions of the HSC. When such decisions are clearly reported they constitute history for the text concerned. The Summary Records are available to the public through the Department of Commerce National Technical Information Service. While these documents do not carry the weight of the ENs or the Compendium of Classification Opinions, they are frequently guides to the intention of the HSC.

Interim HSC Reports

The IHSC drafted the ENs and reviewed the CCCN Compendium of Classification Opinions. The reports of this Committee have the same relationship to those documents as do the Summary Records of the HSC to the legal texts of the HS. Since the ENs have no legal standing, these reports are not considered history for the HS. Customs considers them to be instructive in some instances.

The IHSC also considered a number of amendments to the HS. Because the IHSC had no defined standing, all of the IHSC decisions on amendments were referred to the HSC when the Convention came into force. Therefore, for some of the proposed amendments to the HS, background information can be found in the reports of the IHSC.

Report of the HSC After 1/1/88

The Convention went into force on January 1, 1988, and sessions thereafter are reported in Reports of the Harmonized System Committee. The first session was held in April 1988. Decisions of this committee are advice and guides to the interpretation of the HS. None of these decisions are binding, but Customs considers that they often provide valuable insight into how the HSC views certain provisions.

In rendering its decisions, the HSC also usually decides whether the decision merits an amendment to the ENs, the issuance of a classification opinion to be added to the Compendium, or to merely report the decision in the report of the session. If the decision results in amendment of the EN or goes into the Compendium, it, then, should receive considerable weight. As Congress made clear, however, the decision should not be treated as dispositive.

Decisions of the HSC that are merely given in the report should be given little weight.

Decisions to amend the HS itself need to go through the amendment procedure provided in the Convention. They require domestic legislation to go into effect in the United States.

Nomenclature Committee Reports

Customs is frequently asked to consider reports of the Nomenclature Committee. They carry virtually no weight. Decisions of the Nomenclature Committee cannot imply an intent on the HSC. They are two separate committees, differently constituted, and set up for different purposes.

Normally, the HSC received reports from the Nomenclature Committee without comment. When the HSC adopted an opinion or decision of the Nomenclature Committee it was specifically noted in the Summary Record.

When the HS was drafted it was decided to prepare an entirely new convention to implement it. It was the intention of the HSC to start anew; to have a new convention unencumbered by the many years of action by the Nomenclature Committee. Although the HS is primarily based on the CCCN, it is a new and different nomenclature with a convention that provides for substantial difference in its voting membership. Customs finds that there is no reason to believe that questions decided by the Nomenclature Committee would produce the same result in the HSC.

Working Documents

Customs calls "working documents" those documents issued by the Nomenclature and Classification Directorate of the CCC. These are the documents that form the basis for discussions in HSC sessions. They carry virtually no weight in interpreting the system. Working documents usually consist of commentary by delegations on questions before the Committee, commentary by the Secretariat on various drafts and proposals, commentary by the Secretariat on the comments made by delegations, and other material designed to frame the question the HSC is to discuss and to stimulate the discussion. Because it is preliminary material, none of it reflects the intent of the HSC.

The working documents are sometimes interesting because they contain more detailed descriptions of the goods under consideration and they sometimes contain the rationale for certain positions.

Rulings of Other Countries

The General Rules for the Interpretation of the Harmonized System, the Section and Chapter Notes and the first six digits of the Harmonized System constitute the international nomenclature. Therefore, in principle, all Contracting Parties to the Convention should give the same classification to identical merchandise through the six-digit subheading level. In this regard, classification rulings from other Customs administrations are sometimes submitted to Customs with a ruling request as evidence of how similar merchandise has been classified under the HS by that country.

Customs is not bound to abide by another country's rulings. The foreign ruling may have been subject to political realities or domestic regulations which are different from our own. The merchandise at issue in our ruling may not be identical to that in the foreign ruling. In either case, the foreign ruling is unlikely to describe fully the context in which it was issued. Therefore, at best, the foreign ruling is merely instructive of how others may classify like goods.

Position Papers

Prior to each session of the HSC, Customs, the International Trade Commission and the Bureau of the Census prepare position papers to reflect the position to be taken by the U.S. delegation at the session. These documents in no way reflect the position of Customs in the interpretation of the HTS. Position papers are guides for the delegation in the context of the HSC session; they are essentially negotiating positions. They are mentioned here because some position papers have received some circulation and have been cited in support of a classification; they have no value whatever for such purposes.

Summary

Customs is charged with the interpretation of the HTS and not, as such, of the HS.

Customs concern in looking at documents is to find the scope of headings and subheadings of the HTS.

As indicated by Congress, Customs will give considerable weight to Explanatory Notes and the Compendium of Classification Opinions because they are the official interpretation of the HS, but they shall not be treated as dispositive.

When it is necessary to determine the intent of the HSC, Customs will look to the Reports and Summary Records of the HSC.

Other documentation may be consulted for information purposes only.

Approved: August 16, 1989.

D. Lynn Gordon,

Assistant Commissioner, Commercial Operations.

Sunshine Act Meetings

Federal Register
Vol. 54, No. 162
Wednesday, August 23, 1989

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

FEDERAL MINE SAFETY AND HEALTH REVIEW COMMISSION

August 17, 1989.

TIME AND DATE: 10:00 a.m., Thursday, August 24, 1989.

PLACE: Room 600, 1730 K Street, NW., Washington, DC.

STATUS: Open.

MATTERS TO BE CONSIDERED: The Commission will consider and act upon the following:

1. *Secretary of Labor, MSHA* v. *Garden Creek Pocahontas Co.*, Docket No. VA 88-9, etc. (Issues include whether certain injuries were "occupational injuries" required to be reported to MSHA pursuant to 30 CFR 50.20(a).)

STATUS: Closed (Pursuant to 5 U.S.C. 552b(c)(10))

The meeting will be closed after discussion of the above.

The Commission will continue its consideration of the following:

2. *Westwood Energy Properties*, Docket No. PENN 88-42-R. (Issues include whether Secretary has jurisdiction under the Mine Act to inspect operations involving a culm bank at Westwood's power plant.)

3. *FMC Wyoming Corporation*, Docket No. WEST 88-43-RM, etc. (Issues include whether FMC Wyoming's violation of 30 CFR 57.5002 was a significant and substantial contribution to a mine health hazard and the result of FMC's unwarrantable failure to comply, and whether FMC violated 30 CFR 57.18002.)

Any person intending to attend the open portion of this meeting who requires special accessibility features and/or auxiliary aids, such as sign language interpreters, must inform the Commission in advance of those needs. Subject to 29 CFR 2706.150(a)(3) and 2706.160(d).

CONTACT PERSON FOR MORE INFO: Jean Ellen, (202) 653-5629/(202) 708-9300 for TDD Relay.

Part II

Office of Personnel Management

Department of Agriculture; Proposed Demonstration Project; Notice

OFFICE OF PERSONNEL MANAGEMENT

Proposed Demonstration Project; Department of Agriculture

AGENCY: Office of Personnel Management.

ACTION: Notice of a proposed demonstration project.

SUMMARY: Title VI of the Civil Service Reform Act authorizes the Office of Personnel Management (OPM) to conduct demonstration projects which experiment with new and different personnel management concepts to determine whether such changes in personnel policy or procedure would result in improved Federal personnel management. This notice meets the legal requirement under Title VI that OPM publish a project plan in the **Federal Register** before conducting, or entering into any contract or agreement to conduct, a demonstration project.

DATES: *Comment date:* To be considered, written comments must be received on or before October 23, 1989. *Hearing date:* A public hearing will be held on the proposed plan on October 18, 1989, at the Jefferson Auditorium, U.S. Department of Agriculture, South Building, 14th and Independence Avenue SW., Washington, DC, beginning at 10:00 a.m.

ADDRESSES: Comment address: Written comments may be addressed to Donna Beecher, Assistant Director for Systems Innovation and Simplification, U.S. Office of Personnel Management, 1900 E Street NW., Room 7638, Washington, DC 20415. Public hearing address: Jefferson Auditorium, U.S. Department of Agriculture, South Building, 14th and Independence Avenue SW., Washington, DC.

FOR FURTHER INFORMATION CONTACT: (1) On proposed demonstration project and public hearing: Mary Ellen Recchia, U.S. Department of Agriculture, (202) 447–8580; (2) on proposed demonstration project, Paul R. Thompson, Office of Personnel Management, (202) 632–6164.

SUPPLEMENTARY INFORMATION: On proposed demonstration project: the Department of Agriculture has submitted a proposed demonstration project for consideration under chapter 47 of title 5, U.S. Code entitled "The U.S. Department of Agriculture Demonstration Project."

The purpose of the project is to demonstrate a flexible and responsive staffing system which will permit managers to attain a quality workforce reflective of society. To this end, the demonstration project tests four major innovations in current personnel policy and practice:

(1) Delegation of authority for the day-to-day recruitment and hiring process to the agency for internal redelegation, as appropriate;

(2) A streamlined candidate assessment and selection process, based on greater delegation of direct hire authority and replacement of numerical ratings with broad quality groupings;

(3) Recruitment incentives, including bonuses and relocation expenses, to attract candidates to hard-to-fill positions; and

(4) Establishment of a 2–3 year provisional appointment, to provide greater opportunity to evaluate employee performance before granting career status.

The demonstation project will cover up to 5000 newly hired employees, at any given time, at over 130 locations within the Forest Service and the Agricultural Research Service. Covered employees will represent all occupational groups and grade levels (excluding SES) at the project sites, including both General Schedule (GS) and Federal Wage System (FWS) employees.

On public hearing: A public hearing will be conducted by OPM at the Department of Agriculture in Washington, DC on October 18, 1989. At this time, interested persons or organizations may present their written or oral comments on the proposed demonstration project. The hearing will be informal. However, anyone wishing to testify should contact the person listed under "**FOR FURTHER INFORMATION CONTACT**," so that OPM can plan the hearing and provide sufficient time for all interested persons and organizations to be heard. Priority will be given to those on the schedule, with others speaking in any remaining available time. Each speaker's presentation will be limited to 10 minutes. The hearing record will be left open two weeks, until November 1, 1989, to receive additional written data, comments, and arguments from hearing participants.

U.S. Office of Personnel Management.

Constance B. Newman,

Director.

The plan for the proposed demonstration project reads as follows:

U.S. Department of Agriculture, Demonstration Project—Project Plan

I. Executive Summary

A. Purpose

The purpose of this demonstration project is to develop a recruitment and selection program for new hires that is flexible and responsive to local recruitment needs and which will facilitate the attainment of a quality workforce reflective of society.

In support of this goal, the following project objectives have been identified:

(1) Increase the flexibility and responsiveness of the recruitment and hiring system.

(2) Increase the reliability of the decision to grant career tenure.

During the course of this project, the following interventions will be tested:

(a) Decentralize the decision to authorize direct hire in shortage categories.

(b) Establish an alternative candidate assessment method which uses categorical grouping instead of numeric score.

(c) Provide monetary incentives for recruitment purposes.

(d) Reimburse travel and transportation expenses beyond those currently authorized for travel to first post of duty.

(e) Make initial appointments on a provisional basis, with career tenure earned through on-the-job performance.

B. Benefits To Be Derived From the Project

The combined changes are expected to simplify the hiring system, and to improve the ability of the agency to compete for quality candidates, reflective of society.

C. Project Administration

The project is a joint effort on the part of the U.S. Department of Agriculture Office of Personnel, the Agricultural Research Service, and the Forest Service. The project will be guided by an Executive Steering Committee and conducted through a project task group. Representatives from the Office of

Personnel, the Agricultural Research Service, and the Forest Service, will serve on both the steering committee and the task group, reflecting the joint nature of the project.

D. Participating Organizations

The demonstration project will be conducted entirely within the Agricultural Research Service and the Forest Service of the U.S. Department of Agriculture, at selected experimental and comparison sites, which have been listed in Appendix B. These sites may be subject to change prior to final implementation.

E. Types and Numbers of Participating Employees

Demonstration project coverage is limited to 500 employees hired under project provisions and currently serving under a provisional appointment or receiving a recruitment incentive. Since the project covers only prospective new hires, the occupational mix of participating employees cannot be identified precisely. Based on historical staffing patterns at the participating sites, it is anticipated that the annual breakdown of new hires will include the following approximate percentages for each of the participating agencies:

Agricultural Research Service: 17% scientific, 9% professional, 11% administrative, 36% technical, and 27% clerical and wage grade.

Forest Service: 2% scientific, 18% professional, 8% administrative, 43% technical, and 29% clerical and wage grade.

The most populous occupational series at the Agricultural Research Service include biological technician, entomologist, plant physiologist, and chemist. The most populous occupational series at the Forest Service include forester, forestry technician, engineering technician, and civil engineer.

F. Labor Participation

Agricultural Research Service employees are represented at various experimental locations by the American Federation of Government Employees (AFGE) and the National Federation of Federal Employees (NFFE); Forest Service employees are also represented by both AFGE and NFFE and by the National Association of Government Employees (NAGE).

Briefings will be conducted by both agencies during the developmental stage of the project. In accordance with 5 U.S.C. 4703 (f) and (g), the agencies will consult and negotiate, as appropriate, with employees and labor organizations before publication of the final project plan.

G. Methodology

This proposal provides a detailed description of the following interventions, or personnel system changes, to be tested and evaluated during the life of the project: (1) Delegated direct hire authority; (2) an alternative candidate assessment method; (3) recruitment incentives; (4) payment of travel and transportation expenses; and (5) a provisional appointment system.

H. Training

A comprehensive training effort will be accomplished prior to project implementation in order to ensure that project interventions are implemented as originally conceived.

I. Evaluation Plan

A preliminary evaluation plan has been designed for the purpose of measuring the outcomes expected to result from project implementation. The scope of the evaluation plan is intended to provide sufficient data to evaluate the Federal sector-wide applicability of each of the interventions.

The evaluation model is part of a quasi-experimental design using experimental and comparison groups matched for characteristics but not necessarily for population numbers. The model will provide statistical and historical data regarding the effects attributable to the experiemental treatments. Baseline data collection will occur pre-treatment, and data will be collected during the post-treatment period for comparison and analysis.

II. Introduction

A. Purpose

The project was conceived in response to managerial concern with the adequacy of the present recruiting and hiring system in light of the predicted recruitment challenges of the future, which have been described in recent publications including Workforce 2000, and Civil Service 2000, which were prepared by the Hudson Institute for the Department of Labor and The Office of Personnel Management, respectively. The purpose of this project is to develop and test an alternative system which will enable Federal managers to meet these challenges.

Workforce 2000 outlines an employment future characterized by a slowly growing population, which will result in slower labor force growth. This, in turn, is expected to result in tighter labor markets, with fewer well-educated workers available, and increased competition among employers for available candidates.

Civil Service 2000 provides the following analysis of the impact of these trends within the Federal sector: "Because these tight labor markets are likely to develop in different ways in different states and to shift quickly in response to economic and population changes, it is essential to decentralize responsibility and to provide more flexibility in hiring and personnel management than is characteristic of the current system. Federal employers in locally tight or expensive labor markets must be able to compete for workers on a par with private employers if they are to continue to fulfill their responsibilities" (page 27).

This publication goes on to describe a slowly emerging crisis of competence, as labor markets become tighter and it becomes increasingly more difficult to hire qualified workers. The competition for qualified workers will only intensify, for coupled with slower labor force growth is the fact that substantial numbers of new entrants to the labor market will have lower levels of competence in language, math, and other basic skills. The inability of Federal agencies to adapt as easily as private employers to fluctuating labor market conditions means that,

"* * * some of them will be unable to compete successfully with the private sector, and may find it much harder to recruit and keep good employees" (page 30).

It is imperative that Federal managers and others in positions of responsibility prepare to meet the recruitment challenges of the future. This project was developed as part of a continuing effort to anticipate and successfully confront these challenges. The strategies and recommendations provided by Workforce 2000, Civil Service 2000, and other publications provided guidance and direction as we developed this project. It is our intention to evaluate the demonstration project in order to determine the extent to which each intervention impacts the recruitment and hiring program.

It is anticipated that an alternative recruitment and hiring system, offering expanded incentives for recruitment purposes, will enable Federal managers to more readily adapt to fluctuating labor market conditions. In addition, the level of performance demonstrated by those hired under the new system is expected to be equal to the level of performance demonstrated by employees hired through traditional methods.

B. Problems With the Present System

The current method of employee intake, through centralized testing, assumes a surplus of applicants for available positions within the Federal sector, with a concomitant emphasis on the stratification process required to provide manageable rosters of best qualified candidates from among the numerous applicants for a given position vacancy.

In reality, however, the manner in which changing demographics have fundamentally altered the American labor force has been well documented in the publications cited above. As the population ages and technological innovation accelerates, shortages of qualified candidates either already exist or are predicted to develop in a wide variety of occupations. Trend lines indicate an exacerbation of this problem. Simply stated, the supply/demand curve for labor resources no longer reflects an excess of supply but, rather, an almost insatiable demand for well-trained, quality candidates.

For example, the Forest Service has been recruiting candidates with backgrounds in engineering research combined with a knowledge of wood technology. These candidates are in exceedingly short supply; the few meeting these criteria are found either in academia, or conducting research in private wood technology firms. Experience has shown that potential candidates have been lost to competing employers who can more quickly make position offers and establish reporting dates.

As another example, the Agricultural Research Service has advertised a GS-13 Plant Geneticist position at a remote location on two separate occasions during the past year and received only two applications. Neither applicant possessed the highly specialized skills necessary to perform the duties of the position. The availability of recruitment incentives might have enhanced the ability of the agency to attract qualified candidates to this location.

C. Benefits To Be Derived From the Project

The demonstration system is expected to simplify the selection and appointment of candidates to the Federal service. Additionally, the system is expected to improve the ability of agencies to compete with other public employers and private industry for available quality candidates.

D. Participating Organizations

Agricultural Research Service and Forest Service experimental and comparison sites are identified in Appendix B. These sites may be subject to change prior to final implementation.

E. Types and Numbers of Participating Employees

Demonstration project coverage is limited to permanent new hires receiving provisional appointment to the competitive service at the experimental sites identified in Appendix B whose appointments fall within the following categories: First permanent competitive Federal appointment, and appointments currently made under Schedule B PAC or future equivalent.

Excluded from coverage are candidates who transfer from other Federal agencies; candidates whose initial appointments confer noncompetitive conversion eligibility (other than Schedule B PAC), e.g., appointments through cooperative education programs, Veterans Readjustment appointments, etc.; and candidates for positions for which direct hire authorized by OPM is in effect at any time during the life of the project.

Candidates with reinstatement eligibility as currently defined by regulation may continue to be noncompetitively appointed under the reinstatement authority. At the discretion of the selecting official, however, these candidates as well as candidates eligible for any of the appointment types listed under exclusions, above, may be considered for competitive appointment under the demonstration project authority and all provisions pertaining thereto.

Candidates for appointment to the Senior Executive Service or under the Executive Assignment System are excluded from coverage.

Demonstration project coverage is extended to General Schedule (GS), Federal Wage System (FWS), and Performance Management and Recognition System (PMRS) employees, regardless of occupational series.

The rate at which the number of accessions approaches the regulatory limitation of 5,000 employees to be covered under this authority will be centrally monitored throughout the test sites.

III. Methodology

A. Objective #1: Increase the Flexibility and Responsivenss of the Recruitment and Hiring System

1. Interventions

(a) Decentralize the decision to authorize direct hire in shortage categories.

(b) Establish an alternative candidate assessment method which uses categorical grouping instead of numeric score.

(c) Provide monetary incentives for recruitment purposes.

(d) Reimburse travel and transportation expenses beyond those currently authorized for travel to first post of duty.

Interventions (a) and (b), and (c) and (d), will be discussed separately in the sections that follow.

2. Description of Interventions (a) and (b)

A. Introduction. Civil Service 2000 recommends a number of strategies for attracting, hiring, training, motivating, and keeping talented people. Chief among these is the following: "Decentralize authority and responsibility for operations and hiring * * * Standardized recruiting, testing, competition, classification, and pay should give way to decentralized personnel management, giving agency managers full responsibility not only for their missions, but for the human resources they need to accomplish them * * *" (page 32).

The concept of decentralized authority and full responsibility for human resources is fundamental to this project. The alternative system is founded upon the assumption that centralized registers no longer meet local hiring needs and that a level of qualifications can be established at which all candidates meeting this level are well qualified. Selection will be made from this group following the normal candidate evaluation process, which may include such additional measures as personal interview, reference checks, etc.

The experimental sites will have examining authority for all of their positions. The elimination of centralized registers which establish fine distinctions among candidates will be balanced by an increased emphasis on the responsibility and accountability of managers for ensuring that selection and advancement are determined on the basis of the ability, knowledge, and skills necessary to perform the duties of the position.

This system is expected to produce a workforce equal to that which has been obtained through traditional testing and examining, without compromising the merit system principles, outlined in 5 U.S.C. 2301, which stipulate that, "* * * Recruitment should be from qualified individuals from appropriate sources in an effort to achieve a workforce from all segments of society, and selection and advancement should be determined solely on the basis of relative ability,

knowledge, and skills, after fair and open competition which assures that all receive equal opportunity."

Fair and open competition will be provided by the proposed system as follows:

(1) All candidates (other than those eligible for appointment under the direct hire option) will be considered against the same job-related evaluation criteria for the purpose of placing candidates in the quality group.

(2) All candidates meeting these criteria will be available for selection, taking veterans preference into account. Candidates who do not meet these criteria are available for selection when there is an inadequate number of candidates in the quality group.

(3) Candidates will no longer be eliminated from consideration by the rule of three or point score ranking.

(4) Information regarding all vacancies to be filled under the demonstration project authority shall be made available to the appropriate State Employement Service offices and local Federal Job Information Centers.

Finally, recognizing the mandate contained in title 5, U.S. Code, that the work force be from all segments of society, and to the extent that the current system may be a barrier to proportional representation of protected groups, the alternative system will allow managers and supervisors more direct access to a candidate pool that is reflective of society.

b. Overview of Method. Candidates eligible for appointment under the demonstration project authority will be evaluated using the following method:

(1) Candidate's basic eligibility is determined using OPM Handbook X–118 or modified standard, as outlined below. Questions regarding a candidate's suitability or general fitness to perform the duties of the position may be resolved at this or at any stage prior to appointment.

(2) Candidates meeting basic eligibility requirements are then evaluated for eligibility under the direct hire option, which allows candidates in shortage categories to be directly appointed.

(3) All remaining candidates meeting basic eligibility requirements are evaluated against job-related evaluation criteria, outlined below, which measure above average educational achievement, quality experience, and high ability. Candidates meeting any one of these criteria are place in the quality group.

Selection will be made from the quality group, taking into account such factors as personal interview or reference check, etc. Candidates not meeting any of these criteria are in the eligible group, and may only be selected when there is an inadequate number of quality candidates available. Veterans preference will apply when selecting candidates from either group. The agency will justify the nonselection of preference eligibles.

c. Recruitment Methods and Sources. The agency will identify appropriate recruitment methods and sources in order to ensure that qualified candidates are available for consideration. Demonstration project implementation at experimental sites does not preclude the use of other available noncompetitive appointing authorities intended to facilitate access to particular candidates, e.g., disabled individuals, students eligible for cooperative education programs, etc. The continued use of these programs is encouraged in support of agency employment goals and objectives.

Appropriate recruitment methods and sources include those that are likely to yield candidates with knowledges, skills, or abilities sufficient to perform the duties of the position. Agencies will continue to utilize recruitment methods and sources which identify disabled individuals or members of protected groups.

As no specific waivers of law or regulation are required prior to the development of an effective recruitment strategy, agencies will explore the use of innovative or creative recruitment methods and sources in order to facilitate the attainment of a quality workforce, reflective of society. Towards this end, agencies will take advantage, to the extent necessary, of the full range of telecommunications, printed, and other media in order to reach a sufficient number of qualified candidates.

Recruitment and consideration of candidates under the demonstration project authority will be subject to the following requirements:

(1) Current law and regulation concerning the Reemployment Priority List (RPL), and Displaced Employee (DE) or other outplacement programs, will be observed. The agency is responsible for maintaining and following the regulations concerning the RPL as outlined in pertinent FPM and Departmental guidance. No part of these regulations is waived for the purpose of this project.

Additionally, agencies are responsible for contacting the appropriate OPM office concerning the referral of displaced employees prior to making competitive appointments under the demonstration project authority, and according bona fide consideration, as appropriate, to DE or other outplacement program eligibles.

(2) Information regarding all vacancies to be filled under the demonstration project authority regardless of source will be made available to the appropriate State Employment Service offices and local Federal Job Information Centers. Procedures for providing such notification will be established at the local level.

Recruitment sources may include, but are not limited to, such activities as attendance at a job fair, career day, or professional association meeting; preparation and distribution of a vacancy announcement; on-campus recruiting; or other focused recruitment effort, etc. Procedures for the acceptance of unsolicited or walk-in applications will be established at the local level.

d. Determination of Basic Eligibility. A determination regarding each candidate's basic eligibility for a particular position will be made utilizing the standard criteria.

No part of law or regulation concerning citizenship requirements, security investigations, or other suitability issues is waived under this authority. Additionally, the requirement to pass any pre-employment physical, drug screening, or other fitness for duty examination remains in effect.

The determination that a candidate meets experience or education requirements will be made using OPM Handbook X–118 or approved single-agency standards. Positive education, licensure, and professional certification requirements will remain in effect as currently reflected in the standards unless waived through some other authority.

Selective placement factors may be established when judged to be critical to successful job performance and will be communicated to all candidates for particular position vacancies. These must be met for basic eligibility.

Test requirements as outlined in X–118 or elsewhere, including minimum typing or stenography scores, are eliminated. Emphasis will instead be placed on the supervisor's assessment of the candidate's ability to do the work of the position. Supervisors may, however, continue to accept candidates' self-certification of typing or stenography proficiency when such documentation is necessary to perform an adequate assessment of basic eligibility.

Agencies are authorized to modify X–118 experience requirements (other than positive education, professional certification, or licensure requirements) when the candidate's background

---

includes experience which has provided

(2) Evaluation of Candidates in Non-

Applicants may not be appointed on

---

of education completed to the

requirements; therefore, modification of

2. Candidate has a grade point

includes experience which has provided the skills and abilities necessary for successful job performance. Agencies may not, however, require additional amounts of education or experience beyond those required by the standards, other than selective placement factors as indicated above.

The decision to modify X–118 experience requirements is discretionary on the part of the supervisor and is intended to provide management with a recruitment tool which will allow the consideration of candidates for whom X–118 might otherwise serve as a prima facie basis for exclusion. The opportunity to qualify under a modified standard, however, will be given to all candidates being considered in connection with a particular position vacancy.

Agencies may delegate the decision to use a modified standard to the lowest practicable level within the organization. The decision to modify X–118 requirements will be documented and placed on the right-hand or permanent side of the Official Personnel Folder.

e. *Candidate Evaluation.* (1) *Direct Hire of Individuals in Shortage Categories.* Candidates meeting basic eligibility requirements as outlined above, and who are in shortage categories as locally determined by the agency, may be directly appointed. Agency determination of shortage category will be made by applying the criteria in 5 CFR 572.301 or other factors which the agency has determined to be significant, and may be delegated to the lowest practicable level within the organization.

Agency determination of shortage category may include, but is not limited to, consideration of such factors as external or local labor market demands, extent or impact or prior recruitment efforts, critical or recurring need for particular knowledges or skills based on chronic shortages, turbulent state of the art, etc.

A determination by one agency that a shortage of eligibles exists for a particular title, series, grade, and geographical location does not require a like determination by any other agency. A determination made in connection with one specific vacancy does not establish a precedent in connection with future vacancies.

Agency determination of shortage category will be documented. The documentation supporting the decision to appoint an individual under this authority will be placed on the right-hand or permanent side of the Official Personnel Folder.

(2) Evaluation of Candidates in Non-Shortage Categories. Candidates meeting basic eligibility requirements as outlined above, but who are not eligible for direct hire as outlined in the section immediately preceding, may be considered for appointment against the job-related evalution criteria outlined below under above average educational achievement, quality experience, and high ability.

All candidates, to the extent necessary, will be evaluated against each of these criteria; that is, no candidate will be eliminated from the quality group without being considered under the three criteria outlined under (a), (b), and (c), below.

It is hypothesized that all employees hired through this system are equally likely to demonstrate successful job performance, regardless of the criterion under which the candidate qualifies.

Minimum grade point averages established under above average educational achievement or high ability, below, may be adjusted by mutual agreement between the participating agencies and OPM.

(a) Candidates demonstrating above average educational achievement under any of the options outlined below are eligible for the quality category:

1. Candidate has completed all the requirements for, or is a candidate, within nine months, for a high school diploma, or a degree from an accredited junior college, college, university, or other baccalaureate institution, provided he or she meets one of the requirements listed below (b. & c. apply to post-high school only):

a. Candidate's grade point average is at least 2.70 on a 4.0 scale or equivalent. This is either the average of all completed courses at the time of application, or the average of all courses completed during the last two years of a high school, college, or other four year program, in which case verification that the required average was maintained is prerequisite to appointment.

b. Candidate's grade point average in the major field of study is at least 3.0 on a 4.0 scale or equivalent. This is either the average of all completed courses at the time of application, or the average of all courses completed during the last two years of a four year curriculum, in which case verification that the required average was maintained is prerequisite to appointment.

c. Candidate is a member of one of the national honorary scholastic societies meeting the minimum requirements of the Association of College Honor Societies, other than freshman honor societies.

Applicants may not be appointed on the basis of overall grade point average if more than 10 percent of their grades were based on pass/fail or similar systems rather than on traditional grading systems. Such applicants may claim credit under this provision only on the basis of national honorary society membership.

Candidates are required to submit an official transcript or similar correspondence documenting grade point average in order to establish eligibility for appointment based on above average educational achievement. In the event that grade point average has not been computed by the educational institution, an official transcript may provide the basis for manual computation. Transfer credits, foreign credits, and credits from more than one educational institution must be evaluated and included to the extent that they provided the basis for awarding the degree or the certificate.

Eligibility under this provision is awarded to candidates who have completed or who are about to complete a formal educational program culminating in the granting of a degree. Once a candidate has completed a qualifying period of education as outlined above, leading to the completion of a degree or a diploma, and during which a qualifying grade point average was maintained, he or she is eligible for the quality category. Additional course work has no impact on eligibility, once established.

For example, a candidate qualifying on the basis of high school grade point average retains that eligibility even though he or she may go on to complete several more courses as part of a continuing education program. The additional course work does not become part of the overall grade point average computation. However, unsuccessfully completed course work beyond the high school level should be factored into the decision to appoint candidates to administrative, management, specialist, or other positions for which such education would normally be qualifying in lieu of experience.

2. Candidate has completed all requirements for an advanced degree from an accredited institution, appropriate to the position being filled. An advanced degree is defined as beyond the baccalaureate , e.g., D.V.M., M.A., Ph.D., etc. Candidate must provide certification of completion of all degree requirements, e.g., thesis, dissertation, etc.

Evaluation of candidates under this provision will take into account the relevancy of both the type *and* the level

of education completed to the knowledges, skills, and abilities required to perform the duties of the position.

Candidates are required to submit an official transcript or similar correspondence documenting actual course work, and grade point average, if necessary, in order to establish eligibility for appointment based on above average educational achievement. In the event that grade point average has not been computed by the educational institution, an official transcript may provide the basis for manual computation. Transfer credits, foreign credits, and credits from more than one educational institution must be evaluated and included to the extent that they provided the basis for awarding the degree.

Inasmuch as eligibility under this provision requires completion of a degree or a diploma, candidates who have completed either without meeting any of the criteria outlined above, or who have not completed any type of degree or diploma, will be evaluated under the criteria addressing experience and ability outlined in (b) and (c), below.

(b) Candidates who have quality experience in the field are eligible for the quality category.

Quality experience in the field is defined as directly related experience, and is differentiated from the specialized experience requirements outlined in X–118 to the extent that it is directly related to the position to be filled, was gained in the same functional specialization, and has clearly equipped the candidate with superior ability to perform the duties and responsibilities of the position. The directly related experience must have been at an acceptable level of competence in order to qualify for appointment under this provision.

OPM's generic standard for two-grade interval professional positions defines specialized experience as that, "... which is in or related to the line of work of the position to be filled and which has equipped the applicant with the specific knowledge, skills, and abilities to successfully perform the duties of the position." Similar language also appears in the other generic standards. The intent of the "quality experience" provision is to go beyond experience which is simply related to the line of work and focus upon directly related experience in the same field.

Assessment of individual candidates under this provision will take into account the extent of the candidate's experience beyond that which is necessary to meet basic eligibility requirements; therefore, modification of X–118 qualification requirements is not an option for these candidates.

Candidates currently employed in the same or a directly related occupation, either within the agency under temporary or excepted service appointments, or outside the agency in State or local government, private industry or academia, are likely to qualify for provisional appointment leading to career status under this authority. For example, candidates employed in one of the private forestry operations located in the Pacific Northwest may possess experience that is directly related to one of the specializations covered by the forester or forestry technician standard.

Candidates who have made an outstanding contribution to the state of the art or to the advancement of knowledge in a directly related field may also qualify under this provision. Evaluation of these candidates will be performed by an agency subject matter expert and will focus upon extraordinary professional achievement, beyond normal professional competency, which may include, but is not limited to, such accomplishments as the publication of groundbreaking experimental results, authorship of seminal works in the field, or other noteworthy achievements or credentials.

Documentation regarding the extent to which the candidate's experience exceeds that which is required for basic eligibility, or documentation of extraordinary professional achievement, will be placed on the right-hand or permanent side of the Official Personnel Folder.

(c) Candidates who demonstrate high ability to do the work of the position are eligible for the quality category.

The intent of this provision is to allow candidates, who do not meet criteria established for above average educational achievement or quality experience, to be considered on the basis of having demonstrated high ability through some other means.

Assessment of the candidate's high ability will utilize the following measures:

1. Candidate has received a certificate or other indicator of successful completion of a trade or vocational program that is directly related to the work of the position to be filled, for positions for which this type of education has been determined to be appropriate. Candidates must also meet applicable experience requirements; that is, program completion is not a substitute for, but clearly exceeds, basic eligibility requirements.

2. Candidate has a grade point average of at least 2.7 on a 4-point scale, or equivalent, for at least 24 semester hours, or equivalent, of course work above the high school level that is directly related to the position to be filled.

f. *Grouping of Eligibles.* Candidates who have been evaluated against the criteria outlined above are grouped as follows:

(1) Candidates meeting any one of the criteria outlined above are placed in the quality group.

(2) Candidates who do not meet any of these criteria are placed in the eligible group.

(3) Within each group, veterans will be listed ahead of nonveterans. In addition, for positions other than scientific and professional at GS–9 and above, preference eligibles with a compensable service-connected disability of 10 percent or more who meet basic qualifications requirements will be listed at the top of the quality group.

The quality group and/or the eligible group for a particular position vacancy may include candidates from one or more sources, provided that candidates from the State Employment Service or Federal Job Information Center are included, as appropriate.

g. *Selection and Appointment.* Selection will be made from among candidates in the quality group. When an inadequate number of candidates are in the quality group, all qualified candidates from all sources will be listed as a single group.

In making selections, veterans will be given preference over nonveterans. The provisions granting extra points for veterans and the rule of three (i.e., selection from the top three) will not be followed because candidates will not be assigned points or ranked numerically within a group. However, a preference eligible may not be passed over to select a nonpreference eligible, except under formal objection procedures. The agency will have authority to act on proposals to pass over preference eligibles, including compensably disabled veterans, for suitability, qualifications, and other disqualifying reasons. To do so, the agency will follow the procedures in title 5, United States Code.

Candidates selected under the demonstration project authority will receive provisional appointments and may be eligible for recruitment incentives, subject to the requirements outlined below.

---

3. Description of Interventions (c) and (d)

a. Introduction. Incentives will be authorized in order to positively impact the complete employment and compensation package as part of an effort to enhance the ability of the agency to compete with other employers for individuals with desired skills. Subject to OPM approval, the agency may decide to identify additional incentives under this authority at a future date. Any such additions will be published in the **Federal Register**.

b. Method. Recruitment incentives will be authorized to encourage individuals to enter as well as to remain with the Federal service. These will include cash payments and reimbursement for travel and transportation expenses, any combination of which may be authorized for an individual candidate.

The decision to authorize an incentive will be based upon such market factors as salary comparability and salary offer issues; relocation considerations; programmatic urgency; emerging technologies; unique qualifications; and shortage categories.

(1) Cash Payments. Cash payments as a percentage of salary are authorized for recruitment purposes. The amount of a cash payment will be firmly established prior to entrance on duty, and is not considered to be a part of an individual's basic pay.

Cash payments may be made either in a lump sum upon entrance on duty, incrementally over a period not to exceed 36 months, or deferred until the completion of a specified period, not to exceed 36 months.

(2) Travel and Transportation Expenses. The authority to reimburse new appointees for travel and transporation expenses is expanded to include all of the expenses authorized for transferred employees as outlined in 5 U.S.C. 5724 and 5724a, 5724b, and 5724c. This includes payment to new appointees for such expenses as house hunting trips, sale of residence, purchase of new residence, access to relocation services, and other services normally available only to transferred employees.

(3) Statement of Conditions of Employment. A statement summarizing conditions of employment under which a recruitment incentive will be authorized will be prepared in each case, and will address the following:

(a) Type of incentive(s)
1. Cash payment
2. Travel and transportation expenses
(b) Total authorized percentage of salary
(c) Method and schedule for payment
1. Cash payment
2. Intermittent over a period NTE 36 methods
3. Deferred until the end of a specified period, NTE 36 months
(d) Service requirement
1. Time: 0 to 36 months
2. Location in which to be served
a. Federal service
b. Hiring agency or subdivision thereof
(e) Conditions for repayment or cessation of payment
1. Repayment of lump sum not required
2. Intermittent payment ceases, repayment not required
3. Full repayment of lump sum or travel required

(4) Failure to Meet Service Requirement. Repayment of incentives is required if the employee is separated from the location identified under conditions of employment prior to fulfilling the service requirement, unless the reasons for the separation are beyond the control of the employee and are acceptable to the agency. Repayment is required in all cases where the employee is separated for misconduct. Actions to collect repayment may be terminated under appropriate circumstances and in accordance with 5 U.S.C. 5584.

B. Objective #2: Increase the reliability of the decision to grant career tenure.

1. Intevention

Make initial appointments on a provisional basis, with career tenure earned through on-the-job peformance.

2. Introduction

The purpose of the provisional appointment is to allow managers an adequate period of time within which to assess job performance, and determine whether or not to continue the employment of the individual. The provisional appointment system replaces the current three-tier system of initial probationary period, career-conditional status, and career tenure, with a two-tiered system which effectively extends the maximum length of the probationary period, and which provides for conversion to career tenure.

The provisional appointment system will change the timeframes within which new hires are awarded career tenure. The formal processes required to effect these changes will be incorporated, to the maximum extent possible, into established processes and systems within the agency.

Aside from extending the time period, all other features of the current probationary period are retained, including the potential to remove an employee without providing the full substantive and procedural rights afforded a career employee. This creates a clear distinction between provisional and career status. Under the experimental system the new employee's status remains provisional until his or her performance and conduct have been evaluated over an appropriate period of time.

3. Method

Candidates hired under the demonstration project authority, as described under section II. E., above, Types and Numbers of Participating Employees, will be given provisional appointments to the competitive service as follows:

Scientific positions: Three year provisional appointment.

All others: Two year provisional appointment.

To ensure that supervisors have sufficient time to make tenure decisions, provisional appointment may be extended by the amount of time spent in non-duty status, except when protected by law, e.g., credit is given for nonpay time due to compensable injury and military service.

For the purpose of this subsection, provisional appointment means a permanent appointment, to the competitive service, which provides for conversion to career tenure. Scientific positions are those which are covered under the Research Grade Evaluation Guide.

A provisional appointee to the competitive service is given the full range of benefits provided to career-conditional employees under the current system, i.e., retirement, insurance, leave, within grade increases, etc. Provisional appointees are assigned to tenure group II.

Provisional appointees are eligible for training opportunities and position changes, subject to the time after competitive appointment requirement, in the same manner as career and career-conditional employees. Provisional appointment is portable both within and between ARS and FS experimental sites. Provisional appointment is not portable to non-experimental sites or to non-participating agencies. On position change within USDA but outside the experimental sites, an employee is converted to career conditional status. A discussion of probation and tenure follows in the next paragraph. Provisional appointees who have already been converted to career tenure remain in tenure group I upon position change, regardless of the length of time spent under provisional appointment.

Provisional appointees are eligible for transfer to other Federal agencies as career conditional employees. In such conversions both within and outside of USDA, employees must serve any remaining balance of the one-year probationary period. The three year period counting toward career tenure begins with the provisional appointment. Provisional appointees who have already been converted to career tenure transfer as career employees, tenure group I, regardless of the length of time served under provisional appointment.

Provisional appointment confers reinstatement eligibility identical to that conferred through career conditional employment, as outlined in 5 CFR 315.401. A provisional employee reinstated to a demonstration project test site begins a new provisional appointment. A provisional employee reinstated to either a comparison site, or to a non-participating agency, becomes a career conditional employee and must serve a one-year probationary period if the employee has not completed one year of satisfactory service under provisional appointment. In both cases, reinstatement is to tenure group II. Provisional appointees who have already been converted to career tenure, and preference eligibles, have unlimited reinstatement eligibility, regardless of the length of time served under provisional appointment.

Provisional appointees will have restoration rights under 5 CFR part 353 following military service or a job-related injury. They will not be eligible, however, for the reemployment rights in 5 CFR part 352 based on other service such as with an international organization, as these rights are generally discretionary with the agency head or reserved for non-probationers. Therefore, exclusion of provisional appointees is consistent with existing policies.

Completion of provisional appointment as a supervisior or manager fulfills the requirement to complete a supervisory probationary period.

Any employee appointed prior to the implementation date of the project will not be affected. Present performance management systems will not be affected, as performance standards must still be established against which employees will continue to be rated annually.

If the agency decides to separate a provisional employee for non-RIF reasons, the agency shall follow the current procedures for separating probationary employees, as outlined in 5 CFR 315.804, 315.805, and 315.806. 5 CFR parts 432 and 752 do not apply to an employee under a provisional appointment, regardless of the employee's length of service.

If the agency must consider the employee for release from the competitive level under reduction in force procedures as outlined in FPM Chapter 351, provisional appointees are in tenure group II, subgroup AD, A, or B, as appropriate. They will be eligible for retained grade and pay and severance pay, as well as for the Displaced Employee Program and the Reemployment Priority List, if requirements unrelated to appointment type are met. Former provisional appointees who have been converted to career tenure are in tenure group I, regardless of the length of provisional appointment.

On the basis of exceptional performance, the agency may choose to convert the employee to a career appointment prior to the conclusion of the two or three year provisional appointment. If the supervisor decides to convert the employee to career tenure at an earlier date, documentation must be provided in support of this decision. This documentation should address the employee's exceptional performance, along with any exceptional skills or abilities demonstrated by the employee. However, the employee must serve at least one year before conversion to career tenure under provisional appointment.

The decision to convert an employee may take into account such factors as performance, suitability, conduct, aptitude, etc., as outlined in FPM Chapter 315, Subchapter 8. The decision to convert an employee in a scientific position will also take into account the documentation of his or her research findings. Employees must be rated at least fully successful in order to be converted.

Four months prior to the conclusion of the provisional appointment, the supervisor will be asked for a decision to either convert the employee to career tenure, or to separate the employee. This does not preclude the agency from separating a provisional employee any time prior to the conclusion of the provisional appointment.

IV. Training

A coordinated and extensive training effort, for managers and personnelists at both experimental and comparison sites, will be conducted prior to project implementation. The purpose of the training is to ensure that the experimental interventions are implemented as originally conceived, and that the intent of all interventions, policies, and procedures developed in connection with the project are clearly communicated to all managers, supervisors, employees, and others affected by project implementation.

Training will be conducted prior to implementation to ensure that managers and personnelists understand not only the internal and standard operating procedures established in connection with the project but also the expanded role of the personnelist in providing management advisory services.

Training and orientation will include the following major elements:

1. An in-depth description of each of the project interventions, including philosophy and expected effects;
2. A detailed outline of the policies and procedures established in support of each intervention; and,
3. An overview of the project evaluation effort, including the methods through which data collection will be accomplished.

To the extent that the continuing success of the project is a function of the adequacy of the training effort, periodic refresher training sessions are planned for the purpose of ensuring that experimental interventions continue to be implemented as originally conceived. As the system was designed to increase managerial and supervisory accountability for the success of the recruitment and hiring program, a training effort particularly directed at managers and supervisors is critical to implementation.

More specifically focused and ad hoc training modules will be developed as additional training needs are identified throughout the life of the project.

V. Cost/Benefit Analysis

The experimental modifications are expected to be budget neutral. Current decentralized policies and procedures regarding the expenditure of agency funds will be retained. No additional funding will be requested; all costs will be charged to available funds through existing appropriations, including those incurred in the areas of project development, training, and project evaluation.

No additional costs are expected to accrue to the implementation of the alternative recruitment and hiring, the provisional appointment, or the recruitment incentive system. In fact, the alternative recruitment and hiring system is expected to reduce the number of staff hours expended testing, examining, and rating applicants, as well as to alleviate some of the administrative burden generated in support of these activities.

either be modified or aborted. This is to

otherwise would create inadequate

TABLE 1.—EXPECTED EFFECTS, MEASURES, AND DATA SOURCES—Continued

VI. Duration of the Project

The project will terminate at or before the end of the five year period beginning on the date on which the project takes effect, unless otherwise extended or terminated at an earlier date in accordance with 5 U.S.C. 4703(e).

VII. Evaluation Plan

A. Introduction

An evaluation methodology is established in order to comply with the requirement that the demonstration project be evaluated in terms of the impact of project results against stated objectives as well as to determine whether or not permanent changes in law and/or regulation should be considered or proposed. The agency plans to enter into an agreement or contract with a qualified third party, to be identified at a later date, for the purpose of conducting the evaluation.

B. Methodology

While the formal evaluation will be conducted by an independent external party, it is expected to follow a modified Action Research Model process. The utilization of that model in this situations means that the evaluators, researchers, and research participants share information about the research results to the extent that interventions detrimental to the organization can either be modified or aborted. This is to prevent the continuation of an intervention with obvious and severe impact deficiencies.

The evaluation effort will be carried out in four distinct phases, as follows:

1. Design phase—includes the development of the experimental model, selection of test and comparison sites, and the collection of baseline data prior to implementation;
2. Implementation phase—includes actual project implementation, and monitoring to assure that each of the project interventions has been operationalized as originally conceived;
3. Evaluation phase—includes data collection and analysis. Periodic reports and annual summaries will be presented throughout the life of the project; and,
4. Concluding phase—summary evaluation and overall assessment of the impact of the project; conclusions and final recommendations.

C. Model

There are two objectives, five interventions, two constraints, and fourteen related hypotheses. It is operationally not feasible to apply interventions (a), (b), and (e) independently, nor can interventions (c) and (d) be broken into separate experiments. It was further decided to apply all interventions as one experimental design because to do otherwise would create inadequate sample sizes and become too difficult to manage. Hence, all interventions will be introduced at each of the experimental sites, although the authorization of recruitment and retention incentives is discretionary on the part of management. The utilization and results of experimentation with these incentives will be separately identified to the extent possible.

1. Objectives

(a) Increase the flexibility and responsiveness of the recruitment and hiring system.

(b) Increase the reliability of the decision to grant career tenure.

2. Interventions

(a) Decentralize the decision to authorize direct hire in shortage categories.

(b) Establish an alternative candidate assessment method which uses categorical grouping instead of numeric score.

(c) Provide monetary incentives for recruitment purposes.

(d) Reimburse travel and transportation expenses beyond those currently authorized for travel to first post of duty.

(e) Make initial appointments on a provisional basis, with career tenure earned through on-the-job performance.

TABLE 1.—EXPECTED EFFECTS, MEASURES, AND DATA SOURCES

Constraints/Hypotheses	Measures	Data sources
Overall Project Constraints:		
A. Fair representation of protected groups, will not be adversely impacted	Number of women & minorities in workforce	PR
	Number among applicants	RAF
	Number offered positions	RAF
	Number hired	PR
B. Demonstration project will be cost neutral	Administrative costs for recruiting and hiring	To be identified
	Amount spent for recruitment incentive & travel expenses.	
Objective 1: Increase the flexibility and responsiveness of the recruitment and hiring system		
Interventions:		
(a) Expand authority for approving direct hire		
(b) Implement alternative candidate assessment method using categorical groupings		
(c) Provide option of awarding monetary incentives for recruiting purposes		
(d) Provide option of reimbursing travel and transportation expenses for recruiting purposes		
Hypotheses:		
A. Managers will perceive the new system as more responsive to local recruitment needs.	Managers' perceptions	Annual Survey of managers (AS)
B. Managers will be more satisfied with the new recruitment and hiring system than with the traditional system.	Managers' attitudes	AS
C. Under the experimental employee intake process, new employees will be hired more quickly than under the traditional system.	Time required to fill positions	RAF
	Managers' perceptions	AS
	New hire's perceptions	Pre-employment survey (PES)
D. The experimental employee intake process will require less staff time than the traditional system.	Activities required to fill positions	RAF
	Staff hours required to fill positions	RAF

TABLE 1.—EXPECTED EFFECTS, MEASURES, AND DATA SOURCES—Continued

Constraints/Hypotheses	Measures	Data sources
E. Quality of new hires under the experimental system, as measured by appropriate indicators, will be equivalent to that of employees hired through traditional methods.	GPA	PES
	Education level	PES
	School attended	PES
	Field of Study	PES
	Scholastic honors	PES
	Year of degree	PES
	Number of professional publications	PES
	Level of experience	PES
	Relevant experience	PES
	Previous salary	PES
	Competing offers	PES
F. Level of performance for new hires will be equal to or greater than that for those hired through traditional means.	Performance appraisal	PR
	Performance awards	PR
	Adverse actions	PR
	Managers' perceptions	AS
G. Competitive recruiting position will improve for sites using the experimental recruiting and hiring system relative to those using traditional procedures.	Managers' perception of competitive position	AS
	Candidates lost to competition	RAF
	Number of qualified candidates who apply for USDA positions.	RAF
	Ability to hire candidates whom managers perceive as best qualified.	AS
	Declination/acceptance ratio	RAF
	Number, type, and $ values of incentives awarded.	RAF
H. Recruitment incentives and payment of expenses will increase acceptance rates above and beyond any effects of the new recruitment and hiring system.	Declination/acceptance ratio	RAF
	Number, type, and $ value of incentives awarded.	PR
I. Recruitment incentives tied to service agreements will improve retention of appointees relative to those hired without service agreements.	Rate at which service agreements are met	PR
	Turnover rates	PR
	Number, type, and $ value of incentives awarded.	PR
	Time span of service agreements	PR
Objective 2: Increase the reliability of the decision to grant career tenure		
Intervention: (e) Make initial appointments on a provisional basis, with career tenure earned through job performance		
A. Managers will have more confidence in career tenure decisions under the new system than under the traditional system.	Managers' perceptions	AS
B. Managers will utilize the flexibilities provided by the provisional appointment system.	Turnover rates, reasons	PR
	Length of time spent under provisional appointments.	PR
C. Recruitment efforts will not be hampered by the requirement to hire new employees under provisional appointments.	Managers' perceptions	AS
	New employees' perceptions	PES
Overall Project Expectations:		
A. Supervisory accountability for the success of the recruitment and hiring program will increase.	Managers' perceptions	AS
	Senior managers' perceptions	Interviews
	Documentation of accountability	Performance Standards
B. Management advisory role for personnel specialists will increase	Managers' perceptions	AS Interviews

D. Procedures

Experimental results will be evaluated annually (1) against baseline data collected before the implementation of the interventions, and (2) between the experimental and comparison populations in each block and in toto. While the introduction of the interventions will continue throughout the five year life of the project, the collection of data and consequent evaluation efforts will continue until reasonably stable results can be identified. It is not necessary to wait until the results of the last experimentally hired employee can be fully evaluated before declaring the evaluation completed if the evaluators are satisfied that sufficient valid data have been accumulated to draw such a conclusion.

E. Implementation Evaluation

The evaluation model presents a framework for evaluating the success of the demonstration project in meeting its stated objectives. An equally important component of the overall evaluation is the description and monitoring of the implementation of the project.

Implementation monitoring will provide a qualitative context in which to understand and interpret evaluation results. This facet of the evaluation will help to answer the "why" questions that are likely to arise, whether the project is a success or failure, and provide the documentation of actual implementation necessary to replicate the results of this demonstration project in other settings.

Through examination of project-related documents, ongoing contact with key players in the participating agencies, interviews with project participants, and case studies of selected units, the implementation evaluation will address such questions as:

1. When are project changes implemented?
2. What training and orientation is delivered to facilitate implementation?
3. What operating procedures/guidelines are developed to manage project implementation? How do these guidelines differ from the project plan?
4. How does actual practice differ from the project plan and/or operating guidelines?
5. To what extent are recruiting and hiring practices being carried out in a manner consistent with the merit principles outlined in 5 U.S.C. 2301?

6. To what extent do users of the new system understand it?

7. What differences in actual practice exist with respect to different types of candidates and/or new appointees?

8. To what extent are discretionary interventions (i.e., recruitment incentives) actually used?

9. How similar are the experimental and the comparison sites? How are they different?

10. What other changes occurring at experimental/comparison sites might provide competing explanations for observed changes?

11. What events in the external environment might provide competing explanations for observed changes or lack of change?

12. What unintended consequences of the demonstration project initiative may be observed?

13. What impact does the application of veterans preference under the project have on the examining and selection process? How many preference eligibles are being hired at experimental and comparison sites?

VIII. Experimental Design

The experimental design uses experimental and comparison groups matched for characteristics but not necessarily for population numbers in ten population blocks. The populations were classified into five occupational categories: scientists, professionals, administrative employees, technicians, and all others (includes clerical and Federal Wage System). Each participating unit of the two agencies, the Agricultural Research Service and Forest Service, appeared in as many of these five blocks as the occupational category distribution represents.

The occupational categories were then further subdivided into two situational categories: Difficult and simple. In the difficult situation, the working site or environment, and/or the local personnel supply pool, make it very difficult to attract candidates in a particular occupational category. This situational condition is not necessarily constant for all five occupational categories at any one location. It was postulated that this random assignment to the experimental and comparison groups within these ten groupings would result in ten matched groups. Except for limited administrative pre-selection, the assignments to experimental and comparison groups within each of the ten blocks were by random draw.

A detailed description of the selection process is available upon request.

Part III

The President
Panama Canal Commission

35 CFR Parts 133 and 135
Tolls for Use of Canal and Rules for Measurement of Vessels; Final Rule

The President

PANAMA CANAL COMMISSION

35 CFR Parts 133 and 135

RIN 3207-AA04

Tolls for Use of Canal and Rules for Measurement of Vessels

AGENCY: Panama Canal Commission.

ACTION: Final rule.

SUMMARY: This rule announces an increase of approximately 9.8% in the rates of tolls for use of the Panama Canal. The increase is necessary to comply with the requirements of law that tolls be set to produce revenues sufficient to cover all costs of maintenance and operation of the Panama Canal, including capital for plant replacement, expansion and improvements. The effect of this action is to increase the rates of tolls for: (a) Merchant vessels, yachts, army and navy transports, colliers, hospital ships, and supply ships, when carrying passengers or cargo, from $1.83 to $2.01 per net Panama Canal ton, (b) vessels in ballast without passengers or cargo, from $1.46 to $1.60 per net Panama Canal ton, and (c) other floating craft including warships, other than transports, colliers, hospital ships, and supply ships, from $1.02 to $1.12 per ton of displacement.

In addition to the toll rate increase, certain rules of measurement of vessels for the Panama Canal are amended in order to simplify the Commission's measurement procedures and bring them in line with industry standards. These amendments will have a minimal impact on the amount of tolls collected.

EFFECTIVE DATE: October 1, 1989.

FOR FURTHER INFORMATION CONTACT: Michael Rhode, Jr., Assistant to the Chairman and Secretary, Panama Canal Commission, 2000 L Street NW., Suite 550, Washington, DC 20036–4996. Telephone (202) 634–6441.

SUPPLEMENTARY INFORMATION: On June 1, 1989, an advance notice of proposed rulemaking was published in the **Federal Register** (54 FR 23493) recommending a 9.8% increase in the rates of Canal tolls, to become effective October 1, 1989. At that time, a written analysis showing the basis and justification for the proposed toll increase was made available to interested parties. The analysis stated that the increase was necessary because, by October 1, 1989, the Canal Commission would experience a significant deficit created by a trend of traffic growth revenue inadequate to absorb cost increases due to inflation and other factors. Written comments were solicited and received from interested parties and a public hearing was held in Washington, DC on July 6, 1989. The views presented by the interested parties were considered by the Supervisory Board of the Commission at its quarterly meeting of July 1989. On July 28, 1989, the Board voted to recommend to the President that the measurement changes and the proposed 9.8% increase be implemented on October 1, 1989. The notice of proposals recommended by the Board to the President was published in the **Federal Register** (54 FR 32099) on August 4, 1989. A complete record of the proceedings since initiation of the proposals, including the data, views and arguments submitted by interested parties, was included in the Canal Commission's final recommendation and was forwarded to the President.

Section 1602(b) of the Panama Canal Act of 1979, as amended, 22 U.S.C. 3792(b), requires that Canal tolls be prescribed at rates calculated to produce revenues to cover, as nearly as practicable, all costs of maintaining and operating the Panama Canal and the facilities and appurtenances related thereto, and capital for plant replacement, expansion and improvements. From a review of the information submitted by the Canal Commission, it is evident that for the Canal to remain self-sufficient, a toll rate increase of 9.8% is required.

List of Subjects in 35 CFR Parts 133 and 135

Panama Canal, Vessels.

Accordingly, 35 CFR parts 133 and 135 are amended to read as follows.

PART 133—TOLLS FOR USE OF CANAL

1. The authority citation for part 133 continues to read as follows:

Authority: Issued under authority of the President by 22 U.S.C. 3791; E.O. 12215, 45 FR 36043.

2. Section 133.1 is revised to read as follows:

§ 133.1 Rates of toll.

The following rates of toll shall be paid by vessels using the Panama Canal:

(a) On merchant vessels, yachts, army and navy transports, colliers, hospital ships, and supply ships, when carrying passengers or cargo, $2.01 per net vessel ton of 100 cubic feet each of actual earning capacity—that is, the net tonnage determined in accordance with Part 135 of this chapter.

(b) On vessels in ballast without passengers or cargo, $1.60 per net vessel ton.

(c) On other floating craft including warships, other than transports, colliers, hospital ships, and supply ships, $1.12 per ton of displacement.

3. Section 133.34 is revised to read as follows:

§ 133.34 Tolls for vessels in ballast.

In order for a vessel to secure the reduced rate of toll for vessels in ballast, it may not be carrying any passengers or cargo nor any fuel for its own consumption in a quantity which exceeds the spaces on the vessel which are available for the carriage of fuel (i.e., the actual volume of tanks or fixed compartments, including settling tanks, used for the storage of lubricating oil or fuel, which spaces cannot be used to stow cargo or stores and which have been certified by official marketing to be spaces for the vessel's own fuel).

PART 135—RULES FOR MEASUREMENT OF VESSELS

4. The authority citation for part 135 is revised to read as follows:

Authority: Issued under authority of the President by 22 U.S.C. 3791; E.O. 12215; 45 FR 36043.

5. Section 135.285 is revised to read as follows:

§ 135.285 Water ballast spaces, deducted.

(a) Water ballast spaces, other than spaces in the vessel's double bottom, shall be deducted if they are adapted and used only for water ballast, have for entrance only ordinary circular or oval manholes whose greatest diameter does not exceed thirty-four inches (864 mm), and are not available for the carriage of cargo, stores, or fuel. Spaces that would otherwise qualify as water ballast except that they are also used for fuel for the vessel's own use shall be regarded as part of the vessel's fuel space as defined in section 135.390 of this part.

(b) Tonnage of tanks may be obtained by using liquid capacity times the conversion factor with one-sixth off for frames in case of peak tanks and one-twelfth off in case of wings or deep tanks when they cannot be readily measured.

6. Section 135.352 is revised to read as follows:

§ 135.352 Definition of phrase "space occupied by engine rooms".

The space occupied by engine rooms is defined as that occupied by the engine room itself and the boiler room, together

with the spaces strictly required for the working of the engines and boilers. In addition to those, included are the spaces taken up by the shaft trunks in vessels with screw propellers, the spaces which enclose the funnels, and the casings necessary for the admission of light and air into the engine room to the extent that such spaces are located below the upper deck (as defined in §§ 135.61 through 135.63 of this part) or below a deck with openings. These are usually designated as tonnage openings, which may be so closed as to permit the carriage of cargo or stores under the deck or a portion thereof. This definition also covers donkey-engine and boiler spaces when the donkey-engine and boiler are situated within the boundary of the main engine room, or of the light and air casing above it and when they are used in connection with the main machinery for propelling the vessel. When the shafts of screw propellers pass through open spaces not enclosed within tunnels, the spaces allowed in lieu of tunnels must be of reasonable dimensions suitable for the vessel in question. When a protion of the space within the boundary of the engine or boiler room is occupied by a tank or tanks for the storage of fresh water, lubricating oil, or fuel, including settling tanks, the space considered to be within the engine room shall be reduced by the space taken up by such tanks. Installations not strictly required for the working of the engines or boilers but that would otherwise qualify as a deduction under §§ 135.271 through 135.285 of this part may be left in and included in the engine room measurement.

Dated: August 15, 1989.

G Bush

President.

30 CFR Parts 56 and 57

Safety Standards for Berms or Guardrails at Metal and Nonmetal Mines; Proposed Rule

DEPARTMENT OF LABOR

Mine Safety and Health Administration

RIN 1219–AA56

30 CFR Parts 56 and 57

Safety Standards for Berms or Guardrails at Metal and Nonmetal Mines

AGENCY: Mine Safety and Health Administration (MSHA), Labor.

ACTION: Proposed rule.

SUMMARY: MSHA published a final rule for Safety Standards for Loading, Hauling, and Dumping and Machinery and Equipment at Metal and Nonmetal Mines on August 25, 1988 (53 FR 32496) which took effect October 24, 1988. After further Agency analysis and review of public comments, MSHA stayed the effective date of a portion of the berms or guardrails standard §§ 56.9300(d) and 57.9300(d) (53 FR 41600). The Agency has reviewed the stayed provision and is now proposing new language to replace the stayed paragraph.

DATES: Written comments on the proposed rule must be received on or before October 23, 1989.

ADDRESSES: Send comments to the Office of Standards, Regulations and Variances; MSHA; Room 631, Ballston Towers No. 3; 4015 Wilson Boulevard, Arlington, Virginia 22203.

FOR FURTHER INFORMATION CONTACT: Patricia W. Silvey, Director, or Yvonne Johnson, Project Officer, Office of Standards, Regulations, and Variances, MSHA, (703) 235–1910.

SUPPLEMENTARY INFORMATION:

I. Introduction and Rulemaking Background

The final rule for Safety Standards for Loading, Hauling, and Dumping and Machinery and Equipment at Metal and Nonmetal Mines was published on August 25, 1988 (53 FR 32496) as a revised a Subpart H-Loading, Hauling and Dumping and a revised Subpart M-Machinery and Equipment, of parts 56 and 57 of Title 30 of the Code of Federal Regulations. The final rule, which became effective on October 24, 1988, represents an updating, revision and reorganization of the existing standards in these areas.

Sections 56.9300 and 57.9300 of the final rule address the use of berms or guardrails on elevated roadways. A new paragraph (d) permits an alternative to berms or guardrails for elevated portions of infrequently traveled roadways used only by service or maintenance vehicles. It is the Agency's position that under these limited conditions, berms or guardrails are not necessary if other safety precautions can provide at least the same degree of protection. Paragraph (d) of §§ 56.9300 and 57.9300 includes requirements that would assure the safety of miners using these roadways when berms or guardrails are not present.

After reviewing the final rule in preparation for implementation, and analyzing comments received at public meetings held for the purpose of describing the application of the rule, the Agency determined that paragraph (d) of §§ 56.9300 and 57.9300 did not appropriately address MSHA's goals. Therefore, MSHA stayed paragraph (d) of §§ 56.9300 and 57.9300 pending reconsideration of the provision by the Agency. Upon careful review, the Agency has determined that it is necessary to propose new language for paragraph (d) to accurately reflect the goals of the Agency.

II. Discussion and Summary of Proposed Rule

Section 56/57.9300(d) Berms or Guardrails

MSHA proposes to retain the introductory language to §§ 56.9300(d) and 57.9300(d) which allows a limited exception to the general berms or guardrails requirement for elevated roadways which are infrequently traveled and used only by service or maintenance vehicles. The standard continues to require berms or guardrails on elevated roadways which do not meet all the alternative requirements.

The Agency also proposes to retain paragraphs (1), (2), (4), and (5) of paragraph (d). Paragraph (d)(1) requires locked gates at entrance points to elevated roadways. Locked gates at entrance points limit uncontrolled and accidental access to unbermed areas. Paragraph (d)(2) requires posting of warning signs. Warning signs notify intended users of the unbermed roadways and remind them of the existing hazard.

MSHA proposes to modify paragraph (d)(3) of the stayed provision. The stayed paragraph (d)(3) requires reflectors (delineators) to be placed at 25-foot intervals along the perimeter of elevated roadways. The Agency has reviewed this provision and is proposing a performance-based alternative which is derived primarily from Department of Transportation (DOT) and Bureau of Mines (BOM) analyses. The proposal requires that delineators be installed along the perimeter of the elevated roadway so that, for both directions of travel, the reflective surfaces of at least three delineators along each elevated shoulder are always visible to the driver, and spaced at intervals sufficient to indicate the edges and attitude of the roadway.

Road delineators are light reflecting devices mounted at the side of the roadway, in series, to indicate the roadway alignment. Delineators serve as a guidance device to aid vehicle operators in identifying elevated roadway edges and changes in direction under all circumstances of impaired visibility, including but not limited to darkness and adverse weather. In its Manual on Uniform Traffic Control Devices, paragraph 3D–3, the DOT states that delineators shall consist of reflector units capable of clearly reflecting light under normal atmospheric conditions from a distance of 1,000 feet when illuminated by the upper beam of standard automobile lights. MSHA would accept such delineators as conforming with the intent of the standard.

In the DOT manual, intended for application to streets and highways, DOT provides a table (Table III–1) for variable spacing of delineators as a function of horizontal curve radius. In order to provide drivers with the necessary level of guidance required to safely negotiate roadways, DOT suggests delineators be placed as close as 20 feet apart on curves having a radius of 50 feet. They also include a recommendation for spacing of delineators on uninterrupted highways. This uninterrupted highway spacing recommendation provides a range of 200 to 528 feet with the understanding that "spacing should be adjusted on approaches and throughout horizontal curves so that several delineators are always visible to the driver". A 528 foot spacing serves the purpose of providing 1/10 mile distance markers. The guidance role of delineators in unbermed elevated roadways is much more critical than on public highways. On public highways, berms or guardrails are provided in many instances as a physical backup to the guidance provided by the delineators. In addition to physical barriers, public highways typically have center lines and edge lines to assist delineators in providing the driver the necessary guidance. Since unbermed elevated mine roads do not have these and other safety features, MSHA feels the maximum recommended DOT delineator spacing of 528 feet would not provide adequate guidance to drivers. As mentioned, DOT has recognized that depending on the circumstances of a particular straight roadway, marker spacing should range from 200–528 feet.

In addition, the DOT manual indicates that the placement of signs warning of a change in road direction or attitude where speeds are relatively low should allow for an advance distance of about 250 feet. MSHA believes that delineators should be spaced at intervals sufficient to indicate the edges and attitude of the roadway to provide the driver with the necessary guidance to safely travel on the elevated roadway. MSHA particularly solicits comment on the appropriate spacing of delineators along a straight portion of an unbermed elevated mine road, and whether a specific distance should be set in the standard.

MSHA also recognizes that closer delineator spacing would be necessary on curved portions of unbermed elevated roadways to provide the driver with the guidance needed to safely negotiate these areas. A minimum of three points are necessary to indicate departure from a straight line to a curve. Therefore, to keep the driver constantly aware of approaching changes in road direction and edge location, it is necessary for the operator to have at least three delineators visible to him along each edge of an elevated roadway at all times. In light of this, MSHA proposes that at least three delineators be visible to the driver at all times on each elevated shoulder of an elevated roadway and spaced at intervals necessary to sufficiently indicate the direction and attitude of the roadway. The driver is thereby provided with feedback to maintain safe control of the vehicle.

Paragraph (d)(4) sets a speed limit of 15 MPH on unbermed roadways. Although §§ 56.9101 and 57.9101 require that operating speeds be consistent with the conditions of roadways, they contain no specific limits on speeds. In this alternative to berms or guardrails, a physical barrier to over-travel is not present. In order to assure safety, MSHA proposes to adopt a specific speed limit of 15 MPH at unbermed areas. This additional precaution is necessary to assure that the operator has sufficient time to react and avoid the edge of the elevated roadway in unexpected circumstances.

Paragraph (d)(5) assures proper traction on unbermed elevated roadways. The hazards to travel on an unbermed elevated roadway are significantly increased when weather conditions impair the traction. These roadways could be used only if corrective action, such as tire chains, plowing, or sanding is used to improve traction.

Executive Order 12291 and the Regulatory Flexibility Act

This proposed rule would revise one previously issued standard to require that delineators shall be installed along the perimeter of elevated roadways so that the reflective surfaces of at least three delineators are always visible to the driver along each elevated shoulder for both directions of travel. In comparison with the stayed rule, the proposed rule would involve a minor cost reduction to some mine operators. Accordingly, the Agency has determined that this rule would not result in a major cost increase or have an incremental effect of $100 million or more on the economy. Therefore, a regulatory impact analysis is not required.

Regulatory Flexibility Analysis

In accordance with the Regulatory Flexibility Act (5 U.S.C. 601 et seq.), the Agency has also determined that the final rule will not have a significant impact on a substantial number of small entities.

Paperwork Reduction Act

The proposal does not contain any information collection requirements subject to the Paperwork Reduction Act of 1980.

List of Subjects in 30 CFR Parts 56 and 57

Mine safety and health, Metal and nonmetal mining, Safety standards for berms or guardrails.

Dated: August 16, 1989.

David C. O'Neal,

Assistant Secretary for Mine Safety and Health.

Title 30, chapter I, subchapter N, parts 56 and 57 of the Code of Federal Regulations are proposed to be amended as set forth below:

PART 56—SAFETY AND HEALTH STANDARDS—SURFACE METAL AND NONMETAL MINES

1. The authority citation for subpart H is added after the subpart heading to read as follows:

Authority: 30 U.S.C. 811.

2. In § 56.9300 paragraph (d) is revised to read as follows:

§ 56.9300 Berms or guardrails.

* * * * *

(d) Where elevated roadways are infrequently traveled and used only by service or maintenance vehicles, berms or guardrails are not required when all of the following are met:

(1) Locked gates are installed at the entrance points to the roadway.

(2) Signs are posted warning that the roadway is not bermed.

(3) Delineators are installed along the perimeter of the elevated roadway so that, for both directions of travel, the reflective surfaces of at least three delineators along each elevated shoulder are always visible to the driver, and spaced at intervals sufficient to indicate the edges and attitude of the roadway.

(4) A maximum speed limit of 15 miles per hour is posted for the elevated unbermed portions of the roadway.

(5) Road surface traction is not impaired by weather conditions, such as sleet and snow, unless corrective measures are taken to improve traction.

* * * * *

PART 57—SAFETY AND HEALTH STANDARDS—SURFACE METAL AND NONMETAL MINES

3. The authority citation for subpart H is added after the subpart heading to read as follows:

Authority: 30 U.S.C. 811.

4. In § 57.9300 paragraph (d) is revised to read as follows:

§ 57.9300 Berms or guardrails.

* * * * *

(d) Where elevated roadways are infrequently traveled and used only by service or maintenance vehicles, berms or guardrails are not required when all of the following are met:

(1) Locked gates are installed at the entrance points to the roadway.

(2) Signs are posted warning that the roadway is not bermed.

(3) Delineators are installed along the perimeter of the elevated roadway so that, for both directions of travel, the reflective surfaces of at least three delineators along each elevated shoulder are always visible to the driver, and spaced at intervals sufficient to indicate the edges and attitude of the roadway.

(4) A maximum speed limit of 15 miles per hour is posted for the elevated unbermed portions of the roadway.

(5) Road surface traction is not impaired by weather conditions, such as sleet and snow, unless corrective measures are taken to improve traction.

Early Intervention Program for Infants and Toddlers With Handicaps

AGENCY: Department of Education.

ACTION: Final rule; Correction.

SUMMARY: On June 22, 1989, final regulations for 34 CFR part 303, titled "Early Intervention Program for Infants and Toddlers with Handicaps", were published at 54 FR 26306. The regulations are corrected as set forth below.

EFFECTIVE DATE: September 4, 1989.

FOR FURTHER INFORMATION CONTACT: Thomas B. Irvin, Office of Special Education Programs, Department of Education, 400 Maryland Avenue, SW. (Switzer Building, Room 4618 M/S 2313–4600), Washington, DC 20202. Telephone: (202) 732–1114.

§ 303.4 [Corrected]

1. On page 26310, in the third column, under § 303.4 Applicable regulations, paragraph (a)(1)(ii), the second line, is corrected to read "Department Regulations);".

2. On page 26311, in the first column, paragraph (a)(1)(v) is corrected to read "(v) Part 81 (General Education Provisions Act—Enforcement); and".

3. On the same page, same column, under *Definitions*, the twelfth listed word is corrected to read "Method (§ 303.344(d)(2)(iii))".

§ 303.12 [Corrected]

4. On page 26312, in the second column under paragraph (d)(7)(ii), the fifth line is corrected to read "paragraph (d)(7)(i) of this section; and".

§ 303.13 [Corrected]

5. On page 26313, in the second column, in the Note, the thirteenth line is corrected to read "this part. (See § 303.344(e), and the note 2".

§ 303.15 [Corrected]

6. On the same page, in the second column, the authority citation under § 303.15 is corrected to read "(Authority: 20 U.S.C. 1483)".

§ 303.19 [Corrected]

7. On page 26314, in the first column, in § 303.19(b)(2), the second line is corrected to read " "developmental delay" (see 303.300);".

§ 303.22 [Corrected]

8. On the same page, in the second column, in § 303.22, the first line is corrected to read "Except as provided in § 303.200(b)(3),". Also, the citation of authority for this section is corrected to read "(Authority: 20 U.S.C. 1401(a)(6))".

§ 303.121 [Corrected]

9. On page 26315, in the second column, in § 303.121(b), the first line is corrected to read "Keeping such records and affording such".

§ 303.122 [Corrected]

10. On the same page, in the same column, in § 303.122(a), the third line is corrected to read "acquired with those funds, will be in a public". Also in § 303.122(b), the first line is corrected to read "(b) A public agency will administer the".

§ 303.123 [Corrected]

11. On the same page 26315, in the same column, in § 303.123, the fourth line of the first paragraph is corrected by removing the word "the" at the end of the line.

§ 303.200 [Corrected]

12. On page 26318, in the third column, the second line is corrected to read "most recent satisfactory data as".

§ 303.202 [Corrected]

13. On the same page, in the same column, under § 303.202, the authority citation is corrected to read "(Authority: 20 U.S.C. 1484(c)(1))".

§ 303.203 [Corrected]

14. On the same page, in the same column, in § 303.203, the first line is corrected by adding the word "the" to the end of the line.

§ 303.300 [Corrected]

15. On page 26319, in the first column, the first line of the Note under § 303.300 is corrected to read "Note: Under § 303.322(c)(2), States are".

§ 303.321 [Corrected]

16. On the same page, in the third column, in § 303.321(c)(1), the designation of the fourth paragraph is corrected to read "(iv)".

§ 300.322 [Corrected]

17. On page 26320, in the first column, the section designated "§ 300.322" is corrected to read "§ 303.322".

§ 303.341 [Corrected]

18. On page 26321, in the first column, in § 303.341(a)(1), the end of the second line is corrected by adding ";".

§ 303.344 [Corrected]

19. On page 26322, in the second column, in Note 2 the second paragraph, first line, is corrected to read "The "other services" in paragraph (e) of this".

§ 303.361 [Corrected]

20. On page 26323, in the second column, in § 303.361(b)(2), the seventh line is corrected to read "certification, licensing, registration, or other".

§ 303.402 [Corrected]

21. On page 26324, in the first column, in § 303.402, the eight line is corrected to read "assessments, eligibility determinations".

§ 303.404 [Corrected]

22. On the same page, in the second column, in Note 1, the seventh and the eighth lines are corrected to read "300.571, and in 34 CFR part 99 (Family Educational Rights and Privacy), both of".

§ 303.423 [Corrected]

23. On page 26325, in the third column, the Note is corrected in the thirteenth line to read "the timeline for the due process hearing".

§ 303.460 [Corrected]

24. On page 26326, in the first column, in the Note, the second paragraph, third line is corrected to read "(Family Educational Rights and Privacy);".

§ 303.522 [Corrected]

25. On page 26328, in the first column, in the Note, the second paragraph, seventh line is corrected to read "states, in effect, that nothing in that title shall". Also in the same paragraph, the eleventh line is corrected to read "payment under subsection (a) of section 1903 of the Social Security Act for medical".

§ 303.600 [Corrected]

26. On the same page, in the second column, in the Note, the seventh line is corrected to read "appoint additional members on an ex officio".

§ 300.601 [Corrected]

27. On the same page, in the second column, the section number "§ 300.601" is corrected to read "§ 303.601".

§ 303.604 [Corrected]

28. On page 26329, in the first column, the authority citation for § 303.604 is corrected to read "(Authority: 20 U.S.C. 1482(f))".

Authority: 20 U.S.C. 1471–1485, unless otherwise noted.

Dated: August 16, 1989.

Robert R. Davila,

Assistant Secretary for Office of Special Education and Rehabilitative Services.

Bus Testing

AGENCY: Urban Mass Transportation Administration, DOT.

ACTION: Interim final rule.

SUMMARY: On May 25, 1989, the Urban Mass Transportation Administration published a proposed rule on its bus testing facility program. At the time of the proposal, the agency indicated that it would issue interim guidance to ensure timely implementation of the program. Today's document contains those interim procedures for the bus testing facility program.

DATES: *Effective date:* These procedures are effective from October 1, 1989, up to September 30, 1990.

Comment due date: Comments must be submitted by November 21, 1989.

FOR FURTHER INFORMATION CONTACT: For technical issues, Steven A. Barsony, Director, Office of Engineering Evaluations, Office of Technical Assistance and Safety, (202) 366–0090; for legal issues, Daniel Duff or Susan Schruth, (202) 366–4011. The test facility can be reached by contacting James C. Wambold, Director of Automotive Research, (814) 863–1869.

ADDRESSES: For comments, UMTA, Department of Transportation, Office of the Chief Counsel, Rules Docket Clerk, 400 Seventh Street, SW., Room 9316, Washington, DC 20590. For UMTA staff, UMTA, Department of Transportation, 400 Seventh Street, SW., Washington, DC 20590. For the bus testing facility, Penn State Automotive Research Division, Research Building B, University Park, PA 16802.

SUPPLEMENTARY INFORMATION:

I. Background

The Urban Mass Transportation Administration (UMTA) published a notice of proposed rulemaking (NPRM) on May 25, 1989, to implement section 317 of the Surface Transportation and Uniform Relocation Assistance Act of 1987 (STURAA). (See 54 FR 22716). The NPRM's comment period ended on July 24, 1989.

Section 317 directs the Secretary of DOT (as delegated to UMTA) to establish a bus testing facility at Altoona, Pennsylvania, and provides that no funds appropriated or made available under the Urban Mass Transportation Act, as amended, after September 30, 1989, may be used to purchase a "new bus model", unless a bus of such model has been tested at the facility.

Section 317 also specifies that UMTA is to contract with a "qualified person" for the maintenance and operation of the facility. The agency has entered into an agreement with Pennsylvania State University to operate and maintain the bus testing facility. Penn State will operate the bus testing facility from two locations: first, its own test track and related facilities at State College, Pennsylvania; and, second, the former rail personnel training center at Altoona, Pennsylvania.

The agency's NPRM was expansive—proposing coverage of *all* vehicles used in mass transit and any new bus model used in mass transit after April 2, 1987 (the effective date of STURAA). In addition, the agency specifically requested comment on several issues.

To ensure that there are bus testing procedures in place before the statutory deadline of October 1, 1989, the agency indicated in the NPRM that it would issue interim guidance in advance of the agency's final rule. This document contains the interim guidance.

The preamble includes an overview of the comments received and an overview of the interim program, followed by specific procedural information on how the facility will operate and how a manufacturer can obtain information.

The agency has made the preliminary determinations needed to issue these procedures and to ensure that the bus testing facility is operational by October 1, 1989. While the interim guidance indicates the agency's position regarding testing at the facility during the interim period, these are only interim procedures and the agency in the final rule may decide to change certain of these procedures once it has some experience with the test facility and it has had the opportunity to analyze the comments in depth. Accordingly, actions and procedures provided for during the interim period do not necessarily represent decisions that will be reflected in the final rule.

The next section contains a brief summary of the comments submitted on the NPRM. Where appropriate, the preamble to this interim rule contains a discussion of the comments. As just indicated, however, the decisions made to implement the interim program are not necessarily the same as those that will be made at the time of the final rule.

The agency will provide a complete analysis of and response to the comments at the time of the final rule. The agency anticipates that the final rule will be issued before the end of the interim procedure period. Among other things, information gained during this interim period will be useful to UMTA as it develops its final rule.

II. Public Comments

Fifty-one comments were submitted to the bus testing docket, although not all were received by the July 25, 1989, close of the comment period. As indicated earlier, a complete discussion of the comments, as well as the agency's response to the comments, will be provided in the final rule issued by the agency sometime before the end of the interim period. While a general indication of the comments are noted in the various program issues discussed in the next section of the preamble, the agency provides the following general information about the comments.

Comments were submitted by transit bus operators (22), state and local governments (12), bus manufacturers (including a component manufacturer and a final stage manufacturer) (12), one member of Congress, one test facility operator, one association, and one UMTA regional office.

Nineteen commenters submitted views on the interim period, and their views were as varied as the range of options presented by the agency in the NPRM. Five commenters recommended that *no* testing be done until the test facility is completed. Several others indicated that they objected to testing at or results from a source other than the Altoona facility.

Five commenters recommended a two-year transition period, allowing manufacturers to perform their own testing during this period. A few commenters indicated that these test results should be submitted to Altoona as a substitute for the facility tests.

In response to the agency's query about testing some but not all vehicle types initially, three commenters recommended that small vehicles be phased in for testing first, while one commenter recommended that 40-foot buses be phased in first.

Of specific concern to the agency is determining the cost of this program to the manufacturers, and ultimate purchasers of these tested vehicles. Several commenters submitted opinions concerning the cost of this program. One transit agency estimated the cost of testing a 40-foot bus to range between $750,000 and $1,250,000, while a bus manufacturer estimated the cost for this size bus to be approximately $250,000. One bus manufacturer estimated that the requirement will impose "excessive although presently incalculable costs on each bus funded with UMTA money." While few commenters provided the data to support their conclusions, the agency is carefully examining the information provided in preparing its final regulatory analysis for the final rule.

III. Overview of the Interim Program

This section contains a discussion of a number of the key issues concerning interim period procedures at the bus testing facility. To set the framework for the discussion, we provide the following summary of key interim period requirements:

- The interim period is October 1, 1989 up to September 30, 1990. The agency may shorten the interim period, with **Federal Register** notice.
- A recipient of UMTA funds cannot lease or purchase a new model bus with any grants (including amendments) approved by UMTA after September 30, 1989, unless a model of such bus has been tested at the facility in accordance with these interim procedures.
- A new model bus is a bus put into mass transportation service in the United States after September 30, 1988, or a bus that has had a major change in components or a significant structural modification after September 30, 1988.
- During the interim period three categories of buses are subject to the bus testing procedures. (The agency may, after appropriate notice, expand the types of vehicles to be tested during the interim period.)
- A manufacturer that wants to have a bus tested contacts the facility, at which time the manufacturer will be told the fee for the testing, the specific tests to be conducted on the vehicles, and other facility procedures.
- The Test Report applicable to each vehicle will not become available publicly until the manufacturer provides an UMTA recipient with the Test Report as part of a procurement of an UMTA-funded vehicle.

A. *Federal Funds Subject to Interim Procedures.* (§ 665.1). In the NPRM, UMTA sought comment on its view that the bus testing facility requirements would apply to any funds "obligated or expended" by UMTA or a recipient after September 30, 1989. UMTA pointed out that this could affect ongoing recipient procurements, since funds "expended" by a recipient would be from grants made available by UMTA before October 1, 1989.

A significant number of commenters opposed this point of view noting, among other things, that it could disrupt ongoing procurement cycles, thereby causing delay, increased costs, and reduced mass transit services.

In response to these concerns UMTA has reviewed its initial position, the statute, and its legislative history. On the basis of this review, the agency has determined that there appears to be no intent in the statute or its legislative history for the provision to be implemented in a fashion that would disrupt ongoing procurements. Moreover, the language of the statute dealing with Federal funds—"[n]o funds appropriated or made available pursuant to this Act after September 30, 1989 * * *"—has been interpreted by the agency in the same or similar contexts to apply to grants made after the date specified, not to the expenditure of funds by a recipient after that date.

Accordingly, these interim procedures apply only to grants (or amendments to existing grants) made after September 30, 1989. It is important to point out that funds for such grants may come from any fiscal year, not just fiscal year 1990. That is, any grant made after September 30, 1989, or any amendment to an existing grant made after that date, would be subject to these interim procedures regardless of the fiscal year from which the grant funds are made available. Stated another way, these interim procedures apply to all funds obligated by UMTA after September 30, 1989.

B. *Length of Transition Period.* (§ 665.3). The transition period for the bus testing facility will be from October 1, 1989, up to September 30, 1990. Before the end of this transition period, the agency will publish a final rule containing the final requirements for the bus testing program that will go into effect on October 1, 1990. The agency will use the information acquired during the transition period, in addition to the comments received in response to the NPRM, to make final determinations on the program.

If at any time during this transition period, however, UMTA determines that the facility is ready for full operation, UMTA reserves the right to end the interim period earlier than the twelve month period currently projected. Before doing so, however, the agency will publish a final rule outlining the specific final requirements applicable to this program, and establish the effective date for full operation at the facility in accordance with traditional notice requirements. Furthermore, the agency may, after appropriate notice, expand the scope of the interim period procedures to include vehicle types beyond those covered in this notice.

C. *Types of Vehicles Covered in Interim Program.* (§ 665.11) One of the key issues identified in the proposed rule was the definition of bus, which determines the vehicles to be tested at the facility. The agency had proposed a comprehensive definition, including small vans. During this start-up phase of the facility, however, the agency recognizes that there are certain limitations affecting the ability of the facility to test comprehensively all vehicles. Accordingly, for purposes of the transition period, a vehicle under one of the following categories is covered by the interim procedures:

(1) Heavy duty large buses, approximately 35–40 foot, as well as articulated buses, with a minimum service life of 12 years or 500,000 miles.

(2) Heavy duty small buses, approximately 30 foot with a minimum service life of ten years or 350,000 miles.

(3) Purpose-built medium duty buses approximately 25–35 foot with a minimum service life of seven years or 200,000 miles.

By limiting the transition program to these vehicle types we are excluding from testing both body on chassis medium duty buses with a service life of seven years or 200,000 miles as well as vans, purpose-built paratransit vehicles and other light duty chassis vehicles with a service life of four years or 100,000 miles.

For purposes of the interim transition period, the three categories of vehicles noted above vary somewhat from the categories described in the proposed rule. Specifically, the proposed rule contained a category of bus called medium duty, which the agency now has split into purpose-built medium duty buses and body on chassis medium duty buses. Again, the purpose-built medium duty buses are subject to testing during the interim period, as are the two categories of heavy-duty buses, but body on chassis medium duty buses with a service life of seven years or 200,000 miles, vans, purpose-built paratransit vehicles, and other light duty chassis vehicles with a service life of four years or 100,000 miles are not subject to testing during the interim period.

The agency may, after appropriate notice, expand the scope of vehicles to be tested at the facility during the interim period.

D. *New Bus Model.* (§ 665.5) The law provides that funds appropriated or made available after September 30, 1989, may not be obligated or expended for the acquisition of a new bus model unless a model of such bus has been tested at the bus testing facility. The law

---

also defines a "new bus model" as "a

of the NPRM, and included twelve

program, UMTA is not covering such

contacting Penn State's Transportation

Report becoming available to the public

preliminary regulatory evaluation,

also defines a "new bus model" as "a bus model which has not been used in mass transportation service in the United States before the date of production of such model or a bus model which has been used in such service but which is being produced with a major change in configuration or components."

On the one hand, as UMTA noted in the NPRM, it could be argued that only a new bus model introduced after September 30, 1989, would be subject to the bus testing provision, since it is after that date that UMTA funds appropriated or made available may not be obligated or expended on the acquisition of a new bus model that has not been tested at the bus testing facility. On the other hand, the drafters of the legislation may have meant to have the provision apply to any new bus model introduced after the 1987 STURAA was enacted into law, April 2, 1987. Choosing such a date would preclude manufacturers from trying to rush a new bus model into production before some later effective date. UMTA also sought comment on whether some date in between these two dates might be appropriate.

After consideration of this issue, UMTA has decided that a new bus model is one that is put in mass transportation service in the United States after September 30, 1988. UMTA believes that this date strikes a reasonable balance between the two other dates. For example, many commenters opposed an April 2, 1987, date as being inconsistent with the statute. Any such bus will have been in service for such a period of time that testing it at the facility probably would not provide any new information about its bus performance characteristics.

A bus model placed in service only on October 1, 1988, or later, would in the agency's view have insufficient operating experience such that testing at the facility would prove beneficial. Any such vehicle would be considered new for purposes of these procedures, and in conformance with the underlying purpose of the statute. Among other things, this approach also prevents a new bus model from being rushed into service, say, by September 25, 1989, to avoid a possible effective date of October 1, 1989.

E. *Major Changes in Configuration or Components.* (§ 665.5) Section 317 also provides that any major change in configuration or components made to an existing model would require such modified vehicle to be tested at the facility before it could be purchased or leased with UMTA funds. Examples of changes in configuration or components were provided in the definitions section of the NPRM, and included twelve different items.

Because of the start up nature of the interim period, UMTA has decided to limit the types of change in component or configuration triggering testing to two specific categories. Accordingly, during the interim period only changes of major components or significant structural modifications will require testing at the facility. The final rule will address this issue in detail.

Examples of changes in components include, but are not necessarily limited to, changes in engine, transmission, or axles. Examples of significant structural modification include a dimensional change or the introduction of new structural materials.

The agency recognizes that in some cases a manufacturer may not be certain whether, for purposes of the interim period, a change is a type that would require testing at the facility. Accordingly, UMTA will respond to specific inquires on this matter. In this connection, a manufacturer should write the Office of Technical Assistance and Safety at the address provided in the Addresses section of this Premable.

It is important to note that the effective date of any such change is the same as that for a new model bus, as discussed above. That is, any change in major components or any signficant structural modifications made to a bus after September 30, 1988, would require a model of that bus to be tested at the facility before a recipient could take final acceptance of such a model using funds from grants (including amendments) made after September 30, 1989.

F. *Acquisition of a New Bus Model.* (§ 665.7) The statute provides that UMTA funds may not be used for the "acquisition" of a new bus model unless it first has been tested at the facility. In the NPRM UMTA stated that acquisition included either purchase or lease of a bus, since in either case UMTA funds are being used to acquire a bus. In connection with leasing, the program should be easy to administer when a grantee leases a vehicle itself, since the grantee can require that any leased buses comply with these procedures. For the interim procedures, acquisition will apply to any purchase or lease of a bus.

UMTA noted in the NPRM that the agency saw potential compliance problems when a grantee leases services to be provided by, for example, a private operator. If the agency were to adopt a broad approach, it could require that vehicles used by a private company under service contract with the recipient comply with the provisions of this program. UMTA is not covering such contracted for services under the interim procedures, but will address this issue in the final rule.

G. *Certification of Compliance.* (§ 665.7) A recipient must certify in each application to UMTA for the acquisition of vehicles that any new model bus or a bus produced with a major change in components to be purchased or leased with UMTA funds obligated after September 30, 1989, will be tested at the bus testing facility, and a Test Report provided, before final acceptance of the first vehicle by the recipient.

It is the responsibility of the recipient, in dealing with the manufacturer, to establish whether a vehicle to be acquired is subject to these interim procedures.

H. *Tests in Operation During Transition Period.* (§ 665.11) The test facility will conduct the following types of tests: maintainability; reliability; safety; performance; structural integrity; fuel economy; and noise. These tests are described in Appendix A to Part 665. As the agency indicated in the NPRM, we anticipate that the contractor running the test facility will modify the different tests as it gains more experience with the tests and the vehicles coming through the test facility. In the NPRM the agency indicated that the manufacturer will receive notice of these changes when the manufacturer registers for testing at the facility. It is important to note that such test changes are not subject to notice and comment rulemaking. More specifically, during the interim procedure a manufacturer will receive specific information of the test procedures to be conducted on its specific vehicle type when the manufacturer begins discussions with the operators of the facility to submit its vehicle to the facility for testing, as well as at contract execution.

The agency anticipates that the durability test in particular will be changed during the interim period. While the contractor has developed a modified test to simulate durability, current plans include the construction of a final "durability track." Once the track is complete (which the agency anticipates will be some time during the transition period) the contractor will update the tests procedures to indicate this, and provide manufacturers with the information about the expanded durability tests.

IV. Procedural Information for the Transition Period

A. *Scheduling a vehicle to be tested at the facility.* (Subpart C). A manufacturer may schedule a vehicle for testing by contacting Penn State's Transportation Institute, the contractors for the bus testing facility program. In this connection, a manufacturer should contact James C. Wambold, Director of Automotive Research, The Pennsylvania State University, Pennsylvania Transportation Institute, Research Building B, University Park, PA 16802, (814) 863–1889.

When a manufacturer contacts Penn State, it will be provided with a draft contract for the testing, a fee schedule, and the test procedures that will be conducted on the vehicle. A manufacturer is responsible for transporting its vehicle to and from the facility at the beginning and completion of testing. (§ 665.27) Penn State will process vehicles for testing in the order in which the contracts are signed. The length of time to complete the testing will vary according to vehicle type, although actual testing time is not expected to exceed three months.

B. *Fees.* (§ 665.25) Section 317 provides that the contractor is to develop a fee schedule and is to collect the fees from the manufacturers. Section 317 also requires that UMTA approve the fee schedule. The agency anticipates that the fee schedule will be developed and approved by September 15, 1989. After this time a manufacturer may contact Penn State at the above address and request fee information.

C. *Administration of Tests.* (§ 665.29) The tests will be conducted at the facility, consistent with established procedures and will be consistent with the testing procedures provided to the manufacturer at the time of contract execution. As indicated in the test descriptions, Penn State will perform all normal maintenance and repair work on the vehicles. However, there also will be an office available to the manufacturer for on-site personnel to observe testing.

If at any time during the testing the manufacturer determines that it is in its best interest to withdraw its vehicle, the manufacturer may do so, without prejudice. No information about the tests will be made available in such cases. However, the manufacturer will be responsible for fees incurred up to the point of withdrawal.

D. *Release of Test Data.* (§ 665.13) The interim period procedures provide, consistent with the NPRM, that a manufacturer will be able to withdraw a vehicle from testing at any time before the completion of the tests, and no record of the partial tests will be kept. After vehicle testing is complete, Penn State will provide the entity with a copy of the Test Report for its vehicle.

For the interim period, the agency has decided that the trigger for the Test Report becoming available to the public is at some point during the procurement process when a manufacturer responds to a procurement bid by an UMTA recipient. The specific time *when* that information is to be made available is a local option, but it must be made available no later than the point at which the recipient is to take final acceptance of the first vehicle. That is, a recipient is free to develop bid specifications that require the Test Report to be available, for example, when a manufacturer bids in response to the specifications, but in any event the Test Report must be made available no later than at the final acceptance of the first vehicle. From that point, on the Test Report will available to the public.

The agency requested comment on this issue in the proposed rule, since there may be some entities interested in obtaining the information generated at the test center. A distinct majority favored maintaining the confidentiality of the material until the manufacturer decides that the bus actually will be the subject of a bid response. However, as already noted, this issue as well as all other issues are open for comment and subject to further analysis before the agency issues its final rule. In any event, once a Test Report becomes public, the facility will keep it and all other publicly available Test Reports available.

V. Regulatory Analyses and Certifications

A. *Executive Order 12291.* This action has been reviewed under Executive Order 12291, and UMTA has determined that this is not a major rule. As promulgated, this rule will not result in an annual effect on the economy of $100 million or more, nor will it create a major increase in costs or prices for consumers, individual industries, or geographic regions, nor have significant adverse effects on competition, employment, investment, innovation or the ability of United States-based enterprises in domestic or export markets.

B. *Regulatory Evaluation.* This regulation is significant under the Department's Regulatory Policies and Procedures, because of the potential high level of public interest. A final regulatory evaluation will be prepared before the final rule is issued. These interim procedures will assist the agency in its continuing effort to collect specific cost data on the program. To some extent commenters responded to the agency's request for specific data, although estimates were not accompanied by any underlying analysis or information. The agency has docketed an Addendum to its preliminary regulatory evaluation, outlining the data available to date. The agency will issue a final regulatory analysis at the time the final rule is issued.

C. *Regulatory Flexibility Act.* In accordance with 5 U.S.C. 605(b), as added by the Regulatory Flexibility Act, Public Law 96–354, UMTA believes that this rule may have a significant economic impact on a substantial number of small entities within the meaning of the Act, and accordingly has addressed this impact in its preliminary regulatory evaluation. The NPRM sought comment on the potential impact on this rule on the small manufacturer—of vans, paratransit vehicles and the like.

D. *Paperwork Reduction Act.* The collection of information requirements in this rule are subject to the Paperwork Reduction Act (44 U.S.C. Chapter 35). Section 317 of STURAA specifically requires the establishment of the facility, as well as the Test Reports. The paperwork requirements contained in this rule have been or will be submitted to the Office of Management and Budget for approval.

E. *Federalism—Executive Order 12612.* UMTA has reviewed this rule in light of the Federalism considerations set forth in Executive Order 12612. That Executive Order requires each Federal agency to address the impact of its regulations on State and local governments. Although this rule will have definite Federalism implications, because it will impose additional requirements on States, local governments, and public transit operators receiving Federal financial assistance from UMTA, this rulemaking is required by statute. UMTA considered the Federalism implications of this rulemaking during its development, and has designed it to provide recipients with as much flexibility as possible under the law. UMTA does not expect that this rule will have a substantial direct effect on the relationship between the Federal Government and the States or the distribution of power and responsibilities among the various levels of government.

In addition, UMTA has considered the Federalism implications of this rulemaking on public transit operators which are quasi-governmental or instrumentalities of States and local governments, and UMTA does not expect that this rule will have a substantial direct effect on the relationship between those public operators and the governmental entities with which they are associated. Accordingly UMTA has determined that

BEST COPY AVAILABLE

the preparation of a Federalism Assessment under Executive Order 12612 is not warranted.

Lists of Subjects in 49 CFR Part 665

Vehicle testing, Grant programs—transportation, Mass transportation.

Accordingly, for the reasons described in the Preamble, 49 CFR Chapter VI is amended by adding a new part 665, as set forth below:

PART 665—BUS TESTING

Subart A—General

Sec.
665.1 Purpose.
665.3 Scope.
665.5 Definitions.
665.7 Grantee certification of compliance.

Subart B—Bus Testing Procedures

665.11 Testing requirements.
665.13 Test report and manufacturer certification.

Subart C—Operations

665.21 Bus testing facility.
665.23 Scheduling.
665.25 Fees.
665.27 Transportation of vehicles.
665.29 Procedures during testing.

Appendix A—Tests To Be Performed at the Bus Testing Facility

Authority: Urban Mass Transportation Act of 1964, as amended, 49 U.S.C. 1601 *et seq.*, 1608(h), section 317, Surface Transportation and Uniform Relocation Assistance Act of 1987, and 49 CFR 1.51.

Subpart A—General

§ 665.1 Purpose.

An applicant for Federal financial assistance under the UMT Act for the purchase or lease of buses with funds obligated by UMTA after September 30, 1989, must certify to UMTA that any new bus model acquired with such assistance has been tested in accordance with this part. This part contains the information necessary for a recipient to ensure compliance with this provision.

§ 665.3 Scope.

This part applies to a recipient of Federal financial assistance under sections 3, 9, 16(b)(2), or 18 of the UMT Act. These interim procedures shall be in effect from October 1, 1989, up to September 30, 1990, unless the agency, with appropriate notice, expands the scope of this rule to cover additional vehicles or makes the interim rule final.

§ 665.5 Definitions.

As used in this part—

Administrator means the Administrator of the Urban Mass Transportation Administration or his or her designee.

Bus means a rubber-tired automotive vehicle used for the provision of mass transportation service by or for a recipient.

Bus Model means a bus design or variation of a bus design usually designated by the manufacturer by a specific name and/or model number.

Bus Testing Facility means a testing facility established by renovation of a facility constructed with Federal assistance at Altoona, Pennsylvania under section 317(b)(1) of the Surface Transportation and Uniform Relocation Assistance Act of 1987, and includes proving ground facilities operated in connection with the facility.

Major changes in configuration or components means a change of major components or significant structural modifications.

Mass Transportation Service means the operation of a vehicle which provides general or special service to the public on a regular and continuing basis.

New Bus Model means a bus model which—

(1) Has not been used in mass transportation service in the United States before October 1, 1988; or

(2) Has been used in such service but which after September 30, 1988, is being produced with a change of major components or significant structural modifications.

Recipient means a direct recipient of funds under sections 3, 9, 16(b)(2), or 18 of the UMT Act.

Test Report means the final document prepared by the operator of the bus Testing Facility stating the results of the tests performed on each bus.

UMT Act means the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. app. 1601 *et seq.*)

§ 665.7 Grantee certificate of compliance.

(a) In each application to UMTA for the purchase or lease of buses, a recipient will certify that any new bus model, or any bus model with a major change in configuration or components, to be acquired or leased with funds obligated by UMTA after September 30, 1989, will be tested at the Bus Testing Facility, and a Test Report provided before final acceptance of the first vehicle by the recipient.

(b) It is the responsibility of the recipient in dealing with a manufacturer, to establish whether a vehicle to be acquired is subject to these procedures.

Subpart B—Bus Testing Procedures

§ 665.11 Testing requirements.

(a) A new bus model to be tested at the Bus Testing Facility shall—

(1) Be a single model;

(2) Meet all applicable Federal Motor Vehicle Safety Standards, as defined by the National Highway Traffic Safety Administration in part 571 of this title;

(3) Be substantially fabricated and assembled by techniques and tooling that will be used in production of subsequent buses of that model.

(b) The model shall be tested for maintainability, reliability, safety, performance, structural integrity, fuel economy, and noise.

The following vehicle types shall be tested:

(1) Heavy duty large buses, approximately 35–40 foot, as well as articulated buses, with a minimum service life or 12 years or 500,000 miles.

(2) Heavy duty small buses, approximately 30 foot with a minimum service life of ten years or 350,000 miles.

(3) Purpose-built medium duty buses approximately 25–35 foot with a minimum service life of seven years or 200,000 miles.

(c) The operator of the facility shall develop a test plan for the testing of vehicles at the facility, which is approved by UMTA, and which generally follows the guidelines set forth in appendix A of this part.

§ 665.13 Test report and manufacturer certification.

(a) Upon completion of testing, the operator of the facility shall provide a Test Report to the entity that has had the bus tested.

(b)(1) A manufacturer of a new bus model or a bus produced with a major change in component or configuration shall provide a copy of the Test Report to a recipient during the point in the procurement process specified by the recipient.

(2) A manufacturer who releases a report under paragraph (b)(1) of this section also shall provide notice to the operator of the facility that the report is available to the public.

(c) If a bus model subject to a Test Report has a change that is not a major change under this part, the manufacturer shall advise the recipient during the procurement process and shall include a description of the change and its basis for concluding that it is not a major change.

(d) A Test Report shall be available publicly once the owner of the Report makes it available during the recipient's procurement process. The operator of

the facility will have available for distribution copoies of all the publicly available reports.

(e) The Test Report is the only information or documentation that will be made available publicly in connection with any bus model tested at the facility.

Subpart C—Operations

§ 665.21 Bus testing facility.

(a) *Location.* The bus testing facility is located at Altoona, Pennsylvania, and includes proving ground facilities.

(b) *Operator.* The facility is operated by Penn State University under contract with UMTA.

§ 665.23 Scheduling.

(a) A manufacturer may schedule a vehicle for testing by contacting Penn State's Transportation Institute (PSTI) at the following address: The Pennsylvania State University, Pennsylvania Transportation Institute, Research Building B, University Park, PA 16802 (814) 863–1889.

(b) Upon contacting PSTI, the manufacturer will be provided the following:

(1) A draft contract for the testing;

(2) A fee schedule; and

(3) The draft test procedures that will be conducted on the vehicle.

(c) PSTI will provide final test procedures to be conducted on the vehicle at the time of contract execution.

(d) PSTI will process vehicles for testing in the order in which the contracts are signed.

§ 665.25 Fees.

(a) Fees charged by the operator are according to a schedule approved by UMTA.

(b) Fees will be prorated for a vehicle withdrawn from the facility before the completion of testing.

§ 665.27 Transportation of vehicle.

A manufacturer is responsible for transporting its vehicle to and from the facility at the beginning and completion of the testing.

§ 665.29 Procedures during testing.

(a) The facility operator shall perform all testing, consistent with established procedures at the facility and with the test procedures provided the manufacturer at the time of contract execution.

(b) The manufacturer of a bus being tested may terminate the test program at any time before the completion of testing, and shall be charged a fee for the tests performed.

(c) The operator shall perform all maintenance and repairs on the test vehicle, consistent with manufacturers specifications.

(d) The manufacturer may observe all tests. The manufacturer may not provide maintenance or service.

Appendix A to Part 665—Tests To Be Performed at the Bus Testing Facility

The seven tests to be performed on each vehicle are required by the bus testing legislation and are based in part on tests described in the UMTA report "First Article Transit Bus Test Plan", which is mentioned in the legislative history of section 317. When appropriate, SAE test procedures and other procedures accepted by the transit industry will be used. The seven tests are described in general terms in the following paragraphs.

1. *Maintainability.* The maintainability test includes bus servicing, preventive maintenance, inspection, and repair. It also will include the removal and reinstallation of the engine and drive train components that would be expected to require replacement during the bus' normal life cycle. Much of the maintainability data will be obtained during the bus durability test at the proving ground. Up to twenty-five percent of the bus life will be simulated and there will be servicing, preventive maintenance, and repair actions. These actions will be done by test facility staff, although manufacturers will be allowed to maintain a representative on site during the testing. Since the operator will not become familiar with the detailed design of all new bus models that are tested, tests to determine the time and skill required to remove and reinstall an engine, a transmission, or other major propulsion system components may require advice from the bus manufacturer. All routine and corrective maintenance will be carried out by the test operator in accordance with the manufacturer's specifications.

The maintainability Test Report will include the frequency, personnel hours, and replacement parts or supplies required for each action during the test. The accessibility of selected components and other observations that could be important to a bus user will be included in the report.

2. *Reliability.* The question of reliability will be addressed by recording all bus breakdowns during testing. It is recognized that with one test bus it is not feasible to conduct statistical reliability tests. It is anticipated that bus operation on the durability course should reveal the problems that would otherwise not be detected until much later during scheduled transit service. The bus failures, repair time end the actions required to get the bus back into operation will be recorded in the report.

3. *Safety.* The safety test will be a handling and stability test. The test is an obstacle avoidance or double-lane change test that will be performed at the proving ground. The double-lane change course will be different for each type of bus and the speed could be different for each type of bus. Coach speed will be held constant throughout a given test run. Individual test runs will be made at increasing speeds up to 45 mph or until the coach can no longer be operated safely over the course, whichever speed is lower. Both left- and right-hand lane changes will be tested. The 45 mph maximum speed was selected because it is a reasonable speed at which to expect this bus type to maneuver safely.

4. *Performance.* The performance test will be performed on the proving ground and will measure acceleration and gradeability with the test vehicle operated at seated load weight. Top speed also will be measured if it can be done safely on the track. The test will be performed using a fifth wheel or equivalent and associated instrumentation. The bus will be accelerated at full throttle from standstill to maximum safe speed on the track. The report will include a table of time required to accelerate to each 10 mph increment of speed and when possible, the top speed. The gradeability capabilities will be calculated both from the test data and a test from a dead stop on a minimum of a 15 percent grade.

5. *Structural Integrity.* Two different structural integrity tests will be performed. Structural strength and distortion tests will be performed at the testing facility in Altoona and structural durability tests will be performed at the proving ground.

a. Structural Strength and Distortion Tests

(1) The structural strength and distortion tests will be conducted and will be different for each type of bus. For example, a shakedown of the bus structure will be conducted by loading and unloading the bus no more than three times with a distributed load equal to 2.5 times gross load. The bus then will be loaded with a distributed load to gross vehicle weight. (Gross vehicle weight is a curb weight plus gross load.) Increase in floor deflection will be measured as the bus weight is increased from curb weight to gross vehicle weight. Then the bus will be loaded with a distributed load equal to 2.5 times gross load. The bus then will be unloaded and inspected for any permanent deformation on the floor or coach structure.

(2) The bus will be loaded to gross vehicle weight, with one wheel on top of a 6-inch-high curb and then in a 6-inch-deep pot hole. This test will be repeated for all four wheels. The test will verify: (a) Normal operation of the steering mechanism and (b) operability of all passenger doors, passenger escape mechanisms, windows, and service doors. In addition, a water leak test will be conducted.

(3) Using a load-equalizing towing sling, a static tension load equal to 1.2 times the bus curb weight will be applied to the bus towing fixtures (front and rear). The load will be removed and the tow eyes and adjoining structure will be inspected for damages or permanent deformations.

(4) The bus at curb weight will be towed with a heavy wrecker truck for several miles after which it will be inspected for structural damage or permanent deformation.

(5) With the bus at curb weight probable damages due to tire deflating and jacking will be tested.

(6) With the bus at curb weight possible damages or deformation associated with lifting the bus on a two post hoist system or supporting it on jack stands will be assessed.

b. Structural Durability

The structural durability test also will be different for each type of bus, but all tests will be performed on the durability course at the proving ground, simulating up to twenty-five percent of the vehicle's normal service life. During the test there will be inspections of the bus structure and the mileage and identification of possible structural anomalies.

6. *Fuel Economy.* This test will be run to determine the fuel economy in miles per gallon or equivalent of the new bus models. The test will be run at seated load weight on a duty cycle that simulates transit service for the type of vehicle being tested. (The methods of fuel use measurement for different fuels have yet to be determined) The fuel measurement devices under consideration include volumetric, gravimetric, flow, and pressure.

The agency notes that this fuel economy test bears no relation to the calculations done by the Environmental Protection Agency (EPA) to determine fuel economy levels for the Corporate Average Fuel Economy Program. However, the test will provide data which can be used by recipients in their purchase decisions.

7. *Noise.* There will be two noise tests: (1) Interior noise and vibration and (2) exterior noise. It is recognized that different levels of noise are expected and acceptable with different types of vehicles and different test procedures might be required.

Issued: August 21, 1989.

Roland J. Mross,

Deputy Administrator.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $340 per year in paper form; $195 per year in microfiche form; or $37,500 per year for the magnetic tape. Six-month subscriptions are also available at one-half the annual rate. The charge for individual copies in paper or microfiche form is $1.50 for each issue, or $1.50 for each group of pages as actually bound, or $175.00 per magnetic tape. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or charge to your GPO Deposit Account or VISA or Mastercard.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 54 FR 12345.

THE FEDERAL REGISTER
WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: The Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

ATLANTA, GA

WHEN: September 20; at 9:00 a.m.
WHERE: Room 808, 75 Spring Street, SW.
Richard B. Russell Federal Building
Atlanta, GA
RESERVATIONS: Call the Federal Information Center

Rules and Regulations

Federal Register
Vol. 54, No. 163
Thursday, August 24, 1989

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

FEDERAL HOME LOAN BANK BOARD

12 CFR Part 571

[No. 89-2347]

Applications Processing Guidelines

Date: August 8, 1989.

AGENCY: Federal Home Loan Bank Board.

ACTION: Final rule; solicitation of comments.

SUMMARY: The Federal Home Loan Bank Board ("Board"), as operating head of the Federal Savings and Loan Insurance Corporation ("FSLIC" or "Corporation"), is revising its policy statement, 12 CFR 571.12, which sets forth guidelines concerning the processing of applications filed with the Board and the FSLIC, to make various technical amendments that will streamline and update applications processing, clarify certain procedures, and conform the guidelines to current Board practice, all as more fully described in the preamble to this final rule.

EFFECTIVE DATE: August 24, 1989. Comments on the revised policy statement must be received on or before October 23, 1989.

ADDRESS: Send comments to Director, Information Services Section, Office of Secretariat, Federal Home Loan Bank Board, 1700 G Street NW., Washington, DC 20552. Comments will be available for public inspection at Information Services, Federal Home Loan Bank Board, 801 17th Street NW., Washington, DC 20006.

FOR FURTHER INFORMATION CONTACT: Jacqueline L. Lassier, Attorney, (202) 906–6575; V. Gerard Comizio, Director, (202) 906–6411, Corporate and Securities Division, or Julie L. Williams, Deputy General Counsel for Securities and Corporate Structure, (202) 906–6459, Office of General Counsel; Cindy L. Hausch, Financial Analyst, (202) 906–7488; Cheryl A. Martin, Regional Director, (202) 906–7869; Patrick G. Berbakos, Director, (202) 906–6720, Office of District Banks; Stephen D. Johnson, Attorney, (202) 906–6318, Office of Community Investment, Federal Home Loan Bank Board, 1700 G Street NW., Washington, DC 20552; Robyn H. Dennis, Financial Analyst, (202) 331–4572; Jerry Kluckman, Director of Compliance Programs, (202) 785–5442, Office of Regulatory Activities, Federal Home Loan Bank System, 801 17th Street NW., Washington, DC 20006.

SUPPLEMENTARY INFORMATION: On October 2, 1987, by Resolution No. 87–1038, the Board issued a policy statement that promulgated applications processing guidelines ("Guidelines") (effective October 9, 1987) setting forth maximum time periods for approval of completed applications filed with the Board. *See* 52 FR 39064 (October 20, 1987). The Guidelines are currently set out at 12 CFR 571.12. The Board adopted the Guidelines as a result of section 410 of the Competitive Equality Banking Act of 1987, Public Law No. 100–86, 101 Stat. 552 (August 10, 1987) ("CEBA"), which directed the Board in section 410(a) to promulgate guidelines providing that each completed application filed with the Board or the FSLIC (other than applications submitted under section 408(g) of the National Housing Act, 12 U.S.C. 1730a(g) ("NHA") concerning holding company indebtedness) shall be deemed to be approved as of the end of the period prescribed by such guidelines unless the Board or the FSLIC approves or disapproves the application before the end of the period.[1]

Section 410(d) of CEBA provided that the guidelines required to be promulgated under section 410(a) would take effect on October 9, 1987, *i.e.*, at the end of the 60-day period beginning on August 10, 1987, the date of enactment of CEBA.

While the Guidelines were promulgated in final form, the Board also invited public comment as to how the Board's then current regulations related to regulatory applications review and processing and the newly adopted Guidelines could be further streamlined. In addition, the Board conducted public hearings on November 3 and 4, 1987, on regulations proposed in response to CEBA. The hearing on November 3 covered the Guidelines, which were already effective at the time of the hearing. A number of commenters responded with letters addressing issues covered by the Guidelines and suggested modifications to some of the provisions of the Guidelines.

The Board has carefully studied the issues raised by the commenters. The Board has also studied issues identified as a result of the Board's experience in processing applications under the Guidelines. Accordingly, today the Board is issuing a revised statement of policy on the Guidelines.

The Board notes that the Administrative Procedures Act ("APA"), 5 U.S.C. 553(b)(3)(A), exempts general policy statements and interpretative rules from notice and comment requirements. As permitted by section 553(b)(3)(A) of the APA, the Board has not submitted the revisions to the Guidelines for public comment before adopting this final revised statement of policy. However, the Board also is soliciting comments from interested parties as to how the Board's Guidelines may be further streamlined. Comments should be submitted within 60 days of the effective date of this revised statement of policy.

This preamble will first review the comments received on the Guidelines. An overview of the amendments to the Guidelines is then provided.

I. Summary of Comments

The Board received a total of 17 comment letters in response to the request for written comments. The Board also heard testimony from eight speakers at the public hearing held on November 3, 1987. Nine of the written commenters were thrift industry trade associations (including six state savings institutions leagues), five were FSLIC-insured institutions, one was a professional society of financial managers, one was a law firm, and one was an organization involved in assisting community groups. Four of the commenters at the hearing were representatives of thrift industry trade associations and four were members of law firms. Three of the thrift industry trade associations that had representatives testify at the hearing also submitted comment letters. Generally, the written comments supported the Guidelines, although many comment letters contained suggestions concerning particular aspects of the Guidelines.

---

[1] Section 410(b) of CEBA amended section 408(g) of the NHA to provide that any completed application submitted for approval under that subsection shall be deemed to be approved 60 days after the filing of such completed application, unless the FSLIC approves or disapproves the application prior to the expiration of that period.

The comments primarily addressed two issues: The number and types of applications excluded from the timelines set out in the Guidelines, and the timelines themselves. Commenters also made numerous suggestions to speed the review and the processing of applications and to increase communication between the Board and applicants.

A. Written Comments

1. Applications Excluded From Applications Processing Guidelines

The Guidelines exclude certain categories of applications from the stricture of the time deadlines. Eight commenters addressed this issue, three of whom asserted that the Board has no authority to exclude, any category of application from the timelines. The remaining five urged that the Board include more types of applications within the coverage of the timelines.

Even those commenters who did not assert that the Board has no authority to exclude categories of applications from the timelines disagreed with the number of exclusions. They urged that the categories of covered applications be expanded to include as many as possible, no matter how long a time period the Board may assign, for the sake of certainty in business planning. A number of commenters pointed out the need for speed in acting on transactions related to bringing new capital into the industry. One commenter asked that the Board clarify whether "securities-related filings" are covered by the Guidelines.

2. Length of Time Allowed for Review

The Guidelines set out timelines for the Board or the FSLIC to review and act on applications. Ten commenters addressed the issue of the timelines, three suggesting that some or all of the timelines should be shortened. The extension of time for review provided by paragraph (f) of the Guidelines (12 CFR 571.12(f)) for applications involving significant issues of law or policy elicited three comments.

Of the three commenters who urged shorter time frames, one suggested a 60-day overall time limit with a ten-day time limit for debt applications. This commenter pointed out the need to move quickly to take advantage of desirable financing rates and business opportunities. This commenter also suggested that there is no need for the 30-day extension at the discretion of the Board in paragraph (e) (12 CFR 571.12(e)), because the "law or policy" exception in paragraph (f) should subsume any need to extend consideration of an application.

Another commenter suggested that the review process be modeled after that of the Securities and Exchange Commission ("SEC"). This commenter suggested that an applicant be notified within three to five days whether its application would be afforded "no," "limited," or "full" review, and within 30 days whether additional information is required. This additional information would then be reviewed by the staff within two weeks.

The third commenter who addressed the review period for applications said that the time limits are "completely unworkable for an institution trying to move quickly when an opportunity presents itself." This commenter suggested the following time limitations: Ten days to request additional information, and five days after its receipt to request further information, and for any application that can be approved by a Principal Supervisory Agent or designated Supervisory Agent, a total of 30 days to review from the date of initial filing, tolled only for the period the Board is awaiting additional information. All other applications would have a maximum review period of 45 days.

The three commenters who addressed the extension of time available for those applications determined to present a significant issue of law or policy under paragraph (f) of the Guidelines (12 CFR 571.12(f)) asked that there be some time limit placed on those applications, no matter how long, for the sake of predictability in business planning. One commenter suggested a system whereby the applicant would be notified that its application has been determined to raise a significant issue of law or policy with a statement explaining the reasons, and providing for notice every 30 days to the applicant until 90 days have elapsed. At that point the applicant could request a public hearing to resolve the delay.

One commenter expressed concern that there is no provision made in the text of the Guidelines for stopping the automatic approval process when a protest under the Community Reinvestment Act is filed, noting that a footnote to the Preamble of the Guidelines provides that the automatic approval process will be discontinued until the issues relating to the protest are resolved. The commenter urged that this provision be incorporated into the text of the Guidelines so that the Board's policy on protests is clear.[8]

Another commenter expressed fears that the automatic approval feature might allow "highly objectionable" applications to be automatically approved, merely because the Board had not had the time to review the application properly. This commenter did not suggest a remedy to this perceived danger.

3. Suggested Improvements to Applications Processing

A number of commenters suggested ways to improve and streamline the applications review process. Three commenters suggested, that the information required in any application be explicitly spelled out in detailed forms and regulations similar to the SEC's forms and Regulations S–K and S–X. This should reduce the need for, and therefore the delay from, requests for additional information from the Board's staff.

Four commenters urged greater communication between the staff and an applicant; one commenter suggested the creation of an office that would act as a central clearing house to track the status of an application and keep the applicant informed. The other commenters asked for formal written notification of status at each point in the application's review, including affirmative, written notification that an application has been automatically approved by the expiration of the relevant review period. One commenter suggested that the Guidelines should specify standards with respect to when an application is deemed complete.

Three commenters also suqgested that the provision for extending the review period of applications raising significant issues of law or policy under paragraph (f) of the Guidelines (12 CFR 571.12(f)) should be limited by (1) defining "a significant issue of law or policy," (2) establishing a process and timeline for the treatment of an application once it has been determined to involve a significant issue of law or policy, and (3) limiting the number of staff who have the power to delay or suspend an application that involves a significant issue of law or policy.

---

[8] The Board notes that the protest procedures discussed in the footnote to the Preamble to the original Guidelines are designed to apply to applications subject to the protest procedures set forth in 12 CFR 543.2. There are also different procedures for the processing of other types of protested applications, such ac holding company applications under 12 CFR part 574. *See* section II.B.7, below.

B. Comments of Panelists at Public Hearing on November 3, 1987

Four commenters expressed general, qualified support, while suggesting substantive and minor revisions. Two commenters addressed particular issues but expressed no overall view of the Guidelines, while one commenter expressed general disagreement. No commenter expressed unqualified support for the Guidelines.

1. Applications Excluded from Applications Processing Guidelines

A number of panelists addressed the exclusions from the Guidelines. Several stated that a time clock system should be applied to all applications submitted to the Board. This would provide applicants with certainty as to the time frame which they should expect. They asserted that CEBA requires the Board to promulgate time limits for processing all applications and does not contain any exceptions. The Guidelines contain numerous exceptions to the time limits. Some of these exceptions were viewed as appropriate, such as litigation or enforcement matters, because these are not in the nature of an application. However, several panelists stated that there was little justification for excepting applications for supervisory acquisitions. One suggested that once the terms of a supervisory transaction are arranged, then the time limits should apply to the processing of the necessary applications. Another panelist suggested that the matters that come before the Board that are not considered "applications" (*e.g.*, requests for legal opinions) should be addressed.

A majority of the panelists expressed concern about the provision permitting an exception from the standard review timetable for applications raising issues of law or policy. One person recommended that fewer persons be permitted to decide whether an application involves a significant issue of law or policy and that the meaning of what is a significant issue of law or policy should be clarified. One panelist suggested that guidelines be added setting forth a time frame to decide significant issues of law or policy, just like routine applications. One panelist suggested that a guideline be added stating that the Board will make a good faith attempt to resolve a significant issue of law or policy within 60 or 90 days after determining that one exists.

2. Length of Time Allowed For Review

A number of panelists urged that the processing time be shortened on certain applications, such as branching applications. Other panelists stated that because the Guidelines provide that the "review" period does not begin until the Board deems an application "complete," the chance for delay before the review process begins is high because the Board has "complete control" over when the limits are triggered. The likelihood of numerous requests for additional information from a number of the staff's reviewers is high. This panelist suggested that an absolute time limit from the date of filing of an application be established, notwithstanding requests for additional information. If the record is insufficient to support action because of a lack of adequate information in the application, the applicant should be advised that unless he requests a suspension of processing and leave to amend to correct the deficiency, the Board will deny the application. If the applicant refuses to request a suspension, the Board cannot act on the application because it is incomplete, and it should then be denied. This would put the decision on extensions in the applicant's hands and establishes absolute deadlines. The commenter claimed that the benefit from this approach is that in cases where the record is "substantially complete," it will not be possible for the staff to delay processing by "immaterial or tardy" requests for additional information.

This panelist also recommended the following: First, the Board should establish a centralized office in charge of coordinating and scheduling the processing of all items submitted, whether or not the Guidelines apply; second, the Board should develop a status tracking system to keep track of all items in the system; and third, the Board should delegate as much as possible to the Supervisory Agents to lighten the burden on the Board's Washington staff.

One panelist recommended that the Guidelines be amended to clarify the following issues:

(a) Priorities: It should be a priority of the Board to encourage bringing new capital into the industry. Applications involving new capitalization or supervisory conversions should be processed quickly;

(b) Materiality: It should be the Board's policy that materiality governs completeness. Under the present system, an application that is immaterially incomplete cannot be acted on. This has been employed in the past to forestall processing; the Guidelines should be amended to prevent that situation; and

(c) The Board's staff should evaluate every application immediately upon its filing and determine whether it is the kind of application the Board wants to encourage. If it is a priority application (*i.e.*, one that will put money into the industry), then it should be processed as quickly as possible.

Many panelists commented about requests for additional information. Commenters generally urged that such requests should not be duplicative of the requests of other reviewing offices; should substantively advance the application process; and should not be overused because this results in an application never being reviewed, because it is never deemed complete.

3. Suggested Improvements to Applications Processing

One panelist recommended that a review of the forms of applications be undertaken. Certain applications could be eliminated; others could be tailored more specifically to what is required for that type of application; and a regulation analogous to SEC Regulation S–K should be implemented. The regulation should include, for example, a uniform description for all financial statements, biographical data, and anti-competitive material. Each application should list the type of information required. This would result in a list of standard application components and would thereby reduce staff requests for additional information.

One person recommended that all applications and approvals be published. This would establish precedent to help other applicants understand what is permitted. This would also lighten the staff's workload because they would not be asked questions which have already been decided.

II. Discussion of Amendments to the Guidelines

In the months since the adoption of the Guidelines, the Board has gained significant experience in regulatory applications review and processing under the Guidelines. The Board also has taken action on a number of fronts to improve the efficiency of the agency's application processing procedures. For example, the Board has adopted amendments to its acquisition of control regulations, 12 CFR part 574, designed to streamline the regulatory processing of the wide range of acquisition of control filings made with the Board under part 574 by revising regulatory application processing time periods and procedures consistent with the Guidelines. *See, e.g.*, Acquisition of Control of Insured Institutions; Procedural Requirements, 52 FR 48519 (Dec. 23, 1987) (revising filing procedures and time frames for public notification and sufficiency determinations for applications, notices and rebuttal filings filed pursuant to 12 CFR part 574); Acquisition of Control of Insured Institutions; Delegations of Authority and Technical Amendments, 53 FR 33104 (Aug. 30, 1988) (expanding the authority of the Principal Supervisory Agents to approve and disapprove certain change of control notices and applications under 12 CFR part 574, and certain other technical amendments to streamline 12 CFR part 574).[3] The Board has also established internal applications processing guidelines. *See* Office of District Banks Applications Procedure Memorandum #014–1, August 1, 1988 ("AP 14–1"). Many of the amendments being adopted today are as a result of the Board's experience in processing applications under the Guidelines.

A. Completed Applications to Which the Guidelines Apply

Section 410 of CEBA, by its terms, applies to all completed "applications" under the Board's regulations. Congress did not, however, expressly define the term "application" regarding the nature and type of applications intended to be within the scope of section 410(a). In determining which applications should be governed by the Guidelines, the Board excluded certain matters that it believed do not appear to appropriately fall within the scope or intent of section 410. A number of commenters criticized the exclusions and urged that as many types of applications as possible be covered by the Guidelines. The Board is amending paragraph (a) of the Guidelines (12 CFR 571.12(a)) to delete from the category of applications not covered by the Guidelines those applications involving requests for non-standard supervisory forbearances in connection with mergers or acquisitions under 12 CFR 563.22(e)(1)(i) that do not involve FSLIC assistance. If additional time for review is necessary, there are mechanisms available under the Guidelines to extend the review period. *See 12 CFR 571.12 (e) and (f).*

Second, the Board is amending paragraph (a) of the Guidelines to clarify that under certain circumstances, certain applications that pertain to the Board's litigation and enforcement activities will be covered by the Guidelines. Requests submitted pursuant to special requirements imposed pursuant to cease and desist orders, removal/prohibition orders, supervisory agreements, consent merger agreements, and agreements reached pursuant to the terms of a settlement of litigation are not covered by the Guidelines. Such litigation and enforcement documents often contain provisions that require that the institution in question restrict certain of its activities and/or engage in certain transactions only after obtaining the prior written approval of the Supervisory Agent. Requests to engage in activities that are subject to special limitations or restrictions that are imposed by such documents or that require the prior written approval of the Supervisory Agent, as well as requests for termination or modification of such documents, are not covered by the Guidelines. However, the fact that a regulation involving an application may be mentioned in an enforcement document does not necessarily mean that the Guidelines do not apply to that application. Applications submitted pursuant to a regulatory requirement that an institution obtain the prior written approval of the Board or its delegate before engaging in the proposed activity should be covered by the Guidelines, whether or not the regulation involving the application is mentioned in an enforcement document. Only if the application relates to an activity uniquely covered or restricted by an enforcement document, is the application then excluded from coverage of the Guidelines.

For example, the Board may issue a cease and desist order against an association for violations of the provisions of 12 CFR 563.41, restrictions on real and personal property transactions with affiliated persons, and specifically require that the association not violate § 563.41 in the future. Section 563.41 requires that the prior written approval of the Principal Supervisory Agent must be obtained before an association may enter into any real or personal property transaction specified therein with an affiliate. If, after the entry of the cease and desist order, the association were to file an application for permission to engage in a covered transaction with an affiliate under § 563.41, that application would be subject to the Guidelines because the regulation already requires supervisory approval. If, on the other hand, under the terms of the cease and desist order, the association were required to obtain the special permission of the Supervisory Agent before the association could make commercial loans of any type, then the association's request in that case would not be covered by the Guidelines because there is no independent regulatory requirement for such approval.

This clarification should enhance the prompt and timely processing of regularly required applications that involve institutions that are subject to supervisory or enforcement orders or other documents, where the proposed activity is not specifically constrained by the enforcement document.

Third, the Board is amending paragraph (a) to correct an error in the designation of one of the statutes enumerated in that paragraph. The third sentence of paragraph (a) states that the Guidelines do not apply to, among others, "requests for Corporation assistance or assistance payments in connection with a merger, acquisition or restructuring of an insured institution pursuant to section 406(f)(1)–(4) of the NHA, 12 U.S.C. 1729(f)(1)–(4) * * *". Section 406(f) of the NHA presently contains 6 subparagraphs. It was not the intent of the drafters of the Guidelines to exclude subparagraphs (f)(5), Net Worth Certificates, or (f)(6), Capital Instrument Purchase Program, from the types of FSLIC-assisted transactions that are not covered by the Guidelines. The omission of reference to subparagraphs (f)(5) and (f)(6) appears to have been inadvertent. First, footnote 2 of the Preamble to the Guidelines states explicitly that requests for the purchase of Net Worth Certificates are not covered by the Guidelines, on the ground that 12 CFR part 572 already provides detailed standards, guidelines and timeframes for handling such requests. Second, CEBA added subparagraph (f)(6), the capital instrument purchase program (section 405 of CEBA). Its omission appears to have been unintentional. Accordingly, the phrase in the third sentence is being amended to delete the reference to subparagraphs (f)(1) through (f)(4) of section 406(f) of the NHA, and to refer instead simply to requests for assistance or assistance payments in connection with a merger, acquisition or restructuring of an institution.

---

[3] *See also* Acquisition of Securities of Converting and Converted Insured Institutions, 52 FR 42091 (Nov. 3, 1987) (delegating authority to the General Counsel or his designee to approve routine applications filed pursuant to 12 CFR 563b.3(i)(3)); Holding Company Indebtedness, 52 FR 49381 (Dec. 31, 1987) (revising the time frame for the processing of debt applications and delegating authority to the Supervisory Agent to approve or deny most debt applications); Restrictions on Repurchase of Stock of Recently Converted Insured Institutions, 53 FR 2477 (Jan. 28, 1988) (preapproving certain requests for waiver of the regulatory restrictions on repurchases of stock by recently converted insured institutions); Policy Statement on Merger Conversions (Board Res. No. 88–280, Apr. 21, 1988) (restating and clarifying the Board's position on merger-conversions); Charter and Bylaw Amendments; Delegations of Authority, 54 FR 4257 (Jan. 30, 1989) (delegating authority to the Principal Supervisory Agent to grant or deny preliminary approval of most charter amendments and to approve or deny most bylaw amendments); Preapproved Securities Brokerage Service Corporation Activities, 54 FR 14091 (Apr. 7, 1989) (proposed preapproval of certain securities brokerage service corporation activities).

Fourth, the Board is amending paragraph (a) to clarify that requests for reconsideration, modification or appeals of final decisions of the Board are not covered by the Guidelines. Where the Board has previously rendered a timely decision on an application, thereby fulfilling its obligation under section 410 of CEBA to expedite applications processing, the Board believes that appeals of such final agency actions are not, in essence, applications and should not be subject to the automatic approval process. However, the Board and its staff will act on such appeals in a timely fashion.

Fifth, the Board is amending the third sentence of paragraph (a) to delete as unnecessary all of the statutory citations to the types of applications and other requests for approval that are excluded from coverage of the Guidelines.

The Board notes that, after considering the public comments urging that the categories of applications covered by the Guidelines be expanded to include as many as possible, it has concluded that no additional categories of applications currently excluded from coverage should now be covered by the Guidelines. In response to those commenters who asserted that the Board does not have the authority to exclude any category of application from coverage, the Board continues to hold the view that it was given the discretion under section 410 of CEBA to determine which applications should be governed by the Guidelines and which do not appropriately fall within the scope of section 410. The predominant nature of the applications and other requests for approval excluded from coverage in paragraph (a) of the Guidelines involve either requests for FSLIC assistance or the resolution of litigation and enforcement issues. The excluded matters do not fall into the category of traditional "applications." The Board believes that maximum flexibility must be retained in these areas and that therefore standardized timetables are not appropriate.

B. Acceptance of Applications for Processing

Paragraph (c) of the Guidelines (12 CFR 571.12(c)) states that the review period for the determination whether to approve or deny an application will not commence until an application is deemed complete. The Board is adopting a number of amendments to paragraph (c) based upon its experience in processing applications. The Board believes that the adoption of these amendments will enhance the prompt processing of applications as well as provide additional guidance to potential applicants and their professional advisors.

1. Requests for Additional Information

The Board is amending paragraph (c) of the Guidelines to make it clear that requests for additional information on applications covered by the Guidelines must be in writing. Experience has shown that written requests provide applicants with greater certainty regarding the information the Board's staff needs to complete its review of an application. Also, because a number of offices within the Federal Home Loan Bank System may need to coordinate in order to issue a request for additional information (at least in the context of applications not delegated to the Principal Supervisory Agent), the issuance of oral comments by a particular office may lead to unnecessary confusion. AP 14–1, a memorandum distributed by the Office of District Banks to all Supervisory Agents, whose stated purpose is to clarify the Guidelines and to delineate internal processing procedures to enhance the processing and monitoring of the Guidelines by the Federal Home Loan Bank System, states that any requests for additional information must be in writing. This amendment to the Guidelines is intended to make the Guidelines consistent with current Board policy as expressed in AP 14–1.

2. Requests for Extension

The Board is amending paragraph (c) of the Guidelines to add a provision addressing procedures for requests by applicants for additional time to respond to requests for additional information from the Board's staff. Paragraph (c) states that in the event that any additional information is requested, the applicant must respond fully to the request within 30 days. Failure to respond within such time period may cause the application to be treated as having been withdrawn or may provide grounds for denial of the application. In the staff's experience, applicants occasionally request extensions, but there is currently no uniform method for applicants to request extensions and for staff to respond. Under the new procedure, applicants may request reasonably brief extensions in writing prior to the expiration of the initial 30-day period. The Board's staff may, in its sole discretion, grant limited extensions in writing. As a general matter, the Board's staff will not consider a request for an extension of more than 30 additional calendar days to respond to a request for additional information unless the applicant shows good cause for an extension for longer than 30 calendar days. The Board expects that the Board's staff will respond to such requests promptly.

3. Status of Withdrawn Applications

The Board is amending paragraph (c) of the Guidelines to clarify that in the event an application is deemed withdrawn by the Board or its delegate, any resubmission will constitute a new filing, which will cause all applicable time frames to begin anew, and all applicable procedures are required to be complied with again as if it were a new filing.

4. Material Change in Completed Application

Paragraph (c) provides that, with respect to additional information requests following the initial request, the inquiries must be limited to (1) those matters derived from or prompted by information furnished in response to the previous request, or (2) material information that was not reasonably available from the applicant at the time of the application, was concealed, or pertains to developments subsequent to the initial request. In those situations in which the second type of information is being requested, *after* the application has been deemed complete, the Board or its delegate, at its option, may revoke the completeness determination and deem the application incomplete until the requested information is submitted and, upon receipt of the additional information, deem the application complete and commence the review period of the application again.

The Board wishes to clarify the procedures that will apply when the completeness determination is revoked. In the event the Board or its delegate revokes the completeness determination, deems the application incomplete, and requests additional information, the applicant will have 30 calendar days to respond to the request for additional information. Failure by an applicant to respond fully within 30 calendar days of the date of such request may be deemed to constitute withdrawal of the application or may be treated as grounds for denial of the application or issuance of a notice of disapproval of a notice.

Upon the timely filing of the additional information, the Board or its delegate shall (1) request in writing further additional information to complete the application, (2) deem the application to be complete, or (3) return the application if it is deemed by the Board or its delegate to be materially deficient and/or, substantially incomplete. The Board or its delegate shall notify the applicant as to whether the application is deemed complete within 15 calendar days after timely filing of the additional information. The new period for review by the Board or its delegate of the application will commence on the date the application is deemed complete. If the Board or its delegate fails to notify the applicant within such 15 day period, the application shall be deemed to be complete as of the expiration of such 15 day period.

The Board is amending paragraph (c) to add to the actions that the Board or its delegate may take upon receipt of such additional information. If the additional information furnished changes the application fundamentally and if the Board consequently lacks sufficient information to reach a decision on the application, then, rather than deeming the application complete and commencing the review period again, the Board or its delegate at that point also has the option, at its discretion, of returning the application to the applicant without further review on the grounds that it has become materially deficient and/or substantially incomplete.

5. Effect of Determination that Application Cannot Be Processed Under Delegated Authority

The Board is amending paragraph (c) of the Guidelines to conform the Guidelines to a provision that currently appears in the Board's Acquisition of Control Regulations, 12 CFR part 574. The Board believes that this provision should apply generally to applications covered by the Guidelines. The Guidelines are being amended to provide that in the case of an application that is not eligible for processing under delegated authority by the Principal Supervisory Agent, actions taken by the Principal Supervisory Agent or its delegate shall not commence any of the periods for review of a completed application. If it is determined that an application is not eligible for processing under delegated authority after the application has been deemed complete, the applicant will be required to refile the application with the proper offices of the Board. If the application is refiled with the proper offices, it will be deemed a new filing under the applicable statute or regulation. The refiling will cause all applicable time frames to begin anew, and applicable procedures must be complied with again.

The purpose of this amendment is to ensure that, in the event an application must be processed in Washington, the Board's Washington staff will have the opportunity to determine whether it has the information and the time it needs to process the application. In such case, all periods for determining sufficiency and for review of a completed application will recommence.

However, with respect to applications that involve the publication of notice of filing, the refiling of the application with the proper offices may not necessarily require the applicant to republish the notice. The Board or its delegate will have the discretion to determine on a case-by-case basis whether to require republication. Such determination will depend on the nature of the refiled application and the timing of the resubmission.

6. Waiver of Required Information

Paragraph (c)(1) requires the Board or its delegate to determine whether the application is complete within 30 days of the filing of a properly submitted application. Paragraph (c)(3) also states that when an applicant requests a waiver of information required to be included in the application, the application will not be deemed complete until a final determination is made on the waiver request. The Board is amending this provision to conform to the practice currently followed with respect to waiver requests on applications governed by the Acquisition of Control Regulations. The new procedure requires that within the initial 30-day period after the filing of an application, or within 15 days after the filing of an addition information by an applicant that includes a request for the waiver of required information, the Board or its delegate must determine whether to (1) grant the waiver request, (2) require additional information regarding the requested waiver, or (3) deny the waiver request. Upon expiration of the 30-day or 15-day period, as the case may be, the waiver request will be automatically granted unless it has been denied or additional information has been specifically requested by such date.[4]

7. Protested Applications

The Board is amending paragraph (c) of the Guidelines to add a new provision dealing with the effect of protests on the processing of applications covered by the Guidelines. Under current Board practice, the filing of a protest suspends the automatic approval time frames specified in the Guidelines, although the application will continue to be processed. See AP-14-1 and Office of District Banks Applications Procedure Memorandum #018-1, June 30, 1989.

A commenter pointed out that the Guidelines are silent on the issue of whether the processing of applications will be suspended when a protest is filed, whereas the Preamble to the Guidelines addresses this issue. See footnote 6, 52 FR 39064, 39066. The Preamble states: "Where a regulation prescribes a procedure for submission of protests on an application following publication of notice of a proposed activity after the application has been deemed complete (*e.g.*, 12 CFR 543.2), the automatic approval process will be discontinued until the issues relating to the protest are resolved. In this situation, the review period will not commence until the Corporation or its delegate informs the applicant that a protest has been deemed to be not 'substantial' or that such issues have been resolved." The Board believes that the omission of this item from the text of the Guidelines was inadvertent, and the revisions to the Guidelines correct this omission.

However, not all applications with respect to which protests may be submitted following publication of notice are affected by this amendment. In accordance with paragraph (a) of the Guidelines, where other Corporation or Board regulations establish specific procedures for the processing of applications or set forth specific time periods for automatic approval of applications unless such applications are disapproved or objections are raised, the provisions of those regulations are controlling with respect to the matters to which they pertain. For example, the regulations set forth in 12 CFR part 574 applicable to holding company applications and change in control notices set forth procedures for the processing of public comments on applications after publication of notice of the filing of such applications. Accordingly, such applications are not covered by the protest procedures of the Guidelines. The filing of a protest on applications submitted pursuant to 12 CFR part 574 will not automatically suspend the automatic approval process.[5]

---

[4] The new procedure on requests for waivers of information required to be included in an application applies to informational requirements only; it does not apply to requests for waivers of statutes, regulations or related regulatory requirements such as policy statements or guidelines.

[5] It should be noted that 12 CFR part 563e outlines the Board's substantive responsibilities with respect to the consideration of issues under the Community Reinvestment Act ("CRA") in acting on holding company applications. In this regard, the Board

Continued

The revision also comports with the "Statement of the Federal Financial Supervisory Agencies Regarding the Community Reinvestment Act" adopted by the Board on March 21, 1989, in Board Resolution No. 89-1036, because the joint statement was carefully drafted to allow for the differing application processing procedures of the agencies. See 54 FR 13742 (April 5, 1989) for the text of the joint statement.

8. Effect of Pending Investigation

The Board is amending paragraph (c) of the Guidelines to add a new provision providing a mechanism whereby the Board may discontinue the review or automatic approval process pending the completion of an investigation, examination, or administrative proceeding by the Board or other government entity or self-regulatory organization of an applicant or an affiliate of an applicant that pertains to standards the Board must apply or a determination the Board is required to make in connection with its review of the application. In a number of past instances, during the course of processing an application, the Board has learned of the existence of a government investigation of the applicant or an affiliate of the applicant that pertains to the issues presented by the application. The Board should have the flexibility to suspend processing pending the outcome of the investigation.

9. Completeness Determination: Clarification

Although no amendment to paragraph (c) is being made at this time, the Board wishes to clarify an issue on the effect of an application's being deemed complete. In the Board's experience, certain applications can raise issues and concerns that are not resolved to the mutual satisfaction of the Board and the applicant in the course of the determination of the application's sufficiency. Initial and subsequent requests for additional information may raise issues and concerns to which an applicant cannot or will not fully respond. In those limited cases, the Board believes that further requests for additional information raising the same issues and concerns would not be productive. Therefore, under those circumstances, the Board may deem an application complete for purposes of further processing, and the Board's staff will notify the applicant that while the application is being deemed complete, the applicant's responses to the requests for additional information nevertheless did not respond fully to the requests nor address in a satisfactory manner the issues and concerns expressed in the requests for additional information.

Subparagraph (c)(2) of the Guidelines has always provided that failure by an applicant to respond fully to a written request by the Board or its delegate for additional information within 30 calendar days of the date of such request may be deemed to constitute withdrawal of the application or may be treated as grounds for denial of an application or issuance of a notice of disapproval of a notice. Accordingly, an applicant's failure to respond fully to the issues and concerns raised during the sufficiency determination process may be treated as grounds for denial of the application, even though an application has been deemed "complete" for processing purposes.

C. Board Review Time Frames

Under paragraph (e) of the Guidelines, the Board or its delegate may extend the review period of a completed application for an additional 30 days, thereby increasing the period within which a determination must be made to either 90 or 120 days. If the Board or its delegate elects to extend the review period in this manner, it must notify the applicant at least 30 days prior to the expiration of the applicable period for review of a completed application.

The Board is reducing the notice period to an applicant from 30 to 20 days prior to the expiration of the applicable period for review of a completed application. In the Board's experience, this will give the Board's staff the additional needed flexibility to determine whether an extension for an additional 30-day period is necessary. The Board believes that the reduction of the required time period for advance notice will not unreasonably hamper an applicant's preparation for consummation of a proposed transaction or commencement of a planned activity. Moreover, reducing the advance notice requirement by ten days may, in certain cases, eliminate the need to invoke the extension procedures set forth in paragraph (f), which remove an application entirely from the automatic approval process of the Guidelines.

D. Other Comments

The Board has also undertaken other initiatives designed to streamline and improve further the regulations and procedures governing the various types of applications filed with the Board. These initiatives address certain concerns raised by the commenters. For example, the Board has instituted extensive internal applications tracking procedures, and its Operations Tracking Committee meets regularly to discuss applications. The Board has implemented a National Applications Tracking System to monitor the processing of all applications. AP 14-1 and Federal Home Loan Bank System Regulatory Handbooks delineating applications processing also have been issued. Additionally, many of the Board's application forms have been revised. As indicated above, delegations of authority to the Principal Supervisory Agents have been greatly expanded with appropriate oversight. The Board is currently proceeding with a rulemaking project to implement an Applications File Room for the central filing of most non-delegated applications.

The Board has also considered the public comments on revising the applications processing time frames set out in the Guidelines and revising paragraph (f). The Board has determined not to make any changes in these areas.

Final Regulatory Flexibility Analysis

Pursuant to section 3 of the Regulatory Flexibility Act, 5 U.S.C. 604, the Board is providing the following regulatory flexibility analysis:

1. *Need for and objectives of the rule.* These elements have been incorporated into the Board's discussion set forth in the **SUPPLEMENTARY INFORMATION** section.

2. *Issues raised by comments and agency assessment and response.* As explained in the **SUPPLEMENTARY INFORMATION** section, the Board is revising the policy statement in final form without prior opportunity for comment, although the Board is soliciting post-promulgation public comment. Accordingly, at this time, there are no issues raised by comments that require Board assessment and response.

3. *Significant alternatives minimizing small-entity impact and agency response.* The applications processing guidelines will have no disproportionate impact on small institutions or other entities. The guidelines do not alter or supersede any pre-existing regulations regarding processing of applications, but rather only establish time periods within which action by the Board is required on completed applications submitted pursuant to Corporation or Board regulations.

---

decides all holding company applications involving "substantial" protests (because these constitute significant issues of law or policy) and is required to base its decision on all information available, including, in part, the applicant's CRA assessment record, CRA protests or public comments and any other relevant information.

List of Subjects in 12 CFR Part 571

Accounting, Bank deposit insurance, Savings and loan associations.

Accordingly, the Federal Home Loan Bank Board hereby amends part 571, subchapter D, chapter V, title 12, Code of Federal Regulations, as set forth below.

SUBCHAPTER D—FEDERAL SAVINGS AND LOAN INSURANCE CORPORATION

PART 571—STATEMENTS OF POLICY

1. The authority citation for part 571 continues to read as follows:

Authority: Sec. 5A, 47 Stat. 727, as added by sec. 1, 64 Stat. 256, as amended (12 U.S.C. 1425a); sec. 17, 47 Stat. 736, as amended (12 U.S.C. 1437); sec. 5, 48 Stat. 132, as amended (12 U.S.C. 1464); secs. 402, 403, 406, 407, 48 Stat. 1256, 1257, 1259, 1260, as amended (12 U.S.C. 1725, 1726, 1729, 1730); Reorg. Plan No. 3 of 1947, 12 FR 4981, 3 CFR, 1943–48 Comp., p. 1071.

2. Section 571.12 is revised to read as follows:

§ 571.12 Applications processing guidelines.

(a) *General.* Section 410 of Title IV of the Competitive Equality Banking Act of 1987, Pub. L. No. 100–86, 101 Stat. 552, 620, section 410 generally requires that the Federal Home Loan Bank Board ("Board"), as operating head of the Federal Savings and Loan Insurance Corporation ("Corporation") (hereinafter collectively referred to as the Board), "promulgate guidelines which provide that with respect to each type of completed application" filed by any person for approval by the Corporation, the application "shall be deemed to be approved" as of the end of the period prescribed under such guidelines unless the Board approves or disapproves such application before the end of such period [section 410(a)]. To comply with these requirements and to ensure the timely processing of applications and notices throughout the Federal Home Loan Bank System, the Board hereby sets forth guidelines for the processing of completed applications and notices (hereinafter collectively referred to as "applications") filed with the Board or its delegate subsequent to October 9, 1987. This section does not apply to applications for approval of holding company indebtedness; requests for Corporation assistance or assistance payments in connection with a merger, acquisition, or restructuring of an insured institution; requests in connection with Corporation authorizations of emergency thrift acquisitions; or requests submitted in connection with cease-and-desist orders, temporary cease-and-desist orders, removal and/or prohibition orders, temporary suspension orders, supervisory agreements, consent merger agreements, or documents negotiated in settlement of litigation (including requests for termination or modification of, or for approval pursuant to, such orders, agreements, or documents), or similar litigation or enforcement matters. Requests submitted in connection with cease-and-desist orders, removal/prohibition orders, supervisory agreements, consent merger agreements, and other documents negotiated in settlement of litigation ("enforcement documents") are not covered by this section. However, the fact that a regulation involving an application may be mentioned in an enforcement document does not mean that this section does not apply to that application. Requests to engage in activities that are restricted by enforcement documents and requests for termination or modification of such documents are not covered by this section. Applications submitted pursuant to a regulatory requirement that prior Board approval be obtained before engaging in a proposed activity, however, are covered, whether or not mentioned in an enforcement document. If the application or request is unique to the enforcement document, then it is not covered by this section. Requests for reconsideration, modification, or appeal of final agency actions of the Board are not covered by this section. In addition, where other Corporation or Board regulations establish specific procedures for processing of applications or set forth specific time periods for automatic approval of applications unless such applications are disapproved or objections are raised, the provisions of those regulations are controlling with respect to the matters to which they pertain. Where a regulation sets forth a procedure for processing an application but does not contain a time period pursuant to which such application is to be processed, the application will be processed under the procedure established by the regulation, but will be subject to the time periods contained in this policy statement.

(b) *Applications submitted for review.* An application submitted to the Board or its delegate for processing shall be submitted on the designated form of application and shall comply with all applicable regulations and guidelines governing the filing of such application.

(c) *Accepting applications for processing.* (1) Within 30 calendar days of receipt of a properly submitted application for processing, the Board or its delegate shall:

(i) Request in writing additional information to complete the application,

(ii) deem the application to be complete, or

(iii) return the application if it is deemed by the Board or its delegate to be materially deficient and/or substantially incomplete.

Failure by the Board or its delegate to act as described in paragraph (c)(1) (i), (ii), or (iii) of this section within 30 calendar days of receipt of an application for processing shall result in the filed application's being deemed complete, thereby commencing the period for review. If an application includes a request for a waiver of an application requirement that certain information be supplied, the waiver request shall be deemed granted, unless within 30 calendar days of receipt of a properly submitted application for processing, the Board or its delegate requests in writing additional information about the waiver request, or denies the waiver request in writing.

(2) Failure by an applicant to respond fully to a written request by the Board or its delegate for additional information within 30 calendar days of the date of such request may be deemed to constitute withdrawal of the application or may be treated as grounds for denial of the application or issuance of a notice of disapproval. If an application is deemed withdrawn, the application may be resubmitted for processing, but it will be deemed a new filing under the applicable statute or regulation.

(3) An applicant may request in writing a brief extension of the 30-day period for responding to a request for additional information described in paragraph (c)(2) of this section prior to the expiration of the 30-day time period. The Board or its delegate, at its option, may grant an applicant a limited extension of time in writing. Failure by an applicant to respond fully to a written request for additional information by the expiration of the extended period permitted by the Board or its delegate may be deemed to constitute withdrawal of the application or may be treated as grounds for denial of the application or issuance of a notice of disapproval of a notice.

(4) The period for review by the Board or its delegate of an application will commence on the date that the application is deemed complete. The Board or its delegate shall notify an applicant in writing as to whether the application is deemed complete within 15 calendar days after timely filing of any additional information furnished in response to any initial or subsequent request by the Board or its delegate for

additional information. If the Board or its delegate fails to notify an applicant within such time, the application shall be deemed to be complete as of the expiration of such 15-day period. If additional information furnished in response to a written request by the Board or its delegate for additional information includes a request for a waiver of an application requirement that certain information be supplied, the waiver request shall be deemed granted, unless within 15 calendar days after the timely filing of such additional information the Board or its delegate (i) requests in writing additional information about the waiver request, or (ii) denies the waiver request in writing.

(5) After additional information has been requested and supplied, the Board or its delegate may request additional information only with respect to matters derived from or prompted by information already furnished, or information of a material nature that was not reasonably available from the applicant at the time of the application, was concealed, or pertains to developments subsequent to the time of the Board's initial request for additional information. With regard to information of a material nature that was not reasonably available from the applicant, was concealed at the time an application was deemed to be complete, or pertains to developments subsequent to the time an application was deemed to be complete, the Board or its delegate may request in writing such additional information as it considers necessary and, at its option, may deem the application not to be complete until such additional information is furnished. Upon receipt of such additional information, the Board or its delegate shall:

(i) Request in writing further additional information to complete the application,

(ii) deem the application to be complete and commence a new review period of the completed application, or

(iii) deem the application to be materially deficient and/or substantially incomplete and return it to the applicant.

In the case of an application that is not eligible for decision under delegated authority by the Principal Supervisory Agent, actions taken by the Principal Supervisory Agent or its delegate shall not commence any of the periods for review of a completed application described in paragraph (d) of this section.

(6) Where a regulation prescribes a procedure for submission of protests to an application and a protest is filed, the automatic approval timeframes specified herein shall be temporarily suspended until a record sufficient to support a determination on the protest is developed.

(7) The Board or its delegate, at its option, may deem an application materially deficient and/or substantially incomplete in the event that the applicant or an affiliate of the applicant is or becomes subject to an investigation, examination, or administrative proceeding by a federal or state or municipal court, department, agency or commission or other governmental entity, or a self-regulatory trade or professional organization that is pertinent to the standards applicable to the Board's evaluation of the application or relates to a determination the Board or its delegate is required to make in connection with the application under the applicable statute or regulation.

(d) *Failure by the Board to approve or deny an application or to disapprove a notice.* (1) If, upon expiration of the applicable period for review of any complete application to which this policy statement applies, or any extension of such period, the Board or its delegate has failed to approve or deny such application (or, in the case of a notice, to disapprove such notice), the application shall be deemed to be approved or, in the case of a notice, not disapproved by the Board or its delegate. For purposes of the previous sentence, the applicable period for review shall be (i) 60 calendar days for an application that is eligible for action by a Principal Supervisory Agent or a Supervisory Agent or for any application or notice submitted pursuant to part 574 of the Corporation's regulations, or (ii) 90 calendar days for any other application.

(2) In the event that more than one application is being submitted in connection with a proposed transaction or other action, the applicable period for review of all such applications shall be the review period for the application having the longest period for review.

(e) *Extension of time for review.* The applicable period for review of an application deemed to be complete may be extended by the Board or its delegate for 30 days beyond the time period for review set forth in paragraph (d) of this section. The Board or its delegate shall notify an applicant at least 20 days prior to the expiration of the applicable period for review of a complete application that such review period is being extended for 30 days and shall state the general reasons therefor.

(f) *Extension of time for Board review of applications raising significant issues of law or policy.* In those situations in which an application presents a significant issue of law or policy, the applicable period for review of such application also may be extended by any member of the Board or its General Counsel, Executive Director, Executive Director for Policy, or the Executive Director of the Office of Regulatory Activities of the Federal Home Loan Bank System beyond the time period for review set forth in paragraph (d) of this section or any extension thereof pursuant to paragraph (e) of this section until such time as the Board acts upon the application. In such cases, written notice shall be provided to an applicant not later than the expiration of the time period set forth in paragraph (d) of this section or any extension thereof pursuant to paragraph (e) of this section that the period for review is being extended in accordance with this paragraph (f), which notice shall also state the general reason(s) therefor.

By the Federal Home Loan Bank Board.

John F. Ghizzoni,

Assistant Secretary.

[FR Doc. 89–19824 Filed 8–23–89; 8:45 am]

BILLING CODE 6720-01-M

DEPARTMENT OF COMMERCE

Bureau of Export Administration

15 CFR Parts 776 and 779

[Docket No. 90759-9159]

Digital Computers: Revisions to Section 776.10

AGENCY: Bureau of Export Administration, U.S. Department of Commerce.

ACTION: Final rule.

SUMMARY: Section 776.10(a) of the Export Administration Regulations (EAR) contains general requirements concerning support documents for applications to export or reexport digital computers to destinations in Country Groups Q, W, and Y, Afghanistan and the People's Republic of China (PRC). This final rule revises § 776.10(a)(1) by removing the more detailed instructions for completing and filing Form BXA–6031P. Form BXA–6031P has been revised to include these instructions. Placing the instructions on Form BXA–6301P will make them more accessible to applicants, thereby reducing the chance that applicants will fail to notice them.

Paragraph (c)(1) of Advisory Note 12 to ECCN 1565A contains a specific list of items that, under CoCom requirements, must be addressed in an end-user or importer certification.

MI

Paragraph (a)(2) of § 776.10 also contains the list of such items. The list of such items in paragraph (a)(2) is being deleted and replaced by a reference directing the reader to paragraph (c)(1) of Advisory Note 12 to ECCN 1565A. This amendment will direct exporters to the current source of the CoCom requirements.

Paragraph (c)(4) of Advisory Note 12 to ECCN 1565A describes the CoCom visitation rquirements applicable to equipment whose technical parameters exceed those described in paragraph (c)(3) of the Advisory Note. Paragraph (a)(3) of § 776.10 also describes the visitation requirements. The visitation requirements in paragraph (a)(3) are being deleted and replaced by a reference directing the reader to paragraphs (c)(3) and (c)(4) of Advisory Note 12 to ECCN 1565A.

Section 776.12(e)(5) is revised, consistent with § 776.10(a)(1), to require a Form BXA–6031P for Afghanistan—as well as Country Groups Q, W, and Y, and the People's Republic of China—when submitting a parts and components request for the export of a foreign-made computer system.

EFFECTIVE DATE: This rule is effective November 22, 1989.

FOR FURTHER INFORMATION CONTACT: Willard Fisher, Regulations Branch, Bureau of Export Administration, Telephone: (202) 377–3856.

SUPPLEMENTARY INFORMATION:

Rulemaking Requirements

1. This rule complies with Executive Order 12291 and Executive Order 12661.

2. This rule contains a collection of information subject to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*) and has been submitted to the Office of Management and Budget for review. Public reporting for this collection of information is estimated to average one hour and 20 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. If applicable, the signed statement required as a special documentation will require an additional five minutes and visitation reports will require five minutes each. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Security and Management Support, Bureau of Export Administration, U.S. Department of Commerce, Washington, DC 20230; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503—Attn: Paperwork Reduction Project (0694–0013).

3. This rule does not contain policies with Federalism implications sufficient to warrant preparation of a Federalism assessment under Executive Order 12612.

4. Because a notice of proposed rulemaking and an opportunity for public comment are not required to be given for this rule by section 553 of the Administrative Procedure Act (5 U.S.C. 553) or by any other law, under sections 603(a) and 604(a) of the Regulatory Flexibility Act (5 U.S.C. 603(a) and 604(a)) no initial or final Regulatory Flexibility Analysis has to be or will be prepared.

5. Section 13(a) of the Export Administration Act of 1979, as amended (50 U.S.C. app. 2412(a)), exempts this rule from all requirements of section 553 of the Administrative Procedure Act (APA) (5 U.S.C. 553), including those requiring publication of a notice of proposed rulemaking, an opportunity for public comment, and a delay in effective date. This rule is also exempt from these APA requirements because it involves a foreign and military affairs function of the United States. Section 13(b) does not require that this rule be published in proposed form because this rule does not impose a new control. Further, no other law requires that a notice of proposed rulemaking and an opportunity for public comment be given for this rule.

Therefore, this regulation is issued in final form. Although there is no formal comment period, public comments on this regulation are welcome on a continuing basis. Comments should be submitted to Willard Fisher, Office of Technology and Policy Analysis, Bureau of Export Administration, Department of Commerce, P.O. Box 273, Washington, DC 20044.

List of Subjects in 15 CFR Parts 776 and 779

Computer technology, Exports, Reporting and recordkeeping requirements, Science and technology.

Accordingly, parts 776 and 779 of the Export Administration Regulations are amended as follows:

1. The authority citation for 15 CFR part 776 continues to read as follows:

Authority: Public Law 96–72, 93 Stat. 503 (50 U.S.C. app. 2401 *et seq.*), as amended by Public Law 97–145 of December 29, 1981, by Public Law 99–64 of July 12, 1985, and by Public Law 100–418 of August 23, 1988; E.O. 12525 of July 12, 1985 (50 FR 28757, July 16, 1985).

2. The authority citation for 15 CFR part 779 continues to read as follows:

Authority: Public Law 96–72, 93 Stat. 503 (50 U.S.C. app. 2401 *et seq.*), as amended by Public Law 97–145 of December 29, 1981, by Public Law 99–64 of July 12, 1985, and by Public Law 100–418 of August 23, 1988; E.O. 12525 of July 12, 1985 (50 FR 28757, July 16, 1985); Public Law 95–223 of December 28, 1977 (50 U.S.C. 1701 *et seq.*); E.O. 12532 of September 9, 1985 (50 FR 36861, September 10, 1985) as affected by notice of September 4, 1986 (51 FR 31925, September 8, 1986); Public Law 99–440 of October 2, 1986 (22 U.S.C. 5001 *et seq.*); and E.O. 12571 of October 27, 1986 (51 FR 39505, October 29, 1986).

PART 776—[AMENDED]

3. Section 776.10 is amended by revising paragraph (a) and by removing Note 1 and Note 2 that follow paragraph (a)(3)(iii)(B), as follows:

§ 776.10 Electronic computers and related equipment

* * * * *

(a) Digital computers.

(1) General requirements. Applications to export or reexport "digital computers" or equipment containing digital computers to destinations in Country Groups Q, W, and Y, Afghanistan and the People's Republic of China or to upgrade existing "digital computer" installations in those areas, must be accompanied by Form BXA–6031P, Digital Computer System Parameters. Two or more forms may be submitted if needed to describe all equipment on complex systems. Specification sheets should be furnished to corroborate the data supplied on Form BXA–6031P and calculations used to arrive at values should also be furnished, as appropriate. Observe the precise definitions in Advisory Notes 9, 12, and 16 to ECCN 1565A before making calculations.

(2) Special documentation requirements. Applications to export or reexport computers that are described in Advisory Note 12 to ECCN 1565A, or that exceed any of the limits specified in Advisory Note 12, must be accompanied by a signed statement from a responsible representative of the end-user or importing agency that describes the proposed end-use and includes the certifications contained in paragraph (c)(1) of Advisory Note 12 to ECCN 1565A.

(3) Visitation requirements. Quarterly visits and periodic reports on computer systems described by Advisory Note 12 to ECCN 1565A will be required if the parameters of the equipment to be exported exceed the limits contained in paragraph (c)(3) of Advisory Note 12.

The visitation and reporting requirements are described in paragraph (c)(4) of Advisory Note 12.

* * * * *

4. Section 776.12 is amended by revising paragraph (e)(5) to read as follows:

§ 776.12 Parts, components, and materials in foreign-made products

* * * * *

(e) How to request approval.

* * * * *

(5) Supporting documentation. The supporting documentation otherwise required for a license application need not be submitted with a parts and components request, except that Form BXA–6031P should be furnished when a computer system is being exported to Country Group Q, W, or Y, Afghanistan or the People's Republic of China.

* * * * *

PART 779—[AMENDED]

§ 779.8 [Amended]

5. In § 779.8(b)(3)(i)(D), the phrase "Form ITA–6031P" is revised to read "Form BXA–6031P".

Dated: August 18, 1989.

[Docket No. 90360–9060]

Butadiene Polymers; Transfer of Export Controls From 1801A to 1746A on the Commodity Control List

AGENCY: Bureau of Export Administration, Commerce.

ACTION: Final rule.

SUMMARY: On September 14, 1988, the Bureau of Export Administration published in the Federal Register (53 FR 35459) a final rule amending various entries on the Commodity Control List (CCL), which identifies those items subject to Department of Commerce export controls. Those amendments resulted from a review of strategic controls maintained by the U.S. and certain allied countries through the Coordinating Committee (COCOM).

Among the amendments to the CCL in the September 14 rule was the transfer of certain butadiene polymers from Export Control Commodity Number (ECCN) 1801A to 1746A. These butadiene polymers remained subject to controls, including those related to non-proliferation of nuclear weapons delivery systems.

However, regulatory language related to nuclear weapons delivery controls was inadvertently omitted from the regulatory text. This rule corrects § 776.18, Supplement 4 to part 779, and the *Reason for Control, Special Licenses Available,* and *Technical Data* paragraphs of ECCN 1746A to properly reflect the transfer of these butadiene polymers to that entry.

With the concurrence of the Department of Defense, the Department of Commerce has determined that these amendments to the CCL are necessary to protect U.S. national security interests.

DATES: This rule is effective August 24, 1989.

FOR FURTHER INFORMATION CONTACT: Jim Seevaratnam, Capital Goods Technology Center, Bureau of Export Administration, Telephone: (202) 377–5695.

SUPPLEMENTARY INFORMATION:

Rulemaking Requirements

1. This rule is consistent with Executive Orders 12291 and 12661.

2. This rule involves a collection of information subject to the requirements of the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*). This rule will have no effect on the paperwork burden on the public. This collection has been approved by the Office of Management and Budget under control number 0694–0005.

3. This rule does not contain policies with Federalism implications sufficient to warrant preparation of a Federalism assessment under Executive Order 12612.

4. Because a notice of proposed rulemaking and an opportunity for public comment are not required to be given for this rule by section 553 of the Administrative Procedure Act (5 U.S.C. 553), or by any other law, under sections 603(a) and 604(a) of the Regulatory Flexibility Act (5 U.S.C. 603(a) and 604(a)) no initial or final Regulatory Flexibility Analysis has to be or will be prepared.

5. Section 13(a) of the Export Administration Act of 1979 (EAA), as amended (50 U.S.C. app. 2412(a)), exempts this rule from all requirements of section 553 of the Administrative Procedure Act (APA) (5 U.S.C. 553), including those requiring publication of a notice of proposed rulemaking, an opportunity for public comment, and a delay in effective date. Section 13(b) of the EAA does not require that this rule be published in proposed form because this rule does not impose a new control. Further, no other law requires that a notice of proposed rulemaking and an opportunity for public comment be given for this rule.

Accordingly, it is being issued in final form. However, comments from the public are always welcome. Comments should be submitted to Willard H. Fisher, Office of Technology and Policy Analysis, Bureau of Export Administration, Department of Commerce, P.O. Box 273, Washington, DC 20044.

List of Subjects in 15 CFR Parts 776, 779 and 799

Computer technology, Exports, Reporting and recordkeeping requirements, Science and technology.

Accordingly, the Export Administration Regulations (15 CFR Parts 700–799) are amended as follows:

1. The authority citation for part 776 continues to read as follows:

Authority: Pub. L. 96–72, 93 Stat. 503 (50 U.S.C. app. 2401 *et seq.*), as amended by Pub. L. 97–145 of December 29, 1981, by Pub. L. 99–64 of July 12, 1985, and by Pub. L. 100–418 of August 23, 1988; E.O. 12525 of July 12, 1985 (50 FR 28757, July 16, 1985).

§ 776.18 [Amended]

2. The introductory text of § 776.18 is amended by removing the number "1801" and inserting in its place the number "1746".

3. The authority citations for parts 779 and 799 continue to read as follows:

Authority: Pub. L. 96–72, 93 Stat. 503 (50 U.S.C. app. 2401 *et seq.*), as amended by Pub. L. 97–145 of December 29, 1981, by Pub. L. 99–64 of July 12, 1985, and by Pub. L. 100–418 of August 23, 1988; E.O. 12525 of July 12, 1985 (50 FR 28757, July 16, 1985); Pub. L. 95–223 of December 28, 1977 (50 U.S.C. 1701 *et seq.*); E.O. 12532 of September 9, 1985 (50 FR 36861, September 10, 1985) as affected by notice of September 4, 1986 (51 FR 31925, September 8, 1986); Pub. L. 99–440 of October 2, 1986 (22 U.S.C. 5001 *et seq.*); and E.O. 12571 of October 27, 1986 (51 FR 39505, October 29, 1986).

Supplement No. 4 to Part 799 [Amended]

4. In Supplement No. 4 to part 779, the last entry of paragraph (4) is amended by removing the number "1801A" and inserting in its place the number "1746A".

Supplement No. 1 to § 799.1 [Amended]

5. In Supplement No. 1 to § 799.1 (the Commodity Control List), Commodity Group 7 (Chemicals, Metalloids, Petroleum Products and Related Materials), ECCN 1746A is amended by revising the *Reason for Control, Special Licenses Available* and *Technical Data* paragraphs to read as follows:

1746A Polymeric substances and manufactures thereof, as described in this entry.

* * * * *

Reason for Control: National security; foreign policy. Foreign policy controls apply, for crime control purposes, to police-model helmets and, for nuclear weapons delivery purposes (§ 776.18), to propellants and constituents as follows: polymeric substances, specifically, carboxyl-terminated polybutadiene (CTPB) and hydroxyl-terminated polybutadiene (HTPB).

Special Licenses Available: None available for commodities under foreign policy controls for nuclear weapons delivery purposes (§ 776.18(c)). See Part 773 for special licenses available for other commodities controlled by ECCN 1746A.

Special Foreign Policy Controls: * * *

Technical Data: Export of technical data related to police-model helmets containing 50% or more aromatic polyamide fiber by value require a validated license to all destinations except Australia, Japan, New Zealand, and members of NATO. Exports of technical data related to butadiene polymers require a validated license to all destinations except Canada (see § 779.4(d)(20)).

15 CFR Part 799

[Docket No. 90885-9185]

Revisions to the Commodity Control List

AGENCY: Bureau of Export Administration, Commerce.

ACTION: Final rule.

SUMMARY: The Bureau of Export Administration maintains the Commodity Control List (CCL), which includes those items subject to Department of Commerce export controls. This rule amends two Export Control Commodity Numbers (ECCNs) on the CCL.

A note is added at the end of ECCN 2410A to indicate that this entry controls parachutes designed for use in dropping personnel only and that parachutes specially designed for other military purposes are licensed by the U.S. Department of State. This change is made as a clarification only and neither expands nor limits the provisions of the Export Administration Regulations. It will assist exporters in determining whether a particular parachute system is subject to control by the Department of Commerce or the Department of State.

Section 6(k) of the Export Administration Act of 1979 (EAA), as amended, requires that items designated as "crime control and detection instruments and equipment" be exported only under a validated license, except to specified countries. ECCN 5597B is amended to designate electronic monitoring restraint devices as items included among "crime control and detection instruments and equipment" and, therefore, subject to U.S. foreign policy controls for human rights purposes under section 6(k) of the EAA. This change reflects recent technological developments in the crime control field and is made with the concurrence of the U.S. Department of State.

EFFECTIVE DATE: This rule is effective August 24, 1989.

FOR FURTHER INFORMATION CONTACT: Willard Fisher, Regulations Branch, Bureau of Export Administration, Telephone: (202) 377-3856.

SUPPLEMENTARY INFORMATION:

Rulemaking Requirements

1. This rule complies with Executive Order 12291 and Executive Order 12661.

2. This rule involves a collection of information subject to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*). This collection has been approved by the Office of Management and Budget under Control Number 0694-0005.

3. Because a notice of proposed rulemaking and an opportunity for public comment are not required to be given for this rule by section 553 of the Administrative Procedure Act (5 U.S.C. 553), or by any other law, under sections 603(a) and 604(a) of the Regulatory Flexibility Act (5 U.S.C. 603(a) and 604(a)) no initial or final Regulatory Flexibility Analysis has to be or will be prepared.

4. Section 13(a) of the Export Administration Act of 1979, as amended (EAA) (50 U.S.C. app. 2412(a)), exempts this rule from all requirements of section 553 of the Administrative Procedure Act (APA) (5 U.S.C. 553), including those requiring publication of a notice of proposed rulemaking, an opportunity for public comment, and a delay in effective date. This rule is also exempt from these APA requirements because it involves a foreign and military affairs function of the United States. Section 13(b) of the EAA does not require that this rule be published in proposed form because this rule imposes a foreign policy control. Further, no other law requires that a notice of proposed rulemaking and an opportunity for public comment be given for this rule.

5. This rule does not contain policies with Federalism implications sufficient to warrant preparation of a Federalism assessment under Executive Order 12612.

Therefore, this regulation is issued in final form. Although there is no formal comment period, public comments on this regulation are welcome on a continuing basis. Comments should be submitted to Willard Fisher, Office of Technology and Policy Analysis, Bureau of Export Administration, Department of Commerce, P.O. Box 273, Washington, DC 20044.

List of Subjects in 15 CFR Part 799

Exports, Reporting and recordkeeping requirements.

Accordingly, part 799 of the Export Administration Regulations (15 CFR parts 730-799) is amended as follows:

PART 799—[AMENDED]

1. The authority citation for 15 CFR part 799 continues to read as follows:

Authority: Pub. L. 96-72, 93 Stat. 503 (50 U.S.C. app. 2401 *et seq.*), as amended by Pub. L. 97-145 of December 29, 1981, by Pub. L. 99-64 of July 12, 1985, and by Pub. L. 100-418 of August 23, 1988; E.O. 12525 of July 12, 1985 (50 FR 28757, July 16, 1985); Pub. L. 95-223 of December 28, 1977 (50 U.S.C. 1701 *et seq.*); E.O. 12532 of September 9, 1985 (50 FR 36861, September 10, 1985) as affected by notice of September 4, 1986 (51 FR 31925, September 8, 1986); Pub. L. 99-440 of October 2, 1986 (22 U.S.C. 5001 *et seq.*); and E.O. 12571 of October 27, 1986 (51 FR 39505, October 29, 1986).

Supplement No. 1 to § 799.1 [Amended]

2. In Supplement No. 1 to § 799.1 (the Commodity Control List), Commodity Group 4 (Transportation Equipment), ECCN 2410A is amended by adding a note at the end of the entry to read as follows:

2410A Equipment specially designed for military purposes.

* * * * *

Note: This entry controls parachute systems designed for use in dropping personnel only. Parachute systems designed for use in dropping military equipment, braking military aircraft, slowing spacecraft descent, or retarding weapons delivery are licensed by the U.S. Department of State. See the U.S. Munitions List, Category VIII, Supp. No. 2 to part 770.

3. In Supplement No. 1 to § 799.1 (the Commodity Control List), Commodity Group 5 (Electronics and Precision Instruments), ECCN 5597B is amended by revising the heading, as follows:

5597B Polygraphs (except biomedical recorders designed for use in medical facilities for monitoring biological and neurophysical responses); fingerprint analyzers, cameras and equipment, n.e.s.; automated fingerprint and identification retrieval systems, n.e.s.; psychological stress analysis equipment; electronic monitoring restraint devices; and specially designed parts and accessories, n.e.s.

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 270

[Rel. No. IC-17097; File No. S7-15-88]

RIN 3235-AA14

Offers of Exchange Involving Registered Open-End Investment Companies

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: The Commission is announcing the adoption of a rule (11a-3) that permits a mutual fund or its principal underwriter to make certain exchange offers to the fund's shareholders or to shareholders of another fund in the same group of funds. Absent the rule, such entities would be prohibited from making exchange offers without Commission approval. The rule eliminates the need to obtain those approvals.

EFFECTIVE DATE: October 23, 1989.

Any holder of an order under section 11 of the Investment Company Act of 1940 that was granted without the specific condition that the exchange offer would comply with rule 11a-3, if and when adopted, shall have one year from the effective date of rule 11a-3 to bring its fees and sales loads into conformity with the requirements of the rule or to obtain an individual Commission order approving the offer. However, fees and sales loads permitted with respect to shares purchased while the existing exchange offer remains in effect may continue to be imposed until such shares are redeemed.

FOR FURTHER INFORMATION CONTACT: Brian P. Kindelan, Special Counsel, (202) 272-2048, or Wendy B. Finck, Staff Attorney (202) 272-3045, Mail Stop 5-2, Office of Regulatory Policy, Division of Investment Management, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549.

SUPPLEMENTARY INFORMATION: The Securities and Exchange Commission is adopting rule 11a-3 under the Investment Company Act of 1940 (15 U.S.C. 80a-1 *et seq.*) (the "Act"), which will permit a registered open-end company (other than an insurance company separate account) (a "fund") or its principal underwriter to make certain exchange offers to the fund's shareholders or to shareholders of another fund in the same group of funds.

Executive Summary

In December 1986, the Commission issued a release ("proposing release") on proposed rule 11a-3 under the Act, which would have permitted a registered open-end management investment company ("fund") or its principal underwriter (sometimes referred to collectively as the "offering company") to make certain exchange offers to the fund's shareholders or to shareholders of another fund in the same family of funds.[1] In response to the comments received and developments occurring after issuance of the proposing release, the Commission issued a release (the "revised proposing release") on a revised proposal (the "revised proposed rule") in July 1988.[2] The Commission received 16 letters of comment in response to the revised proposing release. The rule, as adopted, has been modified in some respects to address commenters' concerns, and has been reorganized.

The final rule permits, notwithstanding the provisions of section 11(a) of the Act (15 U.S.C. 80a-11(a)), a fund or its principal underwriter to make certain exchange offers to the fund's shareholders or to shareholders of another fund in the same group of funds. As in the revised proposal, the rule permits the offering company to charge a shareholder a sales load on the acquired security, a redemption fee, an administrative fee, or any combination of the foregoing, provided certain conditions are met. Several conditions are unchanged from the conditions that were proposed in the revised proposed rule:

(1) Sales loads charged with respect to the security acquired in the exchange (the "acquired security") are limited to a percentage rate no greater than the excess of the sales load rate applicable to that security in the absence of an exchange over the sum of the rates of all sales loads previously paid on the security relinquished in the exchange and on any predecessor of such security (the "sales load differential");[3]

(2) No deferred sales load may be imposed on the security relinquished in the exchange (together with any predecessor of such security, the "exchanged security") at the time of an exchange;

(3) Any redemption fee charged with respect to the exchanged security must be paid to the fund, must apply uniformly to all shareholders of the specified class, and may not exceed the redemption fee charged in the absence of an exchange;

(4) The prospectus of the offering company must disclose the amount of any administrative fees charged in connection with an exchange and, if the fund reserves the right to terminate or change the terms of the offer, disclose that the offer is subject to termination or its terms are subject to change;

(5) Any advertising that mentions the existence of the exchange offer must disclose the existence of any administrative fee or redemption fee that would be imposed at the time of an exchange. In addition, if the offering company reserves the right to terminate the offer or change its terms, any advertising or sales literature that mentions the offer must disclose that the offer is subject to termination or its terms are subject to change; and

(6) Shareholders are to be given prominent notice 60 days prior to the effective date of any termination or material amendment of the terms of an exchange offer.

Several proposed conditions in the revised proposed rule have been changed:

(1) An offering company that previously made an exchange offer pursuant to an order under section 11(a) of the Act that was not conditioned specifically upon complying with rule 11a-3, if and when adopted, shall have one year after the effective date of the rule to bring its fees and sales loads into compliance with the rule. However, an

---

[1] See Investment Company Act Rel. No. 15404 (Dec. 23, 1986) (51 FR 47260, Dec. 31, 1986).

[2] See Investment Company Act Rel. No. 16504 (July 29, 1988) (53 FR 30299, Aug. 11, 1988).

[3] The rule does not, however, address charging installment-type deferred sales loads in connection with exchange offers. Proposed rule 6c-10, if adopted, would permit funds to charge installment-type deferred sales loads under certain conditions. See Investment Company Act Rel. No. 16619 (Nov. 2, 1988) (53 FR 45275, Nov. 9, 1988). Until the Commission takes further action on proposed rule 6c-10, it will consider applications under section 11(a) for exchange offers involving funds with installment-type deferred sales loads on a case-by-case basis.

offering company may continue to apply the terms of an existing order related to fees or sales loads to shares purchased prior to the time that the fund's offer comes into conformity with the rule (and to shares acquired through reinvestment of dividends or capital gains distributions based on such shares) until such shares are redeemed. The revised proposed rule contained no grandfathering provision;

(2) An offering company may rely on the rule to amend the terms of an exchange offer if its prospectus disclosed, for a period of at least two years prior to the effective date of the amendment, that the terms of the offer were subject to change. The revised proposed rule would have required the fund's prospectus to have made such disclosure at all times during which the prior offer had been outstanding;

(3) In calculating any deferred sales load when the acquired security ultimately is redeemed, the time period during which the acquired security was held need not be considered (*i.e.*, may be "tolled") if (i) the deferred sales load is solely that which was owed on the exchanged security at the time of the exchange, (ii) no sales load differential or deferred sales load was or will be collected on the acquired security, and (iii) the amount of the load is reduced by the amount of any fees collected with respect to the acquired security under a plan adopted pursuant to rule 12b–1 under the Act (17 CFR 270.12b–1) (a "12b–1 plan").[4] The revised proposed rule would not have permitted tolling if the acquired security was subject to a 12b–1 plan. The rule also permits tolling of the time the *exchanged security* was held if the exchanged security was not subject to any sales load, and if any deferred sales load with respect to the acquired security is reduced by the amount of any fees previously collected under a 12b–1 plan with respect to the exchanged security. In addition, the rule permits holding periods for deferred sales loads to be computed as of the end of the month in which any security was purchased or redeemed;

(4) The rule prohibits the sum of the rates of all sales loads imposed prior to and at the time the acquired security is redeemed from exceeding the maximum sales load rate that would be applicable in the absence of an exchange to the security (exchanged or acquired) with the highest such rate;

(5) Any sales literature that mentions the existence of an exchange offer must disclose the existence of any administrative fee or redemption fee that would be imposed at the time of an exchange. The revised proposed rule would have required any sales literature to disclose the amount, as well as the existence, of such fees;

(6) No notice need be given to shareholders prior to changing materially the terms of an exchange offer if, under extraordinary market conditions, redemption of the security that otherwise would be exchanged is suspended under the rules and regulations under the Act, or the sale of the security that otherwise would be acquired is delayed or suspended;

(7) Funds with investment advisers or principal underwriters that are "affiliated persons" of each other as defined in section 2(a)(3) of the Act (15 U.S.C. 80a–2(a)(3)) are included within the definition of "group of investment companies." The rule thus broadens the scope of funds that come within the definition of "group of investment companies";

(8) The definition of "administrative fee" specifies that the fee be reasonably intended to cover costs incurred in "processing exchanges of the type for which the fee is charged"; and

(9) The definition of "redemption fee" specifies that the fee must be for expenses "directly related to the redemption of fund shares." Also, any scheduled variation of a redemption fee must be reasonably related to the costs to the fund of processing the type of redemptions for which the fee is charged. The revised proposed rule did not have the "reasonable relation" requirement.

The Commission is continuing to consider whether to adopt proposed rule 11c–1, which would permit unit investment trusts ("UITs") and their sponsors to make certain exchange offers without prior Commission approval, provided certain conditions are met. As proposed, rule 11c–1 would limit sales loads upon exchanges of units of UITs to the differential between any sales load charged with respect to the acquired unit in the absence of an exchange over any sales load previously paid on the exchanged unit.[5] The Commission is continuing to consider commenters' claims that the proposed rule would not permit adequate compensation for a sponsor that maintains a secondary market for units of a UIT and would present problems in tracking investments for the purpose of determining sales loads previously paid over a series of exchanges.[6] Until the Commission takes further action on proposed rule 11c–1, it will continue to consider exchange offers involving UITs on a case-by-case basis through the application process.

The Commission also is giving further consideration to whether to propose amendments to rule 11a–2 (17 CFR 270.11a–2), which permits, under certain conditions, offers of exchange by registered insurance company separate accounts.[7] The Commission requested public comment on whether, upon adoption of rule 11a–3, rule 11a–2 should be amended to make insurance company separate accounts subject to the same requirements in the exchange offer area as mutual funds.[8] Until the Commission determines whether to propose any amendments to rule 11a–2, a separate account or its principal underwriter may continue to make exchange offers the terms of which meet the requirements set forth in rule 11a–2.

Background

Section 11(a) of the Act prohibits a fund or its principal underwriter from making an offer to exchange shares of the fund for other shares of that fund or of another fund on any basis other than the relative net asset values of the securities to be exchanged, unless the terms of the offer have been submitted to and approved by the Commission or the terms are in accordance with any rules that the Commission may have prescribed.[9] Since 1940, the Commission has issued numerous orders under section 11 permitting offers of exchange at other than relative net asset value.[10] The original proposal of rule 11a–3, in essence, would have codified those orders.[11] The six comment letters received generally supported the proposal, but argued that certain provisions should be modified or eliminated.

---

[4] The Commission recognizes that only funds that can account for 12b–1 fees on an individual shareholder basis will be able to rely on this provision. The Commission understands that some funds are considering developing ways to account for 12b–1 fees on an individual shareholder basis. Funds that cannot account for 12b–1 fees paid on an individual shareholder basis would be unable to avail themselves of this provision of the rule. Also, funds with "defensive" 12b–1 plans under which no fees are charged could rely on this provision of the rule. See *infra* note 34 and accompanying text.

[10] See proposing release at nn. 9–20 and accompanying text.

[11] See *generally* the proposing release.

In response to those comments and developments occurring after issuance of the proposal, the Commission issued revised proposed rule 11a–3. As in the initial proposal, revised proposed rule 11a–3 would have permitted the imposition of an administrative fee and a sales load on the acquired security. For purposes of calculating any sales load on the acquired security, both proposals would have required that an exchanging shareholder receive credit for any sales load previously paid on the exchanged security and, in the case of an acquired security subject to a contingent deferred sales load, for the length of time the shareholder held the exchanged security. Both proposals also would have required disclosure of any administrative fee in the prospectus of the offering company and in certain sales literature and advertising.

The revised proposed rule contained several changes from the initial proposal. First, the revised proposed rule stated that an offering company that had previously made an exchange offer could not rely on the rule to change the terms of such prior offer unless that company's prospectus had disclosed, at all times the offer was outstanding, that the offer was subject to termination and that its terms were subject to change, unless the only effect of the change was to reduce or eliminate a charge payable at the time of the exchange. Second, the revised proposed rule would have defined the term "administrative fee." Third, the revised proposed rule would have permitted the imposition of certain redemption fees on the exchanged security at the time of an exchange. Fourth, the revised proposed rule would have required sales literature and advertising to disclose the intention to impose a redemption fee. Fifth, the revised proposed rule would have prohibited expressly the imposition of a deferred sales load on the exchanged security at the time of an exchange. Such a prohibition was merely implicit in the original proposal. Sixth, the revised proposed rule would have expanded and relabelled the "family of funds" concept contained in the original proposal. Seventh, the revised proposed rule would have required any offering company that reserved the right to change the terms of or terminate its exchange offer to disclose in its prospectus and in certain advertising and sales literature that the offer may be terminated and that its terms are subject to change. Finally, the revised version would have required that shareholders be given 60 days notice of any material amendment to the terms of an exchange offer, unless the only effect of the amendment was to reduce or eliminate a charge payable at the time of the exchange. These provisions are discussed in more detail below.

The Commission received 14 letters of comment in response to revised proposed rule 11a–3.[12] In general, the commenters supported the Commission's efforts to codify existing orders and relieve funds and the Commission from the expense and burden of filing and reviewing otherwise routine applications for orders under section 11. The commenters opined, however, that the revised proposed rule would go beyond the codification of section 11 orders previously granted, and impose new requirements of questionable value. The commenters specifically opposed several provisions of revised proposed rule 11a–3 that they asserted would impose additional restrictions on exchange offers. The rule, as adopted, has been modified in some respects to address the commenters' concerns.

Discussion

This section discusses provisions in rule 11a–3 that reflect changes from the revised proposed rule, as well as provisions that have been left unchanged.

1. Effect of the Rule on Prior Orders

As stated in the revised proposing release, rule 11a–3 is prospective in effect, is intended to set forth for the entire fund industry the Commission's standards for approval of exchange offers at other than relative net asset value,[13] and supersedes all outstanding Commission orders that approved exchange offers at other than relative net asset value.[14] Each holder of an order under section 11(a) of the Act that was not conditioned specifically upon compliance with rule 11a–3, if and when adopted, shall have one year from the rule's effective date to conform its fees and sales loads to the requirements set forth in the rule or to obtain individually an order approving its exchange offer. However, paragraph (d) permits an offering company that previously made an offer of exchange pursuant to an order to continue to apply any fees or sales loads permitted by the order to shares purchased before the earlier of (i) one year after the effective date of the rule, or (ii) when the offer has been brought into compliance with the rule, until redemption of the shares. The rule permits shares acquired through reinvestment of dividends or capital gains distributions to be treated in the same manner, with respect to fees or sales loads, as the shares on which the dividend was paid or the distribution made. Thus, for example, a fund with an order permitting a deferred sales load to be assessed at the time of an exchange may continue to assess that charge on shares purchased prior to the time that the fund's exchange offer otherwise comes into conformity with the rule. The remaining requirements of the rule (*i.e.*, requirements other than those related to fees and sales loads), such as the requirements related to disclosure and notice to shareholders, will apply to all shares upon the effective date of the rule.

Many commenters objected to the Commission's determination to supersede, through the rulemaking process, orders previously issued under section 11(a) of the Act. Some commenters questioned the Commission's legal authority to supersede orders previously granted without affording individual hearings to holders of the orders. One commenter opined that section 40(a) of the Act (15 U.S.C. 80a–39(a)), which provides that orders of the Commission shall be issued only after appropriate notice and opportunity for hearing, sets forth requirements applicable also to amending or rescinding orders under section 38(a) of the Act (15 U.S.C. 80a–37(a)).[15] Another commenter stated that, although it did not contest the Commission's regulatory power to amend existing orders by means of rule amendments with notice and comment periods, revised proposed rule 11a–3, if adopted, should have no effect on continuing exchange offer arrangements in reliance on those orders. The commenter argued that there had been no demonstration of any unfairness to shareholders such as would warrant costly changes to the structure of arrangements for exchanges under existing orders. Several commenters

---

[12] In addition, the Commission received two letters that commented only on proposed rule 11c–1.

[13] The rule applies only to exchanges among registered open-end investment companies other than insurance company separate accounts. Thus, orders under section 11 involving separate accounts, UITs, or face-amount certificate companies are not superseded by the rule and remain effective.

[14] Orders under section 11 issued since rule 11a–3 was initially proposed have been conditioned specifically on compliance with the rule if and when adopted. *See* revised proposing release at n. 14.

[15] Section 38(a) provides that the Commission shall have the authority to make, issue, amend, and rescind such rules and regulations and such orders as are necessary or appropriate to the exercise of the powers conferred elsewhere in the Act.

suggested that superseding prior orders would cause funds to terminate exchange programs that would be unable to comply with the conditions of the rule.

Proceeding by general rulemaking, with public notice in the Federal Register and the consideration of all comments received on the revised proposed rule prior to the adoption of the rule, meets the requirements of the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and due process requirements.[16] This procedure is the most efficient use of the Commission's resources in developing standards regarding exchange of fund securities that protect the reasonable expectations of both fund investors and offering companies, and are consistent with the purposes and policies of the Act.

Holders of orders under section 11(a) of the Act have had reasonable notice that the orders will be superseded by rule 11a–3.[17] Orders issued since the proposing release was issued have been conditioned specifically on compliance with rule 11a–3, if and when adopted.[18] In addition, the revised proposing release provided public notice that, when adopted, rule 11a–3 would supersede all prior orders that approved exchange offers at other than relative net asset value, and that holders of such prior orders should avail themselves of the comment process on the revised proposed rule, if they should so desire.[19]

To respond to those commenters who argued that revocation of existing orders would work hardship on existing arrangements, the rule will permit holders of the prior orders that were not conditioned specifically on compliance with rule 11a–3, if and when adopted, one year to bring their fees and sales loads into conformity with the requirements of the rule. Additionally, the rule permits a company that previously made an offer of exchange pursuant to an order under section 11(a) to continue to apply fees or sales loads permitted by the order to shares purchased prior to the time the exchange offer is otherwise brought into compliance with the rule. Such "grandfathering" ends as such shares are redeemed.

Affording holders of prior orders, except orders conditioned specifically upon compliance with rule 11a–3, if and when adopted, with a one year period to bring their fees and sales loads into conformity with the requirements of the rule, or to obtain a new order, strikes a balance between the Commission's interest in setting forth fair standards for the entire fund industry for approval of certain offers of exchange and the appropriateness of affording an adequate transition period. The one year transition provision should be sufficient to permit offering companies with existing orders to amend the terms of their offers without undue disruption of their exchange systems, or to obtain a new order based on individual circumstances. Holders of orders under section 11(a) that were granted after rule 11a–3 was proposed, and that were conditioned specifically upon compliance with rule 11a–3, if and when adopted, already should be in substantial compliance with the rule and, in any event, have agreed to come into compliance with the rule upon its effective date.

Permitting offering companies that previously made exchange offers pursuant to orders under section 11(a) to charge the fees or sales loads permitted by the orders on shares purchased before the exchange offer otherwise conforms to the rule, provides additional accommodation to those companies, without being unfair to affected investors. In light of the Commission's desire to minimize disruption of the exchange offer systems presently operating under orders, it appears appropriate to "grandfather" the fees and sales loads assessed on shares purchased while the orders remain in effect. However, the remaining provisions of rule 11a–3, including those relating to disclosure and notice to shareholders, will apply to all shares upon the effective date of the rule, including shares purchased before that date.

Finally, where individual circumstances warrant, offering companies may request Commission approval of exchange offers that differ from these uniform standards. Any such company will be entitled to request a hearing on such application as provided in the Act and the rules and regulations thereunder.[20]

2. Funds That May Rely on the Rule

Paragraph (e) of the rule prohibits an offering company that has previously made an offer of exchange from relying on the rule to amend the offer unless its prospectus had disclosed for at least the two year period prior to the amendment of the offer (or, if the fund is less than two years old, at all times the offer has been outstanding) that the terms of the offer were subject to change. The revised proposed rule would have required the offering company's prospectus to have made this disclosure at all times that the offer was outstanding. In the revised proposing release, the Commission requested comment on whether rule 11a–3 should state that if prospectus disclosure had been made for a particular number of years, then the fund could rely on the rule to amend an exchange offer.[21]

Many commenters objected to the condition of the revised proposed rule requiring prospectus disclosure at all times the offer had been outstanding. One commenter said that the effect of such a retroactive disclosure requirement would be to increase rather than decrease the number of applications filed under section 11(a). Another commenter stated that the concept of conditioning use of the rule on prior prospectus disclosure, perhaps decades earlier, was unprecedented and would result in another variation in exchange program standards among funds. Other commenters stated that it seemed implicit that an exchange program could be amended with or without disclosure, or that such amendments should be within the prerogative of a fund's board of directors.

One commenter opined that the requirement for explicit disclosure prior to allowing any changes in an exchange policy elevated the fund's prospectus into a binding contract between a fund and each investor who purchased shares in reliance on the prospectus. This commenter stated that this creation of contractual obligations would inequitably disadvantage some funds on a retroactive basis and impose burdensome recordkeeping requirements on funds to match the date of an investor's purchase of shares with the terms of the exchange privilege as described in the prospectus on the date of purchase.

Another commenter suggested permitting a fund to modify its exchange offer if the fund reserved the right to make changes in its prospectus for, at most, one year before such modification, and having such a provision take effect one year after the rule is adopted in order to provide an orderly transition.

In considering the comments received, the Commission is persuaded that requiring prospectus disclosure at all times the exchange offer was outstanding prior to permitting amendment of the terms of an exchange offer in reliance on the rule would be unnecessarily restrictive. The purpose of the proposed requirement was to protect the interests of investors who purchased a fund in reliance on certain terms of its exchange privilege. Having no requirement for prospectus disclosure that the offer was subject to change might permit funds that had promoted the sales of fund shares based in part on the existence of a specific exchange privilege to use the rule, for example, to impose charges so as to restrict the use of that privilege. The Commission recognizes that this provision will permit a fund, after a two year period of prospectus disclosure, to rely on the rule to impose new charges on exchanges by existing shareholders, who may have already paid a front-end sales load with the expectation of a liberal and inexpensive exchange privilege, or who may be subject to a deferred sales load or an exit fee to liquidate their investment. Such shareholders will lose whatever sales load or exit fee they paid or will have to pay. However, the two year requirement adopted in the final rule gives reasonable comfort that shareholders in the fund at the time the rule is relied on to change an existing exchange offer have received adequate notice of the possibility of such a change.[22]

3. Calculating the Sales Load Differential

Paragraph (b)(4) of the rule requires that, in calculating any sales load with respect to the acquired security, the rate of the sales load must be limited to a percentage no greater than the excess, if any, of the rate of the sales load applicable to that security in the absence of an exchange over the sum of the rates of all sales loads previously paid on the exchanged security and its predecessors.[23] Paragraph (b)(9)(i) of the rule requires that, in calculating the sales load charged with respect to a security acquired in an exchange, if a securityholder exchanges less than all of his securities, the security upon which the highest sales load rate was previously paid be deemed exchanged first. Paragraph (b)(9)(ii) requires that, if the exchanged security was acquired through reinvestment of dividends or capital gains distributions, the security be deemed to have been sold with a sales load rate equal to the sales load rate previously paid on the security on which the dividend was paid or the distribution made. In the revised proposing release, the Commission requested specific comment on whether the final rule should require that any share acquired through reinvestment of dividends or capital gains distributions not be subject to any sales load upon an exchange, noting that the revised proposed rule would not preclude a waiver of sales load on those shares.[24]

The rule, as adopted, also includes a new provision, paragraph (b)(4)(ii), that limits the sum of the rates of all sales loads that may be imposed prior to and at the time the acquired security is redeemed, including any sales load paid or to be paid with respect to the exchanged security, to the maximum sales load rate applicable to the security (exchanged or acquired) with the highest such rate in the absence of an exchange. This provision is particularly important if there has been more than one exchange and if a deferred sales load is imposed at the time the acquired security is ultimately redeemed.[25]

One commenter agreed that if a shareholder exchanges less than all of his or her securities, the security upon which the highest load rate was previously paid should be deemed exchanged first. It also agreed that if an exchanged security was acquired through reinvestment of dividends or capital gains distributions, such security should be deemed to have been sold with a sales load equal to that paid on the underlying security, in order to save tracking problems. It suggested, however, that the decision on treatment of reinvested shares should be left to the fund, subject to appropriate disclosure. Another commenter disagreed, stating that it saw no reason to exclude shares acquired through reinvestment of dividends from any sales load upon any exchange, since such shares had not previously been subject to a load.

After considering the comments received, the Commission has decided not to change these provisions. By limiting the sales load permitted to be charged on the acquired security to the differential of the rate of the sales load charged on the acquired security in the absence of an exchange over the sum of the rates previously paid on the exchanged security, the rule diminishes the incentive to induce exchanges for the purpose of generating additional sales loads. The sales load differential provisions also seek to assure that investors who purchase a no-load or a low load fund pay, upon exchanging into a load fund in the same group of investment companies, sales charges equivalent to those paid by the acquired fund's other shareholders.[26] The

[16] Agencies with the statutory authority to conduct rulemaking generally have discretion to issue a new rule either through rulemaking procedures or on a case-by-case basis. *See* B. Mezines, J. Stein and J. Gruff, 3 Administrative Law § 14.01, at 14–12 (1988). *See also SEC.* v. *Chenery Corp.*, 332 U.S. 194 (1947), in which the Court concluded that it was within the agency's discretion to decide to proceed by rulemaking or by adjudication, 322 U.S. at 202–203; and *NLRB* v. *Bell Aerospace Co., Div. of Textron, Inc.*, 416 U.S. 267 (1974), in which the Court stated that "the choice between rulemaking and adjudication lies in the first instance within the [National Labor Relations] Board's discretion." 416 U.S. at 294. Moreover, agencies may formulate rules and regulations for general prospective application that modify the rights of holders of certificates or licenses previously issued by the agency, without affording each affected person a hearing. *See Air Line Pilots Ass'n* v. *Quesada*, 276 F.2d 892 (2d Cir. 1960), *cert. denied*, 366 U.S. 962 (1961). *See generally* K. Davis, 3 Administrative Law Treatise § 14:5, at 24–28 (1980).

[17] *See* revised proposing release at nn. 12–14 and accompanying text. Although publication in the Federal Register satisfies the obligation to notify all interested persons, the Division of Investment Management also sent to all holders of prior orders individual letters to remind them of their opportunity to participate in the comment process. Those letters were accompanied by copies of the revised proposing release.

[18] *See* revised proposing release at n.14.

[19] *See* revised proposing release at text accompanying n.14.

[20] *See, e.g.*, section 40(a) of the Act, which provides that orders of the Commission shall be issued only after appropriate notice and opportunity for hearing; and rule 0–5(c) under the Act (17 CFR 270.0–5(c)), which provides that the Commission will order a hearing on a matter if it appears that a hearing is necessary or appropriate in the public interest or for the protection of investors, upon the request of any interested person or upon its own motion.

[21] *See* revised proposing release at nn.15–18 and accompanying text.

[22] Funds that amend the terms of an existing exchange offer in compliance with the two-year disclosure requirement and the other conditions of rule 11a–3 will be deemed to be in compliance with section 11(a) of the Act. The Commission expresses no opinion, however, as to whether any such disclosure is sufficient to relieve a fund from any potential liability under the Securities Act of 1933 (15 U.S.C. 77a *et seq.*) (the "Securities Act"), the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*) (the "Exchange Act"), or any applicable state law. Furthermore, the Commission expresses no opinion as to whether, depending on the circumstances, a shareholder may have a contractual right to an existing exchange offer on its present terms. Such issues may arise whenever a fund decides to amend an existing exchange offer, whether by imposing a new fee or by otherwise restricting the use of an exchange privilege. In such situations, in order to minimize potential problems with respect to future purchasers, a fund that intends to amend an existing exchange offer should sticker its prospectus or amend its registration statement so that prospective purchasers of the fund's shares are given appropriate notice of the fund's intent.

[23] *See Appendix*, Example No. 1.

[24] *See* revised proposing release at n. 23.

[25] This limitation is intended to discourage offering companies or their agents from inducing exchanges to generate higher sales loads than would be payable in the absence of an exchange. See Appendix, Example No. 10.

[26] Paragraph (b)(4) contains a minor modification to clarify that the differential sales load is limited to the excess of the rate charged with respect to the acquired security in the absence of an exchange over the sum of the rates previously charged on the exchanged security. See *Appendix*, Example No. 1.

Commission also remains unpersuaded that shares acquired through reinvestment of dividends or other distributions should be subject to a full sales load upon an exchange, rather than being limited to the sales load differential.

4. Deferred Sales Load at Time of Exchange

Paragraph (b)(3) of rule 11a–3 prohibits the imposition of a deferred sales load on the exchanged security at the time of an exchange.[27] The revised proposing release stated that permitting a deferred sales load to be imposed at the time of an exchange could raise problems of the type with which section 11 of the Act is concerned.[28] In this regard, inducing an exchange would, among other things, permit a fund's underwriter to accelerate payment of a sales load with no corresponding benefit to the shareholder.

One commenter asserted that prohibiting the imposition of a deferred sales load at the time of an exchange for the purpose of preventing switching does not recognize how fund salesmen are compensated. According to the commenter, salesmen are paid upfront commissions for sales from monies advanced in anticipation of recovery of the principal underwriter's expenses through receipt of 12b–1 fees and deferred sales loads. The commenter concluded that, therefore, exchanges do not generate any additional compensation to salesmen.

Other commenters asserted that permitting deferred sales loads to be charged at the time of an exchange would not lead to the abuse that section 11 was intended to prevent, but would relieve funds that charge deferred sales loads of the administrative and recordkeeping burdens of imposing the deferred loads upon the ultimate redemption of the acquired shares, or the financial burden of waiving the deferred load on the exchanged security. Yet another commenter asserted that switching was no more likely to occur to collect a deferred sales load than to earn a sales load on an acquired fund.

Another commenter stated that the prohibition on charging deferred sales loads at the time of an exchange was unnecessary to protect shareholders. The commenter stated that a fund could achieve the same result by having a policy of prohibiting exchanges for the purpose of generating additional commissions and by having a compliance department that monitors account executives to prevent violations of that policy.

One commenter stated that prohibiting the imposition of a deferred sales charge at the time of an exchange failed to recognize the time value of money because a deferred sales load collected years later upon the ultimate redemption of shares of the acquired fund fails to compensate adequately a distributor for its initial expenses and the costs of financing such expenses. This commenter suggested that the decision of whether to postpone the collection of a deferred sales load or to impose its payment at the time of an exchange should be left to the business judgment of a fund's directors in consultation with its distributor.

The Commission has decided to retain the prohibition on the imposition of a deferred sales charge on the exchanged security at the time of an exchange. As adopted, the rule is consistent with the policy of the Act to minimize incentives for switching investors to generate additional sales charges. Even if a particular salesman does not receive a portion of the sales load at the time of an exchange, a deferred sales load at that time often would still inure to the benefit of others, such as the principal underwriter, who may be in a position to encourage switching. As one commenter noted, receiving even the same dollar amount of sales load sooner rather than later may be a benefit because of the time value of money.

5. Tolling and Deferred Sales Loads

Paragraph (b)(5) of rule 11a–3 requires that any deferred sales load charged at the time the acquired security is redeemed be calculated as if the holder of the acquired security had held that security from the time he or she became a holder of the exchanged security.[29] There are two exceptions to this requirement when time periods need not be included in the calculations of the holding period:

(1) The time during which the acquired security was held need not be included in the calculation if there were no sales loads imposed with respect to the acquired security and if the amount of any deferred sales load with respect to the exchanged security is reduced by the amount of any fees collected on the acquired security under a 12b–1 plan,[30] and

(2) The time during which the exchanged security was held need not be included in the calculation if there were no sales loads imposed with respect to the exchanged security and if the amount of any deferred sales load with respect to the acquired security is reduced by the amount of any fees collected on the exchanged security under a 12b–1 plan.

The revised proposed rule would have prohibited tolling of the time during which the acquired shares were held if the acquired shares were subject to a 12b–1 plan.[31] This prohibition recognized that contingent deferred sales loads ("CDSLs") are reduced over time to reflect amounts paid through a 12b–1 plan.[32] The Commission's position of that time was that, if a shareholder were making any payments for distribution through a 12b–1 plan, those payments should be reflected in a commensurate reduction of the CDSL owed, but that tolling would prevent a shareholder from receiving credit for the 12b–1 payments made while holding the acquired shares.[33]

One commenter suggested that tolling should not be prohibited whenever the acquired security is subject to a 12b–1 plan, but that the rule should distinguish between 12b–1 plans that are "spread-load," "supplemental," or purely "defensive." [34] The commenter opined that the rule should permit tolling whenever the acquired fund has no sales load or no spread-load 12b–1 plan. According to the commenter, supplemental and defensive 12b–1 plans are not for the purpose of reimbursing distributors for costs of distribution and therefore should not prevent tolling upon an exchange.

Another commenter stated that a total prohibition on tolling if the acquired fund had any 12b–1 plan is unduly restrictive and suggested that tolling be permitted where the acquired fund has a 12b–1 plan with annual payments of no more than 25 basis points.

The Commission has revised the tolling provision of the rule in response to the comments received. The final rule

---

[27] As noted earlier, rule 11a–3 does not cover installment-type deferred sales loads. See *supra* note 3.

[28] See revised proposing release at nn. 24–32 and accompanying text.

[29] See Appendix, Example Nos. 2–4.

[30] See *supra* note 4. See also Appendix, Example No. 8.

[31] See revised proposing release at n.33 and accompanying text.

[32] *Id.* at n.30.

[33] *Id.*

[34] According to the commenter: (i) Under a "spread-load" 12b–1 plan, payments are substituted for all or part of a traditional sales load; (ii) under a "supplemental" 12b–1 plan, payments of less than 50 basis points per year are used as an additional source for financing advertising and similar activities; and (iii) under a "defensive" 12b–1 plan, no fees are charged. Instead, a defensive plan simply authorizes, without requiring, the fund advisor to use some unspecified portion of the advisory fee to pay for distribution.

permits tolling of the time the acquired shares are held if a credit is given to the investor for any 12b–1 fees paid with respect to the acquired shares, provided the acquired shares are not subject to any sales load.[35] This requirement is intended to give shareholders credit in calculating CDSLs for any payments actually made under a 12b–1 plan. Such credit should be given, regardless of the type of 12b–1 plan involved.

On a related matter, the revised proposed rule did not provide for tolling of the time the exchanged shares were held in calculating the amount of a deferred sales load with respect to the acquired shares. The final rule does permit such tolling, if the exchanged shares were not subject to any sales load and if a credit is given for any 12b–1 fees previously paid under a 12b–1 plan with respect to the exchanged shares. This provision simply is analogous to permitting tolling with respect to the time the acquired shares were held under equivalent circumstances.

Paragraph (b)(5)(iii) of the rule also permits all holding periods to be computed as of the end of the calendar month in which a security was purchased or redeemed. This provision was added in response to two commenters who stated that some funds presently compute holding periods with reference to such dates, and that doing so was simpler and more efficient for the funds with no adverse effect on shareholders.

6. Redemption and Administrative Fees

Paragraph (b)(1) of the rule permits a fund to charge an administrative fee, as defined in paragraph (a)(2) of the rule, or any scheduled variation thereof, provided the administrative fee is applied uniformly to all shareholders of the specified class. Paragraph (b)(2) of the rule permits a fund to charge a redemption fee, as defined in paragraph (a)(7) of the rule, or scheduled variation thereof, provided the fee is applied uniformly to all shareholders of the specified class and the fee does not exceed the redemption fee applicable to a redemption of the exchanged security if it were redeemed rather than exchanged. Unlike the revised proposal, the final rule's definition of "redemption fee" specifies that any scheduled variation thereof must be reasonably related to the costs to the fund of processing the type of redemptions for which the fee is charged.

One commenter supported the revised proposed rule's division of exchange related charges into administrative fees, redemption fees, and deferred sales loads, stating that this division would give directors flexibility to use economic forces to moderate shareholder behavior and provide compensation to the fund or administrative service provider. This commenter requested that the final rule state more clearly that a fund could charge a redemption fee upon an exchange in addition to a deferred sales load or an administrative fee, and further suggested that the final rule should allow a redemption fee to be imposed after a certain number of exchanges or on exchanges effected within a specified time period after purchase. The commenter also requested clarification that a "nominal" administrative fee, based on a 1980 no-action position of the Division of Investment Management (the "Division") that permitted a $5.00 administrative fee, [36] would result in an inflation-adjusted fee of approximately $7.70 as of June 1988. Two commenters also suggested a clarification that "actual costs" permitted in connection with administrative fees would include all relevant costs of implementing an exchange system, including costs reasonably related to employment of personnel to deal with and monitor cash volatility issues and the development of computer systems to track exchanges.[37]

The language of the revised proposed rule that has been adopted in the final rule already states clearly, in paragraph (b), that funds may charge any combination of fees permitted in connection with an exchange that meet the conditions set forth in the rule. With respect to the suggestion that the rule permit funds to impose a redemption fee after a certain number of exchanges or on exchanges effected within a specified time period after purchase, the rule would permit such fee if the fund could establish that: (i) As required by paragraph (b)(2), such a variation was reasonably related to the costs to the fund of processing the type of redemptions for which the fee is charged; (ii) as required by paragraph (b)(2)(i), the variation is applied uniformly to all shareholders of the class specified; and (iii) as required by paragraph (b)(2)(ii), the fee does not exceed the redemption fee applicable to a redemption in the absence of an exchange.[38]

With respect to the suggestion that the rule specify a specific amount that would constitute a "nominal fee" as of a particular date, the Commission has decided that the definition in paragraph (a)(8) would provide more flexibility and is preferable to the Commission setting such a rate for the industry. Moreover, as the rate of inflation changes, the inflation-adjusted amount of a "nominal" fee necessarily will change also.

Finally, the Commission rejects the suggestion that the rule permit administrative fees to be used to cover additional costs related to establishing an exchange offer, such as overhead expenses of the funds. Any fees assessed in connection with exchanges must be reasonable, with the fund maintaining records of any determination of costs as required by paragraph (a)(2) of the rule, or "nominal" as defined by paragraph

---

[35] The final rule does not permit tolling where the acquired shares are subject to a sales load because the incentive for switching would be greater in such circumstances. See Appendix, Example No. 7.

[36] *See* Chase Fund of Boston (pub. avail. July 28, 1980).

[37] Paragraph (a)(2) of rule 11a–3 requires an administrative fee to be either nominal or reasonably intended to cover the costs incurred in processing exchanges of the type for which the fee is charged. Similarly, paragraph (a)(7) requires a redemption fee to be reasonably intended to compensate the fund for expenses directly related to the redemption of fund shares. Thus, administrative fees encompassed by the rule could cover such costs as transfer agent fees incurred in effecting exchanges, costs of mailing confirmation statements to investors who make exchanges, and other transaction costs involved in processing exchanges, such as telephone charges and the cost of personnel assigned to process exchange requests made by telephone or in writing. Redemption fees under the rule could cover the types of costs borne by the fund in any redemption of shares, whether or not related to exchanges. Appropriate costs could include brokerage commissions charged to the fund in connection with any liquidation of portfolio securities necessitated by the redemption portion of the exchange, as well as any processing or other transaction costs incident to the redemption and not covered by any administrative fee charged.

The inclusion of costs, other than those directly related to processing exchanges, in fees imposed in connection with exchanges will continue to be considered by the Commission, or by the Division by delegated authority, on a case-by-case basis through applications and interpretive or no-action letters. In this regard, an application under section 11(a) has been filed seeking approval to charge an administrative fee and a redemption fee on exchanges to cover costs related to the modification and maintenance of systems to monitor cash flow volatility and exchange levels; employment of additional portfolio managers, trading department personnel, tax managers, and legal advisers to deal with the problems of high portfolio turnover; and maintenance of a specially trained group of employees to deal with active traders and to enforce exchange limitations. The Commission will consider the appropriateness of including these costs in fees charged in connection with exchanges in the context of the pending application.

[38] For example, the rule will permit a fund to have a policy of permitting a shareholder to make five exchanges per year without the imposition of a redemption fee, but impose a 1% fee on each additional exchange, if such redemption fee were reasonably related to the costs to the fund of processing that type of redemption, and if the redemption fee applicable to a redemption in the absence of an exchange were at least 1%.

(a)(8). Any other expansion of the authority of funds to impose fees in connection with exchanges could permit the recovery of costs only remotely related to an exchange offer and would raise issues of the type that section 11 of the Act was intended to prevent.

7. Disclosure and Advertising

Paragraphs (a)(8) and (a)(9) of the revised proposed rule, concerning sales literature and advertising, respectively, have been combined into paragraph (b)(7) of the final rule. The rule requires all advertising and sales lliterature that mentions an exchange offer also to disclose the existence of any administrative fee or redemption fee that would be imposed at the time of an exchange. In addition, if the offering company reserves the right to terminate or change the terms of the exchange offer, the advertising and sales literature must disclose that the offer is subject to termination or its terms are subject to change. The revised proposed rule also had required any sales literature that mentioned the exchange offer to disclose the amount of any administrative charges. Paragraph (b)(6) of the rules requires the prospectus of an offering company to disclose the amount of any administrative or redemption fee imposed in connection with an exchange and, if the company reserves the right to terminate the offer or change its terms, that the offer is subject to termination or change.

The rule was modified to require only that the existence of an administrative fee or redemption fee be disclosed in sales literature, rather than also requiring the amount to be disclosed, in response to many comments objecting to the revised proposed rule.[39] Most commenters asserted that the amount of the fees are disclosed in the offering company's prospectus, which is required to be provided in all investors. The modification also was made because there may be space constraints in sales literature and advertising. Although many commenters also objected to the requirement that any advertising or sales literature that mentions the existence of the exchange offer disclose an offering company's reservation of the right to terminate or change the terms of the offer, the Commission has not modified this requirement. If an offering company believes that the exchange offer is a significant enough selling point that it mentions the offer in sales literature or advertising, then it should state that the offer may be terminated or the terms changed, if the company reserves the right to do so.[40]

8. Minimum Holding Periods

Paragraph (c) of the final rule permits an offering company to require an exchanging shareholder to have held the exchanged security for a minimum period of time either if no sales load is imposed on the acquired security or if the sales load imposed is less than the sales load differential.

Only one commenter addressed this provision, opining that the decision to establish a minimum holding period should be left to the business judgement of the offering company. The Commission agrees and has not modified this provision.

9. Amending the Terms of Exchange Offers

Paragraph (b)(8) of the final rule requires an offering company to provide any holder of the security subject to an exchange offer with notice at least 60 days prior to terminating or amending materially the terms of the offer, unless the only material effect of the amendment is to reduce or eliminate an administrative fee, sales load, or redemption fee payable at the time of an exchange. During the 60 day notice period, shareholders would be entitled to make exchanges under the terms of the exchange offer prior to its amendment.

Many commenters objected to the notice requirement because it would lock in for 60 days decisions of directors determining that the best interests of the fund and its shareholders would require changes in the exchange offer. However, the Commission has decided to maintain the 60 day notice requirement in the final rule because the requirement is a reasonable accommodation both to investors who purchased a fund at least in part in reliance on the terms of the existing exhange offer and to the interests of the remaining shareholders. The Commission recognizes, however, that even 60 days notice will not necessarily help shareholders who have paid a front-end sales load, or who will incur a deferred sales load or a redemption fee to exit a fund.

The final rule includes two exceptions to the notice requirement permitted under extraordinary circumstances. The first exception is if there is a suspension of the redemption of the security that otherwise would be exchanged, under section 22(e) of the Act (15 U.S.C. 80a-22(e)) and the rules thereunder.[41] The other exception is if the offering company temporarily delays or ceases the sale of the security that otherwise would be acquired, because the offering company is unable to invest amounts effectively in accordance with applicable investment objectives, policies and restrictions.

The provision regarding extraordinary conditions was added in recognition that a fund should be permitted some flexibility to respond to changing market conditions to prevent the necessity of selling portfolio securities when the fund has suspended redemptions of its shares pursuant to section 22(e). Also, this provision recognizes that an offering company temporarily may delay or cease to sell shares of the fund to be acquired because trading in the fund's portfolio securities is affected by extreme market conditions.[42]

Finally, in response to the comments, the Commission is not adopting the suggestion in the revised proposing release that, during the 60 day period, shareholders be permitted to redeem out of the fund without the imposition of any CDSL or redemption fee that would otherwise be imposed and receive a refund of any front-end sales load previously paid.[43] The commenters objected to the suggestion that CDSLs or redemption fees might be waived, or front-end sales loads refunded, stating that such a requirement would make changes in an exchange privilege too costly, may artificially stimulate redemptions necessitating portfolio liquidations under unfavorable conditions, and would prevent a distributor from recovering commissions and other costs already incurred in connection with the sale of fund shares.

10. Scope of "Group of Investment Companies"

Paragraph (a)(5) of the rule has been modified from the revised proposed rule to define "group of investment companies" to include funds whose investment advisers or principal underwriters are affiliated persons of each other as defines in section 2(a)(3) of the Act. The revised proposed rule would have included in the definition of "group of investment companies" only funds with common advisers or underwiters, or whose advisers and underwriters were under common control. This modification was made in response to a specific suggestion by a commenter. As stated in the revised proposing release, the purpose of the introduction of the term "group of investment companies" was to broaden the scope of funds eligible to rely on the rule and to avoid confusion with the term "family of investment companies" used elsewhere in the rules and regulations under the Act.[44] The commenter's suggestion was consistent with those purposes and, accordingly, has been incorporated into the final rule.

Cost/Benefit of Action

Rule 11a-3 will not impose any significant additional burdens on funds and may reduce the costs that they would incur by eliminating the need to file many applications. Funds, advisers or principal underwriters may incur some costs in complying with the disclosure and notice provisions of the rule. The costs related to the notice requirement may be minimized by including the notice on a separate document with one of the mailings to shareholders that funds make to comply with the federal securities laws and the rules thereunder, or for other purposes. The rule also will require offering companies that impose administrative fees on exchanges based on a cost standard to maintain records with respect to the actual costs incurred in connection with exchanges. Offering companies will save the time and expense of filing applications for approval of exhange offers that meet the requirement set forth in the rule. The Commission will benefit from the rule because its staff will have to review fewer applications requesting orders in this area.

Regulatory Flexibility Act Analysis

A summary of the Initial Regulatory Flexibility Analysis, which was prepared in accordance with 5 U.S.C. 603, was published in Investment Company Act Rel. No. 16504. No comments were received on this analysis. The Commission has prepared a Final Regulatory Flexibility Analysis, a copy of which may be obtained by contacting Wendy B. Finck, Esq., Mail Stop 5-2, Division of Investment Management, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549.

List of Subjects in 17 CFR Part 270

Investment companies, Reporting and recordkeeping requirements, Securities.

Text of Rule

Part 270 of chapter II of title 17 of the Code of Federal Regulations is amended as shown.

PART 270—RULES AND REGULATIONS, INVESTMENT COMPANY ACT OF 1940

1. The authority citation for part 270 continues to read as follows:

Authority: Secs. 38, 40, 54 Stat. 841, 842; 15 U.S.C. 80a-37, 80a-39; The Investment Company Act of 1940, as amended, 15 U.S.C. 80a-1 *et seq.*; unless otherwise noted. * * * Section 270.11a-3 is also issued under Secs. 6(c) [15 U.S.C. 80a-6(c)] and 11(a) [15 U.S.C. 80a-11(a)].

2. By adding § 270.11a-3 to read as follows:

§ 270.11a-3 Offers of exchange by open-end investment companies other than separate accounts.

(a) For purposes of this rule:

(1) "Acquired security" means the security held by a securityholder after completing an exchange pursuant to an exchange offer;

(2) "Administrative fee" means any fee, other than a sales load, deferred sales load or redemption fee, that is

(i) Reasonably intended to cover the costs incurred in processing exchanges of the type for which the fee is charged, *Provided that:* the offering company will maintain and preserve records of any determination of the costs incurred in connection with exchanges for a period of not less than six years, the first two years in an easily accessible place. The records preserved under this provision shall be subject to inspection by the Commission in accordance with section 31(b) of the Act (15 U.S.C. 80a-30(b)) as if such records were records required to be maintained under rules adopted under section 31(a) of the Act (15 U.S.C. 80a-30a)); or

(ii) A nominal fee as defined in paragraph (a)(8) of this section;

(3) "Deferred sales load" means any amount properly chargeable to sales or promotional activities that is or may be deducted upon redemption of all or a portion of a securityholder's interest in an open-end investment company;

(4) "Exchanged security" means

(i) The security actually exchanged pursuant to an exchange offer, and

(ii) Any security previously exchanged for such security or for any of its predecessors;

(5) "Group of investment companies" means any two or more registered open-end investment companies that hold themselves out to investors as related companies for purposes of investment and investor services, and

(i) That have a common investment adviser or principal underwriter, or

(ii) The investment adviser or principal underwriter of one of the companies is an affiliated person as defined in section 2(a)(3) of the Act (15 U.S.C. 80a-2(a)(3)) of the investment adviser or principal underwriter of each of the other companies;

(6) "Offering company" means a registered open-end investment company (other than a registered separate account) or any principal underwriter thereof that makes an offer (an "exchange offer") to the holder of a security of that company, or of another open-end investment company within the same group of investment companies as the offering company, to exchange that security for a security of the offering company;

(7) "Redemption fee" means any fee (other than a sales load, deferred sales load or administrative fee) that is paid to the fund and is reasonably intended to compensate the fund for expenses directly related to the redemption of fund shares; and

(8) "Nominal fee" means a slight or *de minimis* fee.

(b) Nothwithstanding section 11(a) of the Act (15 U.S.C. 80a-11(a)), and except as provided in paragraphs (d) and (e) of this section, in connection with an exchange offer an offering company may cause a securityholder to be charged a sales load on the acquired security, a redemption fee, an administrative fee, or any combination of the foregoing, *Provided that*:

(1) Any administrative fee or scheduled variation thereof is applied uniformly to all securityholders of the class specified;

(2) Any redemption fee charged with respect to the exchanged security or any scheduled variation thereof

---

[39] The amount of any administrative fee or redemption fee, however, must be disclosed in the prospectus.

[40] Additionally, a fund salesman who describes a fund's exchange privilege when recommending that an investor purchase a fund has an obligation to tell the investor any material facts about the exchange offer. That obligation extends to material facts about the nature and level of charges imposed upon an exchange and, if applicable, the fund's right to alter the terms of the exchange privilege. See rule 10b-5(b) under the Exchange Act (17 CFR 240.10b-5(b)). See also supra note 22.

[41] Section 22(e) permits a fund to suspend the right of redemption of its redeemable securities for more than seven days only during periods when the New York Stock Exchange (the "NYSE") is closed (other than customary week-end and holiday closings); when trading on the NYSE is restricted; when an emergency exists as a result of which (i) disposal by the company of securities owned by it is not reasonably practicable, or (ii) it is not reasonably practicable for the fund fairly to determine the value of its net assets; or when the Commission, by order, may permit such suspension for the protection of the company's security holders.

[42] Several orders under section 11(a) issued after the revised proposed rule was published have included a condition similar to the one included in paragraph (b)(8)(ii) of the rule. *See, e.g.*, Pacific Horizon California Tax-Exempt Bond Portfolio, Inc., Investment Cmpany Act Rel. Nos. 16653 (Nov. 23, 1988) (53 FR 48361, Nov. 30, 1988) (notice of application) and 16696 (Dec. 20, 1988) (order); and Hutton Municipal Series Inc., Investment Company Act Rel. Nos. 16561 (Sept. 12, 1988) (53 FR 36518, Sept. 20, 1988) (notice of application) and 16586 (Oct. 6, 1988) (order).

[43] *See* revised proposing release at nn.63-64 and accompanying text.

[44] *See* revised proposing release at n.54-56 and acrompanying text.

(i) Is applied uniformly to all securityholders of the class specified, and

(ii) Does not exceed the redemption fee applicable to a redemption of the exchanged security in the absence of an exchange.

Any scheduled variation of a redemption fee must be reasonably related to the costs to the fund of processing the type of redemptions for which the fee is charged;

(3) No deferred sales load is imposed on the exchanged security at the time of an exchange;

(4) Any sales load charged with respect to the acquired security is a percentage that is no greater than the excess, if any, of the rate of the sales load applicable to that security in the absence of an exchange over the sum of the rates of all sales loads previously paid on the exchanged security, *Provided that*:

(i) The percentage rate of any sales load charged when the acquired security is redeemed, that is solely the result of a deferred sales load imposed on the exchanged security, may be no greater than the excess, if any, of the applicable rate of such sales load, calculated in accordance with paragraph (b)(5) of this section, over the sum of the rates of all sales loads previously paid on the acquired security, and

(ii) In no event may the sum of the rates of all sales loads imposed prior to and at the time the acquired security is redeemed, including any sales load paid or to be paid with respect to the exchanged security, exceed the maximum sales load rate, calculated in accordance with paragraph (b)(5) of this section, that would be applicable in the absence of an exchange to the security (exchanged or acquired) with the highest such rate;

(5) Any deferred sales load charged at the time the acquired security is redeemed is calculated as if the holder of the acquired security had held that security from the date on which he became the holder of the exchanged security, *Provided that*:

(i) The time period during which the acquired security is held need not be included when the amount of the deferred sales load is calculated, if the deferred sales load is

(A) reduced by the amount of any fees collected on the acquired security under the terms of any plan of distribution adopted in accordance with rule 12b–1 under the Act (17 CFR 270.12b–1) (a "12b–1 plan"), and

(B) Solely the result of a sales load imposed on the exchanged security, and no other sales loads, including deferred sales loads, are imposed with respect to the acquired security.

(ii) The time period during which the exchanged security is held need not be included when the amount of the deferred sales load on the acquired security is calculated, if

(A) The deferred sales load is reduced by the amount of any fees previously collected on the exchanged security under the terms of any 12b–1 plan, and

(B) The exchanged security was not subject to any sales load, and

(iii) The holding periods in this subsection may be computed as of the end of the calendar month in which a security was purchased or redeemed;

(6) The prospectus of the offering company discloses

(i) The amount of any administrative or redemption fee imposed on an exchange transaction for its securities, as well as the amount of any administrative or redemption fee imposed on its securityholders to acquire the securities of other investment companies in an exchange transaction, and

(ii) If the offering company reserves the right to change the terms of or terminate an exchange offer, that the exchange offer is subject to termination and its terms are subject to change;

(7) Any sales literature or advertising that mentions the existence of the exchange offer also discloses

(i) The existence of any administrative fee or redemption fee that would be imposed at the time of an exchange; and

(ii) If the offering company reserves the right to change the terms of or terminate the exchange offer, that the exchange offer is subject to termination and its terms are subject to change;

(8) Whenever an exchange offer is to be terminated or its terms are to be amended materially, any holder of a security subject to that offer shall be given prominent notice of the impending termination or amendment at least 60 days prior to the date of termination or the effective date of the amendment, *Provided that:*

(i) No such notice need be given if the only material effect of an amendment is to reduce or eliminate an administrative fee, sales load or redemption fee payable at the time of an exchange, and

(ii) No notice need be given if, under extraordinary circumstances, either

(A) There is a suspension of the redemption of the exchanged security under section 22(e) of the Act [15 U.S.C. 80a–22(e)] and the rules and regulations thereunder, or

(B) The offering company temporarily delays or ceases the sale of the acquired security because it is unable to invest amounts effectively in accordance with applicable investment objectives, policies and restrictions; and

(9) In calculating any sales load charged with respect to the acquired security:

(i) If a securityholder exchanges less than all of his securities, the security upon which the highest sales load rate was previously paid is deemed exchanged first; and

(ii) If the exchanged security was acquired through reinvestment of dividends or capital gains distributions, that security is deemed to have been sold with a sales load rate equal to the sales load rate previously paid on the security on which the dividend was paid or distribution made.

(c) If either no sales load is imposed on the acquired security or the sales load imposed is less than the maximum allowed by paragraph (b)(4) of this section, the offering company may require the exchanging securityholder to have held the exchanged security for a minimum period of time previously established by the offering company and applied uniformly to all securityholders of the class specified.

(d) Any offering company that has previously made an offer of exchange may continue to impose fees or sales loads permitted by an order under section 11(a) of the Act upon shares purchased before the earlier of (1) One year after the effective date of this section, or (2) When the offer has been brought into compliance with the terms of this section, and upon shares acquired through reinvestment of dividends or capital gains distributions based on such shares, until such shares are redeemed.

(e) Any offering company that has previously made an offer of exchange cannot rely on this section to amend such prior offer unless

(1) The offering company's prospectus disclosed, during at least the two year period prior to the amendment of the offer (or, if the fund is less than two years old, at all times the offer has been outstanding) that the terms of the offer were subject to change, or

(2) The only effect of such change is to reduce or eliminate an administrative fee, sales load or redemption fee payable at the time of an exchange.

By the Commission.
Dated: August 3, 1989.

Jonathan G. Katz,
Secretary.

Value of a $10,000 initial investment, assuming (i) a 0% annual return and (ii) redemption at the end of each time period:

Appendix—Illustrations of Sales Load Provisions of Rule 11a–3

	1 yr.	2 yrs.	3 yrs.	4 yrs.	5 yrs.
FUND A:					
6 percent front-end sales load	9,400	9,400	9,400	9,400	9,400
FUND B:					
5 percent CDSL (assume rate declines 1 percent/yr) and no 12b–1 fee	9,500	9,600	9,700	9,800	9,900
FUND C:					
3 percent front-end sales load	9,700	9,700	9,700	9,700	9,700
FUND D:					
5 percent CDSL (assume rate declines 1 percent/yr) and 1 percent 12b–1 fee/yr	9,405	9,409	9,412	9,414	9,415
FUND E:					
No sales load and no 12b–1 fee	10,000	10,000	10,000	10,000	10,000
FUND F:					
1 percent front-end sales load and 2 percent deferred sales load	9,702	9,702	9,702	9,702	9,702
FUND G:					
2 percent front-end sales load	9,800	9,800	9,800	9,800	9,800
FUND H:					
No sales load and 1 percent 12b–1 fee/yr	9,900	9,801	9,703	9,606	9,510

Note: This appendix will not appear in the Code of Federal Regulations.

1. *Sales load differential.*

Assume a shareholder holds shares of FUND C for 2 years. At that time, the shareholder exchanges from FUND C to FUND A and then redeems out of FUND A at the end of the third year. FUND C has a 3% front-end sales load, so the investment in FUND C is worth $9,700. At the time of the exchange into FUND A, FUND A is limited to charging the 3% excess of its 6% front-end sales load over the 3% sales load already paid to FUND C (the "sales load differential"). See paragraph (b)(4). The investment in FUND A is worth $9,409 ($9,700−291 (3% of 9,700)). At the time of the redemption, the investment is worth $9,409.

2. *Deferred sales load of acquired security exceeding sales load of exchanged security.*

Assume a shareholder holds shares of FUND C for 1 year. At that time, the shareholder exchanges from FUND C to FUND B, and then redeems out of FUND B at the end of the second year. At the time of the exchange into FUND B, the investment is worth $9,700. At the time of the redemption, FUND B is required to calculate its CDSL as if the shareholder had held FUND B from the date on which he became the holder of FUND C. See paragraph (b)(5). At the end of the second year (1 year in FUND C and 1 year in FUND B), FUND B otherwise would be entitled to charge a CDSL rate of 4%. (FUND B's CDSL is 5% if a shareholder redeems during the first year, and the rate subsequently declines 1% per year.) However, paragraph (b)(4) limits the sales load of an acquired security to a percentage no greater than the excess, if any, of the acquired security's sales load in the absence of an exchange over the sum of the rates previously paid on the exchanged security. In this example, the sales load rate of FUND B is limited to 1% (the excess of 4% over the 3% rate previously paid to FUND C). Upon redemption, the investment is worth $9,603 ($9,700−97 (1% of 9,700)).

3. *Deferred sales load of acquired security not exceeding sales load of exchanged security.*

Assume a shareholder holds shares of FUND A for 2 years. At that time, the shareholder exchanges from FUND A to FUND B, and then redeems out of FUND B at the end of the third year. At the time of the exchange, the investment is worth $9,400. At the time of the redemption, FUND B is required by paragraph (b)(5) to calculate its CDSL as if the shareholder had held FUND B from the date on which he became the holder of FUND A. At the end of the third year (2 years in FUND A and 1 year in FUND B), FUND B otherwise would be entitled to a CDSL rate of 3%. However, paragraph (b)(4) limits the deferred sales load to the excess, if any, of the rate of the sales load of the acquired security in the absence of an exchange over the rate previously paid on the exchanged security. In this example, there is no excess due to FUND B over the 6% previously paid to FUND A. Therefore, no CDSL may be charged. Upon redemption, the investment is worth $9,400.

4. *Deferred sales load of exchanged security.*

Assume a shareholder holds shares of FUND B for 1 year. At that time, the shareholder exchanges from FUND B to FUND G, and then redeems out of FUND G at the end of the second year. Paragraph (b)(3) prohibits FUND B from charging a deferred sales load at the time of the exchange, but FUND G may charge its 2% front-end sales load, so the investment in FUND G is worth $9,800 at the time of the exchange. At the time of the redemption from FUND G, FUND B is entitled to impose its CDSL, but subject to two conditions: (1) paragraph (b)(5) requires a deferred sales load charged at the time the acquired security is redeemed to be calculated as if the shareholder had held the shares from the date on which he became the holder of the exchanged security; and (2) paragraph (b)(4)(i) limits the rate of the sales load charged when the acquired security is redeemed that is solely the result of a deferred sales load imposed on the exchanged security to the excess, if any, of the applicable rate over the rate previously paid on the acquired security. In this example, the CDSL rate otherwise due to FUND B (4% based upon a holding period of 2 years in FUNDS B and G) exceeds the rate already paid to FUND G (2%) by 2%, so FUND B may charge 2% of the 4% CDSL to which it otherwise would be entitled. Upon redemption, the investment is worth $9,604 ($9,800−$196 (2% of $9,800)).

5. *Tolling.*

Assume a shareholder holds shares of FUND B for 2 years. At that time, the shareholder exchanges from FUND B to FUND E, and then redeems out of FUND E at the end of the sixth year. Paragraph (b)(3) prohibits FUND B from charging any deferred sales load at the time of the exchange, and FUND E does not have any sales load, so the investment is worth $10,000 in Fund E. Upon redemption from FUND E, FUND B is entitled to impose its CDSL. Paragraph (b)(5) would require FUND B to calculate its CDSL as if the shareholder had held the shares 6 years (2 years in FUND B and 4 years in FUND E). However, paragraph (b)(5)(i)(B) permits "tolling" of the time the shareholder held shares in FUND E because no sales loads were imposed with respect to FUND E. Therefore, FUND B may calculate its CDSL at the time of the redemption from FUND E based upon a holding period of 2 years, which would result in a CDSL of 4%. Upon redemption, the investment is worth $9,600 ($10,000−400 (4% of 10,000)).

6. *Tolling with credit for 12b–1 fees.*

Assume a shareholder holds shares of FUND B for 2 years. At that time, the shareholder exchanges from FUND B to FUND H, and then redeems out of FUND H at the end of the fifth year. At the time of the exchange into FUND H, the investment is worth $10,000 because FUND B is prohibited from charging its CDSL at the time of the exchange by paragraph (b)(3). FUND H charges a 1% 12b–1 fee per year, so the investment in FUND H is worth $9,900 after being invested in FUND H for 1 year ($10,000−100 (1% of 10,000)); $9,801 after 2 years ($9,900−99 (1% of 9,900)); and $9,703 after 3 years ($9,801−98 (1% of $9,801)). At the time of the ultimate redemption out of FUND H, FUND B is entitled to charge its CDSL. Paragraph (b)(5)(i)(A) permits FUND B to "toll" the time the shareholder held shares in FUND H, provided the deferred sales load is reduced by the amount of any fees collected on FUND H under a 12b–1 plan. Therefore, based on a holding period of 2 years, FUND B is permitted to charge a CDSL of 4% ($388 (4% of $9,703)), reduced by $297 ($100+99+98). Upon redemption, the investment is worth $9,612 ($9,703−91 (388−297)).

7. *Tolling not permitted if acquired security subject to a sales load.*

Assume a shareholder holds shares of FUND B for 2 years. At that time, the shareholder exchanges from FUND B to FUND A, and then redeems out of FUND A at the end of the fourth year. At the time of the exchange, no CDSL may be charged with respect to FUND B, but FUND A may charge its 6% front-end load, so the investment in FUND A is worth $9,400. Upon redemption, no tolling is permitted of the time the acquired security was held because the acquired security was subject to a sales load. See paragraph (b)(5)(i)(B). The CDSL to which FUND B otherwise would be entitled cannot be charged because a deferred sales load is limited to the excess, if any, of the applicable rate (2% based upon a holding period of 4 years) over the sum of the rates of all sales loads previously paid on the acquired security (6%). *See* paragraph (B)(4)(i). In this example, 2% does not exceed 6%, so no CDSL may be charged. Upon redemption, the investment is worth $9,400.

8. *Exchanges from fund with both CDSL and 12b–1 fee to funds with front-end sales loads.*

Assume a shareholder holds shares of FUND D for 2 years. At that time, the shareholder exchanges from FUND D into FUND C. At the end of the fourth year, the shareholder exchanges from FUND C into FUND A, then redeems out of FUND A at the end of the fifth year. FUND D charges a 1% 12b–1 fee per year, so the investment is worth $9,900 at the end of the first year. At the end of the second year, another 1% 12b–1 fee per year has been deducted, so the investment is worth $9,801 ($9,900−99 (1% of 9,900)). Paragraph (b)(3) prohibits FUND D from charging a CDSL at the time of exchange into FUND C, but FUND C may collect its 3% front-end sales load, so the investment in FUND C is worth $9,507 ($9,801−294 (3% of 9,801)). When the investment in FUND C is exchanged into FUND A, FUND A may charge a 3% front-end sales load (the differential between 6% otherwise charged by FUND A and the 3% paid already to FUND C). *See* paragraph (b)(4). The investment is then worth $9,222 ($9,507−285 (3% of 9,507)). Upon the ultimate redemption from FUND A, FUND D otherwise would be entitled to charge a 1% CDSL (based upon a holding period of 5 years in FUNDS D, C and A, with no tolling permitted). However, front-end sales load rates (3% to FUND C and 3% to FUND A), no CDSL may be charged because there is no excess due. Upon redemption, the investment is worth $9,222.

9. *Maximum sales loads.*

Assume a shareholder holds shares of FUND F for 2 years. At that time, the shareholder exchanges from FUND F to FUND G, and then redeems at the end of the fourth year. At the time of the exchange, the investment in FUND F is worth $9,900. Upon exchange into FUND G, the shareholder pays a 1% sales load (the differential between the 2% payable to FUND G and the 1% already paid to FUND F). The investment in FUND G is thus worth $9,801 ($9,900−99 (the 1% load paid to FUND G)). At the time of redemption, FUND F otherwise would be entitled to a 2% deferred sales load, but may charge only 1% of that load (because the rate of a deferred sales load with respect to an exchanged security that is charged at the time the acquired security is redeemed is limited to the excess of the applicable rate of such sales load over the sum of the rates of all sales loads previously paid on the acquired security). See paragraph (b)(4)(i). Upon redemption, the investment is worth $9,703 ($9,801−98 (1% of 9,801)).

10. *Maximum sales loads.*

Assume a shareholder holds shares of FUND F for 2 years. At that time, the shareholder exchanges from FUND F to FUND G. At the end of the fourth year, the shareholder exchanges from FUND G to FUND E, and then redeems out of FUND E at the end of the fifth year. The investment in FUND F is worth $9,900 because FUND F charges a 1% front-end sales load. At the time of the exchange from FUND F to FUND G, FUND G is permitted to charge 1% of its 2% front-end sales load (the sales load differential). See paragraph (b)(4). The investment in FUND G is worth $9,801 ($9,900−99 (1% of 9,900)). At the time of the exchange into FUND E, FUND E charges no sales load so the investment is still worth $9,801 in FUND E. At the time of the redemption from FUND E, FUND F otherwise would be entitled to its 2% deferred sales load, but may charge only 1% of that load. FUND F is limited to charging 1% of its deferred sales load because the sum of the rates of all sales loads may not exceed the maximum sales load rate that would be applicable in the absence of an exchange to the security (exchanged or acquired) with the highest such rate. See paragraph (b)(4)(ii). In this example, the highest rate of FUNDS F, G, and E, in the absence of an exchange, is 3% for FUND F (1% front-end plus 2% deferred). Since the shareholder has already paid a sum of 2% (1% to FUND F plus 1% to FUND G), FUND F is limited to charging an additional 1% upon redemption from FUND E. Upon redemption, the investment is worth $9,703 ($9,801−98 (1% of 9,801)).

BILLING CODE 8010–01–M

DEPARTMENT OF EDUCATION

34 CFR Parts 668 and 682

RIN 1840–AB21

Student Assistance General Provisions and Guaranteed Student Loan and PLUS Programs

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary amends 34 CFR parts 668 and 682 to add Office of Management and Budget (OMB) control numbers to certain sections of the regulations. These sections contain information collection requirements approved by OMB. The Secretary takes this action to inform the public that these requirements have been approved.

EFFECTIVE DATE: These regulations are effective August 24, 1989.

FOR FURTHER INFORMATION CONTACT: Pamela A. Moran, Chief, Policy Section, Division of Policy and Program Development, U.S. Department of Education, 400 Maryland Avenue SW., (Room 4310 ROB–3, Washington, DC 20202. Telephone: (202) 732–4242.

SUPPLEMENTARY INFORMATION: On June 5, 1989, final regulations were published for 34 CFR parts 668 and 682 (54 FR 24114–24127). The effective date of certain sections of these regulations was delayed until information collection requirements contained in those sections were approved by OMB under the Paperwork Reduction Act of 1980, as amended. OMB has approved the information collection requirements, and these sections of the regulations are now effective.

Waiver of Proposed Rulemaking

In accordance with section 431(b)(2)(A) of the General Education Provisions Act (20 U.S.C. 1232(b(2)(A)) and the Administrative Procedure Act (5 U.S.C. 551 *et seq.*), it is the practice of the Secretary to offer interested parties the opportunity to comment on proposed regulations. However, the publication of OMB control numbers is purely technical and does not establish substantive policy. Therefore, the Secretary has determined, under 5 U.S.C. 553(b)(B), that proposed rulemaking is unnecessary and contrary to the public interest and that a delayed effective date is not required under 5 U.S.C. 553(b)(3).

List of Subjects

34 CFR Part 668

Administrative practice and procedure, Colleges and universities, Consumer protection, Education, Grant programs—education, Loan programs—education, Reporting and recordkeeping requirements, Student aid.

34 CFR Part 682

Administrative practice and procedure, Colleges and universities, Education, Loan programs—education, Reporting and Recordkeeping requirements, Student aid, Vocational education.

(Catalog of Federal Domestic Assistance Number: 84.032, Guaranteed Student Loan and PLUS Programs)

Dated: August 22, 1989.

Lauro F. Cavazos,

Secretary of Education.

The Secretary amends parts 668 and 682 of title 34 of the Code of Federal Regulations as follows:

PART 668—STUDENT ASSISTANCE GENERAL PROVISIONS

1. The authority citation for part 668 continues to read as follows:

Authority: 20 U.S.C. 1085, 1088, 1091, 1092, 1094, and 1141, unless otherwise noted.

§§ 668.15, 668.23, 668.44, and 668.90 [Amended]

2. Sections 668.15, 668.23, 668.44 and 668.90 are amended by adding "(Approved by the Office of Management and Budget under control number 1840–0537)" following each section.

PART 682—GUARANTEED STUDENT LOAN AND PLUS PROGRAMS

3. The authority citation for part 682 continues to read as follows:

Authority: 20 U.S.C. 1071 to 1087–2, unless otherwise noted.

§§ 682.604, 682.606, and 682.610 [Amended]

4. Sections 682.604, 682.606, and 682.610 are amended by adding "(Approved by the Office of Management and Budget under control number 1840–0538)" following each section.

BILLING CODE 4000–01–M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 259

[FRL–3633–9]

Standards for the Tracking and Management of Medical Waste

AGENCY: Environmental Protection Agency.

ACTION: Amendment to final rule.

SUMMARY: The purpose of this rule is to specify the States in which the medical waste demonstration program, published in the **Federal Register** on March 24, 1989 (54 FR 12326), will be effective. The medical waste regulations apply to certain medical wastes generated in states participating in the program ("Covered States"). On June 6, 1989, the Environmental Protection Agency (EPA) published in the **Federal Register** (54 FR 24310) a notice identifying the Covered States. Since the publication of that notice, the Agency has received petitions from two States that elected to participate in the demonstration program; these States have asked EPA to reconsider their participation. The Governor of Louisiana and the Mayor of the District of Columbia have requested removal from the program. EPA is removing Louisiana and the District of Columbia from the list of Covered States. The following States remain Covered States: Connecticut, New Jersey, New York, Rhode Island, and the Commonwealth of Puerto Rico.

EFFECTIVE DATE: These amendments are effective August 24, 1989.

ADDRESSES: The public docket for this Notice (Docket No. F–89–MTPF–FFFFF) is located at Room M2427, RCRA Docket (OS–305), U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460. EPA's RCRA Docket is open from 9:00 a.m. to 4:00 p.m., Monday to Friday, excluding Federal holidays. To review docket materials, the public must make an appointment by calling (202) 475–9327. A maximum of 100 pages may be copied from any regulatory docket at no cost. Additional copies cost $0.15 per page.

FOR FURTHER INFORMATION CONTACT: For general information, contact the RCRA/Superfund Hotline toll free at (800) 424–9346 (in Washington, DC, call (202) 382–3000). For information on specific aspects of today's Notice, contact Paul Mushovic, Office of Solid Waste (OS–332), U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460.

SUPPLEMENTARY INFORMATION:

I. Authority

This Notice is issued under the authority of sections 2002, 11001, 11002, 11003, 11004, 11010, and 11011 of the Solid Waste Disposal Act of 1970 as amended by the Medical Waste Tracking Act of 1988, 42 U.S.C. 6992 *et seq.*

II. Background

Recent incidents of medical waste mismanagement resulted in enactment of a two-year demonstration program for tracking medical waste from the point of its generation to its point of disposal. The Medical Waste Tracking Act (MWTA) of 1988, 42 U.S.C. 6992 *et seq.*, requires this demonstration program to be established in a limited number of States. Congress chose this option in order to regulate medical waste on a small scale.

EPA published in the **Federal Register** on June 6, 1989 (54 FR 24310) the list of States participating in the demonstration program. The "Covered States" included Connecticut, New York, and New Jersey, which under the Act were required to participate or to have a State program that is at least as stringent as the Federal program. The requirements promulgated in the **Federal Register** on March 24, 1989 (54 FR 12326), which established the medical waste tracking demonstration program, were effective on June 24, 1989 for certain medical wastes generated in these States.

In the June 6 Notice, the Agency explained that each of the Great Lakes States (Illinois, Indiana, Michigan, Minnesota, Ohio, Pennsylvania, and Wisconsin) identified in the MWTA had elected to opt out of the medical waste demonstration tracking program. As required under the MWTA, the Governors of these States notified the EPA Administrator of their intent to opt out.

Pursuant to section 11001 of the MWTA, the March 24, 1989 **Federal Register** notice provided the States not identified in the Act an opportunity to participate in the demonstration program. The Governor of any State electing to participate was required to submit a letter petitioning the EPA Administrator to allow the State to participate. The Governors of the States of Louisiana and Rhode Island, the Mayor of the District of Columbia, and the Governor of the Commonwealth of Puerto Rico petitioned the Administrator to be included in the demonstration program. These petitions were accepted, and the June 6 Notice identified Louisiana, Rhode Island, the District of Columbia, and Puerto Rico as Covered States in addition to the States of Connecticut, New Jersey, and New York. The requirements of the demonstration program contained in the March 24 **Federal Register** notice were effective on July 24, 1989 for certain medical wastes generated in Louisiana, Rhode Island, the District of Columbia, and Puerto Rico.

III. States Electing To Opt Out of the Demonstration Program

Since publishing the Notice identifying the States participating in the demonstration program in the June 6, 1989 **Federal Register**, EPA has received a letter from the Governor of Louisiana requesting that Louisiana be removed from the list of Covered States, and a letter from the Mayor of the District of Columbia, requesting that the District of Columbia be removed from the program. Copies of the letters from Louisiana and the District of Columbia, petitioning in and withdrawing from the program, are available in the public docket for this Notice.

EPA received a letter from the Mayor of the District of Columbia dated July 13, 1989 requesting that the District of Columbia be allowed to withdraw its petition to participate in the medical waste demonstration program, because the District would not be able to implement the program fully until well into the second year of the demonstration.

EPA also received a letter from the Governor of Louisiana dated July 28, 1989 requesting that Louisiana be allowed to withdraw its petition for inclusion in the medical waste demonstration program. In the Governor's April 20, 1989 letter to the Administrator petitioning that the State be included in the program, the Governor made Louisiana's participation contingent upon EPA's implementation of the medical waste rules until the State had promulgated its own regulations. Recent State legislation places restrictions on Louisiana's development of medical waste regulations, and on Louisiana's participation in the Federal demonstration program. Thus Louisiana's active participation in the program could not commence until well into the demonstration program period, if then. Given these circumstances, the Governor requested that Louisiana be removed from the program.

EPA has accepted the withdrawal of petitions from the District of Columbia and Louisiana for participation in the medical waste demonstration program. EPA believes that strong State commitment to the program is a necessary prerequisite for an effective program, and that the interests of the demonstration program are not served by implementing the regulations without State participation. Congress intended that State participation, with the exceptions of Connecticut, New York, and New Jersey, be voluntary. The District of Columbia's and Louisiana's requests for removal are based on significant concerns about the effective implementation of the program given the circumstances both jurisdictions currently face. Furthermore, EPA does not believe an effective program can be established in DC and Louisiana without strong support from those States. Therefore, it is in the interest of the demonstration program to remove those States. Effective August 24, 1989, medical waste generated in the District of Columbia and Louisiana is no longer subject to the requirements of the tracking program promulgated March 24, 1989.

IV. Regulatory Impact

Under Executive Order 12291, EPA must determine whether a regulation is "major" and therefore subject to the requirements of a Regulatory Impact Analysis. The Administrator determined in the interim final rule that the Medical Waste Demonstration Tracking Program had a total estimated cost of less than $100 million per year. This estimated cost was based on expected costs for management practices and assumed that the ten States identified in the Medical Waste Tracking Act would participate in the program.

The program costs for management practices are expected to remain under $100 million due to the number of States expected to participate. After removal of the two States that opted in but petitioned for removal, only five States will remain in the program. Given that the estimated annual compliance cost for ten States was $55.5 million, the Agency does not believe that the cost for the five participating States would exceed the $100 million major rule threshold. Therefore, no Regulatory Impact analysis is required.

List of Subjects in Part 259

Medical waste, Labeling, Packaging and Containers, Reporting and Recordkeeping requirements.

Dated: August 16, 1989.

Robert L. Duprey,

Acting Assistant Administrator, Office of Solid Waste and Emergency Response.

PART 259—STANDARDS FOR THE TRACKING AND MANAGEMENT OF MEDICAL WASTE

1. The authority citation for part 259 continues to read as follows:

Authority: 42 U.S.C. 6912, 6992, *et. seq.*

2. Section 259.10 is amended by revising the definition for "Covered States" in paragraph (b) to read as follows:

§ 259.10 Definitions.

* * * * *

(b) * * *

"Covered States" means those States that are participating in the demonstration medical waste tracking program and includes: Connecticut, New Jersey, New York, Rhode Island, and Puerto Rico. Any other State is a Non-Covered State.

* * * * *

Subpart C—Covered States

3. Section 259.20 is revised to read as follows:

§ 259.20 States included in the demonstration program.

(a) The regulations of this part apply to regulated medical waste that is generated in any Covered State.

(b) For the purposes of this part, Covered States are the States of Connecticut, New Jersey, New York, Rhode Island, and Puerto Rico.

[FR Doc. 89-19732 Filed 8-23-89; 8:45 am]

BILLING CODE 6560-50-M

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

49 CFR Part 1

[OST Docket No. 1; Amdt. 1-230]

Organization and Delegation of Powers and Duties

AGENCY: U.S. Coast Guard, Office of the Secretary, Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: The Secretary of Transportation has delegated authority to the Commandant, United States Coast Guard, to accept voluntary services for a museum or a family support program operated by the Coast Guard and to provide for reimbursement of incidental expenses incurred by persons providing voluntary services as an ombudsman or for a family service center program. The *Code of Federal Regulations* does not reflect this delegation, and therefore a change is necessary.

EFFECTIVE DATE: August 17, 1989.

FOR FURTHER INFORMATION CONTACT: Samuel E. Whitehorn, Office of the General Counsel, C-50, (202) 366-9307, Department of Transportation, 400 Seventh Street SW., Washington, DC 20590.

SUPPLEMENTARY INFORMATION: Secretary Skinner has delegated to the Commandant, United States Coast Guard, authority under 10 U.S.C. 1588 to accept from any person voluntary services to be provided for a museum or a family support program operated by the Coast Guard; to determine which expenses are eligible for reimbursement; and to provide from non-appropriated funds for reimbursement of incidental expenses which are incurred by a person providing voluntary services as an ombudsman or for a family service center program.

The *Code of Federal Regulations* does not reflect this delegation and therefore a change is necessary.

Since this amendment relates to Departmental management, procedures and practice, notice and comment on it are unnecessary and it may be made effective in fewer than thirty days after publication in the **Federal Register**. Since the authority was initially delegated by the Secretary on August 17, 1989, the delegation is effective immediately.

In accordance with the Secretary's authority, the following change is made.

List of Subjects in 49 CFR Part 1

Authority delegations (Government agencies), Organization and functions (Government agencies).

In consideration of the forogoing, part 1 of title 49, Code of Federal Regulations, is amended to read as follows:

PART 1—AMENDED

1. The authority citation for Part 1 continues to read as follows:

Authority: 49 U.S.C. 322.

2. Section 1.46 is amended by adding a new paragraph (rr) to read as follows:

§ 1.46 Delegations to Commandant of the Coast Guard.

* * * * *

(rr) Exercise the authority of the Secretary contained in 10 U.S.C. 1588 to accept voluntary services for a museum or a family support program operated by the Coast Guard; to determine which expenses are eligible for reimbursement; and to provide reimbursement from non-appropriated funds of incidental expenses incurred by persons providing voluntary services as an ombudsman or for a family service center program.

Issued on: August 17, 1989

Samuel K. Skinner,

Secretary of Transportation.

[FR Doc. 89-19887 Filed 8-23-89; 8:45 am]

BILLING CODE 4910-62-M

Proposed Rules

Federal Register

Vol. 54, No. 163

Thursday, August 24, 1989

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 989

[FV-89-052PR]

Raisins Produced From Grapes Grown in California; Revision of the Maturity Dockage System for Certain Seedless Raisins

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This proposed rule revises the maturity dockage system for natural (sun-dried) seedless, golden seedless, dipped seedless, oleate and related seedless, Monukka, and other seedless raisins. Currently, handlers may acquire any lot of these raisins which contain 35.0 percent to 49.9 percent, by weight, well-matured or reasonably well-matured raisins under a maturity dockage system. This action would reduce by 50 percent the dockage factors applied to such lots. This proposed revision was recommended by the Raisin Administrative Committee (RAC), the agency responsible for local administration of the order. The purpose of the proposed revision is to provide a more accurate determination of the creditable weight of lots of raisins which are delivered to handlers by producers.

DATES: Comments must be received by September 8, 1989.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposal to: Docket Clerk, Fruit and Vegetable Division, AMS, USDA, Room 2525-S, P.O. Box 96456, Washington, DC 20090-6456. Three copies of all written material shall be submitted, and they will be made available for public inspection in the Office of the Docket Clerk during regular business hours. All comments should reference the docket number and the date and page number of this issue of the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Beatriz Rodriguez, Marketing Specialist, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, Room 2524-S, P.O. Box 96456, Washington, DC 20090-6456; telephone (202) 475-3861.

SUPPLEMENTARY INFORMATION:

This proposed rule is issued under Marketing Agreement and Order No. 989 (7 CFR part 989), both as amended, regulating the handling of raisins produced from grapes grown in California. The agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601-674), hereinafter referred to as the Act.

This rule has been reviewed under Executive Order 12291 and Departmental Regulation No. 1512-1 and has been determined to be a "nonmajor" rule under criteria contained therein.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 23 handlers who are subject to regulation under the raisin marketing order and approximately 5,000 producers in the regulated area. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.2) as those having gross annual revenues for the last three years of less than $500,000, and small agricultural service firms are defined as those whose gross annual receipts are less than $3,500,000. A majority of raisin producers and a minority of raisin handlers may be classified as small entities.

This proposed rule invites comments on a revision of one section of the administrative rules and regulations of the raisin marketing order. This action was recommended by the RAC at its April 20, 1989, meeting.

The marketing order provides that handlers may receive natural condition raisins which exceed the tolerance established for maturity (i.e., at least 50 percent of the raisins must be well-matured or reasonably well-matured) under the maturity dockage system. This system applies a weight reduction to individual lots of raisins which contain from 35.0 percent through 49.9 percent, by weight, well-matured or reasonably well-matured raisins. The weight reduction approximates the weight of raisins needed to be removed in order for the lot to meet minimum grade requirements.

The dockage system is used for the following varietal types: natural (sun-dried) seedless raisins, golden seedless raisins, dipped seedless raisins, oleate and related seedless raisins, Monukkas, and other seedless raisins.

The creditable weight of each lot of raisins acquired by handlers under the maturity dockage system is obtained by multiplying the applicable net weight of the lot of raisins by the applicable dockage factors in the dockage table under 989.213. Handlers acquire and producers are paid according to the creditable weight of raisins delivered to handlers. Lots of raisins containing 50.0 percent or more raisins which are well-matured or reasonably well-matured have met what the industry calls the "B or better" maturity standard. These raisins are accepted by handlers as standard raisins.

In addition to meeting the requirement that 50 percent or more of the raisins are well-matured or reasonably well-matured, lots of raisins must meet other requirements in order to be considered standard. Natural (sun-dried) seedless raisins, for example, must have been prepared from sound, wholesome, matured grapes that have been properly dried and cured. They must be fairly free from damage by sugaring, mechanical injury, sunburn, or other similar injury. They must have the normal characteristic color, flavor, and odor of properly prepared raisins for that varietal type. They must contain no more than five percent, by weight, of underdeveloped raisins. They must be fairly free from shattered or loose end berries and be uniformly cured. These are most, but not all, of the requirements.

Handlers may also acquire raisin lots which contain fewer that 50.0 percent, by weight, well-matured or reasonably well matured raisins. However, raisin lots containing 49.9 percent or less, by weight, raisins which are well-matured or reasonably well-matured are subject to a dockage factor. These factors reduce the weight of raisin lots by an amount approximating the weight of the raisins needed to be removed in order to meet minimum grade requirements. The producers' payments are reduced accordingly. Raisin lots below the 35.0 percent level are considered off-grade and require reconditioning. Producers incur the reconditioning costs necessary to bring such lots within acceptable requirements.

Currently, the weight of the raisin lots containing between 45.0 percent and 49.9 percent well-matured or reasonably well-matured raisins is reduced by 0.1 percent for each 0.1 percent of well-matured or reasonably well-matured raisins the lot contains below 50.0 percent down to 45.0 percent. The weight of lots containing between 40.0 percent and 44.9 percent well-matured or reasonably well-matured raisins is reduced an additional 0.2 percent for each 0.1 percent the lot is below 45.0 percent down to 40.0 percent. The weight of raisin lots containing between 35.0 percent and 39.9 percent raisins which are well-matured or reasonably well-matured is reduced an additional 0.3 percent for each 0.1 percent the lot is below 40.0 percent down to 35.0 percent.

A majority of the RAC believes that the current dockage factors are too stringent and that applying them results in a creditable fruit weight which understates the maturity of lots of raisins in the three maturity levels mentioned above (45.0 to 49.9 percent, 40.0 to 44.9 percent, and 35.0 to 39.9 percent well-matured or reasonably well-matured). Therefore, the RAC has recommended revisions in the maturity dockage system in order to provide creditable fruit weights which better represent the maturity of the raisins.

The RAC has recommended that the dockage factors be reduced by 50 percent for each of the three maturity levels. Lots of the previously named varietal types containing between 45.0 percent to 49.9 percent well-matured or reasonably well-matured raisins would be docked 0.05 percent (i.e., the weight would be reduced by 0.05 percent) for each 0.1 percent the lot is below 50.0 percent down to 45.0 percent. Producers delivering raisins in the 40.0 percent to 44.9 percent well-matured or reasonably well-matured range would receive an additional 0.1 percent weight reduction for each 0.1 percent the raisins were below 45 percent down to 40.0 percent. Producers delivering raisins in the 35.0 percent to 39.9 percent range would receive an additional 0.15 percent weight reduction for each 0.1 percent the raisins were below 40.0 percent down to 35.0 percent. Lots containing 34.9 percent or less raisins which are well-matured or reasonably well-matured would continue to be considered off-grade and require reconditioning before they could be acquired by handlers.

The maturity dockage system was implemented to deduct from the delivered weight an amount approximating the amount of raisins which would need to be removed by handlers during reconditioning to bring the lot of raisins to the 50 percent well-matured or reasonably well-matured level. This proposed action is needed to provide creditable fruit weights which are more representative of the maturity of the raisins. Reducing the dockage factors as proposed would increase producer returns because the weight of raisin lots, from the 35 percent to 50 percent well-matured or reasonably well matured levels, would not be reduced as much as the rules currently provide. Since producers' payments are based on the creditable weight of the raisins, producers would be credited with delivering more raisins. This would increase producer payments and the increases would be paid by handlers. In addition, this action may reduce producers' expenses because it may reduce the cost of reconditioning a lot of raisins to bring it to the 50.0 percent level.

Based on available information, the Administrator of the AMS has determined that issuance of this proposed rule would not have a significant economic impact on a substantial number of small entities.

Interested persons are invited to submit their views and comments on this proposal. A 15-day comment period is considered appropriate because the changes, if implemented, should be in effect for as much of the new crop year, which begins on August 1, as possible.

List of Subjects in 7 CFR Part 989

California, Grapes, Marketing Agreements and Orders, Raisins.

For the reasons set forth in the preamble, 7 CFR part 989 is proposed to be amended as follows:

PART 989—RAISINS PRODUCED FROM GRAPES GROWN IN CALIFORNIA

1. The authority citation for 7 CFR part 989 is proposed to be revised as follows:

Authority: Secs. 1-19, 48 Stat. 31, as amended, 7 U.S.C. 601-674.

Subpart—Administrative Rules and Regulations

2. Paragraphs (b), (c), and (d) of § 989.213 are revised to read as follows:

§ 989.213 Maturity dockage.

* * * * *

(b) Maturity dockage table applicable to lots of natural (sun-dried) seedless, golden seedless, dipped seedless, oleate and related seedless, Monukka, and other seedless raisins which contain 45.0 percent through 49.9 percent well-matured or reasonably well-matured raisins:

Percent well-matured or reasonably well-matured	Dockage factor
50.0 or more	[1]
49.9	.9995
49.8	.9990
49.7	.9985
49.6	.9980
49.5	.9975

[1] No dockage.

Note: Percentages less than the last percentage shown in the table, down to 45.0 percent, shall be expressed in the same increments as the foregoing, and the dockage for each such increment shall be .0005 less than the dockage factor for the preceding increment.

(c) Maturity dockage table applicable to lots of natural (sun-dried) seedless, golden seedless, dipped seedless, oleate and related seedless, Monukka, and other seedless raisins which contain 40.0 percent through 44.9 percent well-matured or reasonably well-matured raisins:

Percent well-matured or reasonably well-matured	Dockage factor
44.9	.974
44.8	.973
44.7	.972
44.6	.971
44.5	.970
44.4	.969

Note: Percentages less than the last percentage shown in the table, down to 40.0 percent, shall be expressed in the same increments as the foregoing, and the dockage factor for each such increment shall be .001 less than the dockage factor for the preceding increment.

(d) Maturity dockage table applicable to lots of natural (sun-dried) seedless, golden seedless, dipped seedless, oleate and related seedless, Monukka, and other seedless raisins which contain 35.0 percent through 38.9 percent well-matured or reasonably well-matured raisins:

Percent well-matured or reasonably well-matured	Dockage factor
39.9	.9235
39.8	.9220
39.7	.9205
39.6	.9190
39.5	.9175
39.4	.9160

Note: Percentages less than the last percentage shown in the table shall be expressed in the same increments as the foregoing, and the dockage factor for each such increment be .0015 less then the dockage factor for the preceding increment. No dockage shall apply to lots of raisins containing 34.9 percent or less of well-matured or reasonably well-matured raisins.

Dated: August 18, 1989.

William J. Doyle,

Acting Deputy Director, Fruit and Vegetable Division.

BILLING CODE 3410–02–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 89–NM–133–AD]

Airworthiness Directives; Boeing Model 727 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes to adopt a new airworthiness directive (AD), applicable to certain Boeing Model 727 series airplanes, which would require high frequency eddy current (HFEC) inspection of certain fuselage skin lap joints for cracks, and repair, if necessary. This proposal is prompted by reports of cracking along the upper fastener row of certain longitudinal lap joints that incorporate a cold metal bonding process. This condition, if not corrected, could result in rapid decompression of the airplane.

DATES: Comments must be received no later than October 16, 1989.

ADDRESSES: Send comments on the proposal in duplicate to the Federal Aviation Administration, Northwest Mountain Region, Transport Airplane Directorate, ANM–103, Attention: Airworthiness Rules Docket No. 89–NM–133–AD, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168. The applicable service information may be obtained from Boeing Commercial Airplanes, P.O. Box 3707, Seattle, Washington 98124. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 17900 Pacific Highway South, Seattle, Washington, or Seattle Aircraft Certification Office, 9010 East Marginal Way South, Seattle, Washington.

FOR FURTHER INFORMATION CONTACT: Mr. Stanton R. Wood, Airframe Branch, ANM–120S; telephone (206) 431–1924. Mailing address: FAA, Northwest Mountain Region, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168.

SUPPLEMENTARY INFORMATION: Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments specified above will be considered by the Administrator before taking action on the proposed rule. The proposals contained in this Notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA/public contact, concerned with the substance of this proposal, will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this Notice must submit a self-addressed, stamped post card on which the following statement is made: "Comments to Docket Number 89–NM–133–AD." The post card will be date/time stamped and returned to the commenter.

Discussion

The FAA issued AD 89–15–08, Amendment 39–6262 (54 FR 29530; July 13, 1989), to require inspection, using non-destructive inspection procedures, for small fatigue cracks in the fuselage skin lap joints, located at stringer (S) 4 and S–10 on certain Boeing Model 727 series airplanes. Additionally, the AD requires visual inspection of all lap joints for corrosion, delamination, and cracking. That AD was prompted by reports of cracking along the upper fastener row of certain longitudinal lap joints that incorporate a cold metal bonding process. This condition, if not corrected could result in rapid decompression of the airplane.

Since issuance of that AD the FAA has determined that it is prudent to ascertain if multiple small cracks are beginning to appear at the remaining lap splices in these airplanes. The FAA is concerned because such cracks in these lap joints could jeopardize the fail-safe capability of the fuselage after experiencing discrete source damage. These small cracks result from repeated pressurization cycles on the fuselage skin lap joint after a delamination of the lap joint bond. The lap joint bond delamination problem is limited to the first 849 Boeing Model 727 airplanes, on which a cold bonding technique was employed in these joints.

The FAA has reviewed and approved Boeing Service Bulletin 727–53–0072, Revision 5, dated June 1, 1989, which describes the inspection for cracking, repair, and modification of the fuselage skin longitudinal lap joints.

Since this condition is likely to exist or develop on other airplanes of this same type design, an AD is proposed which would require a one-time inspection of lap joints S–14, S–19, S–20, and S–26, at locations where the outer skin is less than .056 inch thick, in accordance with the service bulletin previously described. Operators would be required to submit reports of their findings, upon which the FAA would evaluate the "health" of the fleet. Future rulemaking action may be considered, based upon the results of the inspection results.

Information collection requirements contained in this regulation have been approved by the Office of Management and Budget (OMB) under the provisions of the Paperwork Reduction Act of 1980 (Pub. L. 96–511) and have been assigned OMB Control Number 2120–0056.

There are approximately 813 Model 727 series airplanes of the affected design in the worldwide fleet. It is estimated that 623 airplanes of U.S. registry would be affected by this AD, that it would take approximately 20 manhours per airplane to accomplish the required actions, and that the average labor cost would be $40 per manhour. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $498,400.

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft evaluation prepared for this action is contained in the regulatory docket. A copy of it may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend 14 CFR part 39 of the Federal Aviation Regulations as follows:

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Boeing: Applies to Model 727 series airplanes, listed in Boeing Service Bulletin 727–53–0072, Revision 5, dated June 1, 1989, certificated in any category. Compliance required as indicated, unless previously accomplished.

To prevent rapid decompression of the airplane, accomplish the following:

A. Within the next 2,500 landings or 18 months after the effective date of this AD, whichever occurs first, unless previously accomplished within the last 18 months, perform a high frequency eddy current (HFEC) inspection for cracks of the fuselage skin at lap joints, S–14, S–19, S–20, and S–26 at locations where the upper skin is less than .056 inch thick, from body station (BS) 259 to BS 1183, in accordance with paragraph A. of part I of the Accomplishment Instructions of Boeing Service Bulletin 727–53–0072, Revision 5, dated June 1, 1989. If any cracks are detected, repair prior to further flight, in accordance with part III of the Accomplishment Instructions of the service bulletin.

B. To conduct the inspections required by this AD:

1. Remove the paint, using an approved chemical stripper; or

2. Ensure that the fastener head is clearly visible.

C. Airplanes with affected lap splices modified in accordance with figure 4 or part IV of the Accomplishment Instructions of Boeing Service Bulletin 727–53–0072, Revision 5, dated June 1, 1989, are not subject to the requirements of this AD.

D. Within 10 days after the completion of the inspection for cracks required by this AD, report a complete description of the location and size of all cracks found, along with aircraft line number and the number of flight cycles, to the Manager, Seattle Aircraft Certification Office, FAA, Northwest Mountain Region.

E. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Seattle Aircraft Certification Office, FAA, Northwest Mountain Region.

Note: The request should be forwarded through an FAA Principal Maintenance Inspector (PMI), who will either concur or comment, and then send it to the Manager, Seattle Aircraft Certification Office.

F. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base in order to comply with the requirements of this AD.

All persons affected by this directive who have not already received the appropriate service documents from the manufacturer may obtain copies upon request to Boeing Commercial Airplanes, P.O. Box 3707, Seattle, Washington 98124. These documents may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 17900 Pacific Highway South, Seattle, Washington, or Seattle Aircraft Certification Office, 9010 East Marginal Way South, Seattle, Washington.

Issued in Seattle, Washington, on August 15, 1989.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

14 CFR Part 39

[Docket No. 89–NM–149–AD]

Airworthiness Directives; Boeing Model 727 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes to adopt a new airworthiness directive (AD), applicable to Boeing Model 727 series airplanes, which would require the addition of a cotter pin to the landing gear control selector valve actuator arm. This proposal is prompted by one report of an all wheels-up landing, due to a nut missing from the landing gear control selector valve actuator arm installation. This condition, if not corrected, could result in additional wheels-up landings.

DATES: Comments must be received no later than October 16, 1989.

ADDRESSES: Send comments on the proposal in duplicate to the Federal Aviation Administration, Northwest Mountain Region, Transport Airplane Directorate, ANM–103, Attention: Airworthiness Rules Docket No. 89–NM–149–AD, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168. The applicable service information may be obtained from Boeing Commercial Airplanes, P.O. Box 3707, Seattle, Washington 98124. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 17900 Pacific Highway South, Seattle, Washington, or Seattle Aircraft Certification Office, 9010 East Marginal Way South, Seattle, Washington.

FOR FURTHER INFORMATION CONTACT: Ms. Kathi N. Ishimaru, Airframe Branch, ANM–120S; telephone (206) 431–1525. Mailing address: FAA, Northwest Mountain Region, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168.

SUPPLEMENTARY INFORMATION: Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments specified above will be considered by the Administrator before taking action on the proposed rule. The proposals contained in this Notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA/public contact, concerned with the substance of this proposal, will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this Notice must submit a self-addressed, stamped post card on which the following statement is made: "Comments to Docket Number 89–NM–149–AD." The post card will be date/time stamped and returned to the commenter.

Discussion:

One operator has reported the occurrence of an all wheels-up landing on a Boeing Model 727 series airplane. Investigation revealed that the landing gear control selector valve actuator arm had disconnected from the splined shaft on the drum assembly, and the self-locking nut which secures the arm to the shaft was missing. Replacement of the existing nut with a self-locking castellated nut and cotter pin will provide additional assurance that the arm will not disconnect from the shaft. Loss of the nut could result in additional all wheels-up landings.

The FAA has reviewed and approved Boeing Service Bulletin 727–32–0372, dated May 11, 1989, which describes modification of the valve actuator arm and the splined shaft to allow the installation of a castellated nut and cotter pin.

Since this condition is likely to exist or develop on other airplanes of this same type design, an AD is proposed which would require installation of a castellated nut and cotter pin at the connection between the valve actuator arm and the splined shaft, in accordance with the service bulletin previously described.

There are approximately 1,710 Model 727 series airplanes of the affected design in the worldwide fleet. It is estimated that 1,143 airplanes of U.S. registry would be affected by this AD, that it would take approximately 1.5 manhours per airplane to accomplish the required actions, and that the average labor cost would be $40 per manhour. Parts cost is negligible. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $68,580.

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft evaluation prepared for this action is contained in the regulatory docket. A copy of it may be obtained from the Rules Docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Boeing: Applies to all Model 727 series airplanes certificated in any category. Compliance required within the next 3,000 landings after the effective date of this AD, unless previously accomplished.

To prevent nose and main landing gear failure to extend properly due to a disconnect of the landing gear control selector valve actuator arm, accomplish the following:

A. Modify the selector valve actuator arm and splined shaft, in accordance with figure 1. of Boeing Service Bulletin 727–32–0372, dated May 11, 1989.

B. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Seattle Aircraft Certification Office, FAA, Northwest Mountain Region.

Note: The request should be forwarded through an FAA Principal Maintenance Inspector (PMI), who will either concur or comment, and then send it to the Manager, Seattle Aircraft Certification Office.

C. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base in order to comply with the requirements of this AD.

All persons affected by this directive who have not already received the appropriate service documents from the manufacturer may obtain copies upon request to Boeing Commercial Airplanes, P.O. Box 3707, Seattle, Washington 98124. These documents may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 17900 Pacific Highway South, Seattle, Washington, or Seattle Aircraft Certification Office, 9010 East Marginal Way South, Seattle, Washington.

Issued in Seattle, Washington, on August 15, 1989.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate Aircraft Certification Service.

BILLING CODE 4910-13-M

---

14 CFR Part 39

[Docket No. 89–NM–107–AD]

Airworthiness Directives; Boeing Model 747 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes to revise an existing airworthiness directive (AD), applicable to certain Boeing Model 747 series airplanes, which currently requires frequent inspections of the forward end of the Model 747 flap tracks for cracks emanating from fail-safe bar fastener holes until these holes are verified to be corrosion free. This condition, if not corrected, could lead to separation of the flap from the airplane and partial loss of controllability of the airplane. This action would require modification of the fail-safe bar fastener holes to remove corrosion, would tighten certain inspection requirements, and would impose a limitation on the use of flaps to 25 degrees or less.

DATES: Comments must be received no later than October 16, 1989.

ADDRESSES: Send comments on the proposal in duplicate to the Federal Aviation Administration, Northwest Mountain Region, Transport Airplane Directorate, ANM–103, Attention: Airworthiness Rules Docket No. 89–NM–107–AD, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168. The applicable service information may be obtained from Boeing Commercial Airplanes, P.O. Box 3707, Seattle, Washington 98124. This information may be examined at the FAA, Northwest Mountain Region, Transport Airplane Directorate, 17900 Pacific Highway South, Seattle, Washington, or Seattle Aircraft Certification Office,

FAA, Northwest Mountain Region, 9010 East Marginal Way South, Seattle, Washington.

FOR FURTHER INFORMATION CONTACT: Mr. Richard H. Yarges, ANM–120S; telephone (206) 431–1925. Mailing address: FAA, Northwest Mountain Region, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168.

SUPPLEMENTARY INFORMATION: Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments specified above will be considered by the Administrator before taking action on the proposed rule. The proposals contained in this Notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA/public contact, concerned with the substance of this proposal, will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this Notice must submit a self-addressed, stamped post card on which the following statement is made: "Comments to Docket Number 89–NM–107–AD." The post card will be date/time stamped and returned to the commenter.

Discussion

On February 14, 1989, the FAA issued AD 89–05–04, Amendment 39–6148 (54 FR 7759; February 23, 1989), to require frequent inspections of the forward end of the Model 747 flap tracks for cracks emanating from fail-safe bar fastener holes, until these holes are verified to be corrosion-free. That action was prompted by fractures of trailing edge flap tracks in service. This condition, if not corrected, could lead to separation of the flap from the airplane and partial loss of controllability of the airplane.

The crack growth rates for the cracks in the area of concern is extremely high, necessitating very frequent inspections. Because of the urgency of the required inspections, AD 89–05–04 was issued immediately without a public comment period. The FAA has determined that additional, longer term actions are also required to reduce the probability of another in-service incident.

The FAA has reviewed and approved Boeing Alert Service Bulletin 74757A2229, Revision 8, dated January 31, 1989, which describes a modification procedure for the first four fail-safe bar fastener holes on each side of the flap track. This procedure describes removal of corrosion and corrosion pitting which has been the precursor to cracking found in service and will, thereby, reduce the probability of cracking.

Since this condition is likely to exist or develop on other airplanes of this same type design, this proposal would revise AD 89–05–04 to require modification of the flap tracks in accordance with the service bulletin previously described.

It is the FAA's objective to ensure this modification is accomplished fleet-wide at the earliest practical date. The FAA recognizes that the modification is difficult and that special tooling must be created to accomplish it properly. The manufacturer has created some tool kits, but it is the FAA's understanding that still more are required. Considering this information, the proposed compliance time of six months is based on the FAA's current best estimate as to how quickly the fleet modification can be accomplished.

In addition, since the cracking incidents that have occurred in service have been associated with the frequent use of the maximum flap setting, the proposed AD would impose a limitation on the use of landing flaps to 25 degrees or less, until more durable flap tracks of a later design are installed. The FAA specifically invites alternate proposals to the imposition of such a restriction, that would achieve an equivalent effect.

In addition, since issuance of AD 89–05–04, one operator reported finding an eight-inch crack emanating from the fifth most-forward failsafe bar fastener hole on the outboard side of track number six. This location had been visually inspected for cracking approximately 400 landings prior to the crack discovery, and no crack was detected at that time. Since this indicates a higher than expected crack growth rate, the FAA has determined that the currently-required visual inspection interval at this location should be reduced. Therefore, the proposed AD would require repetitive visual inspections of the track for cracks in the web extending from fastener holes 5 through 10, at intervals of 300 flight cycles.

In addition to the actions proposed in this Notice, the FAA is also proposing, as part of a separate rulemaking activity, the eventual replacement of the flap tracks affected by AD 89–05–04 with more durable flap tracks of a later design. This separate rulemaking is contained in Regulatory Docket 89–NM–68–AD, issued May 1, 1989 (54 FR 22300; May 23, 1989).

There are approximately 240 Model 747 series airplanes of the affected design in the worldwide fleet. It is estimated that 125 airplanes of U.S. registry would be affected by this AD, that it would take approximately 296 manhours per airplane to accomplish the required actions, and that the average labor cost would be $40 per manhour. The cost of tooling is estimated to be $8,000 per airplane, based on the manufacturer's quoted rental charges for the tool kit. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $2,480,000.

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft evaluation prepared for this action is contained in the regulatory docket. A copy of it may be obtained from the Rules Docket.

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); and 14 CFR 11.89.

BEST COPY AVAILABLE

§ 39.13 [Amended]

2. Section 39.13 is amended by amending AD 89-05-04, Amendment 39-6148 (54 FR 7759; February 23, 1989), by revising existing paragraph E. and adding new paragraphs L., M., and N., as follows:

E. Within the next 50 landings after August 15, 1988 (the effective date of AD 88-16-03, Amendment 39-5985), unless accomplished within the past 950 landings, and thereafter at intervals not to exceed 1,000 landings, visually inspect numbers 1 through 8 flap track webs for cracks extending from all fastener holes not inspected in accordance with the requirements of paragraphs A., B., C., or D., above or paragraph L., below. These visual inspections must be accomplished in accordance with the procedures described in Boeing Service Bulletin 747-57-2146, Revision 3, dated May 9, 1988.

L. Within 150 landings after the effective date of this amendment, unless accomplished within the last 150 landings, and thereafter at intervals not to exceed 300 landings, remove the fairing from the forward end of flap track numbers 1 through 8 (except tracks 4 and 5 with a spliced-in end fitting) and visually inspect the flap track webs for cracks extending from the fifth through the tenth most-forward failsafe bar fastener holes on each side of the track. These visual inspections must be accomplished in accordance with the procedures described the Boeing Service Bulletin 747-57-2146, Revision 3, dated May 9, 1988.

M. Within the next 6 months, after the effective date of this amendment, accomplish the following on the first four fail-safe bar fastener holes on each side of the track (eight per track) of flap track numbers 1 through 8 (except tracks 4 and 5 with a spliced-in end fitting):

1. Modify the fastener holes in accordance with Boeing Service Bulletin 747-57A2229, Revision 8, dated January 31, 1989.

2. Verify that modified fastener holes are crack-free and corrosion-free in accordance with paragraph B.2., above.

Note: Modification of the fastener holes does not terminate the repetitive inspection requirements of paragraph B.2.)

N. For airplanes on which the first four flap track failsafe bar fastener holes have been verified to be corrosion-free in accordance with paragraph B.2. of this AD, within 6 months after the effective date of this amendment, and until reworked and interim production flap tracks are replaced with more durable later design flap tracks in accordance with Boeing Service Bulletin 747-57A2229, Revision 8, dated January 31, 1989, revise the Limitations Section of the Airplane Flight Manual (AFM) by adding the following instructions. This may be acccomplished by inserting a copy of this AD into the AFM.

Landing Flaps

Maximum landing flaps shall not exceed 25 degrees, unless deemed necessary for safe operation by the pilot.

Issued in Seattle, Washington, on August 15, 1989.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

14 CFR Part 71

[Airspace Docket No. 89-AEA-11]

Proposed Alteration of Transition Area; Winchester, VA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Federal Aviation Administration is proposing to amend the description of the Winchester, Virginia, 700 foot Transition Area. This is necessary due to the decommissioning of the Shawnee, Virginia VHF Omnidirectional Range/Tactical Air Navigaiton (VORTAC) aid to navigation. The associated Standard Instrument Approach Procedures (SIAP's) based upon this VORTAC have been cancelled as the result of a previous non rule-making study. The intended effect of this proposed action would be to realign the transition area to reflect the actual amount of airspace needed to contain instrument operations when aircraft are executing the SIAP's to the Winchester, VA airport.

DATES: Comments must be received on or before September 15, 1989.

ADDRESSES: Send comments on the rule in triplicate to: Charles S. Shuler, Manager, Systems Management Branch, AEA-530, Docket No. 89-AEA-530, Eastern Region, Federal Building #111, John F. Kennedy Int'l Airport, Jamaica, NY 11430.

The official docket may be examined in the Office of the Assistant Chief Counsel, Federal Aviation Administration, Fitzgerald Federal Building, John F. Kennedy International Airport, Jamaica, New York 11430.

An informal docket may also be examined during normal business hours in the Systems Management Branch, AEA-530, Federal Aviation Administration, Fitzgerald Federal Building #111, John F. Kennedy International Airport, Jamaica, New York 11430.

FOR FURTHER INFORMATION CONTACT: Mr. Curtis L. Brewington, Airspace Specialist, Systems Management Branch, AEA-530, Federal Aviation Administration, Fitzgerald Federal Building #111, John F. Kennedy International Airport, Jamaica, New York 11430; telephone: (718) 917-0857.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy aspects of the proposal. Communications should identify the airspace docket and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 89-AEA-11." The postcard will be date/time stamped and returned to the commenter. All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in the light of comments received. All comments submitted will be available for examination in the Rules Docket both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) by submitting a request to the Office of the Assistant Chief Counsel, AEA-7, Federal Aviation Administration, Fitzgerald Federal Building, John F. Kennedy International Airport, Jamaica, New York 11430. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRMs should also request a copy of Advisory Circular No. 11-2A which describes the application procedure.

The Proposal

The FAA is considering an amendment to § 71.181 of part 71 of the Federal Aviation Regulations (14 CFR part 71) to amend the description of the Winchester, Virginia, Transition Area due to the decommissioning of the Shawnee VORTAC and the prior cancellation of SIAP's which were based upon this VORTAC. Section

71.181 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6E dated January 3, 1989.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) Is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Transition areas.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69

§ 71.181 [Amended]

2. Section 71.181 is amended as follows:

Winchester, VA [Revised]

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of the center, lat. 39°08'30" N., long. 78°08'30" W., of Winchester Municipal Airport; within a 9.5-mile radius of the center of the airport extending clockwise from a 187° bearing to a 008° bearing from the airport; within 4 miles either side of the 043° bearing extending from the 6.5-mile radius to 10 miles northeast of the airport; within 5 miles each side of a 134° bearing from a point at lat. 39°08'17" N., long. 78°08'16" W., extending from said point to 14 miles southeast of said point.

Issued in Jamaica, New York, on August 3, 1989.

John D. Canoles,

Manager, Air Traffic Division.

BILLING CODE 4910-13-M

Federal Highway Administration

23 CFR Part 658

[FHWA Docket No. 89-21]

RIN 2125-AC37

Truck Size and Weight; Dromedary Decks and Plates

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: The FHWA proposes to amend its current regulations to clarify that dromedary decks and plates are included under its dromedary box provisions. This would preempt inconsistent State laws and regulations to permit truck tractors equipped with dromedary decks or plates having the capacity to carry cargo that were in legal use on December 1, 1982, to continue to operate throughout their useful lives. Proof of such legal use would continue to rest with the operator of the equipment.

DATE: Comments on this docket must be received on or before October 23, 1989.

ADDRESSES: Submit written, signed comments to FHWA Docket No. 89-21, Room 4232, HCC-10, Office of the Chief Counsel, Federal Highway Administration, 400 Seventh Street. SW., Washington, DC 20590. Commenters may, in addition to submitting "hard copies" of their comments, submit a floppy disk (either 1.2Mb or 360Kb density) in a format that is compatible with either word processing programs, Word Perfect or WordStar. All comments received will be available for examination at the above address from 8:30 a.m. to 3:30 p.m., ET, Monday through Friday, except legal holidays. Those desiring notification of receipt of comments must include a self addressed, stamped postcard.

FOR FURTHER INFORMATION CONTACT: Mr. Max Pieper, Office of Motor Carrier Information Management and Analysis, (202-366-4029) or Mr. Charles Medalen, Office of the Chief Counsel (202-366-1354), Federal Highway Administration, 400 Seventh Street, SW., Washington, DC 20590. Office hours are from 7:45 a.m. to 4:15 p.m., ET, Monday through Friday, except legal holidays.

SUPPLEMENTARY INFORMATION: The Surface Transportation Assistance Act of 1982 (STAA), Public Law 97-424, 96 Stat. 2097, required the States to permit the operation of specified equipment on the National Network (NN) highways. The purpose of the legislation was to increase motor carrier productivity, but its definition of a truck tractor as a "noncargo carrying power unit" inadvertently denied to operators of tractors already equipped with dromedary boxes the opportunity to use the larger semitrailers authorized by the statute. However, the STAA also authorized the Secretary of Transportation to establish rules to accommodate specialized equipment on the NN. The FHWA, therefore, concluded that it was consistent with the intent of Congress to allow truck tractors with dromedary equipment in lawful operation on December 1, 1982 (the cut-off date for other grandfather rights created by the STAA), to operate on the NN for the remainder of their useful lives. A final rule requiring the States to permit the operation of such vehicles was adopted on June 5, 1984 (49 FR 23302) and codified at 23 CFR 658.13(f).

Truck tractors equipped with functionally-similar, cargo-carrying, dromedary decks or plates were not the subject of any of the comments to the docket for this rulemaking and were, therefore, not addressed in the June 5, 1984, final rule. We are now finding that there exists a small group of carriers that were using dromedary decks or plates to carry cargo, particularly crated household goods, before December 1, 1982. The rationale for grandfathering dromedary boxes appears to be equally applicable to these decks or plates.

Request for Comments

The FHWA solicits comments from all interested persons in regard to the following:

1. Should dromedary decks and plates (some equipped with plywood ends and tops and side curtains) be subject to the same regulations as dromedary boxes?

2. Are there other types of dromedary equipment that should be considered in this proceeding?

Federalism Assessment

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that the proposed rulemaking does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment. As discussed herein, this proposal merely clarifies the definition of specialized equipment permitted under the provisions of the STAA.

Further, a small number of vehicles, whose productivity will be increased as intended by the STAA, will be affected by this proposal.

Regulatory Impact

The FHWA has considered the impact of this notice and has determined that it is not a major rulemaking action within the meaning of E.O. 12291 and not a significant rulemaking under the regulatory policies and procedures of the DOT. These determinations by the agency are based on the nature of the rulemaking. The FHWA has determined that this rulemaking technically amends the June 5, 1984, final rule (49 FR 23302), clarifying and further defining certain issues contained therein. The impacts of the provisions addressed in this rulemaking do not differ in substance from those fully considered in the original impact statement accompanying the June 5 final rule. The Regulatory Impact Analysis prepared for that rule is available for inspection in the Headquarters Office of FHWA, Public Docket Room 4232, 400 Seventh Street, SW., Washington, DC 20590.

Under the criteria of the Regulatory Flexibility Act, the FHWA hereby certifies that this action will not have a significant economic impact on a substantial number of small entities. (Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

A regulatory information number (RIN) is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN number contained in the heading of this document can be used to cross reference this action with the Unified Agenda.

In consideration of the foregoing, the FHWA proposes to amend chapter 1 of title 23, Code of Federal Regulations, by revising part 658 as set forth below.

List of Subjects in 23 CFR Part 658

Grants program—transportation, Highways and roads, Motor carrier size and weight.

Issued on: August 17, 1989.

Thomas D. Larson,

Federal Highway Administrator.

The FHWA proposes to amend 23 CFR part 658 as follows:

PART 658—TRUCK SIZE AND WEIGHT, ROUTE DESIGNATIONS—LENGTH, WIDTH AND WEIGHT LIMITATIONS

1. The authority citation for 23 CFR part 658 continues to read as follows:

Authority: Secs. 133, 411, 412, 413, and 416 of Pub. L. 97–424, 96 Stat 2097 (23 U.S.C. 127; 49 U.S.C. App. 2311, 2312, 2313, and 2316), as amended by Pub. L. 98–17, 97 Stat. 59, and Pub. L. 98–554, 98 Stat. 2829; 23 U.S.C. 315; and 49 CFR 1.48.

2. Section 658.13 is amended by revising paragraph (f) to read as follows:

§ 658.13 Length.

* * * * *

(f) Truck tractors containing a dromedary box, deck or plate in legal operation on December 1, 1982, shall be permitted to continue to operate, notwithstanding their cargo carrying capacity, throughout their useful life. Proof of such legal operation on December 1, 1982, shall rest upon the operator of the equipment.

RIN 1545-AN60

Registration Requirements With Respect to Certain Debt Obligations; Application of Repeal of 30 Percent Withholding by the Tax Reform Act of 1984

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document contains proposed Income Tax Regulations relating to the definition of the term "registration required obligations" with respect to obligations issued to certain foreign persons and relating to the imposition of sanctions on issuers of registration required obligations in bearer form. These regulations would provide the public with guidance necessary to comply with the Tax Equity and Fiscal Responsibility Act of 1982. This document also contains proposed Income Tax Regulations relating to the repeal of 30 percent withholding on certain types of interest by the Tax Reform Act of 1984. They provide the public with guidance necessary to comply with the Tax Reform Act of 1984.

DATES: The regulations amending § 1.163–5(c) are proposed to be effective for obligations issued after the 30th day following the date that final regulations are published in the **Federal Register**. The regulations amending § 1.163–5T and § 35a.9999–5 are proposed to be effective upon the date that temporary regulations are published in the **Federal Register**. Comments and requests for a public hearing must be delivered or mailed by October 10, 1989.

ADDRESS: Send comments and requests for a public hearing to: Commissioner of Internal Revenue, (Attention: CC:CORP:T:R, INTL–0536–89), Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Carl Cooper of the Office of Associate Chief Counsel (International), within the Office of Chief Counsel, Internal Revenue Service, 1111 Constitution Avenue, NW., Washington, DC 20224, (Attention: CC:CORP:T:R(INTL–0536–89)) (202–566–6795, not a toll-free call).

SUPPLEMENTARY INFORMATION:

Paperwork Reduction Act

The collection of information contained in this notice of proposed rulemaking has been submitted to the Office of Management and Budget for review in accordance with the Paperwork Reduction Act of 1980 (44 U.S.C. 3504(h)). Comments on the collection of information should be sent to the Office of Management and Budget, Paperwork Reduction Project, Washington, DC 20503, with copies to the Internal Revenue Service, Attn: IRS Reports Clearance Officer T:FP, Washington, DC 20224.

The collection of information in this regulation is in § 1.163–5(c)(2)(i)(D). This information is required by the Internal Revenue Service to insure that purchasers of bearer obligations are not U.S. persons (other than those permitted to hold such obligations under section 165(j)). The likely respondents or recordkeepers are individuals and businesses and other for-profit institutions.

These estimates are an approximation of the average time expected to be necessary for a collection of information. They are based on such information as is available to the Internal Revenue Service. Individual respondents or recordkeepers may require greater or less time depending on their particular circumstances. Estimated total annual reporting and recordkeeping burden: 852 hours.

The estimated annual burden per respondent or recordkeeper is estimated to be approximately 10 minutes (.167 hours). It is estimated that there will be 5,000 respondents, and 100 recordkeepers required to maintain records. Estimated number of respondents and recordkeepers: 5,100. Estimated annual frequency of responses: On occasion.

Background

This document contains proposed amendments to the Income Tax Regulations (26 CFR Part 1) under section 163 of the Internal Revenue Code of 1986. Section 1.163–5(c) of the current regulations incorporates by reference certain requirements based on the interpretation of the Securities Act of 1933 by the Securities and Exchange Commission (SEC). The SEC has proposed to revise its interpretation of that Act. The amendments proposed in this document are in response to that action.

In addition, this document contains other proposed income tax regulations relating to sections 163, 871, 1441, 1442, and 4701 of the Internal Revenue Code of 1986.

Explanation of Provisions

Section 1.163–5(c)(2)(i)(A) of the current regulations provides that an obligation will be considered to be issued under arrangements reasonably designed to insure that the obligation will be sold (or resold in connection with its original issuance) only to a person who is not a U.S. person if, among other things, the obligation is not registered under the Securities Act of 1933 because it is intended for distribution to persons who are not U.S. persons, and the issuer has obtained, and relies in good faith on, a written opinion of counsel to that effect. It further provides that the term "U.S. person" has the same meaning for this purpose as it has for the purpose of determining whether an obligation is intended for distribution to foreign persons under the Securities Act of 1933.

Section 1.163–5(c)(2)(i)(B) provides that an obligation which is registered under the Securities Act of 1933 or is exempt from registration by reason of section 3 or 4 of such Act, or does not qualify as a security under such Act, will be considered to be issued under arrangements reasonably designed to insure that the obligation will be sold only to a person who is not a U.S. person, if five requirements are met. In general, these requirements reflect the requirements necessary for obtaining an opinion of counsel under § 1.163–5(c)(2)(i)(A). In brief, they are;

(1) The obligation is offered for sale only outside the U.S.;

(2) The issuer does not offer to sell the obligation inside the U.S. or to a U.S. person, and each underwriter promises not to do so;

(3) The issuer or underwriter sends a confirmation to the purchaser of the obligation stating that the purchaser represents that it is not a U.S. person;

(4) The obligation is not delivered in bearer form to the purchaser until a certificate is presented stating that the purchaser is not a U.S. person and is not acquiring for sale or resale inside the U.S. or to a U.S. person; and

(5) The issuer or underwriter does not have actual knowledge that the certificate is false.

The SEC has proposed to change its interpretation of the requirements of the Securities Act of 1933 in a number of respects. Among these proposed changes are a redefinition of the term "U.S. person" on the basis of residence, and elimination of the certification in most cases.

Many of the changes proposed by the SEC are reflected in the proposed revision of § 1.163–5(c)(2)(i). However, the Internal Revenue Service does not believe that the two specific changes described above are consistent with the general purpose of section 163(f) to prevent avoidance of U.S. tax by U.S. persons. In order to insure the effective operation of section 163(f), the proposed regulations in this document provide that § 1.163–5(c)(2)(i) (A) and (B) are amended by the insertion of termination date provisions. Under the termination date provisions, the "A" and "B" alternatives generally cannot be used for obligations issued after the 30th day following the date that final regulations are published in the **Federal Register**. Obligations issued after such day must be foreign targeted under the new proposed "D" alternative of § 1.163–5(c)(2)(i)(D) or under the interstate commerce alternative of § 1.163–5(c)(2)(i)(C), if applicable.

The proposed "D" alternative uses the definition of the term "U.S. person" provided by section 7701(a)(30) of the Code and also retains the certification requirement referred to above. The proposed "D" alternative parallels the SEC's changes in many other respects; however, the proposed "D" alternative is separate and independent from rules or interpretations that the SEC chooses to adopt in its administration of the securities laws. The SEC's interpretation of the securities laws will be considered by the Service where appropriate; however, the Service must ultimately base its interpretations on the tax policies underlying section 163(f)(2)(B).

The proposed regulations in this document also revise paragraphs (a), (c), and (e) of § 35a.9999–5 and add new paragraph (e) of § 1.163–5T.

A–5 of paragraph (a) of § 35a.9999–5 provides conditions that must be satisfied to obtain an exemption from information reporting and backup withholding in the case of interest described in section 861(c) (as in effect prior to the Tax Reform Act of 1986) that is paid outside the United States on an obligation that would be a registration required obligation but for the fact that it has a maturity (at issue) of less than one year. A–6 of paragraph (a) extends the requirements of A–5 to original issue discount obligations. One of the conditions of A–5 is that the obligation satisfy the requirements of section 163 (f)(2)(B) (i) and (ii)(I) and the regulations thereunder (as if the obligation would otherwise be a registration required obligation within the meaning of section 163 (f)(2)(A)).

Proposed § 1.163–5 (c)(2)(i)(D)(*1*) would provide that an obligation generally will not satisfy the requirements of 163 (f)(2)(B)(i) unless a certificate is presented at the end of a 40-day restricted period stating that the obligation is not being acquired by or on behalf of a United States person. Obviously, this certificate cannot be provided in respect of an obligation with a maturity at the time of original issuance of less than 40 days. Moreover, the Internal Revenue Service believes that it may be difficult to satisfy the certification requirement in respect of short-term obligations with maturities of longer than 40 days.

These regulations therefore propose to amend A–6 of paragraph (a) to provide an exception from the certification requirement for certain short-term commercial paper. Under this provision, a certificate would not be required under § 1.163–5(c)(2)(i)(D)(*1*) by virtue of A–6 if the obligation is an original issue discount obligation with a maturity of 90 days or less from the date of issuance.

A–18 of paragraph (c) of § 35a.9999–5 provides that an obligation that would otherwise be in registered form but for the fact that it is convertible into bearer form is considered to be in bearer form. Under A–1 of § 35a.9999–5 (a), this provision applies to obligations issued after July 18, 1984. The provision in A–18 is amended in order to better coordinate the provision with § 1.163–5(c)(2)(vi). A–21 of paragraph (e) of § 35a.9999–5 provides that interest paid to the holder of a pass-through certificate described in § 1.163–5T(d) may qualify as portfolio interest. It provides further that for purposes of sections 871(h) and 881(c), interest is considered to be paid on or with respect to the pass-through certificate and not with respect to any obligations held by the fund or trust to which the pass-through certificate relates. This rule was intended to apply with respect to payments from the trustee of the pass-through trust to the certificate holder, but not with respect to payments made to the trustee of the pass-through trust. Thus, the rule applies when the trustee of the pass-through trust is a United States person who collects and pays out interest to the certificate holders, but does not apply when the payment is made to a trustee that is a foreign person. A–21 would be amended to clarify this point. A–21 would also be amended to clarify its application to REMICs. Section 1.163–5T is amended to add paragraph (e) concerning REMICS.

Special Analyses

It has been determined that these proposed rules are not major rules as defined in Executive Order 12291. Therefore, a Regulatory Impact Analysis is not required. It has also been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. chapter 5) and the Regulatory Flexibility Act (5 U.S.C. chapter 6) do not apply to these regulations, and, therefore, an initial Regulatory Flexibility Analysis is not required. Pursuant to section 7805(f) of the Internal Revenue Code, these regulations will be submitted to the Administrator of the Small Business Administration for comment on their impact on small business.

Comments and Request for a Public Hearing

Before adopting these proposed regulations, consideration will be given to any written comments that are submitted (preferably a signed original and seven copies) to the Commissioner of Internal Revenue. Comments are specifically requested on the following subjects: (i) The "targeted offshore offering" exception to the certification requirement under § 1.163–5(c)(2)(i)(D)(*7*); (ii) the applicability of the certification requirement to short-term obligations under § 35a.9999–5(a)(A–6); (iii) the feasibility of adopting an alternative system of periodic blanket certification that would also satisfy the requirement under § 1.163–5(c)(2)(i)(D)(*7*); and (iv) the feasibility of allowing offerings of foreign targeted obligations to foreign persons together with convertible obligations in registered form to U.S. persons.

All comments will be available for public inspection and copying. A public hearing will be held upon written request by any person who submits written comments on the proposed rules. Notice of the time and place for the hearing will be published in the **Federal Register.**

Drafting Information

The principal author of these proposed regulations is Carl M. Cooper of the Office of Associate Chief Counsel (International), within the Office of Chief Counsel, Internal Revenue Service. Other personnel from offices of the Internal Revenue Service and Treasury Department participated in developing the regulations.

Paragraph 1. The authority for part 1 continues to read in part:

Authority: 26 U.S.C. 7805. * * *

Par. 2. Section 1.163–5 (c) is amended as follows:

1. Paragraph (c)(2)(i) is amended by removing the first and fourth sentences thereof and be adding the sentences set forth below in their respective places.

2. Paragraph (c)(2)(i)(A) is amended by adding the sentence set forth below after the last sentence thereof.

3. Paragraph (c)(2)(i)(B) is amended by removing the first sentence thereof and adding the sentence set forth below in its place.

4. Paragraph (c)(2)(i)(D) is added as set forth below.

5. Paragraph (c)(3) is amended by redesignating the existing text as paragraph (c)(3)(i) and by adding a new paragraph (c)(3)(ii) as set forth below.

§ 1.163–5 Denial of interest deduction on certain obligations issued after December 31, 1982, unless issued in registered form.

* * * * *

(c) *Obligations issued to foreign persons after September 21, 1984.* * * *

(2) *Rules for the application of this paragraph*—(i) *Arrangements reasonably designed to insure sale to non-United States persons.* An obligation will be considered to satisfy paragraph (c)(1)(i) of this section if the conditions of paragraph (c)(2)(i) A, (B), (C), or (D) of this section (i) are met in connection with the original issuance of the obligation. * * * Obligations that meet the conditions of paragraph (c)(2)(i) (A), (B), (C) of this section other than certificates of deposit issued under the conditions of paragraph (c)(2)(i)(C) of this section by a United States person or by a controlled foreign corporation within the meaning of section 957 (a) that is engaged in the active conduct of a banking business within the meaning of section 954 (c) (3) (B) as in effect prior to the Tax Reform Act of 1986, and the regulations thereunder), or (D) may be issued in a single public offering. * * *

(A) * * * Except as provided in paragraph (c)(3 of this section this paragraph (c)(2)(i)(A) applies only to obligations issued on or before [insert date which is 30 days after final regulations are published in **Federal Register**].

(B) The obligation is registered under the Securities Act of 1933, is exempt from registration by reason of section 3 or section 4 of such Act, or does not qualify as a security under the Securities Act of 1933; all of the conditions set forth in paragraph (c)(2)(i)(B)(*1*), (*2*), (*3*), (*4*) and (*5*), of this section are met with respect to such obligation; and, except as provided in paragraph (c)(3) of this section the obligation is issued on or before [insert date which is 30 days after final regulations are published in **Federal Register**].

* * * * *

(D) The obligation is issued after [insert date which is 30 days after final regulations are published in **Federal Register**], is not described in § 1.163–5 (c)(2)(i)(C), and all of the conditions set forth in this subdivision (D) are met with respect to such obligation.

(*1*) *Directed selling efforts.* Neither the issuer nor any distributor makes a directed selling effort with respect to the obligation (or other obligations included in the same offering that are identical to the obligation). For purposes of this paragraph (c) (2) (i) (D) (*1*), the term "directed selling effort" means activity that is undertaken prior to or during the restricted period for an obligation—and that has the purpose of, or could reasonably be expected to have the effect of, conditioning the market in the United States or its possessions for the obligation. The term "directed selling effort" shall include, but not be limited to, the placing of an advertisement in a publication with a general circulation in the United States that refers to the offering of the obligation. However, the placing of an advertisement that is required to be published under foreign law, which contains no more

---

information than legally required, shall not be deemed to constitute a "directed selling effort." For purposes of this paragraph (c)(2)(i)(D)(*1*), the term "publication with a general circulation in the United States" shall mean any publication that satisfies one or more of the following requirements:

(*i*) The publication is printed in the United States primarily for distribution in the United States;

(*ii*) The publication has had, during the preceding twelve months, an average circulation in the United States of 15,000 or more copies per issue; or

(*iii*) The publication has had, during the preceding twelve months, an average of 50 percent or more of its circulation per issue in the United States.

(*2*) *Offers.* Neither the issuer nor any distributor offers the obligation within the United States or its possessions or to a United States person (other than an exempt distributor or a person described in paragraph (c)(2)(i)(D)(*10*) of this section) during the restricted period. For purposes of this paragraph (c)(2)(i)(D)(*2*), an obligation shall be deemed to be offered within the United States or its possessions if the offeree is within the United States or its possessions.

(*3*) *Sales* (*i*) *In general.* The issuer does not, and each distributor covenants that it will not, sell the obligation within the United States or its possessions or to any United States person (other than an exempt distributor or a person described in paragraph (c)(2)(i)(D)(*10*) of this section) during the restricted period. For purposes of this paragraph (c)(2)(i)(D)(*3*), a sale is deemed to be made to a United States person if the seller of the obligation (whether the issuer or a distributor) has an address within the United States or its possessions for the buyer of the obligation.

(*ii*) *Knowledge.* The issuer does not know that a distributor has sold the obligation within the United States or its possessions or to a United States person, in violation of the covenant described in paragraph (c)(3)(i) of this section, during the restricted period.

(*4*) *Delivery.* Neither the issuer nor any distributor delivers the obligation within the United States or its possessions in connection with a sale of the obligation during the restricted period.

(*5*) *Offering materials.* All offering materials and documents used in connection with the original issuance of the obligation include a statement to the effect that the obligation may not be offered or sold in the United States or its possessions or to a United States person as defined in section 7701(a)(30) (other than an exempt distributor or a person described in paragraph (c)(2)(i)(D)(10)) of this section during the restricted period. Such statement shall appear on the cover or inside cover page of any prospectus or offering circular used in connection with the original issuance of the obligation; in the tax section of any prospectus or offering circular used in connection with the original issuance of the obligation; and in any press release or advertisement made or issued by the distributor. Such statement may appear in summary form on prospectus cover pages and in advertisements or press releases.

(*6*) *Confirmations.* If the issuer or any distributor sells the obligation during the restricted period to a distributor, a dealer, or any other person who receives a selling concession, fee or other remuneration in respect of the securities sold, the seller sends a confirmation to such person stating that such person is subject to the restrictions regarding the offer, sale, and delivery of the obligation during the restricted period as set forth in paragraphs (c)(2)(i)(D) (*1*), (*2*), (*3*), (*4*), and (*5*) of this section. Confirmations may be provided electronically, and in such a case may be stated in summary form.

(*7*) *Certification*—(*i*) *In general.* No later than the 10th day after the last day of the restricted period, a certificate is provided to the issuer or a distributor of the obligation stating that the owner of the obligation on the last day of the restricted period either is not a United States person or is a United States person described in paragraph (c)(2)(i)(D)(*10*) of this section. The certificate must be signed (or sent, as provided in paragraph (c)(2)(i)(D)(7)(*ii*) of this section) either by the owner of the obligation or by a financial institution or clearing organization through which the owner holds the obligation directly or indirectly. For purposes of this paragraph (c)(2)(i)(D)(*7*), the term "financial institution" means a financial institution described in § 1.165–12 (c)(i)(v). When a certificate is provided by a clearing organization, the certificate must be based on statements provided to it by its member organizations. The requirement of this paragraph (c)(2)(i)(D)(*7*) shall be deemed not to be satisfied with respect to an obligation if the issuer or a distributor knows that the certificate with respect to such obligation is false. The issuer or distributor will be deemed to know that the certificate is false if the issuer or distributor has a United States address for the owner (other than an owner that is a United States person described in paragraph (c)(2)(i)(D)(*10*) of this section) and does not have documentary evidence as described in subdivision (iii) of A–5 of section 35a.9999–4T that the owner is not a United States person. The certificate must be retained by the issuer or distributor (and statements by member organizations must be retained by the clearing organization, in the case of certificates based on such statements) for a period of four calendar years following the year in which the certificate is received.

(*ii*) *Electronic certification.* The certificate required by paragraph (c)(2)(i)(D)(*7*)(*i*) of this section (including a statement provided to a clearing organization by a member organization) may be provided electronically, but only if the person receiving such electronic certificate maintains adequate records, for the retention period described in paragraph (c)(2)(i)(D)(*7*)(*i*) of this section, establishing that such certificate was received in respect of the subject obligation, and only if the person sending the electronic certificate has agreed in writing with the recipient, prior to the time of certification, that the electronic certificate shall have the effect of a signed certificate described in paragraph (c)(2)(i)(d)(*7*)(*i*) of this section.

(*iii*) *Exception for targeted offshore offerings.* This paragraph (c)(2)(i)(D)(*7*) shall not apply, and no certificate shall be required, in the case of an obligation that is sold during the restricted period in a targeted offshore offering. For purposes of this paragraph (c)(2)(i)(D)(*7*)(*iii*) of this section, a "targeted offshore offering" is an offering of obligations that is targeted to the domestic capital markets of a single foreign country in accordance with customary local practices and documentation; that is neither listed nor the subject of an application for listing on a securities exchange outside the targeted foreign country; and that consists solely of obligations denominated in the local currency of the targeted foreign country. An offering shall not be considered to be a "targeted offshore offering" if the issuer or any distributor knows or has reason to believe that a substantial portion of the offering will be sold or resold outside of the domestic markets of the targeted foreign country in connection with the original issuance.

(*8*) *Distributor.* For purposes of this § 1.163–5(c)(2)(i)(D), the term "distributor" means:

(*i*) Any affiliate of the issuer;

(*ii*) The lead underwriter;

(*iii*) Any person that participates in the original issuance of the obligation pursuant to a contractual arrangement; and (*iv*) Any person acting on behalf of any of the foregoing, or acting on behalf of the issuer.

(*9*) *Exempt distributor.* For purposes of this § 1.163–5(c)(2)(i)(D), the term "exempt distributor" means a distributor that certifies in writing to the selling issuer or distributor that it is buying for the purpose of resale in connection with the original issuance of the obligation, and that if it retains the obligation for investment, it will only do so in accordance with the requirements of paragraph (c)(2)(i)(D)(*10*) of this section. In the latter case, the certificate required under paragraph (c)(2)(i)(D)(*10*) of this section (other than a blanket certificate) shall be provided to the selling issuer or distributor no later than the 40th day of the restricted period. The provisions of paragraph (c)(2)(i)(D)(*11*) governing the restricted period for unsold allotments or subscriptions shall apply to any obligation retained for investment by an exempt distributor.

(*10*) *Certain United States persons.* An obligation may be offered and sold outside the United States and its possessions to a United States person that is a financial institution purchasing for its own account, or to a United States person that is a customer of, and holds the obligation through, a financial institution, provided that the financial institution holding the obligation provides a certificate to the issuer or distributor no later than the end of the restricted period stating that it agrees to comply with the requirements of section 165(j)(3) (A), (B), or (C) and the regulations thereunder. For purposes of this paragraph (c)(2)(i)(D)(*10*), the term "financial institution" means a United States person that is a financial institution as defined in § 1.165–12(c)(1)(v). A financial institution may provide a blanket certificate to the issuer or distributor stating that the financial institution will comply with the requirements of section 165(j)(3) (A), (B), or (C) and the regulations thereunder. A blanket certificate must be received by the issuer or distributor in the year of the issuance or in either of the preceding 2 calendar years, and must be retained by the issuer or distributor for at least 4 years after the end of the last calendar year to which it relates.

(*11*) *Restricted period.* The purposes of this § 1.163–5(c)(2)(i)(D), the term "restricted period" means the 40-day period beginning on the later of the closing of the offering or the first date on which the obligation (or any other obligation included in the same issue that is identical to the obligation) is offered to persons other than a distributor. Notwithstanding the preceding sentence, any offer of the obligation by the issuer or a distributor shall be deemed to be during the restricted period if the issuer or distributor holds the obligation as part of an unsold allotment or subscription.

(*12*) *Special rule for international organizations and foreign central banks.* For purposes of this § 1.163–5(c)(2)(i)(D), an obligation that is offered or sold to an international organization or foreign central bank shall be deemed not to be offered or sold to a United States person. For purposes of this paragraph (c)(2)(i)(D)(*12*), the terms "international organization" and "foreign central bank" shall have the meanings set forth in section 7701(a)(18) and section 895, respectively, and the regulations thereunder.

(*13*) *Clearing organization.* For purposes of this § 1.163–5(c)(2)(i)(D), a "clearing organization" is an entity which is in the business of holding obligations for member organizations and transferring obligations among such members by credit or debit to the account of a member without the necessity of physical delivery of the obligation.

(3) *Effective date—(i) In general.* * * *

(ii) *Special rules.* If an obligation is originally issued after [insert date which is 30 days after final regulations are published in **Federal Register**] pursuant to the exercise of a warrant or the conversion of a convertible obligation, which warrant or obligation (including conversion privilege) was issued on or before [insert date on which final regulations are published in **Federal Register**], then the rules of § 1.163–5(c)(2)(i)(A) or § 1.163–5(c)(2)(i)(B) shall apply to such obligation as if such rules contained no termination date provision. The issuer of an obligation may choose to apply either the rules of § 1.163–5(c)(2)(i) (A) or (B), or the rules of § 1.163–5(c)(2)(i)(D), to an obligation that is originally issued after [insert date on which final regulations are published in **Federal Register**] and on or before [insert date which is 30 days after final regulations are published in the **Federal Register**].

Paragraph 3. The authority for Part 1 continues to read in part:

Authority: 26 U.S.C. 7805. * * *

Par 4. § 1.163–5T is amended by adding new paragraph (e) to read as follows:

§ 1.163–5T Denial of the interest deduction on certain obligations issued after December 31, 1982, unless issued in registered form (temporary).

* * * * *

(e) *Regular interests in REMICS.* (1) A regular interest in a REMIC, as defined in sections 860D and 860G and the regulations thereunder, is considered to be a "registration-required obligation" under section 163(f)(2)(A) and § 1.163–5(c) if the regular interest is described in section 163(f)(2)(A) and § 1.163–5(c), without regard to whether any obligation held by the REMIC to which the regular interest relates is described in section 163(f)(2)(A) and § 1.163–5(c). A regular interest in a REMIC is considered to be described in section 163(f)(2)(B) and § 1.163–5(c) if the regular interest is described in section 163(f)(2)(B) and § 1.163–5(c), without regard to whether any obligation held by the REMIC to which the regular interest relates is described in section 163(f)(2)(B) and § 1.163–5(c).

(2) An obligation held by a REMIC is considered to be described in section 163(f)(2) (A) or (B) if such obligation is described in section 163(f)(2) (A) or (B), respectively, without regard to whether the regular interests in the REMIC are so considered.

(3) For purposes of section 4701, a regular interest is considered to be issued solely by the recipient of the proceeds from the issuance of the regular interest (hereinafter the "sponsor"). The sponsor is therefore liable for any excise tax under section 4701 that may be imposed with reference to the principal amount of the regular interest.

(4) In order to implement the purpose of section 163, section 163–5(c), and this section, the Commissioner may characterize a regular interest in a REMIC and any obligation held by such REMIC in accordance with the substance of the arrangement they represent and may impose the penalties provided under sections 163(f)(1) and 4701 in the appropriate amounts and on the appropriate persons. This provision may be applied, for example, where a corporation issues an obligation that is purportedly in registered form and that will qualify as a "qualified mortgage" within the meaning of section 860G(a)(3) in the hands of a REMIC, contributes the obligation to a REMIC as its only asset, and arranges for the sale to investors of regular interests in the REMIC in bearer form that do not meet the requirements of section 163(f)(2)(B). If this provision is applied, the obligation held by the REMIC will not be considered to be issued in registered form or to meet the requirements of section 163(f)(2)(B). The corporation will not be allowed a deduction for the payment of interest on the obligation held by the REMIC, and the excise tax under section 4701,

calculated with reference to the principal amount of the obligation held by the REMIC, will be imposed on the corporation and may be collected from the corporation and its agents.

Par 5. The authority for part 35a continues to read in part as follows:

Authority: 26 U.S.C. 7805. * * *

Par 6. Section 35a.9999–5 is amended by adding a sentence immediately after the last sentence of A–6 of paragraph (a); by removing the sentence immediately before the last sentence of A–18 of paragraph (c), and adding two new sentences in its place; in paragraph (e), by redesignating the text of existing A–21 as subdivision (i) and adding a sentence immediately following the second sentence, and adding new subdivision (ii). The added sentences read as follows:

§ 35a.9999–5 Questions and answers relating to repeal of 30 percent withholding by section 127 of the Tax Reform Act of 1984 and to the application of information reporting and backup withholding in light of such repeal.

* * * * *

(a) *Rules concerning obligations in bearer form.*

* * * * *

A–6. * * * However, an original issue discount obligation with a maturity of ninety days or less from the date of issuance is not required to satisfy the certification requirement of § 1.163–5(c)(2)(i)(D)(*7*).

* * * * *

(c) *Convertibility of obligations.*

A–18. * * * An obligation issued after July 18, 1984, and on or before September 21, 1984, that would otherwise be in registered form but for the fact that it is convertible into bearer form, shall be considered to be in bearer form for purposes of A–1 if it satisfies the applicable requirements of the relevant temporary or proposed regulations under section 163(f)(2)(B), as described in § 1.163–5(c)(2)(vi). An obligation issued after September 21, 1984, that would otherwise be in registered form but for the fact that it is convertible into bearer form shall be considered to be in bearer form. * * *

* * * * *

(e) *Application of Repeal of 30 Percent Withholding to Pass-through Certificates.*

* * * * *

A–21. (i) * * * The rule of this A–21 applies only to payments made to the holder of the pass-through certificate from the trustee of the pass-through trust and does not apply to payments made to the trustee of the pass-through trust. * * *

(ii) Interest paid to a holder of a regular or residual interest in a REMIC will qualify as portfolio interest under section 871(h)(2) or section 881(c)(2) for purposes of the exemption from 30 percent withholding if the interest paid to the holder satisfies the conditions described in A–1 or A–8 of this section. For purposes of A–1 or A–8 of this section and sections 871(h) and 881(c), interest paid to the holder of a regular interest in a REMIC is considered to be paid on or with respect to the regular interest in the REMIC and not on or with respect to any mortgage obligations held by the REMIC. The foregoing rule, however, applies only to payments made to the holder of the regular interest from the REMIC and does not apply to payments made to the REMIC. For purposes of A–1 or A–8 of this section and sections 871(h) and 881(c), interest paid to the holder of a residual interest in a REMIC is considered to be paid on or with respect to the obligations held by the REMIC, and not on or with respect to the residual interest. For purposes of A–1 and A–8 of this section and section 127 of the Tax Reform Act of 1984, a residual interest in a REMIC will be considered as issued after July 18, 1984, only to the extent that the obligations held by the REMIC are issued after July 18, 1984, but a regular interest in a REMIC will be considered issued after July 18, 1984, if the regular interest was issued after July 18, 1984, without regard to the date on which the mortgage obligations held by the REMIC were issued.

Par. 7. The authority for Part 46 continues to read as follows:

Authority: 26 U.S.C. 7805. * * *

Par. 8. Section 46.4701–1 is amended by adding paragraph (b)(5) to read as follows:

§ 46.4701–1 Tax on issuer of registration required obligation not in registered form.

* * * * *

(b) *Definitions.* * * *

* * * * *

(5) *Issuer.* Except as provided in § 1.163–5T(d) (relating to pass-through certificates) and § 1.153–5T(e) (relating to REMICs), the "issuer" is the person whose interest deduction would be disallowed solely by reason of section 163(f)(1).

BILLING CODE 4830-01-M

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 913

Illinois Regulatory Program; Public Notice; Permits; Performance Standards; Civil Penalties

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSMRE), Interior.

ACTION: Proposed rule.

SUMMARY: OSMRE is announcing the receipt of proposed amendments to the Illinois permanent regulatory program (hereinafter referred to as the Illinois program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The amendments are intended to make the requirements of the Illinois program no less effective than the Federal program. They concern proposed changes to the Illinois Administrative Code (IAC) at 62 IAC 1700 General; 62 IAC 1701 Definitions; 62 IAC 1761 Areas Designated by Acts of Congress; 62 IAC 1772 Coal Exploration Requirements; 62 IAC 1773 Permits and Permit Processing Requirements; 62 IAC 1774 Revision, Renewal and Transfer of Permit Rights; 62 IAC 1778 Permit Applications—Minimum Requirements for Legal, Financial, Compliance and Related Information; 62 IAC 1779 Permit Applications—Minimum Requirements for Information on Environmental Resources; 62 IAC 1780 Surface Mining Permit Applications—Minimum Requirements for Reclamation and Operation Plan; 62 IAC 1784 Underground Mining Permit Applications—Minimum Requirements for Reclamation and Operation Plan; 62 IAC 1800 Bonding and Insurance Requirements for Surface Coal Mining; 62 IAC 1816 Permanent Program Performance Standards—Surface Mining; 62 IAC 1817 Permanent Program Performance Standards—Underground Mining; 62 IAC 1843 State Enforcement; and 62 IAC 1846 Individual Civil Penalties.

This notice sets forth the times and locations that the Illinois program and proposed amendments to that program are available for public inspection, the comment period during which interested persons may submit written comments on the proposed amendments and the procedures that will be followed regarding the public hearing, if one is requested.

DATES: Written comments must be received on or before 4:00 p.m. on

OL

UMI

September 25, 1989. If requested, a public hearing on the proposed amendments will be held at 1:00 p.m. on September 18, 1989. Requests to present oral testimony at the hearing must be received on or before 4:00 p.m. on September 8, 1989.

ADDRESSES: Written comments should be mailed or hand delivered to: Mr. James F. Fulton, Director, Springfield Field Office, at the address listed below. Copies of the Illinois program and all written comments received in response to this notice will be available for public review at the addresses listed below during normal business hours, Monday through Friday, excluding holidays. Each requester may receive, free of charge, one copy of the proposed amendments by contacting OSMRE's Springfield Field Office.

Office of Surface Mining Reclamation and Enforcement, Springfield Field Office, 600 East Monroe Street, Room 20, Springfield, Illinois 62701, Telephone: (217) 492–4495.

Illinois Department of Mines and Minerals, 300 West Jefferson Street, Suite 300, Springfield, Illinois 62791, Telephone: (217) 782–4970.

FOR FURTHER INFORMATION CONTACT: James F. Fulton, Director, Springfield Field Office; (217) 492–4495.

SUPPLEMENTARY INFORMATION:

I. Background

On June 1, 1982, the Secretary of the Interior conditionally approved the Illinois program. Information pertinent to the general background of the Illinois program submission, as well as the Secretary's findings, the disposition of comments, and a detailed explanation of the conditions of approval can be found in the June 1, 1982, **Federal Register** (47 FR 23883 *et seq.*). Subsequent actions concerning the conditions of approval and program amendments are identified at 30 CFR 913.11, 913.15, 913.16, and 913.17.

II. Discussion of Proposed Amendments

Pursuant to 30 CFR 732.17, OSMRE identified required revisions to the Illinois regulatory program by letters dated June 9, 1987; December 16, 1988; and May 11, 1989. OSMRE also notified Illinois of deficiencies which OSMRE had determined to be less effective than the Federal requirements for surface mining and reclamation operations in Illinois program amendments approved by the Director on October 25, 1988 (53 FR 43112), and January 4, 1989 (54 FR 118).

In response to these notifications, Illinois by letter dated July 17, 1989 (Administrative Record No. IL–1075), submitted the following proposed amendments to its program.

The Illinois Administrative Code (IAC), Title 62, Mining, chapter I: Regulations of the Illinois Department of Mines and Minerals, § 1700.11(a), limits the applicability of IAC rules to all coal exploration and active surface coal mining operations.

Section 1701, General Definitions, Appendix A, changes the definition of "previously mined area" to those lands not reclaimed in accordance with the Act and changes the definition of "valid existing rights" in response to a required regulatory program amendment notice published in the **Federal Register** on January 4, 1989 (54 FR 123).

Section 1761.11(a), Areas Designated by Act of Congress, is revised to remove the quarter-mile restriction on the maximum width of wild or scenic river study corridors and § 1761.11(c) is revised to extend the prohibitions/limitations to privately owned places listed on the National Register of Historic Places. Section 1761.12(e) is likewise revised to extend prohibitions/limitations to privately owned places listed on the National Register of Historic Places.

Section 1772.12(b), Requirements for Coal Exploration, is revised to require the applicant for a coal exploration permit to provide, if requested, other information regarding known or unknown historic or archeological resources.

A new § 1773.5, Requirements for Permits and Permit Processing, is added which defines the phrases "owned or controlled" and "owns or controls".

Section 1773.11(a) is revised to restrict the permit renewal requirement to those operations actively conducting surface coal mining operations.

Section 1773.15(b) is revised to prohibit the issuance of permits to any person currently in violation of the Federal Act who owns or controls the permit applicant.

Section 1773.15(c) is revised to delete one permit finding and add two new permit findings. Existing subsection (c)(11) concerning cemeteries is deleted and a new subsection (c)(11) adds a finding that the site of a remining operation, where the applicant intends to reclaim to the lesser standards applicable to remining, is considered a previously mined area. New subsection (c)(12) adds a finding that the effect of the proposed permitting action on properties listed or eligible for listing on the National Register of Historic Places has been taken into account. Section 1773.15(e) is revised to require reconsideration of any approved permit, prior to issuance, based on a review of any new violation and compliance information submitted pursuant to proposed new 62 IAC 1778.13(i) and 1778.14(e).

Section 1773.17(h) is revised to require that, in the absence of a legal stay, within 30 days after issuance of a cessation order for operations conducted under the permit, the permittee must notify the State of any changes that have occurred in the ownership information submitted at the time of application or since submittal of the last update of this information.

Subsection (a)(2)(D) is added to § 1773.19 to clarify the time limits for final permit decisions by the State.

Sections 1773.20 and 1773.21 are added to outline Illinois' procedures for identifying and rescinding improvidently issued permits.

Section 1774.15(b), Revision; Renewal; and Transfer, Assignment, or Sale of Permit Rights, is revised to correct a typographical error in this section. The citation to 62 IAC 1773.19(b) is changed to section 1773.19(a)(3).

Section 1774.17(b) is revised to add a new sentence to subsection (b)(2) clarifying the number of newspaper advertisements to be published when an application is filed.

Section 1778.13, Permit Applications—Minimum Requirements for Legal, Financial, Compliance, and Related Information, subsection (b) is revised to expand the information requirements for permit applications to include the person who will pay the abandoned mine land reclamation fees. Subsections (c) and (d) are revised to expand informational requirements to include persons who own or control the applicant. New subsection (i) is added to require the applicant to update the identification of interests sections of the permit application after State approval, if necessary. New subsection (j) is added to require the applicant to submit all identification of interests and violation and compliance information in a prescribed format.

Section 1778.14, subsection (c) is revised to require that each permit application include a list of all unabated cessation orders and unabated air or water quality violation notices received prior to the application by any suface coal mining and reclamation operation owned or controlled by either the applicant or any person who owns or controls the applicant. New subsection (e) requires the applicant to update the compliance and violation section of the permit application after State approval, if necessary.

Sections 1779.12(b)(1) and (b)(2), Surface Mining Permit Applications—

Minimum Requirements for Information on Environmental Resources, and sections 1783.12(b) (1) and (b)(2), Underground Mining Permit Applications—Minimum Requirements for Information on Environmental Resources, are revised to require the applicant to identify and evaluate important historic and archaeological resources that may be eligible for listing on the National Register of Historic Places through the collection of additional information, including field investigations.

Section 1779.20 for surface mining permit applications and Section 1783.20 for underground coal mining permit applications are deleted and the requirements for fish and wildlife resources information are transferred to sections 1780.16 and 1784.21 respectively.

Section 1780.16, Surface Mining Permit Application—Minimum Requirements for Reclamation and Operation Plan, is revised to add the requirements for fish and wildlife resource information from section 1779.20. Section 1780.21(a) is revised to correct a typographical error in the address of the Department's Land Reclamation Division. Section 1780.21(f) is revised to add provisions for the determination of probable hydrologic consequences. Section 1780.21(i) is revised to define when the State may exercise its power to waive the ground water monitoring requirement, in accordance with section 4.02 of the Illinois Administrative Procedures Act (IAPA).

Section 1780.31 is revised to require the applicant to prevent or minimize the impacts of proposed operations on privately-owned places listed on the National Register of Historic Places and allow the State to specify appropriate mitigation and treatment measures for places listed and eligible for listing.

Section 1784.14(a), Underground Mining Permit Applications—Minimum Requirements for Reclamation and Operation Plan, is revised to correct an address for the State Land Reclamation Division. Section 1784.14(e) is revised to clarify the scope of the determination of probable hydrologic consequences. Section 1784.14(h) is revised to allow the State to waive the ground water monitoring requirement if it finds the operation will not proximately result in contamination, diminution or interruption of a water source in the permit or adjacent area.

Section 1784.17 is revised to correspond with the requirements for the protection of public parks and historic places previously discussed at sections 1780.31.

Section 1784.21 is revised to add the requirements for fish and wildlife information from section 1783.20.

Section 1800.21(b)(4), Bonding and Insurance Requirements for Surface Coal Mining and Reclamation Operations, is revised to require that the ten percent capital and surplus accounts limitation for letters of credit is applied on a cumulative rather then on an individual basis.

Section 1800.40, subsection (a)(2), is revised to provide a 45 day time frame for submitting a copy of a bond release advertisement. The reference to "informal conferences" is deleted. Revisions to subsection (b)(1) replace the word "receipt" with the word "filing" and extend the period in which to conduct the bond release inspection to 60 days. Revisions to subsection (b)(2) extend the time period for the final bond release decision to 90 days, extend the notification period after a public hearing to 60 days, and add the words "nearest municipality", so that subsection (e), which discussed notification requirements to municipalities, could be deleted. Revisions to subsection (f) would extend the period for holding a public hearing to 60 days after receipt of the request.

Revisions to section 1800.60(b) require that an applicant's public liability insurance policy be maintained in full force during the life of the permit and the liability period necessary to complete all reclamation operations.

Section 1816.49, Permanent Program Performance Standards—Surface Mining Activities, and section 1817.49, Permanent Program Performance Standards—Underground Mining Activities, are revised. Subsection (a)(9) specifies a level of required experience for professionals charged with inspecting impoundments, specifies the timing of impoundment inspections, and clarifies the location at which impoundment inspection reports are to be retained. Subsection (a)(10) specifies exemptions from quarterly impoundment examinations for certain classes of impoundments. Subsections (b)(9) and (c) clarify the spillway requirements for both permanent and temporary impoundments.

Revisions to section 1816.61 for surface mining and section 1817.61 for underground mining relating to general requirements for use of explosives place limitations on requirements specified in other regulations to blasts using more than 25 pounds of explosives.

Section 1816.64(c) for surface mining, subsection (c)(1), is revised to require a public notice of blasting schedule for all blasts. The five pound exemption is deleted.

Revisions to section 1817.64(a) for underground mining would require the operator to notify the State of proposed times and locations of blasting operations.

Revisions to section 1817.66(a) for underground mining require the operator to place signs in the vicinity of the location of blasting.

Revisions to section 1816.67(c) for surface mining and section 1817.67(c) for underground mining requirements for limiting and monitoring the off-site adverse effects of blasting operations change the cube root scaled distance formula for blasts from 500 to 350.

Revisions to section 1816.68(a) for surface mining and 1817.68(a) for underground mining delete the requirement to record wind velocity and direction in the record of blasting operations.

Revisions to section 1816.83(a) for surface mining and 1817.83(a) for underground mining correct a typographical error in a regulation citation in subsection (a)(3). The correct citation for underdrain requirements is section 1816.73(1).

Revisions to section 1816.97 for surface mining and section 1817.97 for underground mining for requirements concerning the protection of fish, wildlife, and related environmental values include a requirement that operators use appropriate methods to exclude wildlife from ponds which contain toxic-forming materials.

Section 1816.99(c) for surface mining is revised to specify that lateral support requirements apply to any mine-related excavation.

Section 1816.102(a) for surface mining is revised to correct a typographical error in a regulation citation. The correct citation for previously mined highwalls is subsection (k)(3)(C).

Section 1817.122 for underground mining is revised to require operators to maintain copies of all public notices mailed pursuant to this section and to make said copies available for inspection by State agents.

Section 1843.11(a)(2), State Enforcement, is revised to limit automatic issuance of cessation orders for non-permitted operations to those operators actually engaged in surface coal mining. New section 1843.11(g) requires that, within 60 days of the issuance of a cessation order, the State shall notify all owners and controllers.

In section 1846, Individual Civil Penalties, regulations for individual civil penalties are provided. They include provisions for computing, assessing, and collecting the penalties.

III. Public Comments Procedures

In accordance with the provisions of 30 CFR 732.17(h), OSMRE is seeking comments on whether the proposed amendments satisfy the applicable program approval criteria of 30 CFR 732.15.

If the amendments are deemed adequate, they will become part of the Illinois program.

Written Comments

Written comments should be specific, pertain only to the issues proposed in this rulemaking, and include explanations in support of the commentor's recommendations. Comments received after the time indicated under "DATES" or at locations other than the OSMRE Springfield Office will not necessarily be considered and included in the Administrative Record for the final rulemaking.

Public Hearing

Persons wishing to comment at the public hearing should contact the person listed under "FOR FURTHER INFORMATION CONTACT" by 4:00 p.m. on September 8, 1989. If no one requests an opportunity to coment at a public hearing, the hearing will not be held.

Filing of a written statement at the time of the hearing is requested as it will greatly assist the transcriber.

Submission of written statements in advance of the hearing will allow OSMRE officials to prepare adequate responses and appropriate questions.

The public hearing will continue on the specified date until all persons scheduled to comment have been heard. Persons in the audience who have not been scheduled to comment, and who wish to do so, will be heard following those scheduled. The hearing will end after all persons scheduled to comment and persons present in the audience who wish to comment have been heard.

Public Meeting

If only one person requests an opportunity to comment at a hearing, a public meeting rather than a public hearing, may be held. Persons wishing to meet with OSMRE representatives to discuss the proposed amendments may request a meeting at the OSMRE office listed under "ADDRESSES" by contacting the person listed under "FOR FURTHER INFORMATION CONTACT." All such meetings will be open to the public, and, if possible, notices of meetings will be posted at the locations under "ADDRESSES". A written summary of each meeting will be made a part of the Administrative Record.

30 CFR Part 936

Oklahoma Permanent Regulatory Program

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSMRE), Interior.

ACTION: Proposed rule; reopening and extension of comment period.

SUMMARY: OSMRE is announcing receipt of additional information and revisions pertaining to previously proposed amendments to the Oklahoma permanent regulatory program (hereinafter, the "Oklahoma program") under the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The additional information and revisions pertain to exploration, permit requirements, applicant ownership and control information, reclamation and operations plans, special categories of mining, performance standards for surface mining, performance standards for underground mining, bonding, and inspections. The amendment is intended to revise the State program to be consistent with the corresponding Federal standard, incorporate the additional flexibility afforded by the revised Federal regulations, provide additional safeguard, clarify ambiguities, improve operational efficiency, and achieve use of the best technology currently available.

This notice sets forth the times and locations that the Oklahoma program and the proposed amendment to the program are available for public inspection and reopens the comment period during which interested persons may submit written comments on the proposed amendment.

DATES: Written comments must be received by 4:00 p.m., c.d.t., September 25, 1989.

ADDRESSES: Written comments should be mailed or hand delivered to Mr. James H. Moncrief at the address listed below.

Copies of the Oklahoma program, the proposed amendment, and all written comments received in response to this notice will be available for public review at the addresses listed below during normal business hours, Monday through Friday, excluding holidays. Each requester may receive one copy of the proposed amendment, free of charge, by contacting OSMRE's Tulsa Field Office.

Mr. James H. Moncrief, Director, Tulsa Field Office, Office of Surface Mining Reclamation and Enforcement, 5100 East Skelly Dirve, Suite 550, Tulsa, OK 74135, Telephone: (918) 581-6430.

Oklahoma Department of Mines, 4040 N. Lincoln, Oklahoma City, OK 74105, Telephone: (918) 521-3859.

FOR FURTHER INFORMATION CONTACT: Mr. James H. Moncrief, Director, Tulsa Field Office, at the address or telephone number listed in "ADDRESSES."

SUPPLEMENTARY INFORMATION:

I. Background on the Oklahoma Program

On January 19, 1981, the Secretary of the Interior conditionally approved the Oklahoma program. General background information on the Oklahoma program, including the Secretary's findings, the disposition of comments, and the conditions of approval of the Oklahoma program were published in the January 19, 1981, **Federal Register** (46 FR 4910). Subsequent actions concerning the Oklahoma program and program amendments are at 30 CFR 936.15.

II. Proposed Amendment

By letter dated May 18, 1988, (administrative record No. OK-843), Oklahoma submitted a proposed amendment to its program under SMCRA. Oklahoma submitted the proposed amendment in response to a July 15, 1985, letter (administrative record No. OK-681) and a June 9, 1987, letter (administrative record No. OK-811) that OSMRE sent in accordance with 30 CFR 732.17(d) through (f). Oklahoma proposed to amend 33 Sections of its program in response to the OSMRE letters. OSMRE published a notice in the June 28, 1988, **Federal Register** (53 FR 24321) announcing receipt of the May 18, 1988; amendment and inviting public comment on the adequacy of the proposed amendment. The public comment period ended July 28, 1988. Specific information on the proposed revisions to the Oklahoma program as a result of the May 18, 1988 submittal are presented in the June 28, 1988 **Federal Register** (53 FR 24321).

In a letter dated October 6, 1988, (administrative record No. OK-873), OSMRE notified Oklahoma, pursuant to 30 CFR 732.17(f)(1), of additional changes necessary to make the

Oklahoma program no less effective than the Federal regulations. By letter dated November 14, 1988, (administrative record No. 866) Oklahoma responded by asking OSMRE to formally consider a previously submitted informal amendment package dated September 16, 1988 (administrative record No. OK-862). The amendment package submitted by the November 14, 1988, letter contains proposed changes to 4 parts of the Oklahoma program. This amendment also adds Part 846, Individual Civil Penalties. Specific information on the proposed changes is presented in the January 9, 1989 **Federal Register** (54 FR 634).

To facilitate the processing of the May 18 and November 14, 1988 amendments, OSMRE combined the two amendments into a single amendment. Consequently, OSMRE published a notice in the January 9, 1989, **Federal Register** (54 FR 634) announcing the receipt of the November 14, 1988, amendment, the reopening and extension of the May 18, 1988 amendment, and inviting public comment on the adequacy of the proposed amendments. The public comment period ended February 8, 1989.

During its review of the proposed amendment, OSMRE identified concerns relating to: Jurisdiction, definitions, mining plans, Federal lands, lands unsuitable, exploration, permit requirements, permit revisions, applicant ownership and control, reclamation and operations plans, special categories of mining, bonding, performance standards for surface mining, performance standards for underground mining, prime farmland, preparation plants, inspections, and civil penalties. OSMRE notified Oklahoma of its concerns during a March 3, 1989, meeting (administrative record No. OK-887). In a letter dated June 22, 1989 (administrative record No. OK-888) Oklahoma responded to these concerns by submitting a revised proposed amendment package. The OSMRE reopened the public comment period for 30 days in the July 13, 1989 **Federal Register** notice (54 FR 133).

During its review of the June 22, 1989, amendment package, OSMRE identified concerns relating to: exploration, permit requirements, applicant ownership and control information, reclamation and operations plans, special categories of mining, performance standards for surface mining, performance standards for underground mining, bonding, and inspections. OSMRE notified Oklahoma of its concerns during a meeting on July 6, 1989 (administrative record No. OK-889). Oklahoma responded to OSMRE's concerns by submitting a revised proposed amendment package dated August 8, 1989 (administrative record No. OK-890).

Public Comment Procedures

OSMRE is reopening the comment period on the proposed Oklahoma program amendment to provide the public an opportunity to reconsider the adequacy of the amendment in light of the additional materials submitted on August 8, 1989. In accordance with the provisions of 30 CFR 732.17(h), OSMRE is seeking comments on whether the proposed amendment satisfies the applicable program approval criteria of 30 CFR 732.15. If the amendment is deemed adequate, it will become part of the Oklahoma program.

Written comments should be specific, pertain only to the issues proposed in this rulemaking, and include explanations in support of the commenter's recommendations. Comments received after the time indicated under "DATES" or at locations other than the Tulsa Field Office will not necessarily be considered in the final rulemaking or included in the administrative record.

List of Subjects in 30 CFR Part 936

BILLING CODE 4310-05-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 60 and 61

[FRL-3634-9]

National Emission Standards for Hazardous Air Pollutants; Mississippi and Tennessee; Delegation of Authority

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of delegation.

SUMMARY: On April 28, 1989, the State of Mississippi requested delegation of authority for the implementation and enforcement of certain standards in 40 CFR part 60, Standards of Performance for New Stationary Sources (NSPS) and 40 CFR part 61, National Emission Standards for Hazardous Air Pollutants (NESHAP), that had been promulgated and revised since December 14, 1988. On May 31, 1989, these NSPS and NESHAP were delegated to Mississippi (listed in "Supplementary Information").

On May 4, 1989, the Knox County Department of Air Pollution Control requested delegation of one NSPS category. This was delegated to them on May 16, 1989.

Three requests for delegation of authority for the implementation and enforcement of the NSPS and NESHAP were received from the Metropolitan Health Department of Nashville/Davidson County.

On May 10, 1989, the Metropolitan Health Department requested delegation of several NSPS. Also on May 10, 1989, the Metropolitan Health Department resubmitted a June 23, 1986, delegation request for several NESHAP which was inadvertently overlooked by EPA. These NSPS and NESHAP standards were delegated to the Metropolitan Health Department on May 31, 1989 (listed in "Supplementary Information").

The third request was made on May 30, 1989, for three NESHAP categories which were delegated on June 20, 1989 (listed in "Supplementary Information.").

On December 6, 1988, the State of Tennessee requested delegation of several NSPS and NESHAP standards. Since some of the standards were outdated when EPA received the request, EPA requested that Tennessee commit to updating the outdated standards. The committal letter was received on June 5, 1989. The standards were delegated on June 27, 1989.

DATES: The effective dates of the delegation are: Mississippi, May 31, 1989; Knox County, Tennessee, May 16, 1989; Nashville/Davidson County, Tennessee; May 31, 1989 and June 20, 1989; State of Tennessee, June 27, 1989.

ADDRESSES: Copies of the requests for delegation of authority and EPA's letters of delegation may be examined during normal business hours at the following locations:

Environmental Protection Agency, Region IV—Air Programs Branch, 345 Courtland Street, NE., Atlanta, Georgia 30365.

Knox County Department of Air Pollution Control, City/County Building, Room 459, 400 West Main Street, Knoxville, Tennessee 37902.

Metropolitan Health Department, Air Pollution Control Division, 311—23rd Avenue, North, Nashville, Tennessee 37203.

Bureau of Pollution Control, Mississippi Department of Natural Resources, Post Office Box 10385, Jackson, Mississippi 39209.

Division of Air Pollution Control,
Tennessee Department of Public
Control, 4th Floor, Customs House,
701 Broadway, Nashville, Tennessee
37219.

FOR FURTHER INFORMATION CONTACT: Rosalyn D. Hughes of the EPA Region IV Air Programs Branch, at the above address and telephone number (404) 347–2864 or FTS 257–2864.

SUPPLEMENTARY INFORMATION: Sections 101, 111(c)(1) and 112(d)(1) of the Clean Air Act authorize EPA to delegate authority to implement and enforce the standards set out in 40 CFR part 60, Standards of Performance for New Stationary Sources (NSPS) and 40 CFR part 61, National Emission Standards for Hazardous Air Pollutants (NESHAP).

On April 28, 1989, the State of Mississippi requested delegation of the NSPS and NESHAP standards that had been promulgated and revised as of December 14, 1988. The following standards were requested by Mississippi (the revised standards are designated by "(R)"):

40 CFR Part 60 Subpart
- F—Portland Cement Plants (R)
- O—Sewage Treatment Plants (R)
- QQQ—VOC Emissions from Petroleum Refinery Wastewater Systems
- SSS—Magnetic Tape Manufacturing

40 CFR Part 61 Subpart
- N—Inorganic Arsenic Emissions from Glass Manufacturing Plants
- O—Inorganic Arsenic Emissions from Primary Copper Smelters
- P—Inorganic Arsenic Emissions from Arsenic Trioxide and Metallic Arsenic Production Facilities

After a thorough review of the request, the Division Director of the Air, Pesticides and Toxics Management Division determined that such a delegation was appropriate for these source categories with all the conditions set forth in the delegation letter of November 30, 1981, and delegated them to Mississippi on May 31, 1989.

On May 10, 1989 Metropolitan Health Department of Nashville/Davidson County requested delegation of several NSPS. Also, on May 10, 1989, the local agency's Director of Environmental Services brought to EPA's attention a June 23, 1988, request from the Metropolitan Health Department that the delegation of several NESHAP standards be updated. This request was inadvertently overlooked. The following NSPS and NESHAP were requested:

40 CFR Part 60 Subpart
- Subpart Db—Industrial-Commercial Institutional Steam Generating Units for which Construction Commenced After June 19, 1986 (R)
- Subpart Na—Basic Oxygen Process Steelmaking Facilities for which Construction Commenced After January 20, 1983
- Subpart BBB—Rubber Tire Manufacturing Industry
- Subpart QQQ—VOC Emissions from Petroleum Refinery Wastewater Systems
- Subpart TTT—Surface Coating of Plastic Parts for Business Machines

40 CFR Part 61 Subpart
- B—Radon-222 Emissions from Underground Uranium Mines
- C—Beryllium (R)
- D—Beryllium Rocket Motor Firing (R)
- E—Mercury (R)
- F—Vinyl Chloride (R)
- H—Radionuclide Emissions from the Department of Energy Facilities
- I—Radionuclide Emissions from Facilities Licensed by the Nuclear Regulatory Commission and Federal Facilities not covered by Subpart H
- J—Equipment Leaks (Fugitive Emission Sources) of Benzene (R)
- K—Radionuclide Emissions from Elemental Phosphorus Plants
- M—Equipment Leaks (Fugitive Emissions Sources)

After a thorough review of both requests, the Division Director determined that such a delegation was appropriate for all the NSPS and NESHAP standards, except for subparts B, H, I, and K, with all the conditions set forth in the delegation letters of May 25, 1977, and February 20, 1988, and delegated them to Nashville/Davidson County on May 31, 1989. NESHAP subparts B, H, I, and K were not delegated because EPA has not developed the proper technical guidance. Once guidance is developed EPA will on a case-by-case basis review delegation requests for these standards.

On May 30, 1989, the Metropolitan Health Department requested authority for three NESHAP categories:

40 CFR Part 61 Subpart
- N—Inorganic Arsenic Emissions from Glass Manufacturing Plants
- O—Inorganic Arsenic Emissions from Primary Copper Smelters
- P—Inorganic Arsenic Emissions from Arsenic Trioxide and Metallic Arsenic Production Facilities.

After a thorough review of the request, the Division Director determined that such a delegation was appropriate for these source categories with all the conditions set forth in the delegation letters of May 25, 1977, and February 20, 1988, and delegated them to Nashville on June 20, 1989.

On May 4, 1989, the Knox County Department of Air Pollution Control requested delegation of NSPS Subpart QQQ, VOC Emissions from Petroleum Wastewater Systems. After a thorough review of the request, the Division Director determined that such a delegation was appropriate for this source category with all the conditions set forth in delegation letters of May 20, 1977, and December 15, 1985, and delegated them to Knox County on May 14, 1989.

On January 6, 1989, the State of Tennessee submitted several NSPS and NESHAP regulations and requested delegation for those source categories. Their NSPS and NESHAP regulations go through the same process as State Implementation Plan revisions. Once the NSPS or NESHAP is State-effective, it is submitted to EPA. EPA reviewed the regulations and discovered that the submitted version of some source categories was outdated. Before EPA would delegate those source categories to Tennessee, Tennessee was required to submit a letter committing to update the outdated NSPS and NESHAP standards. The letter was received June 5, 1989. The NSPS and NESHAP which were requested are listed below:

40 CFR Part 60 Subpart
- D—Fossil-Fuel-Fired Steam Generators for Which Construction is Commenced after April 3, 1972 (R)
- Da—Electric Utility Steam Generating Units for Which Construction is Commenced After September 8, 1978 (R)
- Db—Industrial-Commercial-Institutional Steam Generating Units
- I—Hot Mix Asphalt Facilities (R)
- J—Petroleum Refineries (R)
- N—Iron and Steel Plants (R)
- Na—Secondary Emissions from Basic Oxygen Process Steelmaking Facilities for Which Construction is Commenced After January 20, 1983.
- T—Phosphate Fertilizer Industry: Wet Phosphoric Acid Plants (R)
- U—Phosphate Fertilizer Industry: Superphosphoric Acid Plants (R)
- V—Phosphate Fertilizer Industry: Diammonium Phosphate Plants (R)
- W—Phosphate Fertilizer Industry: Triple Superphosphate Plants (R)
- AA—Steel Plants: Electric Arc Furnaces Constructed After October 24, 1974, and on or Before August 17, 1983 (R)
- AAa—Electric Arc Furnaces and Argon-Oxygen Decarburization Vessels Constructed After August 7, 1983
- BB—Kraft Pulp Mills (R)
- CC—Glass Manufacturing Plants (R)
- EE—Surface Coating of Metal Furniture
- GG—Stationary Gas Turbines (R)
- HH—Lime Manufacturing Plants (R)
- KK—Lead-Acid Battery Manufacturing Plants
- MM—Automobile and Light-Duty Truck Surface Coating Operations
- NN—Phosphate Rock Plants
- QQ—Graphic Arts Industry: Publication Rotogravure Printing

- RR—Pressure Sensitive Tape and Label Surface Coating Operations
- SS—Industrial Surface Coating: Large Appliances
- TT—Metal Coil Surface Coating
- UU—Asphalt Processing and Asphalt Roofing Manufacture
- VV—Equipment leaks of VOC in the Synthetic Organic Chemicals Manufacturing Industry
- WW—Beverage Can Surface Coating Industry
- XX—Bulk Gasoline Terminals
- FFF—Flexible Vinyl and Urethane Coating and Printing
- GGG—Equipment Leaks of VOC in Petroleum Refineries
- HHH—Synthetic Fiber Production Facilities
- JJJ—Petroleum Dry Cleaners
- KKK—Equipment Leaks of VOC from Onshore Natural Gas Processing Plants
- LLL—Onshore Natural Gas Processing: SO_2 Emissions
- OOO—Nonmetallic Mineral Processing Plants
- PPP—Wool Fiberglass Insulation Manufacturing Plants
- TTT—Industrial Surface Coating: Surface Coating of Plastic Parts for Business Machines

40 CFR Part 61 Subpart
- E—Mercury (R)
- F—Vinyl Chloride (R)
- J—Equipment Leaks (Fugitive Emission Sources) of Benzene
- N—Inorganic Arsenic Emissions from Glass Manufacturing Plants
- O—Inorganic Arsenic Emissions from Primary Copper Smelters
- P—Inorganic Arsenic Emissions from Arsenic Trioxide and Metallic Arsenic Production Facilities
- V—Equipment Leaks (Fugitive Emissions Sources)

After a thorough review of the request, EPA's Division Director determined that such a delegation was appropriate for these source categories with all the conditions set forth in the delegation letters of April 11, 1980, and delegated them to Tennessee on June 27, 1989.

I certify, pursuant to 5 U.S.C. section 605(b), that these delegations will not have a signficant impact on a substantial number of small entities.

The Office of Management and Budget has exempted this rule from the requirements of Section 3 of Executive Order 12291.

Authority: Secs. 111 and 112 of the Clean Air Act (42 U.S.C. 7411 and 7412).

Dated: August 14, 1989.

Greer C. Tidwell,

Regional Administrator.

DEPARTMENT OF TRANSPORTATION

Coast Guard

46 CFR Part 151

[CGD 81–082]

RIN 2115–AA70

Unmanned Barges Carrying Certain Bulk Dangerous Cargoes

AGENCY: Coast Guard, DOT.

ACTION: Notice of withdrawal.

SUMMARY: On June 4, 1984, an advance notice of proposed rulemaking (ANPRM) concerning the revision of rules in 46 CFR part 151 for barges carrying bulk cargoes was published in the Federal Register (49 FR 23085). This rulemaking project is being withdrawn because the amendments that this project would have made have since been made under other Coast Guard rulemakings.

DATE: The advance notice of proposed rulemaking is withdrawn as of August 24, 1989.

FOR FURTHER INFORMATION CONTACT: Mr. T.J. Felleisen, Office of Marine Safety, Security and Environmental Protection (G–MTH–1), Room 1214, U.S. Coast Guard Headquarters, Washington, DC 20593–0001, (202) 267–1217.

Dated: August 18, 1989.

J.D. Sipes,

Rear Admiral, U.S. Coast Guard, Chief, Office of Marine Safety, Security and Environmental Protection.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 0

[Gen. Dkt No. 89–44; DA 89–943]

Measuring Electromagnetic Emission From Digital Devices

AGENCY: Federal Communications Commission.

ACTION: Proposed rule; extension of reply comment time.

SUMMARY: The Chief Engineer, in response to several requests for a 60–day extension, granted an additional 30–day time period in which to file reply comments in the proceeding to revise the FCC procedure for testing digital devices (TP–5). The additional time will give interested parties the necessary time to file meaningful reply comments.

DATES: The new date for filing reply comments is September 6, 1989.

ADDRESSES: Federal Communications Commission, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Richard Fabina, FCC Laboratory, 301–725–1585.

SUPPLEMENTARY INFORMATION: The Notice of Proposed Rule Making was published at 54 FR 11415, March 20, 1989.

Order Extending Time to File Reply Comments

In the matter of Procedure for measuring electromagnetic emissions from digital devices.

Adopted: August 4, 1989.

Released: August 7, 1989.

By the Chief Engineer:

1. A Notice of Proposed Rule Making in the above entitled proceeding, FCC 89–53, was adopted by the Commission on February 13, 1989, and released on March 7, 1989. Comments in this proceeding originally due May 8, 1989, were extended twice—30 days each time by two separate Commission Orders. The dates for Reply comments originally due June 7, 1989, were extended the same amount of time by each Order. The date for filing comments expired on July 7, 1989. Reply comments are currently due on August 7, 1989.

2. The Computer and Business Equipment Manufacturers Association ("CBEMA") filed with the Commission a petition requesting an additional 60 day extension of the time for filing reply comments. The petitioner expresses the opinion that additional time is needed because the substantial changes to the proposed digital device measurement procedure have elicited comments from more than 24 different parities. The issues raised in these comments are substantive and warrant full investigation before reply comments may be submitted. Separate petitions filed by Hewlett-Packard and Tandy Corporation support CBEMA's motion.

3. Because of the complexity and technical nature of this proceeding, as well as our desire to have a fully developed record before us, we are persuaded that a 30 day extension of the reply comment date is warranted. A 60 day extension is not justifiable because of the two previous 30 day extensions.

4. Accordingly, it is ordered, Pursuant to the delegated authority contained in 47 CFR 0.241(a)(5), that the period of time for the filing of reply comments in

the above proceeding is extended until September 6, 1989.

Thomas P. Stanley,

Chief Engineer.

[FR Doc. 89-19933 Filed 8-23-89; 8:45 am]

BILLING CODE 6712-01-M

---

47 CFR Part 15

[Gen. Docket Nos. 89-116, 89-117 and 89-118; DA 89-673]

Procedure for Measurement of Intentional Radiators; Extension of Comment Period

AGENCY: Federal Communications Commission.

ACTION: Proposed rule; extension of time.

SUMMARY: The Chief Engineer, in response to several requests for a 60-day extension, granted an additional 30-day time period in which to file comments in the proceeding to revise the FCC procedure for testing intentional radiators (TP-3), unintentional radiators (TP-4) and radio control and security devices and their associated receivers (TP-6) (54 FR 28690-28693, July 7, 1989). The additional time will give interested parties the necessary time to file meaningful comments.

DATES: Comments to be filed on or before September 11, 1989 and reply comments to be filed on or before October 9, 1989.

ADDRESSES: Federal Communications Commission, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Richard Fabina, FCC Laboratory, 301-725-1585.

SUPPLEMENTARY INFORMATION:

In the matter of: FCC procedure for measurement of intentional radiators (except for periodic and spread spectrum devices and devices operating below 30 MHz); FCC procedure for measuring RF emissions from intentional radiators with periodic operation and associated superregenerative receivers; FCC procedure for measurement of unintentional radiators (except digital devices and devices operating below 30 MHz).

Adopted: August 14, 1989

Released: August 16, 1989

By the Chief Engineer: 1. Notices of Proposed Rule Making in the above entitled proceedings, FCC 89-154, FCC 89-155 and FCC 89-156, respectively, were adopted by the Commission on May 12, 1989, and released on June 29, 1989. Comments and reply comments in these proceedings are due on August 21, 1989, and September 5, 1989, respectively.

2. On July 28, 1989, the Computer and Business Equipment Manufacturers Association (CBEMA) filed with the Commission a petition requesting an extension of the time for filing comments in these proceedings to October 9, 1989. A concurrent proceeding in General Docket No. 89-44 is seeking to revise the FCC established measurement procedure for digital devices. The measurement procedures in these proceedings are similar in many aspects, indeed, have the same foundation in RF emission measurement techniques as the digital device measurement procedure proposed in Gen. Docket No. 89-44. Since many of the its members are expected to expand their interests into other low power uses of the RF spectrum, CBEMA is asking for more time for its members to adequately evaluate the proposals in these proceedings.

3. On August 3, 1989, Compaq Computer Corporation (Compaq) filed a petition supporting the CBEMA petition requesting a 60 day extension on the date for filing comments in these proceedings. The Compaq petition essentially states the same reasons for the requested 60 day extension.

4. The Commission values contributions made to the development of national measurement standards by organizations such as CBEMA and Compaq. Because of the additional information and experience which can be added to these proceedings by CBEMA, Compaq and others, as well as our desire to have a fully developed record before us in each proceeding, it has been determined that an extension of the reply comment date in each proceeding is warranted. However, due to our desire to resolve these proceedings as soon as possible, we feel that extending the reply comment period as requested will prolong these proceedings unnecessarily. We believe that the concerns of all interested parties can still be resolved by extending the comment period in each proceeding by 30 days, instead of the requested 60 days. Accordingly, it is ordered, pursuant to the delegated authority contained in 47 CFR 0.241(a)(5), that the period of time for the filing comments in the above proceedings is extended until September 11, 1989, and the time for filing of reply comments is extended until October 9, 1989.

Thomas P. Stanley,

Chief Engineer.

BILLING CODE 6712-01-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 640

[Docket No. 90693-9193]

RIN 0648-AC29

Spiny Lobster Fishery of the Gulf of Mexico and South Atlantic

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Proposed rule.

SUMMARY: NOAA issues this proposed rule to implement Amendment 2 to the Fishery Management Plan for the Spiny Lobster Fishery of the Gulf of Mexico and South Atlantic (FMP). This proposed rule would establish a regulatory amendment procedure for the future implementation of specified types of gear and harvest restrictions applicable to the fishery in the exclusive economic zone (EEZ). The intended effects of this proposed rule are to provide a more flexible and timely system implementing rules governing the conduct of the spiny lobster fishery, enhance cooperative Florida (State)/federal management, reduce federal management costs, improve the effectiveness of necessary rules, and presumably increase productivity from the resource.

DATE: Written comments must be received on or before October 10, 1989.

ADDRESSES: Comments on this proposed rule and requests for copies of Amendment 2 which incorporates the draft regulatory impact review (RIR) and the draft environmental assessment (EA) should be sent to Michael E. Justen, Southeast Region, National Marine Fisheries Service, 9450 Koger Boulevard, St. Petersburg, FL 33702.

FOR FURTHER INFORMATION CONTACT: Michael E. Justen, 813-893-3722.

SUPPLEMENTARY INFORMATION: The spiny lobster fishery is managed under the FMP, prepared by the Gulf of Mexico and South Atlantic Fishery Management Councils (Councils), and its implementing regulations at 50 CFR part 640, under the authority of the Magnuson Fishery Conservation and Management Act (Magnuson Act). Amendment 2, prepared jointly by the Councils, proposes a regulatory amendment procedure to implement or modify certain gear and harvest limitations, as a substitute for the costly, time-consuming FMP amendment process presently required for such actions. Amendment 2 also modifies in the FMP several of the issues, a management objective, the statement of optimum yield, and the habitat section and adds a new section on vessel safety to the FMP.

The directed fishery for spiny lobsters occurs entirely within or off the waters of Florida with the principal harvest area being the Florida Keys reef tract. Consequently, the great preponderance of landings have occurred in Monroe County, Florida (96 percent in 1984). East coast landings have occurred primarily in Dade County (Miami area), Florida. Landings of smaller amounts and/or of a sporadic nature have

occurred in other east and west coast Florida counties. Over 80 percent of spiny lobsters consumed in the U.S. are imported. Management of the fishery has been based on rules almost entirely developed by the State of Florida.

The FMP provides management authority only for that part of the fishery operating in the EEZ. The fishery within State waters remains under State authority. To achieve its conservation and management objectives of protecting the fishery throughout its range and to effectively coordinate management with the State, the FMP, as implemented in 1982, complemented the State's management regime. Subsequent amendments have largely extended State rules into the EEZ. However, some measures implemented in the EEZ were different from those of the State. In 1984, the Councils prepared Amendment 1 in an attempt to resolve the remaining State/federal management incompatibilities and generally to improve management of the resource. Although the State, through its representative on the two Councils, had extensive input during the 3-year development process of Amendment 1, the resulting state and federal regulations implemented in 1987 still contained significant incompatibilities with regard to bag and size limits, permits, and use of undersized lobsters as attractants. These incompatibilities are largely due to changes by the State during the lengthy period required to implement a change via an amendment to the FMP and exemplify the differences in the relative responsiveness of the federal and state management systems.

Concern over the difficulties experienced in implementing compatible regulations prompted the Councils, the Florida Marine Fisheries Commission (FMFC), and the Director, Southeast Region, NMFS (Regional Director) to pursue alternative state/federal management structures that would optimize the use of limited state and federal resources, prevent duplication of effort, and make maximum use of the existing State regime. Accordingly, Amendment 2 proposes a procedure whereby the FMFC may request the Regional Director to implement in the EEZ by regulatory amendment, with Councils' oversight, modification to certain gear and harvest limitations applicable to State waters that were proposed by the FMFC and approved by the Florida Governor and Cabinet. The regulatory amendment process requires publication of a proposed rule in the **Federal Register**, a public comment period, and, if the rule is approved, publication of a final rule in the **Federal Register**.

Under Amendment 2, the Councils, FMFC, and NMFS would adopt a protocol that describes the roles and positions of the federal and State governments in the management of the spiny lobster fishery. The provisions of the protocol are as follows:

1. The Councils and NMFS acknowledge that the fishery is a State fishery (which extends into the EEZ) in terms of current participants in the directed fishery, major nursery, fishing, and landing areas, and historical regulation; and it is a fishery requiring cooperative State/federal efforts for effective management through an FMP.

2. The Councils and NMFS acknowledge that the State is managing and will continue to manage the resource to protect and increase the long-term yields and prevent depletion of the lobster stocks and that the State Administrative Procedure Act and rule implementation procedures, including final approval of the rules by Governor and Cabinet, provide ample and fair opportunity for all persons to participate in the rulemaking procedure.

3. The FMFC acknowledges that rules proposed for implementation under this amendment must be consistent with the management objectives of the FMP, the national standards, other provisions of the Magnuson Act, and other applicable federal law. Federal rules will be implemented in accordance with regulatory amendment procedures.

4. The Councils and NMFS agree that, for any of the rules defined within this amendment, the State may propose the rule directly to NMFS, concurrently informing the Councils of the nature of the rule, and that NMFS will implement the rule within the EEZ provided it is consistent under protocol number 3. If either of the Councils informs NMFS of its concern over the rule's inconsistency with protocol number 3, NMFS will not implement the rule until the Councils, FMFC, and NMFS or their representatives meet and resolve the issue (i.e., until the Council has withdrawn its objection).

5. The State will have the responsibility for collecting and developing the information upon which to base the fishing rules, with assistance by NMFS as needed, and will cooperatively share the responsibility for enforcement with federal agencies.

6. FMFC will provide to NMFS and to the Councils written explanations of its decisions related to each of the rules (including a statement of the problem that the rulemaking addresses, how the rule will solve the problem, and how interested parties were involved in the rulemaking), summaries of public comments, biological, economic and social analyses of the impacts of the proposed rule and alternatives, and such other information that is relevant.

7. The rules will apply to the EEZ for the management area (North Carolina to Texas) unless the Regional Director determines they may adversely impact other state and federal fisheries. In that event, the Regional Director may limit the application of the rule, as necessary, to address the problem.

8. NMFS agrees that its staff will prepare the proposed federal rule. The Councils agree that their staffs, with assistance by the staffs of FMFC and NMFS, will prepare the EA/RIR and other documents required in support of the rule.

The Councils believe that using a regulatory amendment procedure for implementation by the Regional Director, under oversight by the Councils, of certain types of rules adopted by the State has the following advantages:

1. It provides a more flexible and timely system that should result in compatible rules between State and federal jurisdictions.

2. It provides ample and fair opportunity for public input into the rulemaking process through state hearings and workshops, Council oversight, and public comment to NMFS on the proposed rule.

3. It is more cost-effective by (a) allowing the Councils and the Regional Director to use public hearing information gathered by and socioeconomic analyses prepared by the State, (b) increasing enforcement effectiveness through compatible State/federal rules, and (c) shifting the costs of data gathering and interpretation to the State.

4. It provides the Councils with opportunity to review each rule for consistency with the FMP objectives and the Magnuson Act and ensures that Councils' concerns regarding consistency are resolved before a rule may be implemented.

5. It does not prohibit the Councils from exercising their amendment or public hearing authority for changes to the FMP.

6. It provides the State with a more responsive management system for the EEZ portion of a fishery that is largely a State fishery (99.3 percent of spiny lobster permit holders in 1986 were State residents), whereas previously, by virtue of the localized geographical scope of the spiny lobster fishery, the Councils placed higher priority on

amending FMPs with regional application, thereby delaying implementation of compatible rules and adversely impacting effective management of the fishery.

7. It assures that the management objectives of the Council and FMFC are carried out in a manner that more effectively benefits the resource and user groups, within the standards of the Magnuson Act and the standards of the FMFC.

Concomitant with the proposed regulatory amendment procedure for changing certain gear and harvest limitations, Amendment 2 proposes to (1) amend and add to the issues of the "Problems and Issues in the Fishery" identified in the FMP; (2) add to the FMP a "Management Objective" to provide for a more flexible management system that minimizes regulatory delay, thus assuring more effective, cooperative State and federal management of the fishery; (3) modify the statement of optimum yield to remove numerically specified minimum legal carapace and tail lengths, thus permitting modification of those lengths by the regulatory amendment process contained in Amendment 2; (4) add a "Vessel Safety" section; and (5) update the "Habitat of the Stocks" section. These amendments and additions are discussed in Amendment 2, the availability of which was published in the **Federal Register** (54 FR 31063, July 26, 1989. The Secretary may adopt the proposed regulatory text in some form other than as an amendment to 50 CFR part 640, or as an appendix to that part.

Classification

Section 304(a)(1)(D)(ii) of the Magnuson Act, as amended by Public Law 99–659, requires the Secretary of Commerce (Secretary) to publish regulations proposed by a Council within 15 days of receipt of an amendment and regulations. At this time, the Secretary has not determined that Amendment 2, which this proposed rule would implement, is consistent with the national standards, other provisions of the Magnuson Act, and other applicable law. The Secretary, in making that determination, will take into account the data, views, and comments received during the comment period.

The Councils prepared within Amendment 2 an environmental assessment (EA) that discusses the impact on the environment as a result of this rule. A copy of the EA may be obtained at the address listed above and comments on it are requested.

The Under Secretary for Oceans and Atmosphere, NOAA, determined that this proposed rule is not a "major rule" requiring the preparation of a regulatory impact analysis under E.O. 12291. This proposed rule, if adopted, is not likely to result in an annual effect on the economy of $100 million or more; a major increase in costs or prices for consumers, individual industries, federal, state, or local government agencies, or geographic regions; or a significant adverse effect on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic or export markets.

The Councils prepared within Amendment 2 a regulatory impact review (RIR) which concludes that this rule, if adopted, would have the economic effect of reducing federal spiny lobster management costs. A copy of the draft RIR may be obtained at the address listed above.

The General Counsel of the Department of Commerce certified to the Small Business Administration that this proposed rule, if adopted, will not have a significant economic impact on a substantial number of small entities because the rule would only establish a procedure for the future implementation of specified types of gear and harvest restrictions on fishing in the EEZ. Each future action will be accompanied by an RIR and, if it will have a significant economic impact on a substantial number of small entities, a regulatory flexibility analysis will be prepared. As a result, a regulatory flexibility analysis was not prepared for this rule to implement Amendment 2.

This proposed rule is exempt from the procedures of E.O. 12291 under section 8(a)(2) of that order. It is being reported to the Director, Office of Management and Budget, with an explanation of why it is not possible to follow the procedures of that order.

The Councils determined that this rule will be implemented in a manner that is consistent to the maximum extent practicable with the approved coastal zone management programs of North Carolina, South Carolina, Florida, Alabama, Mississippi, and Louisiana. Georgia and Texas do not have approved coastal zone management programs. This determination has been submitted for review by the responsible state agencies under section 307 of the Coastal Zone Management Act.

This proposed rule does not contain a collection-of-information requirement for purposes of the Paperwork Reduction Act.

The Deputy Assistant Secretary of Commerce for Intergovernmental Affairs has determined that Amendment 2 and this proposed rule have sufficient federalism implications to warrant preparation of a federalism assessment (FA) under E.O. 12612. Because section 304(a)(1)(D)(ii) of the Magnuson Act requires the Secretary to publish regulations proposed by a Council within 15 days of receipt, there is insufficient time to prepare an FA prior to publication. However, an FA is being prepared and will be available, upon request, at the address listed above approximately 10 days after the date this rule is published in the **Federal Register**. Based on a preliminary analysis, there are no provisions or elements of Amendment 2 or this proposed rule that are inconsistent with the principles, criteria, and requirements set forth in sections 2 through 5 of E.O. 12612. Further, Amendment 2 and the proposed rule would not appear to affect Florida's ability to discharge traditional state governmental functions, or other aspects of state sovereignty. The FA will address these preliminary determinations as well as the extent to which Amendment 2 and this proposed rule will impose costs or burdens on Florida, and Florida's ability to carry out its responsibilities under Amendment 2 and this proposed rule.

List of Subjects in 50 CFR Part 640

Fisheries, Fishing, Recordkeeping and reporting requirements.

Dated: August 16, 1989.

James E. Douglas, Jr.,

Deputy Assistant Administrator for Fisheries, National Marine Fisheries Service.

For reasons set forth in the preamble, 50 CFR Part 640 is proposed to be amended as follows:

PART 640—SPINY LOBSTER FISHERY OF THE GULF OF MEXICO AND SOUTH ATLANTIC

1. The authority citation for the part 640 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

2. Section 640.24 is redesignated as § 640.25 and a new § 640.24 is added to read as follows:

§ 640.24 Modification of gear and harvest limitations.

(a) *Applicability.* The following specified types of rules applicable to the spiny lobster fishery in the EEZ may be established or modified in accordance with the procedures of paragraphs (b), (c), and (d) of this section:

(1) Gear limitations:

(i) Setting the number of traps that may be fished by each vessel;

(ii) Prescribing the construction characteristics of traps, including escape gaps;

(iii) Specifying gear and vessel identification requirements;

(iv) Specifying gear that may be used or prohibited in a directed fishery;

(v) Specifying bycatch levels that may be taken as incidental catch in a non-directed fishery; and

(vi) Specifying the soak or removal periods for traps and the procedures for removal of lost or abandoned traps.

(2) Harvest limitations:

(i) Specifying the recreational bag and possession limits;

(ii) Specifying fishing seasons;

(iii) Restricting use, possession, and handling of undersized lobsters; and

(iv) Specifying minimum legal size limits.

(b) *Initiation.* (1) After final approval by the Florida Governor and Cabinet of a rule proposed by the Florida Marine Fisheries Commission (FMFC), the FMFC will advise the Gulf of Mexico and South Atlantic Fishery Management Councils (Councils) and the Regional Director of any rule within the scope of paragraph (a) of this section that the FMFC is recommending for implementation in the EEZ by regulatory amendment. Such written recommendation must include:

(i) The FMFC rule;

(ii) The proposed implementation date;

(iii) A statement of the problem that the rule addresses and how the rule will solve the problem;

(iv) A summary of the best available scientific information relative to the problem;

(v) Alternatives to the rule that were considered by the FMFC;

(vi) Analyses of the biological, economic, and social impacts of the rule and the alternatives;

(vii) A statement of how interested persons were involved in the rulemaking and a summary of public comments; and

(viii) Such other information that is relevant.

(2) For a rule to be implemented by the start of the next fishing season, an FMFC rule and recommendation that is consistent with the criteria specified in paragraph (c)(1) of this section must be provided to the Councils and the Regional Director not later than 6 months before the start of the fishing season. The effective date of an FMFC rule implemented under this procedure will be the starting date of the next fishing season following final approval of the regulatory amendment unless otherwise agreed upon by the FMFC, the Councils, and the Regional Director.

(3) The Councils will submit the rule and supporting analyses to their Scientific and Statistical Committees who will advise the Regional Director of the scientific validity of the analyses. The Councils will also submit the rule and supporting analyses to their advisory panels for comment to the Councils and the Regional Director.

(4) If either Council judges the FMFC rule to be inconsistent with the Magnuson Act or the objectives of the FMP, that Council will so advise the other Council, the Regional Director, and the FMFC of that judgment. In that event, the Regional Director will not proceed with implementation of the FMFC rule until the issue of consistency is resolved (i.e., until the Council has withdrawn its objection).

(5) With assistance from the FMFC, the Councils will prepare such supporting documentation (environmental assessment/environmental impact statement, regulatory impact review, regulatory flexibility analysis) as may be required.

(c) *Review.* The Regional Director will review the FMFC rule and recommendations, the supporting analyses, and the supporting documentation. If the Regional Director preliminarily concludes that the rule is consistent with the national standards, other provisions of the Magnuson Act, other applicable law, and the objectives of the Fishery Management Plan for the Spiny Lobster Fishery of the Gulf of Mexico and South Atlantic (FMP) and that the FMFC rule and recommendation are consistent with the scope and procedures of paragraphs (a) and (b) of this section, he will notify the Councils and the FMFC of his intent to implement the FMFC rule in the EEZ by regulatory amendment. If he concludes that the FMFC rule or recommendation is not consistent, he will immediately notify the Councils and the FMFC. The Councils and the FMFC will be given an opportunity to correct a deficiency in the FMFC rule or recommendation, the record, or the supporting documents.

(d) *Implementation.* (1) When the Regional Director preliminarily concludes that the FMFC rule and recommendation are consistent with the criteria specified in paragraph (c) of this section, provided any issue of consistency raised by a Council has been resolved, the Regional Director will draft and the Secretary will publish in the **Federal Register** a Federal proposed rule with a 30-day public comment period.

(2) After reviewing any public comment, if the Regional Director finally concludes that the rule is consistent with the criteria specified in paragraph (c) of this section, the Secretary will publish in the **Federal Register** the final rule.

Thursday, August 24, 1989

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forms Under Review by Office of Management and Budget

August 18, 1989.

The Department of Agriculture has submitted to OMB for review the following proposals for the collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35) since the last list was published. This list is grouped into new proposals, revisions, extensions, or reinstatements. Each entry contains the following information:

(1) Agency proposing the information collection; (2) Title of the information collection; (3) Form number(s), if applicable; (4) How often the information is requested; (5) Who will be required or asked to report; (6) An estimate of the number of responses; (7) An estimate of the total number of hours needed to provide the information; (8) An indication of whether section 3504(h) of Public Law 96–511 applies; (9) Name and telephone number of the agency contact person.

Questions about the items in the listing should be directed to the agency person named at the end of each entry. Copies of the proposed forms and supporting documents may be obtained from: Department Clearance Officer, USDA, OIRM, Room 404-W Admin. Bldg., Washington, DC. 20250, (202) 447–2118.

Federal Crop Insurance Corporation

Nominations for Appointment to the Federal Crop Insurance Commission

The Federal Crop Insurance Corporation (FCIC) solicits, on behalf of the Secretary of Agriculture, nominations for appointment to fill one vacancy on the Congressionally created Federal Crop Insurance Commission (the "Commission"). The Commission was created by the Federal Crop Insurance Act of 1988 (Pub. L. 100–546) (the "Act").

The Act provides for the establishment of a commission to study problems with respect to participation in the crop insurance program; program operations; and ways to improve crop insurance. The Commission consists of twenty one voting members and four non-voting members. The Secretary of Agriculture has appointed ten (10) individuals representing various constituencies of the insurance industry, and ten (10) individuals representing agricultural producer interests. The Manager of FCIC also serves as a voting member and the Chairman and Ranking Minority Members of the House and Senate Agriculture Committees also serve as non-voting members of the Commission.

Nominations from interested parties are hereby solicited to fill one vacancy on the Commission according the following criteria in section 4.(b)(1)(A) of Public Law 100–546:

(A) Four (4) individuals who will represent the views of the companies (for managing general agencies which write crop insurance through other companies) that:

(1) Have a 1989 Reinsurance Agreement under the Federal Crop Insurance Act; and

(2) For the 1967 crop year, wrote the greatest dollar volume of federally reinsured crop insurance;

The Department of Agriculture's programs are open to all individuals without regard to race, color, religion, sex, national origin, age, mental or physical handicap, or marital status. Further, it is the Secretary of Agriculture's policy that membershp on USDA boards and committees reflect, to the extent practicable, the diversity of individuals served by the programs.

Nominations to the Commission in response to this notice are accepted by the filing of a National Agency Check Standard Form (SF–85A).

Interested parties may request a National Agency Check Standard Form (SF–85A), either in writing or by telephone, from Peter F. Cole, Secretary, Federal Crop Insurance Corporation, Room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250, telephone (202) 447–3325.

Nominations should be mailed to Peter F. Cole at the above address. For timely consideration, completed SF–85A Forms must be received by not later than September 12, 1989.

Done in Washington, DC on August 15, 1989.

John Marshall,
Manager, Federal Crop Insurance Corporation.

[FR Doc. 89–20004 Filed 8–23–89; 8:45 am]

BILLING CODE 3410–08–M

Forest Service

Mallard Timber Sales; Nez Perce National Forest; Idaho County, Idaho

AGENCY: Forest Service, USDA.

ACTION: Notice; intent to prepare an environmental impact statement.

SUMMARY: Notice is hereby given that the Forest Service will prepare an environmental impact statement (EIS) to be known as the Mallard EIS on a proposal to build roads and harvest timber in Mallard Roadless Area 1847, which lies about 36 miles southeast of Grangeville, Idaho. This roadless area is proximate to the Frank Church-River of No Return Wilderness on the south and east; and effects of proposed development have been highly controversial in the past.

DATE: Written comments and suggestions should be received on or before September 25, 1989.

ADDRESS: Submit comments and suggestions to the District Ranger, Red River Ranger District, Nez Perce National Forest, Box 23, Elk City, ID. 83525.

FOR FURTHER INFORMATION CONTACT: Mark Peterson, Supervisory Forester, Red River Ranger District, Elk City, Idaho 83525, telephone (208) 842–2255.

SUPPLEMENTARY INFORMATION. The proposed action to be analyzed in this EIS calls for harvest of timber on 1,140 acres over ten years. Collector and local roads would be constructed. A range of alternatives to this proposed action will be considered, including no action (nondevelopment of the roadless area). The EIS will tier to the Nez Perce Forest Plan and Forest Plan EIS. The purpose of the proposed action is to help satisfy short-term demands for timber and to move toward an equal distribution of timber age classes on suitable lands.

On March 12, 1986, notice was published in the **Federal Register** (51 FR 8524) that an environmental impact statement would be prepared to assess the effects of a transportation system and associated timber sales within the Jersey Creek, Noble Creek, and Big Mallard Creek areas. Analysis began on schedule, but was delayed until the Nez Perce Forest Plan was approved in October, 1987. Further analysis after that date indicated that the scope of the proposed action was likely too broad for reasonably thorough site-specific treatment in a single EIS. As a result of this additional analysis two separate proposed actions were formulated. The original notice of intent was cancelled (54 FR 32677); this notice is one of the two which replace it.

All management activities proposed in the Mallard EIS would occur within Roadless Area 1847. Similar management activities are planned at about the same time entirely within Roadless Area 1921; these will be considered separately in the Cove EIS. The two roadless areas are separated by a road corridor, and although the proposed actions are similar and could possibly be treated in the same EIS (40 CFR 1508.25 (a)(3)), the scope of the combined proposals is such that the best way to adequately assess reasonable alternatives and combined impacts is to prepare an EIS for activities proposed within each roadless area.

The two proposed actions may have cumulatively significant impacts on some environmental components in both roadless areas. For example, the Big Mallard Creek drainage would be affected by both proposed actions. Therefore, discussions of fisheries and water quality in this drainage in each EIS will include activities proposed in the other EIS and the combined impact of all activities. Evaluations of impacts on threatened or endangered species habitat will be handled in like manner. Analysis may show further combined treatments to be necessary.

The actions are not connected. The timber harvest and road construction proposed in either roadless area would not automatically trigger actions in the other which may require an environmental impact statement. Either action could proceed without the other; and neither depends upon a larger action for justification.

Primitive area and wilderness possibilities of Roadless Area 1847 have been examined several times over the past 53 years by both the Forest Service and Congress. It was excluded from the Frank Church-River of No Return Wilderness in the Central Idaho Wilderness Act and was not recommended for wilderness or continued roadless management in the Nez Perce Forest Plan.

Public participation in the environmental analysis for the proposed projects was first solicited in the spring of 1986. Two hundred letters were sent to individuals, organizations, and government agencies. Public meetings were held at Red River Ranger Station and Grangeville. Comments on the draft Forest Plan EIS specific to Roadless Area 1847 were reviewed.

Among the issues identified to date are those associated with the magnitude of impacts on:

1. Fish habitat, water quality, and riparian areas;
2. Threatened or endangered species;
3. Big game habitat;
4. Commercial outfitters;
5. Recreational use of the area;
6. Visual quality;
7. Wilderness characteristics.

Considerable interest has also been shown in the silvicultural treatment of high-risk, decadent stands and the economics of timber sales in the area.

Development of alternatives is underway, and additional comments or questions are being solicited at this time. Consultation with the U.S. Fish and Wildlife Service will be initiated with regard to listed species. Letters explaining the division of the project into two proposed actions to be considered in two EISs together with maps of the proposed actions will be sent to those who received previous mailings. No public meetings are scheduled, but they will be arranged if necessary. While public participation in the development of the Mallard EIS is welcome at any time, comments received within 30 days of the publication of this notice will be especially useful in the preparation of the draft environmental impact statement (DEIS), which is expected to be filed with the Environmental Protection Agency (EPA) and available for public review in December, 1989. The Cove EIS is on a similar schedule.

A 45-day comment period will follow publication of a notice of availability of the DEIS in the **Federal Register**. The comments received will be analyzed and considered in preparation of a final environmental impact statement (FEIS). The FEIS is scheduled to be completed by May, 1990; and a decision will be made and documented in a Record of Decision.

The Forest Service believes it is important to give reviewers notice at this early stage of several court rulings related to public participation in the environmental review process. First, reviewers of draft environmental impact statements must structure their participation in the environmental review of the proposal so that it is meaningful and alerts the agency to the reviewer's position and contentions. *Vermont Yankee Nuclear Power Corp.* v. *NRDC*, 435 U.S. 519, 553 (1978). Also, environmental objections that could be raised at the draft environmental impact

BEST COPY AVAILABLE

statement stage but that are not raised until after completion of the final environmental impact statement may be waived or dismissed by the courts. *Wisconsin Heritages, Inc.* v. *Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the 45-day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the final environmental impact statement.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the draft environmental impact statement should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the draft environmental impact statement or the merits of the alternatives formulated and discussed in the statement. Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3.

I am the responsible official for this environmental impact statement.

Dated: August 17, 1989.

Tom Kovalicky,

Forest Supervisor, Nez Perce National Forest.

[FR Doc. 89-19948 Filed 8-23-89; 8:45 am]

BILLING CODE 3410-11-M

Cove Timber Sales; Nez Perce National Forest; Idaho County, Idaho

AGENCY: Forest Service, USDA.

ACTION: Notice; intent to prepare an environmental impact statement.

SUMMARY: Notice is hereby given that the Forest Service will prepare an environmental impact statement (EIS) to be known as the Cove EIS on a proposal to build roads and harvest timber in Gospel-Hump (Jersey-Jack) Roadless Area 1921, which is about 30 miles southeast of Grangeville, Idaho. This roadless area is proximate to the Frank Church-River of No Return Wilderness and effects of proposed development have been highly controversial in the past.

DATE: Written comments and suggestions should be received on or before September 25, 1989.

ADDRESS: Submit comments and suggestions to the District Ranger, Red River Ranger District, Nez Perce National Forest, Box 23, Elk City, ID. 83525.

FOR FURTHER INFORMATION CONTACT: Mark Peterson, Supervisory Forester, Red River Ranger District, Elk City, Idaho 83525, telephone (208) 842-2255.

SUPPLEMENTARY INFORMATION: The proposed action to be analyzed in this EIS calls for harvest of timber on 2,200 acres over ten years. Collector and local roads would be constructed. A range of alternatives to this proposed action will be considered, including no action (nondevelopment of the roadless area). The EIS will tier to the Nez Perce Forest Plan and Forest Plan EIS. The purpose of the proposed action is to help satisfy short-term demands for timber and to move toward an equal distribution of timber age classes on suitable lands.

Entry into the area was originally scheduled for 1981. Planning began soon after the Frank Church-River of No Return Wilderness boundary was established in law by the Central Idaho Wilderness Act of 1980 (Pub. L. 96-312) and culminated in four environmental assessments. The first of these dealt with a 14.2-mile collector road, and the other three addressed individual timber sales to be served by the road.

The Forest Supervisor's decision to approve what soon came to be known as the "Jersey-Jack Road" was issued in February, 1981. The decision was appealed in April, and the Forest was upheld by both the Regional Forester and the Chief of the Forest Service. The appellants then took the decision to court and in February, 1985 the Ninth Circuit Court of Appeals in *Thomas* v. *Peterson*, 753 F. 2d 754, 755 ruled that the Forest must "prepare an Environmental Impact Statement(EIS) that analyzes the combined impacts of the road and the timber sales that the road is designed to facilitate."

On March 12, 1986, notice was published in the **Federal Register** (51 FR 8524) that an environmental impact statement would be prepared to assess the effects of a transportation system and associated timber sales within the Jersey Creek, Noble Creek, and Big Mallard Creek areas. Analysis began on schedule, but was delayed until the Nez Perce Forest Plan was approved in October, 1987. Further analysis after that date indicated that the scope of the proposed action was likely too broad for reasonably thorough site-specific treatment in a single EIS. As a result of this additional analysis two separate proposed actions were formulated. The original notice of intent was cancelled (54 FR 32677); this notice is one of the two which replace it.

All management activities proposed in the Cove EIS would occur within Roadless Area 1921. Similar management activities are planned at about the same time entirely within Roadless Area 1847; these will be considered separately in the Mallard EIS. The two roadless areas are separated by a road corridor, and although the proposed actions are similar and could possibly be treated in the same EIS (40 CFR 1508.25 (a)(3)), the scope of the combined proposals is such that the best way to adequately assess reasonable alternatives and combined impacts is to prepare an EIS for activities proposed within each roadless area.

The two proposed actions may have cumulatively significant impacts on some environmental components in both roadless areas. For example, the Big Mallard Creek drainage would be affected by both proposed actions. Therefore, discussions of fisheries and water quality in this drainage in each EIS will include activities proposed in the other EIS and the combined impact of all activities. Evaluations of impacts on threatened or endangered species habitat will be handled in like manner. Analysis may show further combined treatments to be necessary.

The actions are not connected. The timber harvest and road construction proposed in either roadless area would not automatically trigger actions in the other which may require an environmental impact statement. Either action could proceed without the other, and neither depends upon a larger action for justification.

Primitive area, wilderness, and roadless possibilities of Roadless Area 1921 have been examined several times over the past 53 years by both the Forest Service and Congress. It was excluded from the Frank Church-River of No Return Wilderness in the Central Idaho Wilderness Act and was not recommended for wilderness or continued roadless management in the Nez Perce Forest Plan.

Public participation in the environmental analysis for the proposed projects was first solicited in the spring of 1986. Two hundred letters were sent to individuals, organizations, and government agencies. Public meetings were held at Red River Ranger Station and Grangeville. Comments on the draft Forest Plan EIS specific to Roadless Area 1921 were reviewed.

BILLING CODE 3410-11-M

DEPARTMENT OF COMMERCE

Agency Information Collection Under Review by the Office of Management and Budget

DOC has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: National Oceanic and Atmospheric Administration.

Title: Applications and Reports for Scientific Research and Public Display Permits Under the Marine Mammal Protection Act, the Fur Seal Act, and the Endangered Species Act.

Form Numbers: NOAA—None; OMB—0648-0084, 0648-0085.

Type of Request: Request for reinstatement of previously approved collections.

Burden: 487 respondents; 6,393 reporting hours; average hours per response—13 hours.

Needs and Uses: Federal law requires permits for either displaying or conducting scientific research on marine mammals or endangered species. Applicants must submit information showing whether their request meets permit standards set by law. Permit holders must submit reports to ensure the conditions of the permit have been followed.

Affected Public: State or local governments, businesses or other for profit institutions, federal agencies or employees, nonprofit institutions, small businesses or organizations.

Frequency: On occasion, annual.

Respondent's Obligation: Required for benefit.

OMB Desk Officer: Russell Scarato, 395-7340

Copies of the above information collection proposal can be obtained by calling or writing DOC Clearance Officer, Edward Michals, (202) 377-3271, Department of Commerce, Room 6622, 14th and Constitution Avenue, NW., Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent to Russell Scarato, OMB Desk Officer, Room 3208, New Executive Office Building, Washington, DC 20503.

Dated: August 17, 1989.

Edward Michals,

Departmental Clearance Officer, Office of Management and Organization.

BILLING CODE 3510-CW-M

National Institute of Standards and Technology

Users and Implementors of Integrated Services Digital Network (ISDN); Workshop

AGENCY: National Institute of Standards and Technology (NIST), Commerce.

ACTION: Notice.

SUMMARY: The National Computer Systems Laboratory (NCSL) at the National Institute of Standards and Technology (NIST) announces the Seventh North American ISDN Users' Forum (NIU-FORUM). The NIU-FORUM will be hosted by U S WEST Communications. The NIU-FORUM was formed in 1988 under the auspices of NIST to create a strong user voice in the implementation of Integrated Services Digital Network (ISDN) and to ensure that the emerging ISDN services meet users' application needs.

DATES: The Seventh North American ISDN Users' Forum (NIU-FORUM) will be held at The Hyatt Regency, Phoenix, Arizona, October 9-12, 1989. Tutorials will be conducted on October 9. This FORUM will consist of joint workshops for the User's (IUW) and Implementor's (IIW). The IUW will continue work identifying, defining, and prioritizing user applications of ISDN. The IIW will continue defining implementation agreements for ISDN. Working group meetings will discuss issues related to the use and implementation of ISDN technology. Manufacturers and service providers are invited to participate in this workshop.

ADDRESS: To obtain registration forms for the workshops, companies may contact: ISDN Workshops, Attn: Kim Brashears, National Institute of Standards and Technology, Building 223, Room B364, Gaithersburg, MD 20899, Telephone: (301) 975–4853.

Upon receipt of the completed registration form, additional registration information will then be mailed to the registrant.

FOR FURTHER INFORMATION CONTACT: Dawn Hoffman, (301) 975–2967.

SUPPLEMENTARY INFORMATION: The registration fee before September 14, 1989, will be $275. After September 15, 1989, the registration fee will be $325. Participants are expected to make their own travel arrangements and accommodations. NIST reserves the right to cancel any part of the workshops.

Dated: August 21, 1989.

Raymond G. Kammer,

Acting Director.

BILLING CODE 3510-CN-M

National Oceanic and Atmospheric Administration

North Pacific Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service, NOAA, Commerce.

The North Pacific Fishery Management Council's Fishery Planning Committee and the Council's Interim Pacific Northwest Crab Industry Advisory Committee will hold public meetings.

On September 6, 1989, at 8:30 a.m., the Fishery Planning Committee will meet at the North Pacific Council's office, 605 W. 4th Avenue, Suite 306, Anchorage, AK. The Committee will receive an update on the status of the draft sablefish limited access plan, review halibut limited access alternatives, and make recommendations concerning inshore/offshore allocation alternatives, including the course of future Council action.

On September 6 at 9 a.m., the Council's newly-formed Interim Pacific Northwest Crab Industry Advisory Committee will meet at the Alaska Fisheries Science Center, National Marine Fisheries Service, 7600 Sand Point Way, N.E., Seattle, WA. The Committee is being formed as a result of the North Pacific Council's recently-approved Bering Sea/Aleutian Islands King and Tanner Crab Fishery Management Plan, which defers management of the resource to the State of Alaska, while maintaining federal oversight. The Committee will develop operational procedures and provide an opportunity for the Pacific northwest crab industry to develop and to discuss shellfish management proposals. For more information contact the North Pacific Pacific Fishery Management Council, P.O. Box 103136, Anchorage, AK 99501; telephone: (907) 271–2809.

Dated: August 18, 1989.

Richard H. Schaefer,

Director, Office of Fisheries Conservation and Management, National Marine Fisheries Service.

BILLING CODE 3510-22-M

Endangered Marine Mammals

AGENCY: National Marine Fisheries Service, NOAA, Commerce.

ACTION: Issuance of Scientific Research Permit No. 675.

SUMMARY: On Thursday, April 6, 1989, notice was published in the Federal Register (54 FR 13932), that an application (P440) and been filed by Dr. C. Scott Baker, the Department of Health & Human Services, National Cancer Institute, to take by harassment, including photo-identification and the collection of skin biopsies, 400 humpback whales (*Megaptera novaeangliae*) in territorial waters of the United States.

Notice is hereby given that on August 4, 1989, as authorized by the provisions of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361–1407), the Endangered Species Act of 1973 (16 U.S.C. 1531–1544), the National Marine Fisheries Service Regulations Governing Endangered Fish and Wildlife permits (50 CFR parts 217–222), and the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216), issued a Permit for the above activities subject to the Special Conditions set forth therein.

The Permit is available for review by interested persons in the following offices:

Office of Protected Resources and Habitat Programs, National Marine Fisheries Service, 1335 East West Hwy., Rm. 7330, Silver Spring, Maryland 20910;

Director, Alaska Region, National Marine Fisheries Service, NOAA, 709 West 9th Street, Federal Bldg., Juneau, Alaska 99802;

Director, Northeast Region, National Marine Fisheries Service, NOAA, One Blackburn Drive, Gloucester, Massachusetts 01930;

Director, Northwest Region, National Marine Fisheries Service, NOAA, 7600 Sand Point Way, NE., BIN C15700, Seattle Washington 98115;

Director, Southeast Region, National Marine Fisheries Service, NOAA, 9450 Koger Boulevard, St. Petersburg, Florida 33702;

Director, Southwest Region, National Marine Fisheries Service, NOAA, 300 South Ferry Street, Terminal Island, California 90731–7415; and

Administrator, Western Pacific Program Office, National Marine Fisheries Service, NOAA, 2570 Dole Street, Room 106, Honolulu, Hawaii 96822–2396.

Dated: August 4, 1989.

Nancy Foster,

Director, Office of Protected Resources and Habitat Programs, National Marine Fisheries Service.

[FR Doc. 89–19914 Filed 8–23–89; 8:45 am]

BILLING CODE 3510-22-M

Marine Mammals; Application for Permit; Dr. Thomas N. James (P452)

Notice is hereby given that an Applicant has applied in due form for a Permit to take marine mammals as authorized by the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361–1407), the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216), the Endangered Species Act of 1973 (16 U.S.C. 1531–1544), and the regulations governing endangered fish and wildlife permit (50 CFR parts 217–222).

1. *Applicant:* Dr. Thomas N. James, President, University of Texas Medical Branch, Galveston, TX 77550–2774.

2. *Type of Permit:* Scientific research under MMPA and scientific purposes under ESA.

3. *Name and Number of Marine Mammals:* sperm whale specimen (*Physeter catodon*) 1½ hearts.

4. *Type of Take:* The applicant requests authorization to import one and one half sperm whale hearts to study the morphological features of the conduction system of sperm whale hearts and to compare the findings to those of other mammalian species. The findings will be useful for understanding the anatomy and function of the hearts of sperm whales. The hearts are fixed in 10% formalin and have been at the University of Osaka, Japan since 1966.

5. *Location of and Duration of Activity:* Importation from University of Osaka, Japan. 2 years.

Concurrent with the publication of this notice in the Federal Register, the Secretary of Commerce is forwarding copies of this application to the Marine Mammal Commission and the Committee of Scientific Advisors.

Written data or views, or requests for a public hearing on this application should be submitted to the Assistant Administrator for Fisheries, National Marine Fisheries Service, U.S. Department of Commerce, 1335 East West Hwy., Room 7324, Silver Spring, Maryland 20910, within 30 days of the publication of this notice. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular application would be appropriate. The holding of such hearing is at the descretion of the Assistant Administrator for Fisheries. All statements and opinions contained in this application are summaries of those of the Applicant and do not necessarily reflect the views of the National Marine Fisheries Service.

Documents submitted in connection with the above application are available for review by interested persons in the following offices:

Office of Protected Resources, National Marine Fisheries Service, 1335 East West Hwy., Room 7324, Silver Spring, Maryland 20910;

Director, Southeast Region, National Marine Fisheries Service, 9450 Koger Blvd., St. Petersburg Florida 33702;

Director, Southeast Region, National Marine Fisheries Service, 9450, Koger Blvd., St. Petersburg, Florida 33702.

Dated: August 16, 1989.

BILLING CODE 3510-22-M

Marine Mammals; Application for Permit; Dr. Joseph R. Mobley, (P453)

Notice is hereby given that an Applicant has applied in due form for a Permit to take marine mammals as authorized by the Marine Mammal Protection Act of 1972 (15 U.S.C. 1361–1407), the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216), the Endangered Species Act of 1973 (16 U.S.C. 1531–1544), and the regulations governing endangered fish and wildlife permit (50 CFR parts 217–222).

1. *Applicant:* Joseph Robert Mobley, Jr., Ph.D. Chair, Dept. Behavioral Sciences, Chaminade University of Honolulu, 3140 Waialae Ave., Honolulu, HI 96816.

2. *Type of Permit:* Scientific research under MMPA and scientific purposes under ESA.

3. *Name and Number of Marine Mammals:* Humpback whales (*Megaptera novaeangliae*).

4. *Type of Take:* Inadvertent harassment during aerial surveys.

5. *Location of Activity:* Coastlines of all major Hawaiian Islands including Hawaii, Maui, Molokai, Penguin Bank, Lanai, Kahoolawe, Oahu, Kauai, and Niihau.

6. *Period of Activity:* January through April over a 3-year period.

Concurrent with the publication of this notice in the Federal Register, the Secretary of Commerce is forwarding copies of this application to the Marine Mammal Commission and the Committee of Scientific Advisors.

Written data or views, or requests for a public hearing on this application should be submitted to the Assistant Administrator for Fisheries, National Marine Fisheries Service, U.S. Department of Commerce, 1335 East West Hwy., Room 7324, Silver Spring, Maryland 20910 within 30 days of the publication of this notice. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular application would be appropriate. The holding of such hearing is at the discretion of the Assistant Administrator for Fisheries.

All statements and opinions contained in this application are summaries of those of the Applicant and do not necessarily reflect the views of the National Marine Fisheries Service.

Documents submitted in connection with the above application are available for review by interested persons in the following offices:

Office of Protected Resources and Habitat Programs, National Marine Fisheries Service, 1335 East West Hwy., Room 7324, Silver Spring, Maryland 20910; and

Director, Southwest Region, National Marine Fisheries Service, 300 South Ferry Street, Terminal Island, California 90731–7514.

Dated: August 16, 1989.

BILLING CODE 3510-22-M

Marine Mammals: Issuance of Permit; NMFS, Southwest Fisheries Center (P77#33)

On May 9, 1989, notice was published in the Federal Register (54 FR 19934) that an application had been filed by the Southwest Fisheries Center, National Marine Fisheries Service, P.O. Box 271, La Jolla, California 92038–0271 for a scientific research permit to take tissue samples via projectile dart from marine mammals encountered during dolphin surveys.

Notice is hereby given that on August 16, 1989, as authorized by the provisions of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361–1407), the National Marine Fisheries Service issued a Permit for the above taking subject to certain conditions set forth therein.

Issuance of this Permit is based on a finding that the proposed taking is consistent with the purposes and policy of the Marine Mammal Protection Act. The Service has determined that this research satisfies the issuance criteria for scientific research permits. The taking is required to further a bona fide scientific purpose and does not involve unnecessary duplication of research. No lethal taking is authorized.

The Permit is available for review in the following offices:

Office of Protected Resources and Habitat Programs, National Marine Fisheries Service, 1335 East West Highway, Room 7324, Silver Spring, Maryland 20910; and

Director, Southwest Region, National Marine Fisheries Service, 300 South Ferry Street, Terminal Island, California 90731.

Dated: August 16, 1989.

Nancy Foster,

Director, Office of Protected Resources and Habitat Programs, National Marine Fisheries Service.

BILLING CODE 3510-22-M

Marine Mammals

AGENCY: National Marine Fisheries Service (NOAA Fisheries), NOAA, Commerce.

ACTION: Application for Permit; Dr. J. Ward Testa (P420B).

SUMMARY: Notice is hereby given that an Applicant has applied in due form for a Scientific Research Permit to take marine mammals as authorized by the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361–1407), and the Regulations Governing the Taking and

Importing of Marine Mammals (50 CFR Part 216).

1. *Applicant:* Dr. J. Ward Testa, Institute of Marine Science, University of Alaska, Fairbanks, AK 99775–1080.

2. *Type of Permit:* Scientific Research.

3. *Name and Number of Marine Mammals:*

Weddell seal (*Leptonychotes weddellii*)—2000
Crabeater seal (*Lobodon carcinophagus*)—30
Leopard seal (*Hydrurga leptonyx*)—30
Ross seal (*Ommatophoca rossii*)—30
Southern elephant seal (*Mirounga leonina*)—30

4. The Applicant requests permission to (1) capture with physical restraint using a canvas bag placed over the head and tag up to 1200 individual Weddell seals including 500 pups, 400 adult females (of which up to 50% may be pregnant), and 300 adult males, and up to 30 each of Leopard seals, crabeater seals, Ross seals, and southern elephant seals annually with plastic cattle ear tags in both rear flippers, (2) implant up to 300 adult Weddell seals of either sex annually with transponders in the blubber layer just anterior to the tail; (3) instrument up to 30 adult Weddell seals over three years with satellite and radio transmitters; (4) collect and import foreflipper claws from up to 100 subadult animals annually for age estimation; (5) weigh up to 200 pups and up to 200 adults and subadults for both sexes annually using a mobile platform sled; (6) collect blood samples from up to 100 Weddell seals of any age annually; (7) conduct up to seven (7) censuses of the eastern McMurdo Sound population annually and count all seals present on the surface of the ice and record tag numbers and; (8) salvage and import any parts of natural fatalities of the above fire (5) seal species. Permission is also requested to approach up to 2000 Weddell seals each not more than ten (10) times annually in order to read tags. The proposed research is part of a continuing program to understand the population ecology and behavior of Weddell seals in McMurdo Sound, is expected to advance the understanding of the diving behavior and movements of a large marine mammal outside of the breeding season, and to provide continuity in the long-term study of this large marine mammal.

5. Location and Duration of Activity: The focus of this activity will be McMurdo Sound, Antarctica, for a 3-year period. Concurrent with the publication of this notice in the **Federal Register**, the Secretary of Commerce is forwarding copies of this application to the Marine Mammal Commission and the Committee of Scientific Advisors.

Written data or views, or requests for a public hearing on this application should be submitted to the Assistant Administrator for Fisheries, National Marine Fisheries Service, U.S. Department of Commerce, 1335 East West Highway, Silver Spring, Maryland 20910, within 30 days of the publication of this notice. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular application would be appropriate. The holding of such hearing is at the discretion of the Assistant Administrator for Fisheries. All statements and opinions contained in this application are summaries of those of the Applicant and do not necessarily reflect the views of the National Marine Fisheries Service.

Documents submitted in connection with the above application are available for review by interested persons in the following offices:

Office of Protected Resources and Habitat Programs, National Marine Fisheries Service, 1335 East West Highway, Room 7330, Silver Spring, Maryland 20910; and

Director, Alaska Region, National Marine Fisheries Service, 709 West 9th Street, Federal Building, Juneau, Alaska 99802.

Dated: August 16, 1989.

Nancy Foster,

Director, Office of Protected Resources and Habitat Programs.

BILLING CODE 3510-22-M

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Adjustment of Import Limits for Certain Cotton and Man-Made Fiber Textile Products Produced or Manufactured in the United Arab Emirates

August 18, 1989.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs adjusting limits.

EFFECTIVE DATE: August 24, 1989.

FOR FURTHER INFORMATION CONTACT: Jerome Turtola, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 377–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port. For information on embargoes and quota re-openings, call (202) 377–3715.

SUPPLEMENTARY INFORMATION: *Authority.* Executive Order 11651 of March 3, 1972, as amended; section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854).

The current limits for certain categories are being increased, variously, for swing and carryforward. The limit for Category 352 is being reduced to account for the swing being applied.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 53 FR 44937, published on November 7, 1988). Also see 54 FR 52463, published on December 28, 1988.

The letter to the Commissioner of Customs and the actions taken pursuant to it are not designed to implement all of the provisions of the Memorandum of Understanding dated March 14, 1989, but are designed to assist only in the implementation of certain of its provisions.

Auggie D. Tantillo,

Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

August 18, 1989.

Commissioner of Customs, Department of the Treasury, Washington, DC 20229

Dear Mr. Commissioner:

This directive amends, but does not cancel, the directive issued to you on March 22, 1989 by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports into the United States of certain cotton and man-made fiber textile products, produced or manufactured in the United Arab Emirates and exported during the period which began on January 1, 1989 and extends through December 31, 1989.

Effective on August 24, 1989, the directive of March 22, 1989 is amended to adjust the limits for the following categories, as provided under the provisions of the Memorandum of Understanding dated March 14, 1989 between the Governments of the United States and the United Arab Emirates:

Category	Adjusted Twelve-Month Limit [1]
338/339	371,000 dozen of which not more than 247,333 dozen shall be in Categories 338–S/339–S [2].
340/640	243,600 dozen.
341/641	201,400 dozen.
347/348	291,200 dozen of which not more than 145,600 dozen shall be in Categories 347–T/348–T [3].
352	115,895 dozen.

[1] The limits have not been adjusted to account for any imports exported after December 31, 1988.

[2] In Categories 338–S/339–S, only HTS numbers 6103.22.0050, 6105.10.0010, 6105.10.0030, 6105.90.3010, 6109.10.0009, 6109.10.0027, 6110.20.1025, 6110.20.2040, 6110.20.2065, 6110.90.0068, 6112.11.0030 and 6114.20.0005 in Category 338–S; and 6104.22.0060, 6104.29.2046, 6106.10.0010, 6106.10.0030, 6106.90.2010, 6106.90.3010, 6109.10.0070, 6110.20.1030, 6110.20.2045, 6110.20.2075, 6110.90.0070, 6112.11.0040, 6114.20.0010 and 6117.90.0022 in Category 339–S.

[3] In Categories 347–T/348–T, only HTS numbers 6103.19.2015, 6103.19.4020, 6103.22.0030, 6103.42.1020, 6103.42.1040, 6103.49.3010, 6112.11.0050, 6113.00.0035, 6203.19.1020, 6203.19.4020, 6203.22.3020, 6203.42.4005, 6203.42.4010, 6203.42.4015, 6203.42.4025, 6203.42.4035, 6203.42.4045, 6203.49.4015, 6203.42.4025, 6203.42.4035, 6203.42.4045, 6203.49.3020, 6210.40.2030, 6211.20.1520, 6211.20.3010 and 6211.32.0040, in Category 347–T; and HTS numbers 6104.12.0030, 6104.19.2030, 6104.22.0040, 6104.29.2034, 6104.62.2010, 6104.62.2025, 6104.69.3022, 6112.11.0060, 6113.00.0040, 6117.90.0042, 6204.12.0030, 6204.19.3030, 6204.22.3040, 6204.29.4034, 6204.62.3000, 6204.62.4005, 6204.62.4010, 6204.62.4020, 6204.62.4030, 6204.62.4040, 6204.62.4050, 6204.69.3010, 6204.69.9010, 6210.50.2030, 6211.20.1550, 6211.20.6010, 6211.42.0030 and 6217.90.0050 in Category 348–T.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

Auggie D. Tantillo,

Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510-DR-M

Amendment Clarifying a Previous Directive Concerning Visa and Quota Reporting for Garments and Clothing Accessories Entered as Sets

August 18, 1989.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs clarifying a previous directive.

EFFECTIVE DATE: August 24, 1989.

FOR FURTHER INFORMATION CONTACT: Brian Fennessy, Commodity Industry Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 377–3400.

SUPPLEMENTARY INFORMATION:

Authority: Executive Order 11651 of March 3, 1972, as amended; section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854).

A **Federal Register** notice and letter to the Commissioner of Customs published on December 29, 1988 (53 FR 52765) announced separate visa and separate statistical reporting requirements for textiles and textile products entered as sets. The letter published below is an amendment, clarifying the previously published letter.

Auggie D. Tantillo,

Chairman, Committee for the Implementation of Textile Agreements.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Mr. Commissioner: This letter amends the directive of December 23, 1988 to further clarify the intent of the Committee for the Implementation of Textile Agreements on the applicability of visa requirements and quota reporting of textiles and their products entered as parts of sets under GRI 3 of the Harmonized Tariff Schedule.

Effective on August 24, 1989, the directive of December 23, 1988 is amended to read as follows:

Under the terms of Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); and in accordance with the provisions of Executive Order 11651 of March 3, 1972, as amended; all applicable visa and quota requirements will apply for textiles and their products which are classified as parts of a set. This rule applies to all items which, if imported separately, would have required a visa and the reporting of quota.

Effective January 1, 1989, you are directed to prohibit entry for consumption or withdrawal from warehouse for consumption into the United States (i.e., the 50 states, the District of Columbia and the Commonwealth of Puerto Rico) of any textile item for which classification is claimed as sets under General Rules of Interpretations (GRI) 3 of the HTS, where a separate textile category currently exists or comes into existence requiring separate reporting of the components forming those sets.

Entry shall be permitted if all visa and quota requirements are met.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

Auggie D. Tantillo,

Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3910-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project Nos. 2683 and 588]

James River II, WA; Intention To Prepare an Environmental Impact Statement

August 17, 1989.

The Federal Energy Regulatory Commission (FERC) has received an application for an original license for the operation of the Elwha Project, FERC No. 2683 and an application for a new license for the operation of the Glines Canyon Project, FERC No. 588. The two hydropower projects are located on the Elwha River in Clallam County, Washington. The FERC staff has determined that licensing these projects would constitute a major federal action significantly affecting the quality of the human environment. Therefore, the staff intends to prepare an environmental impact statement (EIS) on the hydroelectric projects in accordance with the National Environmental Policy Act. The staff's EIS will objectively consider both site specific and cumulative environmental impacts of the projects and reasonable alternatives, and will include an economic, financial and engineering analysis.

A draft EIS will be issued and circulated for review by all the interested parties. All comments filed on the draft EIS will be analyzed by the staff and considered in a final EIS. The staff's conclusions and recommendations will then be presented for the consideration of the Commission in reaching its final licensing decision.

Scoping Meetings

FERC staff will conduct public scoping meetings in the Seattle and Port Angeles, Washington area. The place and time of these meetings will be announced in a subsequent notice.

Procedures

The purpose of the notice is to invite all interested individual's, organizations, tribes, and agencies to assist the staff in identifying the scope of environmental issues that should be analyzed in the EIS. Anyone who has views on the issues or information relevant to the issues, may submit written statements for inclusion in the public record. All comments must be filed with the Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426. All correspondence should clearly show the following caption on the first page: Elwha/Glines Canyon Projects, Washington, Docket Nos. P–2683 and 588.

All those that are formally recognized by the Commission as intervenors in the Elwha/Glines Canyon Projects proceedings are asked to refrain from engaging the staff or its contractor in discussions of the merits of the projects outside of any announced meetings.

Further, parties are reminded of the Commission Rules of Practice and Procedure, requiring parties filing documents with the Commission, to serve a copy of the document on each person whose name is on the official service list.

For further information please contact S. Ronald McKitrick at (202) 376–0269.

Lois D. Cashell,

Secretary.

BILLING CODE 6717–01–M

[Project Nos. 503–006, et al.]

Hydroelectric Applications (Idaho Power Co., et al.); Applications Filed With the Commission

Take notice that the following hydroelectric applications have been filed with the Commission and are available for public inspection:

1. a. *Type of Application:* Amendment of License.

b. *Project No:* 503–006.

c. *Date Filed:* April 24, 1989.

d. *Applicant:* Idaho Power Company.

e. *Name of Project:* Swan Falls.

f. *Location:* On the Snake River in Ada and Owyhee Counties, Idaho, partially on lands of the United States administered by the U.S. Department of the Interior.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:*

Mr. Robert W. Stahman, Secretary and General Counsel, 1220 Idaho Street, P.O. Box 70, Boise, ID 83707, (206) 383–2676.

Mr. Lee S. Sherline, Leighton & Sherline, Suite 101, 1010 Massachusetts Ave. NW, Washington, DC 20001–5402, (202) 898–1122.

i. *Commission Contact:* Mr. James Hunter (202) 376–1943.

j. *Comment Date:* September 15, 1989.

k. *Applicant proposes to:* (1) Replace the existing powerhouse, which contains generating units with a total rated capacity of 10.4 MW, with a new powerhouse on the east bank, containing two identical generating units with a total rated capacity of 25 MW; (2) remove all equipment from the existing powerhouse and fill the draft tubes and turbine pits with concrete to elevation 2,315 feet; (3) construct a new switchyard on the east bank 200 feet downstream from the powerhouse; and (4) build a new 1.2-mile-long, 138–kV transmission line. The estimated cost of this new development is $53,814,800 in August 1988 dollars.

l. This notice also consists of the following standard paragraphs: B, C, and D1.

2. a. *Type of Application:* Transfer of License.

b. *Project No.:* 2307–022.

c. *Date Filed:* June 5, 1989.

d. *Applicant:* Alaska Electric Light and Power Company of Juneau (Licensee) and Alaska Electric Light and Power Company (Transferee).

e. *Name of Project:* Annex Creek and Salmon Creek.

f. *Location:* On Annex and Salmon Creeks near Juneau, Alaska, partially within the Tongass National Forest, in T41S, R69E, 68E, and 67E.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. § 791(a)–825(r).

h. *Applicant Contact:* Mr. William A. Corbus, 612 Willoughby Avenue, Juneau, AK 99801–1798.

i. *FERC Contact:* Julie Bernt, (202) 376–1936.

j. *Comment Date:* September 15, 1989.

k. *Description of Project:* On August 31, 1989, a new license was issued to Alaska Electric Light and Power Company of Juneau for the continued operation of the Annex Creek and Salmon Creek Project No. 2307. It is proposed to transfer the license to Alaska Electric Light and Power Company. The purpose of this proposed license transfer is to reflect a corporate name change.

The licensee certifies that it has fully complied with the terms and conditions of its license and obligates itself to pay all annual charges accrued under the license to the date of transfer. The transferee accepts all the terms and conditions of the license and agrees to be bound thereby to the same extent as though it were the original licensee.

l. This notice also consists of the following standard paragraphs: B and C.

3. a. *Type of Application:* Transfer of License.

b. *Project No.:* 2622–001.

c. *Date filed:* June 20, 1989.

d. *Applicant:* Hammermill Paper Company.

e. *Name of Project:* Turners Falls.

f. *Location:* On a power canal taking water from the Connecticut River at Turners Falls, Franklin Cou9nty, Massachusetts.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* William J. Madden, Jr., Attorney, Law Offices of Bishop, Cook, Purcell, & Reynolds, 1400 L Street, NW., Washington, DC 20005–3502, (202) 371–5700.

i. *FERC Contact:* Mary Nowak (202) 376–9634.

j. *Comment Date:* September 18, 1989.

k. *Description of Project:* Hammermill Paper Company proposes to transfer the license for the Turners Falls Project No. 2622 to International Paper Company. Through a series of transactions, Hammermill Paper Company was merged into International Paper Company on January 1, 1989. The parties inadvertently failed to seek a transfer of the license for the project prior to the merger and now seek to correct that error with the instant application.

l. This notice also consists of the following standard paragraphs: B, C, and D2.

4. a. Type of Application: Transfer of License.

b. Project No.: 2631–003.

c. Dated Filed: June 20, 1989.

d. Applicant: Hammermill Paper Company.

e. Name of Project: Woronoco Hydroelectric.

f. Location: On a Westfield River, in Hampden County, Massachusetts.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791 (a)–825(r).

h. Applicant Contact: William J. Madden, Jr., Attorney, Law Offices of Bishop, Cook, Purcell, & Reynolds, 1400 L Street NW., Washington, DC 20005–3502, (202) 371–5700.

i. FERC Contact: Mary Nowak (202) 376–9634.

j. Comment Date: September 18, 1989.

k. Description of Project: Hammermill Paper Company proposes to transfer the license for the Woronoco Project No. 2631 to International Paper Company. Through a series of transactions, Hammermill Paper Company was merged into International Paper Company on January 1, 1989. The parties inadvertently failed to seek a transfer of the license for the project prior to the merger and now seek to correct that error with the instant application.

l. This notice also consists of the following standard paragraphs: B, C, and D2.

5. a. Type of Filing: Transfer of License.

b. Project No.: 7174–006.

c. Date Filed: June 13, 1989.

d. Applicant: Mr. Truman Price (transfetor) and Truman Price, Inc. (transferee).

e. Name of Project: Cottrell Hydroelectric Project.

f. Location: On McCloskey Creek in Skamania County, Washington.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791 (a)–825(r).

h. Applicant Contact: Mr. Peter W. Brown, Brown, Olsen & Wilson, 21 Green Street, Concord, New Hampshire 03301.

i. Commission Contact: Ms. Deborah Frazier–Stutely at (202) 376–1669.

j. Comment Date: September 15, 1989.

k. Description of Proposed Action: On December 26, 1985, aa major license was issued to Mr. Truman Price for the construction, operation, and maintenance of the Cottrell Project No. 7174. Mr. Truman Price proposes to transfer the license to Truman Price, Inc.

The transferee is a private corporation organized under the laws of the state of Delaware, and domesticated in the states of Maryland and Washington.

The licensee certifies that it has fully complied with the terms and conditions of its license, as amended, and obligates itself to pay all annual charges accrued under the license to the date of transfer. The transferee accepts all the terms and conditions as though it were the original licensee.

l. This notice also consists of the following standard paragraphs: B and C.

6. a. Type of Application: Surrender of License.

b. Project No.: 7806–012.

c. Date filed: June 16, 1989.

d. Applicant: Richard J. Wilkinson and Georgenia M. Wilkinson.

e. Name of Project: Prospect Creek.

f. Location: On the licensee's land on Prospect Creek in Sanders County, Montana near the town of Thompson Falls. T21N R29W, section 18.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791 (a)–825(r).

h. Applicant Contact: Richard J. and Georgenia, M. Wilkinson, P.O. Box 848, Thompson Falls, MT l59873.

i. FERC Contact: Ms. Deborah Frazier-Stutely at (202) 376–1669.

j. Comment Date: September 7, 1989.

k. Description of Proposed Action: The proposed project for which the license is being surrendered would have consisted of: (1) A 10-foot-high, 50-foot-long reinforced concrete diversion dam at elevation 2,555 feet; (2) a 6-foot-diameter, 4,170-foot-long penstock; (3) a powerhouse containing two generating units with a combined capacity of 2,900 kW; (4) a tailrace; (5) 2.4–kV generator leads; (6) a 2.4/4.16–kV step-up transformer; (7) a 200-foot-long, 4.16–kV transmission line tying into an existing Montana Power Company line; and (7) appurtenant facilities.

The licensee states that the project is not financially feasible at this time. Construction of the project has not begun.

l. This notice also consists of the following standard paragraphs: B, C, and D2.

7. a. Type of Application: Surrender of License.

b. Project No.: 9214–005.

c. Date Filed: June 14, 1989.

d. Applicant: Provo Hydro Associates.

e. Name of Project: Murdock Dam Hydro Project.

f. Location: On Provo River in Utah County, Utah.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: Domonique Darne, 1900 L Street NW., Suite 606, Washington, DC 20036.

i. FERC Contact: Nanzo T. Coley (20) 376–9416.

j. Comment Date: September 9, 1989.

k. Description of Proposed Action: The license to be surrendered would have included a project consisting of (1) a 60-inch-diameter, 6-foot-long penstock; (2) a powerhouse with an installed capacity of 200 kW under a head of 23 feet; (3) a tailrace returning the flow to the provo River; (4) an underground 12.5–kV transmission line, about 100 feet long; and (5) appurtenant facilities. The applicant estimates the average annual energy output at 1,178,373 kWh. Energy produced at the project would have been sold to Utah Power and Light Company.

l. This notice also consists of the following standard paragraphs: B and C, & D2.

8. a. *Type of Application:* Exemption (small conduit).

b. *Project No.:* 10720–000.

c. *Date Filed:* January 19, 1989.

d. *Applicant:* South Central Connecticut Regional Water Authority.

e. *Name of Project:* Gaillard Hydroelectric Project.

f. *Location:* At the Lake Gaillard Water Treatment Plant, New Haven County, Connecticut.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a) 825(r).

h. *Applicant Contact:* Mr. Frank O. Christie, Christie Engineering, South William St., Ballard Mill, Malone, NY 12953.

i. *FERC Contact:* Michael Dees (202) 376–9414.

j. *Comment Date:* September 22, 1989.

k. *Description of Project:* The constructed Gaillard small conduit hydroelectric facility is part of the Lake Gaillard Water Treatment Plant. The water to the hydroelectric plant (and water treatment plant) is conveyed from Lake Gaillard by a 54" pipeline placed in a 76" diameter Great Hill Tunnel. The

300 kW Turbine generator is installed on this raw water pipeline just before it enters into the water treatment plant. The project consist of: (1) a 54′ dia. 75 ft. long intake pipe; (2) a 37′ W X 44′ L X 18′ H concrete powerhouse with one 300 kW turbine-generator; (3) a 250′ long, 480 volt underground transmission line; (4) 72′ dia. 35 ft. long discharge/influent pipeline into water treatment plant; and (5) appurtenant facilities. Applicant estimates that the average annual energy production will be 1.5 GWh. All energy production will be used at the applicants water treatment plant.

l. This notice also consists of the following standard paragraphs: A3, A9, B, C, and D3b.

9. a. *Type of Application:* Preliminary Permit.

b. *Project No.:* 10790–000.

c. *Date Filed:* June 2, 1989.

d. *Applicant:* West Rutland Pumped Storage Hydroelectric Inc.

e. *Name of Project:* West Rutland Pumped Storage Hydro Project.

f. *Location:* On the Castleton River near West Rutland, Rutland County, Vermont.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. §§ 791(a)–825(r).

h. *Applicant Contact:* Mr. Dermont A. McGuigan, Chase Mill, 1 Mill Street, Burlington, VT 05401, (802) 658–5110.

i. *FERC Contact:* Ed Lee (202) 376–5786.

j. *Comment Date:* September 22, 1989.

k. *Description of Project:* The proposed project would consist of either: (1) a 160–MW closed-looped pumped storage project designed to operate with a minimum head of 1000 feet (Alternative No. 1); or (2) a 200–MW closed-looped pumped storage project designed to operate with a minimum head of 1060 feet (Alternative No. 2). Both alternatives will consist of a new upper reservoir and existing querries as the lower reservoir. The reservoirs will be connected by a tunnel with a underground power-pumping house located in the lower reservoir. No areas within or in the vicinity of the proposed project boundary are included in or have been designated for study for inclusion in the National Wild and Scenic River System. The applicant estimates that the average annual generation would be 2,000 MWh for Alternative No. 1 and 2,400 MWh for Alternative No. 2. The cost of the work and studies to be performed under the permit would be $250,000. No lands of the United States are included in the project. The applicant states that due to the availability of borings from wells and roads constructed in or adjacent to the upper reservoir and tunnel sties, no subsurface exploration will be required, and no disturbance of land, water, or habitat will occur.

l. Purposes of Project: The applicant will sell the generated power to one or more electric utilities located in New York or the New England states.

m. This notice also consists of the following standard paragraphs: A5, A7, A9, A10, B, C, and D2.

10. a. *Type of Application:* Preliminary Permit.

b. *Project No.:* 10793–000.

c. *Date Filed:* June 5, 1989.

d. *Applicant:* Mitia Hydro Corporation.

e. *Name of Project:* Mitchell Mill Dam Project.

f. *Location:* On the Cedar River near Mitchell, Mitchell County, Iowa.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Mr. Thomas Wilkinson, 700 Higley Bldg., P.O. Box 1968, Cedar Rapids, IA 52406, (319) 366–4990.

i. *FERC Contact:* Ed Lee (202) 376–5786.

j. *Comment Date:* September 22, 1989.

k. *Description of Project:* The proposed project would consist of: (1) An existing 195–foot-long and 20-foot-high concrete dam; (2) a 120-acre reservoir; (3) a new powerhouse containing a single 510-kW generator; (4) a 400-foot-long, 13.8-kV transmission line; and (5) appurtenant facilities. The applicant estimates that the average annual generation would be 2,829 MWh. The cost of the work and studies to be performed under the permit would be $27,000. The site is owned by the Mitchell County Conservation Board, Osage, IA 50461. The applicant estimates that the power generated will be sold to a local utility company.

l. This notice also consists of the following standard paragraphs: A5, A7, A9, A10, B, C, and D2.

11. a. *Type of Application:* Preliminary Permit.

b. *Project No.:* 10797–000.

c. *Date Filed:* June 5, 1989.

d. *Applicant:* Greia Hydro Corporation.

e. *Name of Project:* Greene Mill Dam Project.

f. *Location:* On the Shell Rock River near Greene, Bulter County, Iowa.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Mr. Thomas Wilkinson, 700 Higley Bldg., P.O. Box 1968, Cedar Rapids, IA 52406, (319) 366–4990.

i. *FERC Contact:* Ed Lee (202) 376–5786.

j. *Comment Date:* September 22, 1989.

k. *Description of Project:* The proposed project would consist of: (1) An existing 290-foot-long and 11-foot-high concrete dam; (2) an 85-acre reservior; (3) a new powerhouse containing two 325-kW generators for a total installed capacity of 650 kW; (4) a 25-foot-long, 13.8-kV transmission line; and (5) appurtenant facilities. The applicant estimates that average annual generation would be 3,347 MWh. The cost of the work and studies to be performed under the permit would be $27,000. The site is owned by the Bulter County Conservation Board, Clarksville, IA 50619. The applicant estimates that all power generated will be sold to a local utility company.

l. This notice also consists of the following standard paragraphs: A5, A7, A9, A10, B, C, and D2.

12. a. *Type of Filing:* Minor License (5–MW or less).

b. *Project No.:* 10800–000.

c. *Date Filed:* June 9, 1989.

d. *Applicant:* Hydrodynamics, Inc.

e. *Name of Project:* Ross Creek Hydroelectric Project.

f. *Location:* On Ross Creek near the town of Bozeman, in Gallatin County, Montana.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

i. *Commission Contact:* Nanzo T. Coley, (202) 376–9416.

j. *Comment Date:* September 15, 1989.

k. *Description of Project:* The applicant proposes to utilize the water from the existing water supply system, part of licensed project No. 6117, by tapping the existing penstocks. The proposed project would consist of: (1) A proposed 14-inch-diameter penstock that would be connected to the existing 8-inch and 12-inch-diameter penstocks; (2) a proposed powerhouse containing one generating unit rated at 120-kW; (3) a proposed tailrace that would discharge the water into a proposed 21-inch-diameter pipe which would be connected to the existing penstocks and returning the water to the existing system; (4) a proposed 400-foot-long, 480 volt transmission line; (5) appurtenant facilities. The applicant estimates that the average annual energy output would be 632,000 kWh.

l. *Purpose of Project:* Energy produced at the project would be utilized by the applicant.

m. This notice also consists of the following standard paragraphs: A3, A9, B, C, and D3b.

Standard Paragraph

A3. Development Application—Any qualified development applicant desiring to file a competing application must submit to the Commission, on or before the specified comment date for the particular application, a competing development application, or a notice of intent to file such an application. Submission of a timely notice of intent allows an interested person to file the competing development application no later than 120 days after the specified comment date for the particular application. Applications for preliminary permits will not be accepted in response to this notice.

A5. Preliminary Permit—Anyone desiring to file a competing application for preliminary permit for a proposed project must submit the competing application itself, or a notice of intent to file such an application, to the Commission on or before the specified comment date for the particular application (see 18 CFR 4.36). Submission of a timely notice of intent allows an interested person to file the competing preliminary permit application no later than 30 days after the specified comment date for the particular application. A competing preliminary permit application must conform with 18 CFR 4.30(b)(1) and (9) and 4.36.

A7. Preliminary Permit—Any qualified development applicant desiring to file a competing development application must submit to the Commission, on or before the specified comment date for the particular application, either a competing development application or a notice of intent to file such an application. Submission of a timely notice of intent to file a development application allows an interested person to file the competing application no later than 120 days after the specified comment date for the particular application. A competing license application must conform with 18 CFR 4.30(b)(1) and (9) and 4.36.

A8. Preliminary Permit—Public notice of the filing of the initial preliminary permit application, which has already been given, established the due date for filing competing preliminary permit and development applications or notices of intent. Any competing preliminary permit or development application or notice of intent to file a competing preliminary permit or development application must be filed in response to and in compliance with the public notice of the initial preliminary permit application. No competing applications or notices of intent to file competing applications may be filed in response to this notice. A competing license application must conform with 18 CFR 4.30(b)(1) and (9) and 4.36.

A9. Notice of intent—A notice of intent must specify the exact name, business address, and telephone number of the prospective applicant, include an unequivocal statement of intent to submit, if such an application may be filed, either (1) a preliminary permit application or (2) a development application (specify which type of application), and be served on the applicant(s) named in this public notice.

A10. Proposed Scope of Studies under Permit—A preliminary permit, if issued, does not authorize construction. The term of the proposed preliminary permit would be 36 months. The work proposed under the preliminary permit would include economic analysis, preparation of preliminary engineering plans, and a study of environmental impacts. Based on the results of these studies, the Applicant would decide whether to proceed with the preparation of a development application to construct and operate the project.

B. Comments, Protests, or Motions to Intervene—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of the Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motion to intervene must be received on or before the specified comment date for the particular application.

C. Filing and Service of Responsive Documents—Any filings must bear in all capital letters the title "COMMENTS", "NOTICE OF INTENT TO FILE COMPETING APPLICATION", "COMPETING APPLICATION", "PROTEST", "MOTION TO INTERVENE", as applicable, and the Project Number of the particular application to which the filing refers. Any of the above-named documents

---

OL 54 SS 163 AG 24 989 MI

must be filed by providng the original and the number of copies provided by the Commission's regulations to: The Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426. An additional copy must be sent to Dean Shumway, Director, Division of Project Review, Federal Energy Regulatory Commission, Room 203–RB, at the above-mentioned address. A copy of any notice of intent, competing application or motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

D1. Agency Comments—States, agencies established pursuant to federal law that have the authority to prepare a comprehensive plan for improving, developing, and conserving a waterway affected by the project, federal and state agencies exercising administration over fish and wildlife, flood control, navigation, irrigation, recreation, cultural or other relevant resources of the state in which the project is located, and affected Indian tribes are requested to provide comments and recommendations for terms and conditions pursuant to the Federal Power Act as amended by the Electric Consumers Protection Act of 1986, the Fish and Wildlife Coordination Act, the Endangered Species Act, the National Historic Preservation Act, the Historical and Archeological Preservation Act, the National Environmental Policy Act, Public Law No. 88–29, and other applicable statutes. Recommended terms and conditions must be based on supporting technical data filed with the Commission along with the recommendations, in order to comply with the requirement in Section 313(b) of the Federal Power Act, 16 U.S.C. Section 8251(b), that Commission findings as to facts must be supported by substantial evidence.

All other federal, state, and local agencies that receive this notice through direct mailing from the Commission are requested to provide comments pursuant to the statutes listed above. No other formal requests will be made. Responses should be confined to substantive issues relevant to the issuance of a license. A copy of the application may be obtained directly from the applicant. If an agency does not respond to the Commission within the time set for filing, it will be presumed to have no comments. One copy of an agency's response must also be sent to the Applicant's representatives.

D2. Agency Comments—Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtain by agencies directly from the Applicant. If an agency does not file comments within the time specified for filig comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

D3b. Agency Comments—The Commission requests that the U.S. Fish and Wildlife Service, the National Marine Fisheries Service, and the State Fish and Game agenc(ies), for the purposes set forth in Section 408 of the Energy Security Act of 1980, file within 45 days from the date of issuance of this notice appropriate terms and conditions to protect any fish and wildlife resources or to otherwise carry out the provisions of the Fish and Wildlife Coordination Act. General comments concerning the project and its resources are requested; however, specific terms and conditions to be included as a condition of exemption must be clearly identified in the agency letter. If an agency does not file terms and conditions within this time period, that agency will be presumed to have none. Other Federal, state and local agencies are requested to provide any comments they may have in accordance with their duties and responsibilities. No other formal requests for comments will be made. Comments should be confined to substantive issues relevant to the granting of an exemption. If an agency does not file comments within 45 days from the date of issuance of this notice, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

Dated: August 18, 1989.

Lois D. Cashell,

Secretary.

[FR Doc. 89–19904 Filed 8-23-89; 8:45 am]

BILLING CODE 6717-01-M

[Project Nos. 2389-002, et al.]

Hydroelectric Applications (Augusta Dev. Corp., et al.) Filed With the Commission

Take notice that the following hydroelectric applications have been filed with the Commission and are available for public inspection:

1. a. *Type of Application:* Transfer of License.

b. *Project No.:* 2389–002.

c. *Date Filed:* June 12, 1989.

D. *Applicant:* Augusta Development Corporation (Transferor) and Edwards Manufacturing Company, Inc. (Transferee).

e. *Name of Project:* Edwards Dam Project.

f. *Location:* On Kennebec River, Augusta, Maine.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:*

Transferor: Amy S. Koch, Chadbourne & Parke, 1101 Vermont Ave., NW., Suite 900, Washington, DC 20005, (202) 289–3000.

Transferee: Mark Isaacson, Vice President, Edwards Manufacturing Company, Inc., P.O. Box 97, Lisbon Falls, ME 04252, (207) 353–4111.

i. *FERC Contact:* Ed Lee at (202) 376–5786.

j. *Comment Date:* September 28, 1989.

k. *Description of Proposed Action:* On August 12, 1964, a license was issued for the construction, operation, and maintenance of the Edwards Dam project. It is proposed to transfer the license to Edwards Manufacturing Company because the project was sold to Edwards Manufacturing Company. The proposed transfer will not result in any changes to the proposed development. The Transferor certifies that it has fully complied with the terms and conditions of the license and agrees to be bound thereby to the same extent as though it were the original licensee.

l. This notice also consists of the following standard paragraphs: B, C, and D2.

2. a. *Type of Filing:* Amendment of License.

b. *Project No.:* 2426–028.

c. *Date Filed:* January 23, 1989.

d. *Applicant:* State of California, Department of Water Resources.

e. *Name of Project:* California Aqueduct Project.

f. *Location:* The Mojave Siphon Development is on the California Aqueduct near Silverwood Lake, 15 miles north of the City of San Bernardino, San Bernardino County, California.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:*

Mr. Viju Patel, Chief, Energy Division, Department of Water Resources, P.O. Box 942836, Sacramento, CA 94236–0001, (916) 445–6687.

i. *FERC Contact:* Thomas Dean, (202) 376–9562.

j. *Comment Date:* September 25, 1989.

k. *Description of Project:* The Mojave Siphon Development of the California Aqueduct Project as amended on August 12, 1982, would consist of: (1) Modification to the existing gated reinforced concrete intake structure; (2) an 11-foot-diameter, 650-foot-long penstock leading to; (3) a powerhouse containing a single generating unit with a capacity of 7.2 megawatts; (4) an 11-foot-diameter, 190-foot-long pipeline, and a 17-foot-diameter, 865-foot-long tunnel to convey plant tailrace water to Silverwood Lake; (5) a 0.5-mile-long, 33-kV transmission line; and (6) appurtenant facilities. The estimated average annual energy generation is 47 GWh.

The applicant proposes to modify its amended Mojave Siphon Development by: (1) Adding an 18-foot-diameter, 2.36-mile-long pipeline parrallel to the existing 11-foot-diameter pipeline; (2) adding an 18-foot-diameter, 360-foot-long penstock extending from the existing Mojave Siphon valve vault to the powerhouse; (3) changing the single generating unit with three generating units with a combined installed capacity of 32.4 megawatts; (4) adding an 18-foot-diameter, 480-foot-long discharge pipe extending from the powerhouse to the tailrace tunnel; and (5) change the transmission line to 0.1-mile-long and 115-kV. The average annual energy generation with the increased capacity is 111 GWh.

l. *Purpose of Project:* Applicant intends to either wheel the power generated from the proposed facility to its pumping plants for the California Aqueduct, or exchange the power with Southern California Edison Company.

m. This notice also consists of the following standard paragraphs: A4, B, and C.

3. a. Type of Applications: Amendment of License.

b. Project No.: 2543–021.

c. Date Filed: July 13, 1989.

d. Applicant: The Montana Power Company.

e. Name of Project: Milltown Dam Hydroelectric Project.

f. Location: On the Clark Fork River, near Milltown, Missoula County, Montana.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. Applicant Contact:

G. Howard Van Noy, 40 East Broadway, Butte, MT 59701, (406) 723–5421.

i. FERC Contact: Edward Melisky, (202) 376–8255.

j. Comment Date: September 28, 1989.

k. Description of Project: In an application for amendment of license filed with the Commission on July 13, 1989, the Montana Power Company (licensee) requested that the Commission extend the term of the license for the Milltown Dam Hydroelectric Project. The license, which was issued on June 3, 1968, has a termination date of December 31, 1993. The licensee requests that the Commission change that termination date to December 31, 1999. This notice is being issued to inform interested parties that the Commission will now consider the licensee's request to extend the term of the license.

l. This notice also consists of the following standard paragraphs: B, C, and D2.

4. a. Type of Applications: Transfer of License.

b. Project No.: 2801–011.

c. Date Filed: June 8, 1989.

d. Applicant: Mary C. Heather.

e. Name of Project: Glendale Project.

f. Location: On the Housatonic River, Town of Stockbridge, Berkshire County, Massachusetts.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791(a)–825(r).

h. Applicant Contact:

Mary C. Heather, Sergeant Street, P.O. Box 336, Stockbridge, MA 01262, (413) 298–3141.

i. FERC Contact: Mary Nowak (202) 376–9634.

j. Comment Date: September 21, 1989.

k. Description of Project: Mary C. Heather proposes to transfer the license for the Glendale Project No. 2801 to Mr. Joseph A. Guerrieri. The transferor lacks the time to manage the project and wishes to be disassociated from the project. The transferor inadvertently conveyed project property to the transferee without prior Commission approval. Such an error violates Article 5 of the license for Project No. 2801.

l. This notice also consists of the following standard paragraphs: B, C, and D2.

5. a. Type of Filling: Surrender of License.

b. Project No.: 3552–010.

c. Date Filed: July 28, 1989.

d. Applicant: Oakdale and South San Joaquin Irrigation Districts.

e. Name of Project: Goodwin Dam.

f. Location: On the Stanislaus River in Tuolumne and Calaveras Counties, California.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791(a)–825(r).

h. Applicant Contact:

Jeffrey A. Meith, Minasian, Minasian, Minasian, Spruance, Baber, Meith & Soares, P.O. Box 1679, 1681 Bird Street, Oroville, CA 95965, (916) 533–2885.

i. Commission Contact: Nanzo T. Coley, (202) 376–9416.

j. Comment Date: September 9, 1989.

k. Description of Proposed Action: The license to be surrendered would have included a project consisting of: (1) A 79-foot-high, 480-foot-long dam; (2) a reservoir with a surface area of 70 acres and a storage capacity of 502 acre-feet at elevation 357 feet m.s.l.; (3) a 11-foot-diameter, 100-foot-long penstock; (4) a powerhouse with an installed capacity of 5MW under a head of 61 feet; (5) a 300-foot-long, 17-kV transmission line; and (6) appurtenant facilities. The applicant estimates the average annual energy output at 16,530,000 KWh. Energy produced at the project would have been sold to Pacific Gas and Electric Company.

l. This notice also consists of the following standard paragraphs: B, C, & D2.

6. a. Type of Applications: Surrender of License.

b. Project No.: 4369–009.

c. Date Filed: June 5, 1989.

d. Applicant: City of Anoka.

e. Name of Project: Coon Rapids Dam.

f. Location: In Anoka and Hennepin Counties, Minnesota, on the Mississippi River.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791(a)–825(r).

h. Applicant Contact:

Mark Nagel, City Manager, City of Anoka, Minnesota, 2015 First Avenue, Anoka, MN 55303, (612) 421–6630.

i. FERC Contact: Mary Nowak (202) 376–9634.

j. Comment Date: September 28, 1989.

k. Description of Project: The license for this project was issued on May 29, 1987, for an installed capacity of 10.4 megawatts. The licensee states that it has determined that the project would be economically infeasible. No construction has commenced at the project site.

l. This notice also consists of the following standard paragraphs: B, C, and D2.

7. a. *Type of Application:* Transfer of License.

b. *Project No.:* 7860–010.

c. *Date Filed:* July 3, 1989.

d. *Applicant:* O'Connell Management Company, Inc. and Ammonoosuc River Hydroelectric Corporation.

e. *Name of Project:* Bethlehem Dam Project.

f. *Location:* On the Ammonoosuc River in Grafton County, New Hampshire.

h. *Applicant Contact:*

Mr. George K. Lagassa, Mainstream Associates, P.O. Box 947, North Hampton, NH 03862, (603) 431–3748.

i. *FERC Contact:* Robert Bell (202) 376–9237.

j. *Comment Date:* September 28, 1989.

k. *Description of Project:* On December 1, 1987, a licensee was issued to O'Connell Management Company, Inc. (licensee) to construct, operate, and maintain the Bethlehem Dam Project No. 7860. The Licensee intends to transfer the license to Ammonoosuc River Hydroelectric Corporation (transferee), which will purchase, construct and operate the project. The transferee agrees to accept the terms and conditions of the license as if it were the original licensee. The transfer is requested to facilitate the financing and construction of the project.

l. This notice also consists of the following standard paragraphs: B and C.

8. a. *Type of Application:* Amendment of License.

b. *Project No.:* 8615–002.

c. *Date Filed:* May 8, 1989.

i. *FERC Contact:* Ed Lee (202) 376–5786.

j. *Comment Date:* October 10, 1989.

k. *Description of Project:* The Fiske Mill Hydro Project No. 8615 as licensed consists of: (1) A 19-foot-high and 185-foot-long concrete-capped dam with a spillway crest elevation of 226.8 feet mean sea level (m.s.l.); (2) 2-foot-high flashboards at the spillway creating an impoundment of 4 acres at surface elevation of 228.8 feet m.s.l.; (3) an intake structure at the north abutment; (4) an 80-foot-long steel plate arch canal, 20.5 feet by 13.5 feet in diameter; (5) a powerhouse with 3 turbine-generator units with an installed capacity of 221 kW each, and one unit with an installed capacity of 147 kW; (6) generator leads, a 0.48/4.16-kV step-up transformer, a 100-foot-long 4.16 kV transmission line; and (7) appertenant facilities.

The Applicant proposes to amend its license by increasing the total installed capacity by 100-kW with the installation of one generator located in the northerly existing waste bay adjacent to the powerhouse at the north abutment of the dam. The Applicant states that the new facilities would be in the same general project area, and that no adverse impacts would be expected other than those addressed in the original licensing process. The project would be operated as already licensed with no other charges.

l. *Purpose of Project:* All of the power generated by the Applicant will be sold to a local utility.

m. This notice also consists of the following standard paragraphs: B, C, and D1.

9. a. *Type of Application:* Surrender of License.

b. *Project No.:* 9727–002.

c. *Date Filed:* June 28, 1989.

d. *Applicant:* Bellamy's Mill Power, Ltd.

e. *Name of Project:* Bellamy's Mill Hydropower Project.

f. *Location:* On Fishing Creek, Nash and Halifax Counties, North Carolina.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:*

Mr. T. Stewart Gibson, 605 Sunset Avenue, P.O. Box 269, Rocky Mountain, NC 27802, (919) 977–2333.

i. *FERC Contact:* Michael Dees (202) 376–9414.

j. *Comment Date:* September 21, 1989.

k. *Description of Project:* On December 28, 1988, a license was issued to construct, operate, and maintain the Bellamy's Mill Hydropower Project No. 9727. The project would consist of: (a) A granite block gravity dam with an overall length of 220 feet and a height of 12 feet; (b) a 1.0-acre reservoir with a storage capacity of 5.0 acre-feet at a normal water surface elevation of 91.5 feet MSL; (c) a powerhouse to contain an installed capacity of 39 kW; (d) a second powerhouse to contain an installed capacity of 115 kW; (e) generator leads; (f) a 0.44/7.2-kV transformer; (g) a 50-foot-long, 7.2-kV, single-phase transmission line and; (h) appurtenant facilities.

Licensee states that the project is no longer economically feasible.

l. This notice also consists of the following standard paragraphs: B, C, and D2.

10. a. Type of Filing: Minor License (5–MW or less).

b. Project No.: 10048–002.

c. Date Filed: October 26, 1988.

d. Applicant: Turner Creek Power Company, Inc.

e. Name of Project: Turner Creek Hydroelectric Project.

f. Location: In the Tahoe National Forest on Turner Creek, near the town of Sierraville, in Sierra County, California.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. section 791(a)–825(r).

h. Applicant contracts:

Mr. Russell Turner, Turner Creek, Power Company, Inc., P.O. Box 7, Sattley, CA 96124, (916) 587–8909.

i. FERC Contact: Thomas Dean, (202) 376–9562.

j. Comment Date: October 11, 1989.

k. Description of project: The proposed project would consist of: (1) A 6-foot-high, 20-foot-long diversion structure at elevation 5,780 feet msl; (2) a 10-inch-diameter, 5,000-foot-long penstock leading to; (3) a powerhouse at elevation 4,980 feet msl containing a single generating unit with an installed capacity of 100 kilowatts; (4) a tailrace; and (5) a 2,600-foot-long, 12.5-kV transmission line. The applicant estimates the average annual energy generation at 740 MWh.

l. Purpose of Project: Applicant intends to sell project power to Pacific Gas and Electric Company.

m. This notice also consists of the following standard paragraphs: A3, A9, B, C, and D1.

11. a. Type of Application: Preliminary Permit.

b. Project No.: 10780–000.

c. Date Filed: May 22, 1989.

d. Applicant: Flannagan Hydro Associates.

e. Name of Project: Flannagan Dam Project.

f. Location: On the Pound River near Clintwood, Dickenson County, Viriginia.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)-825(r)

h. Applicant Contact:

Mr. David K. Iverson, Synergics, Inc., 410 Severn Avenue, Suite 313, Annapolis, MD 21403, (301) 268–8820.

i. FERC Contact: Michael Dees (202) 386–9414.

j. Comment Date: October 2, 1989.

k. Competing Application: Project No. 10779–000

Date Filed: May 15, 1989

Competition Due Date: September 7, 1989

l. Description of Project: The proposed project would utilize the existing Corps of Engineers' Flannagan Dam and reservoir and would consist of: (1) An existing intake structure and tunnel; (2) a proposed penstock; (3) a proposed powerhouse housing a hydropower unit rated at 7.0 MW; (4) a proposed transmission line 4,500 feet long; and (5) appurtenant facilities. The estimated annual energy production is 17.5 GWh. Project energy would be sold to Appalachian Power Company. Applicant estimates that the cost of the work to be performed under the preliminary permit would be $100,000.

m. This notice also consists of the following standard paragraphs: A8, A10, B, C, and D2.

12. a. Type of Application: Preliminary Permit.

b. Project No.: 10783–000.

c. Date Filed: May 22, 1989.

d. Applicant: James A. Riendeau.

e. Name of Project: Bean Brook Water Power Project.

f. Location: On Bean Reservoir on Bean Brook, near Berlin/Success Town Line, in Coos County, New Hampshire.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791(a)-825(r).

h. Applicant Contact: Mr. James A. Riendeau, 8 Gordon Avenue, Cascade/Gorham, NH 03581, (603) 752–4874.

i. FERC Contact: Mary Nowak (202) 376–9834.

j. Comment Date: October 13, 1989.

k. Description of Project: The proposed project would consist of the following facilities: (1) An existing concrete gravity dam 15 feet high and 262 feet long; (2) an existing reservoir with a surface area of 2 acres and a total storage capacity of 9 acre-feet at a surface elevation of 1,282 feet mean sea level; (3) an existing penstock approximately 5,280 feet long and 10 feet in diameter; (4) a proposed powerhouse containing one generating unit at a total installed capacity of 40 kilowatts; and (5) appurtenant facilities. The applicant estimates that the cost of the studies under permit would be about $1,000. The existing dam is owned by the City of Berlin Water Works and the average annual generation would be 180,000 kilowatthours.

l. This notice also consists of the following standard paragraphs: A5, A7, A9, A10, B, C, and D2.

13. a. Type of Application: Preliminary Permit.

b. Project No.: 10791–000.

c. Date filed: June 2, 1989.

d. Applicant: FORIA Hydro Corporation.

e. Name of Project: Fort Dodge Mill Project.

f. Location: On the Des Moines River in Webster County, Iowa.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: Mr. Thomas J. Wilkinson, FORIA Hydro Corporation, 700 Higley Bldg., P.O. Box 1968, Cedar Rapids, IA 52406, Phone: (319) 366–4990.

i. FERC Contact: Robert Bell (202) 376–9237.

j. Comment Date: October 12, 1989.

k. Description of Project: The proposed project would consist of: (1) The existing 18-foot-high, 372-foot-long concrete Fort Dodge Dam; (2) an impoundment having a surface area of 90 acres with negligible storage and a normal water surface elevation of 990 feet m.s.l.; (3) an existing powerhouse with two proposed generating units having a total installed capacity of 1260-kW; (4) a proposed 200-foot-long, 13.8-kV transmission line; and (5) appurtenant facilities. The existing dam is owned by the City of Fort Dodge, Iowa. The Applicant estimates the average annual generation would be 7507 MWH. All project energy generated would be sold to a local utility.

l. This notice also consists of the following standard paragraphs: A5, A7, A9, A10, B, C, and D2.

14. a. Type of Application: Preliminary Permit.

b. Project No.: 10795–000.

c. Date filed: June 5, 1989.

d. Applicant: RUTIA Hydro Corporation.

e. Name of Project: Rutland Mill Dam Project.

f. Location: On the West Fork, Des Moines River in Humboldt County, Iowa.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: Mr. Thomas J. Wilkinson Jr., RUTIA Hydro Corporation, 700 Higley Bldg., P.O. Box 1968, Cedar Rapids, IA 52406, Phone: (319) 366–4990.

i. FERC Contact: Robert Bell (202) 376–9237.

j. Comment Date: October 12, 1989.

k. Description of Project: The proposed project would consist of: (1) The existing 260-foot-long, 13-foot-high concrete Rutland Mill Dam; (2) an impoundment having a surface area of 80 acres with negligible storage and a normal water surface elevation of 1090 feet m.s.l.; (3) an existing powerhouse containing one proposed generating unit having an installed capacity of 700-kW; (4) a proposed 200-foot-long, 24-kV transmission line; and (5) appurtenant facilities. The existing dam is owned by the Humboldt County Conservation Board. The Applicant estimates the average annual generation would be 3549 MWH. All project energy generated would be sold to a local utility.

l. This notice also consists of the following standard paragraphs: A5, A7, A9, A10, B, C, and D2.

15. a. Type of Application: Preliminary Permit.

b. Project No.: 10798–000.

c. Date filed: June 5, 1989.

d. Applicant: HUMIA Hydro Corporation.

e. Name of Project: Humboldt Mill Dam Project.

f. Location: On the East Fork, Des Moines River in Humboldt County, Iowa.

g. Filed Pursuant to: Federal Power Act 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: Mr. Thomas J. Wilkinson Jr., HUMIA Hydro Corporation, 700 Higley Bldg., P.O. Box 1968, Cedar Rapids, IA 52406, Phone: (319) 366–4990.

i. FERC Contact: Robert Bell (202) 376–9237.

j. Comment Date: October 12, 1989.

k. Description of Project: The proposed project would consist of: (1) An existing 557-foot-long, 12-foot-high concrete Humboldt Dam; (2) an impoundment having a surface area of 80 acres with negligible storage and normal water surface elevation of 1070 feet m.s.l.; (3) an existing powerhouse containing a proposed generating unit with an installed capacity of 634 kW; (4) a proposed 50-foot-long, 12.47-kV transmission line; and (5) appurtenant facilities. The existing dam is owned by the Humboldt County Conservation Board. The Applicant estimates the average annual generation would be 3003 MWH. All project energy generated would be sold to a local utility.

l. This notice also consists of the following standard paragraphs: A5, A7, A9, A10, B, C, and D2.

Standard Paragraphs

A3. Development Application—Any qualified development applicant desiring to file a competing application must submit to the Commission, on or before the specified comment date for the particular application, a competing development application, or a notice of intent to file such an application. Submission of a timely notice of intent allows an interested person to file the competing development application no later than 120 days after the specified comment date for the particular application. Applications for preliminary permits will not be accepted in response to this notice.

A4. Development Application—Public notice of the filing of the initial development application, which has already been given, established the due date for filing competing applications or notices of intent. In accordance with the Commission's regulations, any competing development application must be filed in response to and in compliance with public notice of the initial development application. No competing applications or notices of intent may be filed in response to this notice.

A5. Preliminary Permit—Anyone desiring to file a competing application for preliminary permit for a proposed project must submit the competing application itself, or a notice of intent to file such an application, to the Commission on or before the specified comment date for the particular application (see 18 CFR 4.36). Submission of a timely notice of intent allows an interested person to file the competing preliminary permit application no later than 30 days after the specified comment date for the particular application. A competing preliminary permit application must conform with 18 CFR 4.30(b) (1) and (9) and 4.36.

A7. Preliminary Permit—Any qualified development applicant desiring to file a competing development application must submit to the Commission, on or before the specified comment date for the particular application, either a competing development application or a notice of intent to file such an application. Submission of a timely notice of intent to file a development application allows an interested person to file the competing application no later than 120 days after the specified comment date for the particular application. A competing license application must conform with 18 CFR 4.30(b) (1) and (9) and 4.36.

A8. Preliminary Permit—Public notice of the filing of the initial preliminary permit application, which has already been given, established the due date for filing competing preliminary permit and development applications or notices of intent. Any competing preliminary permit or development application or notice of intent to file a competing preliminary permit or development application must be filed in response to and in compliance with the public notice of the initial preliminary permit application. No competing applications or notices of intent to file competing applications may be filed in response to this notice. A competing license application must conform with 18 CFR 4.30(b) (1) and (9) and 4.36.

A9. Notice of intent—A notice of intent must specify the exact name, business address, and telephone number of the prospective applicant, include an unequivocal statement of intent to submit, if such an application may be filed, either (1) a preliminary permit application or (2) a development application (specify which type of application), and be served on the applicant(s) named in this public notice.

A10. Proposed Scope of Studies under Permit—A preliminary permit, if issued, does not authorize construction. The term of the proposed preliminary permit would be 36 months. The work proposed under the preliminary permit would include economic analysis, preparation of preliminary engineering plans, and a study of environmental impacts. Based on the results of these studies, the Applicant would decide whether to proceed with the preparation of a development application to construct and operate the project.

B. Comments, Protests, or Motions to Intervene—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of the Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

C. Filing and Service of Responsive Documents—Any filings must bear in all capital letters the title "COMMENTS", "NOTICE OF INTENT TO FILE COMPETING APPLICATION", "COMPETING APPLICATION", "PROTEST", "MOTION TO INTERVENE", as applicable, and the Project Number of the particular application to which the filing refers. Any of the above-named documents must be filed by providing the original and the number of copies provided by the Commission's regulations to: The Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426. An additional copy must be sent to Dean Shumway, Director, Division of Project Review, Federal Energy Regulatory Commission, Room 203-RB, at the above-mentioned address. A copy of any notice of intent, competing application or motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

D1. Agency Comments—States, agencies established pursuant to federal law that have the authority to prepare a comprehensive plan for improving, developing, and conserving a waterway affected by the project, federal and state agencies exercising administration over fish and wildlife, flood control, navigation, irrigation, recreation, cultural or other relevant resources of the state in which the project is located, and affected Indian tribes are requested to provide comments and recommendations for terms and conditions pursuant to the Federal Power Act as amended by the Electric Consumers Protection Act of 1986, the Fish and Wildlife Coordination Act, the Endangered Species Act, the National Historic Preservation Act, the Historical and Archeological Preservation Act, the National Environmental Policy Act, Public Law No. 88-29, and other applicable statutes. Recommended terms and conditions must be based on supporting technical data filed with the Commission along with the recommendations, in order to comply with the requirement in Section 313(b) of the Federal Power Act, 16 U.S.C. Section 8251(b), that Commission findings as to facts must be supported by substantial evidence.

All other federal, state, and local agencies that receive this notice through direct mailing from the Commission are requested to provide comments pursuant to the statutes listed above. No other formal requests will be made. Responses should be confined to substantive issues relevant to the issuance of a license. A copy of the application may be obtained directly from the applicant. If an agency does not respond to the Commission within the time set for filing, it will be presumed to have no comments. One copy of an agency's response must also be sent to the Applicant's representatives.

D2. Agency Comments—Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

Dated: August 18, 1989, Washington, DC.

Lois D. Cashell,

Secretary.

[Docket Nos. CS71-760 et al.]

Fair Operating, Inc. (Ralph E. Fair, Inc.), et al.;

Applications for Small Producer Certificates [1]

August 17, 1989.

Take notice that each of the Applicants listed herein has filed an application pursuant to section 7(c) of the Natural Gas Act and § 157.40 of the Commission's regulations thereunder for a small producer certificate of public convenience and necessity authorizing the sale for resale and delivery of natural gas in interstate commerce, all as more fully set forth in the applications which are on file with the Commission and open to public inspection.

Any person desiring to be heard or to make any protest with reference to said applications should on or before September 5, 1989, file with the Federal Energy Regulatory Commission, Washington, DC 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's rules.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicants to appear or to be represented at the hearing.

Lois D. Cashell,

Secretary.

[Docket Nos. RP89-14-009, TA89-1-45-006, and TQ89-1-45-005]

Inter-City Minnesota Pipelines Ltd., Inc.; Tariff Filing

August 17, 1989.

Take notice that on August 10, 1989, Inter-City Minnesota Pipelines, Ltd., Inc. ("Inter-City"), 245 Yorkland Boulevard, North York, Ontario, Canada M2J 1R1, tendered for filing a revised tariff sheet to Original Volume 1 and Original Volume 2 of its FERC Gas Tariff to be effective December 1, 1988 and February 1, 1989:

Original Volume No. 1
  Corrected Third Substitute First Revised Thirty-First Revised Sheet No. 4
  Corrected Fourth Substitute First Revised Thirty-First Revised Sheet No. 4
Original Volume No. 2
  First Revised Fifth Revised Sheet No. 11
  First Revised Fifth Revised Sheet No. 12

Inter-City states that these sheets are filed in compliance with the Commission orders issued in these dockets on January 30, 1989 and letter order issued August 31, 1989.

Inter-City states that copies of the filing have been mailed to all of its customers and affected state regulatory commissions.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance Rules 211 and 214 of the Commission's Rules of Practice and Procedure. All such protests should be filed on or before August 24, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. RP89-47-001]

Natural Gas Pipeline Company of America; Changes in PGA Tariff Procedure

August 17, 1989.

Take notice that on August 9, 1989, Natural Gas Pipelines Company of America (Natural) tendered for filing tariff sheets as part of its FERC Gas Tariff, Third Revised Volume No. 1 (Tariff) the below listed tariff sheets to be effective January 1, 1989.

Fifth Revised Sheet Nos. 121C and 121D
Third Revised Sheet Nos. 121E and 121F

Natural states the purpose of the instant filing is to comply with the Commission's July 11, 1989 letter order issued at Docket No. RP89-47-000. Said order granted Natural's request for waiver of § 154.305(h)(3)(ii)(D) of the Commission's Regulations effective January 1, 1989. The waiver will allow Natural to calculate carrying charges on the Account No. 191 balance using Natural's Temporary LIFO Liquidation Account as the offset rather than the rolling weighted average method set forth in the Regulations.

A copy of this filing is being mailed to Natural's jurisdictional sales customers and interested state regulatory agencies.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with §§ 385.214 and 385.211. All such protests must be filed on or before August 24, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket Nos. RP88-259-019 and RP85-136-007]

Northern Natural Gas Company; Proposed Changes in FERC Gas Tariff

August 17, 1989.

Take notice that on August 9, 1989, Northern Natural Gas Company (Northern) (Division of Enron Corp.), tendered for filing proposed changes in its FERC Gas Tariff to correct pagination errors in the filing made June 30, 1989 in this proceeding.

The Company states that copies of the filing have been mailed to all parties of record in these proceedings, each of its customers purchasing gas and receiving transportation and gathering services under its FERC Gas Tariff and to interested State Commissions. Any persons desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825

North Capitol Street, NE., Washington, DC 20426, in accordance with Rules 214 and 211 of the Commission's Rules of Practice and Procedure (18 CFR 385.214 and 385.211). All such protests should be filed on or before August 24, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

BILLING CODE 6717-01-M

[Docket No. RP74-41-046, et al.]

Texas Eastern Transmission, Corp., et al., Filing of Pipeline Refund Reports

August 17, 1989.

Take notice that the pipeline listed in the Appendix hereto heve submitted to the Commission for filing proposed refund reports. The date of filing and docket number are also shown on the Appendix.

Any person wishing to do so may submit comments in writing concerning the subject refund reports. All such comments should be filed with or mailed to the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, on or before September 7, 1989. Copies of the respective filings are on file with the Commission and available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. CI89-421-000]

Texas Eastern Oil Co.; Application

August 17, 1989.

Take notice that on July 14, 1989, Texas Eastern Oil Company (TEOC) of P.O. Box 2521, Houston, Texas 77252, filed an application pursuant to section 7 of the Natural Gas Act and the Federal Energy Regulatory Commission's (Commission) regulations thereunder for a certificate of public convenience and necessity authorizing TEOC to make and continue sales of natural gas to Texas Eastern Transmission Corporation (Texas Eastern) from properties to be acquired from Texas Eastern, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

TEOC states that Texas Eastern proposes to transfer certain properties located in Texas and West Virginia to TEOC and that production from the subject properties is delivered directly to Texas Eastern for use as system supply. TEOC proposes to make sales from the subject properties to Texas Eastern pursuant to six contracts between TEOC and Texas Eastern dated July 11, 1989. According to TEOC, the gas subject to the application qualifies for NGPA section 104 and 108 pricing. In support of its application, TEOC states that no change in the service provided to Texas Eastern or its respective customers will result from the grant of this application.

Any person desiring to be heard or to make any protest with reference to said applications should on or before September 7, 1989, file with the Federal Energy Regulatory Commission, Washington, DC 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party in any proceeding herein must file a petition to intervene in accordance with the Commission's rules.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for TEOC to appear or to be represented at the hearing.

Lois D. Cashell,

Secretary.

[FR Doc. 89-19676 Filed 8-23-89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. RP89-003]

Trunkline Gas Co.; Proposed Changes in FERC Gas Tariff

August 17, 1989.

Take notice that Trunkline Gas Company (Trunkline), on August 10, 1989 tendered for filing the following proposed changes in its FERC Gas Tariff, Original Volume No. 1:

Second Substitute Eleventh Revised Sheet No. 3-A.1
Second Substitute Original Sheet No. 9-JC

The proposed effective date of these revised tariff sheets is May 1, 1989.

Trunkline states that these revised tariff sheets are being filed in accordance with Ordering Paragraph (D) of the Commission's Order issued July 11, 1989.

Copies of this letter and enclosure are being served on all jurisdictional customers and interested state agencies.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capital Street NE., Washington, DC 20426, in accordance with §§ 385.214 and 385.211 of the Commission's Rules and Regulations. All such protests should be filed on or before August 24, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

Western Area Power Administration

Adjusted Final Post-1989 Allocation of Power; Salt Lake City Area Integrated Projects

AGENCY: Western Area Power Administration, DOE.

ACTION: Notice of adjustments to the Final Post-1989 Power Allocations; Salt Lake City Area Integrated Projects.

SUMMARY: Final post-1989 allocations from the Salt Lake City Area Integrated Projects (SLCA/IP) were published in the **Federal Register** on April 2, 1987 (52 FR 10620), and a correction notice for those final allocations was published on May 20, 1987 (52 FR 18945). Subsequently, the allocations of certain allottees have been withdrawn, either at the request of the allottee or because the allottees have failed to meet the eligibility requirements listed in the General Power Marketing and Allocation Criteria (Criteria), published in the **Federal Register** on February 7, 1986 (51 FR 4844). Available energy and capacity have been administratively reallocated to Enterprise and Hurricane, Utah. Other adjustments have been made to the allocations of other allottees, who have approached the Western Area Power Administration (Western) with requests that their individual final allocations be modified because of unusual or extenuating circumstances.

DATES: These allocations will become final on August 24, 1989, and become effective on September 25, 1989.

ADDRESS: For further information on these adjusted final allocations, contact: Mr. Lloyd Greiner, Area Manager, Salt Lake City Area Office, Western Area Power Administration, P.O. Box 11606, Salt Lake City, UT 84147, (801) 524-5493.

  B. Northern Division Existing Customers
  C. Northern Division Participating Customers
    1. New Customers
    2. Existing Customers and Special Allocations

I. Background of Allocation Procedures

On February 4, 1983, Western published a **Federal Register** notice (48 FR 5303) requesting applicant profile data (APD) from existing and potential customers in order to determine entities' eligibility to receive allocations of post-1989 SLCA/IP resources. Hypothetical allocations were published in the **Federal Register** on September 4, 1984 (49 FR 34900). Based on public comment, Western formulated and published its Post-1989 General Power Marketing and Allocation Criteria and Call for Applications for Power (Criteria) on February 7, 1986 (51 FR 4844). The hypothetical allocations were revised and published as proposed allocations in the **Federal Register** on September 11, 1986 (51 FR 32362). Following additional public comment, final post-1989 allocations were published in the **Federal Register** on April 2, 1987 (52 FR 10620), and a notice of correction was published on May 20, 1987 (52 FR 18945).

II. Final Allocation Adjustment Procedures

A. Refused or Rescinded Allocations

The February 7, 1986, Criteria indicate that contractors must have the means to receive and distribute power by September 30, 1988, in order to avoid automatic forfeiture of their contract rights unless Western specifically agrees otherwise in writing. Contractors were required to (1) have transmission arrangements in place by the September 30 deadline in order to receive SLCA/IP power and energy, and (2) have acquired electrical distribution systems with the capability of delivering SLCA/IP power and energy to their loads reported in the 1983 APD. Five entities not meeting the September 30, 1988, deadline were determined to be ineligible for their post-1989 SLCA/IP allocations. The capacity and energy either refused by or rescinded from these entities is listed in table 1 in section II.C.1.

B. Reallocation of Capacity and Energy Adjustments

1. First Right of Refusal Allocations

In the February 1987 Criteria, the cities of Enterprise and Hurricane, Utah, were granted first right to any reallocable energy and capacity, up to an amount equal to one-half of their individual peakloads in the 1975 summer and 1975-76 winter seasons. Since there is sufficient capacity available for reallocation to meet the specified requirements of the two cities, the final special allocations of SLCA/IP energy and capacity of both Enterprise and Hurricane will be adjusted consistent with the Criteria. Enterprise's allocation will be adjusted to a total of 1.292 megawatts (MW) of capacity and 2,945.890 megawatthours (MWh) of energy in the winter season and .992 MW of capacity and 2,265.232 MWh of energy in the summer season. Hurricane's allocation will be adjusted to a winter season total of 3.882 MW of capacity and 8,851.348 MWh of energy and a summer season total of 1.716 MW of capacity and 3,918.486 MWh of energy.

2. Capacity Adjustments

Following the publication of the final post-1989 allocations, several allottees have requested that their capacity allocations be adjusted due to unusual circumstances. All reduced capacity adjustment requests have been granted. Requested increased capacity adjustments have been granted only if, in Western's determination, such adjustments are necessary to ensure that all customers have been treated equitably through the allocation procedures specified in the February 1987 Criteria. Any capacity adjustments will be or have been reflected in the individual allottee's post-1989 firm power sales contracts.

a. *Requested capacity reductions.* Central Valley Electric Cooperative, Inc., Colorado-Ute Electric Association, Inc., Lea County Electric Cooperative, and Roosevelt County Electric Cooperative, Inc., requested and were granted capacity reductions. Those reductions are listed in table 1 in section II.C.1.

b. *Farmers Electric Cooperative, Inc.* After the final allocations were published, Western became aware that Farmers Electric Cooperative, Inc.'s (Farmers), load factor at its requested capacity level was greater than 100 percent. Since Western cannot deliver power at a load factor greater than 100 percent, Western has increased Farmers' capacity to allow it to take its full allocated energy entitlement. Farmers' resulting capacity allocation in the winter season has therefore been changed from 1.602 MW to 2.353 MW, and its summer season capacity allocation has been changed from 1.857 MW to 2.576 MW.

c. Weber Basin Water Conservancy District

(1) Background. Weber Basin Water Conservancy District (Weber Basin), the contracting entity for the Bureau of Reclamation's (Reclamation) Weber Basin Project, is a Northern Division existing customer with only a summer allocation. Weber Basin has its own generation to supply a portion of its needs, and Western has historically supplied Weber Basin with all its capacity and energy needs above its own generation. By letter dated April 12, 1968, the Commissioner of Reclamation agreed that Reclamation would supply Weber Basin all its power needs above Weber Basin's own generation in exchange for Colorado River Storage Project (CRSP) use of Weber Basin's excess generation.

Article 10 of Contract No. 14–06–400–5002 between Reclamation and Weber Basin provides that Weber Basin may purchase power from Reclamation as needed to supply Weber Basin's power requirement. Weber Basin has requested and been granted the ability to overrun its allocation under article 10 of that contract.

(2) Basis for Adjustment. Because Reclamation and Western have historically delivered more capacity and energy to Weber Basin than its contract rate of delivery (CROD), Weber Basin requested that its final capacity allocation reflect Western's historic deliveries and commitment to Weber Basin rather than Weber Basin's CROD. Western has considered Weber Basin's request upon the condition that such an adjustment should not affect the final allocations of other allottees.

(3) Allocation Adjustment Methodology. Western has used Weber Basin's 1980–82 CRSP peak demand and 3-year average energy as bases for adjusting Weber Basin's allocation by applying the allocation methodology for Northern Division existing customers found in the February 1987 Criteria. After applying these bases to the allocation methodology, Western has calculated the following adjusted Weber Basin associated capacity allocations:

	Associated capacity	SLCA/IP energy entitlement
Resource Pool 4.	1.820 MW	915.704 MWh
Resource Pool 6.	3.324 MW	1,939.439 MWh
Total	5.144 MW	2,855.153 MWh

(4) Conclusion. Weber Basin's Resource Pool 4 capacity allocation has been adjusted from 0.415 MW to 1.820 MW. Its Resource Pool 6 capacity allocation has been adjusted from 0.758 MW to 3.324 MW. Weber Basin's final post-1989 SLCA/IP energy entitlement will remain unadjusted.

C. Reallocation of Capacity and Energy

1. Available Capacity and Energy

Capacity and energy available for reallocation are shown on the following table:

	Winter		Summer	
	MW	MWh	MW	MWh
Refused or Rescinded Allocations				
Cedar City	3.475	8,655.275	2.750	6,987.911
Ivins	0.131	328.168	0.116	300.073
LaVerkin	0.246	617.549	0.211	538.062
Springdale	0.029	72.781	0.024	81.052
West Bountiful	0.469	1,167.983	0.444	1,126.827
Subtotal rescinded	4.350	10,841.756	3.547	9,013.925
Reduced Capacity Allocations				
Central Valley Electric Cooperative, Inc	3.081		2.812	
Colorado-Ute Electric Association, Inc	56.000		52.000	
Lea County Electric Cooperative	2.335		2.570	
Roosevelt County Electric Cooperative, Inc	2.517		2.869	
Subtotal reduced	63.933		60.051	
4-2-87 allocations	74.490		67.856	
Available capacity	10.557		7.805	
(4–2–87 Allocations Minus Subtotal Reduced Allocations) Total Available (Rescinded and Reduced Allocations)	14.907	10,841.756	11.352	9,013.925
Increased Capacity and Energy Allocations				
Enterprise, UT	1.292	2,945.890	0.992	2,265.232
Farmers Electric Cooperative, Inc	2.353		2.576	
Hurricane, UT	3.882	8,851.348	1.716	3,916.486
Weber Basin Water Conservative District			5.144	
Subtotal increased	7.527	11,797.238	10.428	6,183.718
4-2-87 allocations	−4.189	−5,898.619	−4.349	−3,091.859
Total unavailable	3.338	5,898.619	6.077	3,091.859
(Required for Increased Allocations) Total Available for Reallocation (Available less Unavailable)	11,569	4,943.137	5.275	5,922.066

2. Administrative Reallocation

The February 7, 1986, Criteria indicate that long-term firm energy and associated capacity made available from refused or rescinded allocations may be administratively reallocated without further public process.

III. Adjusted Final Allocations

A. Southern Division Existing Customers

Table 2: Adjusted final SLCA/IP post-1989 allocations to Southern Division existing customers.

B. Northern Division Existing Customers

Table 3: Adjusted final SLCA/IP post-1989 allocations to Northern Division existing customers.

C. Northern Division Participating Customers

Table 4: Adjusted final SLCA/IP post-1989 allocations to Northern Division participating customers and special allocations.

Issued at Golden, Colorado, August 11, 1989.

William H. Clagett,

Administrator.

Agency Information Collection Activities Under OMB Review

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), these notices announce that the Information Collection Requests (ICRs) abstracted below have been forwarded to the Office of Management and Budget (OMB) for review and comments. The ICRs describe the nature of the information collections and their expected costs and burdens; where appropriate, they include the actual data collection instrument.

DATES: Comments must be submitted on or before September 25, 1989.

FOR FURTHER INFORMATION CONTACT: Sandy Farmer at EPA, (202 382-2740).

SUPPLEMENTARY INFORMATION:

Office of Air and Radiation

Title: NSPS for Onshore Natural Gas Processing Plants—Reporting and Recordkeeping. (EPA ICR #1086.02; OMB #2060-0123). This is a reinstatement of a previously approved collection.

Abstract: Onshore natural gas processing plants must keep records demonstrating VOC leak detection, conducted repair programs, and records demonstrating compliance with equipment standards. Semiannual reports of exceedances, which enable enforcement agencies to monitor the leak detections, are required. Also required are records of operation of continuous emission monitoring and of excess emission for SO2. EPA uses records and reports to determine compliance with the standards.

Burden statement: The public reporting burden for this collection of information is estimated to average 195 hours per response for reporting and 447 hours per response for recordkeeping. This estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Respondents: Owners/Operators of Onshore Natural Gas Processing Plants.

Estimated No. of respondents: 92.

Estimated total annual burden of respondents: 17,963 hours for reporting and 41,088 hours for recordkeeping.

Frequency of collection: Semiannually.

Title: NSPS for Primary Aluminum Reduction Plants (Subpart S)—Reporting and Recordkeeping. (EPA ICR #1067; OMB #2060-0031). This is a reinstatement of a previously approved collection.

Abstract: Owners/Operators must monitor and maintain records of daily production rates for aluminum anode, raw material feed rates, and potline voltages for two years. Monthly performance tests and reports are required. Also required are reports of operation and maintenance conditions when tests reveal high emission levels. This information is used to ensure continuing compliance with the standards.

Burden statement: The public reporting burden for this collection of information is estimated to average 67 hours per response for reporting and 88 hours per response for recordkeeping. This estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Respondents: Owners/Operators of Primary Aluminum Reduction Plants.

Estimated numbers of respondents: 5.

Estimated total annual burden on respondents: 1,331 hours for reporting and 438 hours for recordkeeping.

Frequency of collection: On occasion.

Title: NSPS for Bulk Gasoline Terminal (Subpart XX)—Information Requirements. (EPA ICR #0664.03; OMB #2060-0006). This is a reinstatement of a previously approved collection.

Abstract: Owners/Operators must notify EPA of construction, modifications, start-ups, shutdowns, malfunctions and dates and result of performance tests; they must record the tank identification number of each gasoline truck loaded; they must notify

EPA of each non-vapor-tight gasoline truck, and record each leak detected; they must also inspect control equipment during loading operations. No excess emission reports are required. EPA uses the information to implement and enforce the standards.

Burden statement: The public reporting burden for this collection of information is estimated to average 19.3 hours per response for reporting and 8.5 hours per response for recordkeeping. This estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Respondents: Owners/Operators of Bulk Gasoline Terminals.

Estimated No. of respondents: 31.

Estimated total annual burden of respondents: 599 hours for reporting and 284 hours for recordkeeping.

Frequency of collection: Initial performance test, and on occasion.

Send comments regarding the burden estimate, or any other aspect of these information collections, including suggestions for reducing the burden, to:

Sandy Farmer, U.S. Environmental Protection Agency, Information Policy Branch (PM-223), 401 M Street SW., Washington, DC 20460
and
Nicolas Garcia, Office of Management and Budget, Office of Information and Regulatory Affairs, 726 Jackson Place NW., Washington, DC 20530.

Dated: August 15, 1989.

RCRA Inspection Manual

AGENCY: Environmental Protection Agency.

ACTION: Notice of availability of Inspection Manual.

SUMMARY: The Environmental Protection Agency (EPA) announces the availability of a final inspection guidance entitled the *RCRA Inspection Manual.* It was finalized on April 22, 1988, and replaces the RCRA Inspection Manual completed in 1981. The manual provides guidance concerning the procedures and checklists employed by duly authorized inspectors during RCRA inspections pursuant to section 3007 of the Resource Conservation and Recovery Act.

Initially, the Manual was intended only for RCRA field inspectors to assist them in their performance of Compliance Evaluation Inspections of RCRA generators, transporters, and treatment, storage, and disposal facilities. With this notice, we are also making it available to the regulated community.

ADDRESS: Copies of the document entitled *RCRA Inspection Manual* are available for viewing at all EPA libraries and the RCRA/Superfund docket. The docket number is F-89-RIMA-FFFFF. The docket is located at EPA Headquarters (room M2427), 401 M Street SW., Washington, DC 20460 and is open from 9:00 a.m. to 4:00 p.m. Monday through Friday, except for Federal holidays. The public must make an appointment to review docket materials. Call 475-9327 for appointments. Copies cost $.15/page. In addition, this document is available for purchase through the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, Virginia 22161, at (703) 487-4600: RCRA Inspection Manual. (NTIS #PB89-208-169/AS).

FOR FURTHER INFORMATION CONTACT: For general information contact: RCRA/Superfund Hotline, (800) 424-9346. For technical information contact Peter R. Siebach, USEPA (OS-520), Office of Waste Programs Enforcement, 401 M Street SW., Washington, DC 20460, telephone (202) 475-9849.

Dated: August 9, 1989.

Robert L. Duprey,

Acting Assistant Administrator.

BILLING CODE 6560-50-M

[OPTS-59272A; FRL-3635-2]

Certain Chemicals; Approval of a Test Marketing Exemption

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This ntoice announces EPA's approval of an application for test marketing exemption (TME) under section 5(h)(1) of the Toxic Substances Control Act (TSCA) and 40 CFR 720.38. EPA has designated this application as TME-89-18. The test marketing conditions are described below.

EFFECTIVE DATES: August 17, 1989.

FOR FURTHER INFORMATION CONTACT: Darlene Jones, Premanufacture Notice Management Branch, Chemical Control Division (TS-794), Office of Toxic Substances, Environmental Protection Agency, Rm. E-608, 401 M St. SW., Washington, DC 20460, (202) 382-2279.

SUPPLEMENTARY INFORMATION: Section 5(h)(1) of TSCA authorizes EPA to exempt persons from premanufacture notification (PMN) requirements and permit them to manufacture or import new chemical substances for test marketing purposes if the agency finds that the manufacture, processing, distribution in commerce, use, and disposal of the substances for test marketing purposes will not present any unreasonable risk of injury to health or the environment. EPA may impose restrictions on test marketing activities and may modify or revoke a test marketing exemption upon receipt of new information which casts significant doubt on its finding that the test marketing activity will not present any unreasonable risk of injury.

EPA hereby approves TMS-89-18. EPA has determined that test marketing of the new chemical substance described below, under the conditions set out in the TME application, and for the time period and restrictions specified below, will not present any unreasonable risk of injury to health or the environment. Production volume, use, and the number of customers must not exceed that specified in the application. All other conditions and restrictions described in the application and in this notice must be met.

The following additional restrictions apply to TME-89-18. A bill of lading accompanying each shipment must state that the use of the substance is restricted to that approved in the TME. In addition, the applicant shall maintain the following records until 5 years after the date they are created, and shall make them available for inspection or copying in accordance with section 11 of TSCA:

1. Records of the quantity of the TME substance produced and the date of manufacture.
2. Records of dates of the shipments to each customer and the quantities supplied in each shipment.
3. Copies of the bill of lading that accompanies each shipment of the TME substance.

TME-89-18

Date of Receipt: July 14, 1989 (54 FR 29779).

Applicant: Westvaco Corporation.

Chemical: (G) Rosin, polymer with substituted phenols, formaldehyde, pentaerythritol and metal hydroxide.

Use: (G) Ink resin.

Production Volume: (Confidential).

Number of Customers: (Confidential).

Test Marketing Period: 1 Year, commencing on first day of manufacture.

Risk Assessment: EPA identified no significant health or environmental concerns for the test market substance. Therefore, the test market substance will not persent any unreasonable risk of injury to health or the environment.

The Agency reserves the right to rescind approval or modify the conditions and restrictions of an exemption should any new information that comes to its attention cast significant doubt on its finding that the test marketing activities will not present any unreasonable risk of injury to health or the environment.

Dated: August 17, 1989.

John W. Melone,

Director, Chemical Control Division, Office of Toxic Substances.

[FR Doc. 89-19976 Filed 8-23-89; 8:45 am]

BILLING CODE 6560-50-M

[OPTS-81015; FRL-3634-5]

TSCA Inventory; Notice of Intent To Remove 217 Reported Chemical Substances

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In reviewing the chemical substances included on the Toxic Substances Control Act Chemical Substance Inventory, EPA has concluded that certain chemical substances were incorrectly reported and listed. EPA intends to remove 217 chemical substances from the Inventory and solicits public comment on the appropriateness of that removal.

DATES: Comments must be received by EPA on or before October 10, 1989).

ADDRESSES: Three copies of the written comments should be addressed to: TSCA Document Processing Center (TS-790), Office of Toxic Substances, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Comments should bear the identifying notation OPTS-81015. The administrative record supporting this action is available for public inspection in the OPTS Reading Rm. NE Mall G004, at the above address, from 8 a.m. to 4 p.m., Monday through Friday, excluding holidays.

FOR FURTHER INFORMATION CONTACT: Michael M. Stahl, Director, TSCA Assistance Office (TS-799), Office of Toxic Substances, U.S. Environmental Protection Agency, Rm. EB-44, 401 M St., SW., Washington, DC 20460, (202) 554-1404, TDD: (202) 554-0551.

SUPPLEMENTARY INFORMATION: Section 8(b) of the Toxic Substances Control Act (TSCA), Pub. L. 94-469, requires the Administrator of the EPA to identify, compile, and keep current a list of chemical substances which are manufactured, imported, or processed for commercial purposes in the United States. To meet this requirement, EPA promulgated the Inventory Reporting Regulations (40 CFR part 710), which appeared in the **Federal Register** of December 23, 1977 (42 FR 64572). These regulations provided the basis for the initial compilation of the TSCA Chemical Substance Inventory, which identifies chemical substances in U.S. commerce.

The Inventory is a compilation of chemical substances that have been manufactured, imported, or processed in the United States for commercial purposes since January 1, 1975. The Inventory's primary purpose is regulatory. It defines a new chemical substance for purposes of section 5(a)(1)(A) of TSCA. If a chemical substance is not included in the Inventory, it is considered a new substance (section 3(9) of TSCA), and a premanufacture notice (PMN) is required at least 90 days before the manufacture or import of such a substance can begin.

For the Inventory to perform its regulatory functions, it must be continuously and accurately updated as new information becomes available. Updated information includes identities of new chemical substances which are being introduced into U.S. commerce and corrections for previously reported information. Recognizing industry's need for making corrections to incorrectly submitted Inventory reports, EPA announced, in the **Federal Register** of July 29, 1980 (45 FR 50544), that it would accept certain types of corrections related to substances previously reported for the Inventory. The types of corrections specified in the July 29, 1980 **Federal Register** notice relate to chemical identity.

Since the publication of the Inventory and the July 29, 1980 **Federal Register** notice, the Agency has received numerous requests to correct certain previously submitted Inventory reports. The Agency reviewed these correction requests and the corresponding reports originally submitted for the Inventory, and concluded that a number of the chemical substances currently listed on the Inventory were erroneously reported. Furthermore, in reviewing the total body of the Inventory submissions, the Agency discovered that each of the incorrectly listed substances was reported only by a submitter who subsequently requested that EPA correct the chemical identity originally reported, or who subsequently notified the Agency that the substance in question was solely manufactured for a non-TSCA use.

There are various reasons why chemical substances were incorrectly reported for the Inventory. First, the mistakes could have been typographical or transcriptional and were not known to the submitter when the original report was submitted. Second, improved analytical equipment and methods may have allowed for a more accurate description of a previously reported substance. Third, EPA may have identified reporting errors and requested corrections. Regardless of the source of error, the result is the same: A chemical substance not eligible for inclusion on the Inventory was reported and currently is included on the Inventory. If these mistakes are not corrected, the integrity of the Inventory will be impaired, and its reliability as an accurate compilation of commercial substances for TSCA purposes will diminish. In addition, substances which should be subject to premanufacture notification (PMN) review before they are manufactured or imported would not be reviewed.

In this notice, the Agency proposes to remove 217 chemical substances. The Agency has found that these chemical substances were incorrectly reported and listed. The substances proposed for removal from the TSCA Inventory are listed by Chemical Abstracts Service (CAS) Registry Number. Each of the 217 chemical substances is further identified by its corresponding Chemical Abstracts Preferred Name.

Each of the 217 chemical substances proposed for removal was reported for the Inventory. Subsequently, persons who had reported the chemical substances in question informed EPA of errors in their submissions. In the majority of the cases the errors were due to mistaken chemical identities. The corrected identities for these chemical substances have been added to the Agency's Master Inventory File. In other cases, substances which are not eligible for reporting under TSCA were included on the Inventory. EPA has checked each of these 217 chemical substances, as originally reported, to determine whether any other person had also reported the same chemical substance for the Inventory. No others were found.

In accordance with EPA policy (OTS Order 7730.7), an erroneously or incorrectly reported chemical substance should be removed from the Inventory. Accordingly, these 217 chemical substances do not appear to be eligible for continued inclusion on the Inventory.

Publication of this notice does not mean that EPA will actually and automatically delete from the Inventory any of the 217 chemical substances listed below. Rather, the Agency solicits public comments on its intent to remove from the TSCA Inventory the listed substances. EPA is specifically interested in knowing whether any of the chemical substances listed below have been manufactured, imported, or processed for TSCA commercial purposes other than research and development, as defined in the Inventory Reporting Regulations (40 CFR 710.2 (p)), by anyone during the period January 1, 1975 through August 24, 1989. The Agency is also interested to know whether any person can show that any of the chemical substances could have been properly reported for the Inventory. EPA also solicits comments from anyone who believes that any of the chemical substances listed below should not be removed from the TSCA Inventory for any reason. With the publication of this notice, any on-going manufacture, import, or processing of any of the 217 chemical substances listed below which was begun prior to the publication date of this notice may continue until publication of the final notice of disposition. All such comments must be submitted to EPA within the 45-day comment period.

EPA will review all comments received and will make a determination regarding the eventual status of each of the chemical substances listed below. The Agency will announce its decision in a final notice of disposition in the Federal Register. EPA will not consider any request to retain any of the listed chemical substances on the Inventory based solely on manufacture, import, or processing of that substance which begins after August 24, 1989. If the Agency determines that any of the listed chemical substances should not be removed from the Inventory, manufacturers, importers, or processors of these chemical substances would be invited to submit Inventory Reports to establish the need to retain the chemical substances on the Inventory. The substance would then remain on the Inventory. On the other hand, if the Agency concludes that a chemical substance is not eligible for inclusion on the Inventory, effective with the publication of the final notice of disposition, the chemical substance will be considered removed from the Inventory—the presence of its name in any previously published version of the Inventory notwithstanding. In that event, the premanufacture requirements of section 5(a) of TSCA would apply to any manufacture or import of the chemical substance from the date of removal.

CHEMICAL SUBSTANCES PROPOSED FOR REMOVAL FROM TSCA INVENTORY

CAS Registry No.	Name
80-63-7	2-Propenoic acid, 2-chloro-, methyl ester
925-76-6	2-Propenamide, N-[2-(dimethylamino)ethyl]-
1471-18-7	1-Propene, 3,3'-[[2,2-bis[(2-propenyloxy) methyl]- 1,3-propanediy]bis(oxy)]bis-
1611-83-2	2-Propenamide, 2-methyl-N-phenyl-
2039-85-2	Benzene, 1-chloro-3-ethenyl-
2556-36-7	Cyclohexane, 1,4-diisocyanato-
3121-60-6	Benzenesulfonic acid, 4-hydroxy-5-(2-hydroxy-4- methoxybenzoyl)-2-methoxy-, monosodium salt
3435-51-6	Benzonitrile, 4-ethenyl-
3539-43-3	1-Hexadecanol, dihydrogen phosphate
4270-70-6	Sulfonium, triphenyl-, chloride
5045-40-9	1H-Isoindol-1-one, 3,3'-[(2-methyl-1,3- phenylene)diimino]bis[4,5,6,7-tetrachloro-
5339-85-5	Benzeneethanol, 2-amino-
6370-14-5	Chromate(3-), bis[5-chloro-2-hydroxy-3-[(2-hydroxy-1- naphthalenyl)azo]benzenesulfonato(3-)]-, trisodium
6709-58-8	Benzenediazonium, 4-[(2,6-dichloro-4-nitrophenyl)azo]-2,5-dimethoxy-
7195-45-1	1,2-Benzenedicarboxylic acid, bis(oxiranylmethyl) ester
9022-52-0	Benzene, chloroethenyl-, homopolymer
10054-29-2	1-Tetradecanol, dihydrogen phosphate
10127-28-3	C.I. Solvent Orange 6
13103-75-8	Benzenamine, N,N-dimethyl-4-(2-pyridinylazo)
13401-85-9	2-Propenoic acid, 2-chloro-, butyl ester
14049-79-7	Cobaltate(3-), hexakis(cyano-C)-, zinc (2:3), (OC-6- 11)-
19824-98-6	Phosphoric acid, monobutyl ester, diammonium salt
20640-71-5	Benzoic acid, 2-[(4-amino-9,10-dihydro-9,10-dioxo-3- sulfo-1-anthracenyl)amino]-4[[2-(sulfooxy)ethyl]sulfonyl]-
23089-48-9	Disulfide, cyclohexyl ethyl
25086-42-4	Benzenamine, 4-ethenyl-, homopolymer
25765-19-9	2-Propenenitrile, polymer with 2,5-furandione
26100-51-6	Propanoic acid, 2-hydroxy-, homopolymer
26375-31-5	2-Propenoic acid, 2-methyl-, polymer with ethene and ethenyl acetate
27306-79-1	Poly(oxy-1,2-ethanediyl), .alpha.-methyl-.omega.-[3- [1,3,3,3-tetramethyl-1-[(trimethylsilyl)oxy]disiloxanyl]propyl]-
28107-22-4	Benzoic acid, 2-hydroxy-, methyl ester, polymer with formaldehyde
28677-93-2	1-Propanol, methoxy-
32445-13-9	Benzenediazonium, 4-[(4-methoxyphenyl)amino]-
34323-54-1	2-Propenoic acid, ethyl ester, polymer with ethenyl acetate and 2,5-furandione
34591-13-4	1-Hexadecanol, dihydrogen phosphate, monoammonium salt
36491-08-6	Phosphoric acid, dibutyl ester, ammonium salt
38808-51-4	2-Propenoic acid, 2-methyl-, oxiranylmethyl ester, polymer with ethenylbenzene and 2-propenoic acid
41989-08-6	Phosphoric acid, monooctyl ester, monopotassium salt
42986-19-6	2-Naphthalenesulfonic acid, 6-amino-4-hydroxy-5-[[2- sulfo-4-[[2-(sulfooxy)ethyl] sulfonyl]phenyl]azo]-
46300-01-0	Benzenediazonium, 4-cyano-2,5-dimethoxy-
47300-91-4	Benzenediazonium, 2-methoxy-5-methyl-4-[(4-methyl-2- nitrophenyl)azo]-
52264-35-0	2-Anthracenesulfonic acid, 1-amino 4-[[4-[[3-[(2- chloroethyl)sulfonyl]benzoyl] methylamino]-2-sulfophenyl]amino]-9,10- dihydro-9,10-dioxo-
52371-97-8	1-Naphthalenesulfonic acid, 6-amino-5-[[2-sulfo-4- [[2-(sulfooxy)ethyl] sulfonyl]phenyl]azo]-
53802-03-2	C.I. Solvent Red 109
55850-01-6	3H-Indolium, 1,3,3-trimethyl-2- [(methylphenylhydrazono)methyl]-, chloride
56512-40-3	Benzenesulfonyl chloride, 4-[[4- (dimethylamino)phenyl]azo]-
61670-11-9	2,7-Naphthalenedisulfonic acid, 4-hydroxy-5-[(2- hydroxy-1-naphthalenyl)azo]-3-[(2-hydroxy-3-nitro-5-sulfophenyl)azo]-'

CAS Registry No.	Name
61951-72-2	C.I. Leuco Sulphur Yellow 1
63082-99-5	2-Cyclohexene-1-octanoic acid, 5-carboxy-4-hexyl-, monosodium salt
63450-32-8	2(3H)-Furanone, 4-hexyldihydro-
63833-78-3	3-Pyridinecarbonitrile, 5-[(2-cyano-4- nitrophenyl)azo]-6-[(2-hydroxyethyl)amino]-4-methyl-2-[[3-(2- phenoxyethoxy)propyl]amino]-
64346-12-9	Phosphoric acid, monooctadecyl ester, compound with 2,2'-iminobis[ethanol] (1:1)
64346-51-6	Phosphoric acid, monodecyl ester, compound with 2,2'-iminobis[ethanol] (1:2)
64346-58-3	Phosphoric acid, monododecyl ester, compound with morpholine (1:1)
64509-06-4	Tetradecen-1-ol, hydrogen phosphate
64509-07-5	Octadecadien-1-ol, dihydrogen phosphate
64601-16-7	Docosanoic acid, compound with 1,3-propanediamine acetate eicosanoate (1:1)
64611-70-7	Chromate(2-), [2-[[(2-hydroxyethyl)imino] methyl]phenolato(2-)-N,O,O'][6-hydroxy-5-[(2-hydroxy-4-nitrophenyl)azo]-1-naphthalenesulfonato(3-)]-, disodium
65104-37-2	Phosphoric acid, monododecyl ester, compound with morpholine (1:2)
65104-38-3	Phosphoric acid, monododecyl ester, compound with 2,2'-iminobis[ethanol] (1:1)
65104-39-4	Phosphoric acid, monododecyl ester, compound with 2,2'-iminobis[ethanol] (1:2)
65104-55-4	1-Tetradecanol, dihydrogen phosphate, diammonium salt
65104-56-5	1-Tetradecanol, dihydrogen phosphate, compound with 2,2'-iminobis[ethanol] (1:1)
65104-57-6	1-Tetradecanol, dihydrogen phosphate, compound with 2,2'-iminobis[ethanol] (1:2)
65104-58-7	1-Tetradecanol, dihydrogen phosphate, monoammonium salt
65104-59-8	1-Tetradecanol, dihydrogen phosphate, compound with morpholine (1:1)
65104-60-1	1-Tetradecanol, dihydrogen phosphate, compound with morpholine (1:2)
65104-94-1	Hexadecadien-1-ol, hydrogen phosphate
65104-95-2	Hexadecen-1-ol, hydrogen phosphate
65104-96-3	Octadecadien-1-ol, hydrogen phosphate
65121-80-4	Phosphoric acid, monodecyl ester, compound with morpholine (1:2)
65121-81-5	Phosphoric acid, monodecyl ester, compound with 2,2'-iminobis[ethanol] (1:1)
65121-90-6	Tetradecen-1-ol, dihydrogen phosphate
65122-24-9	1-Hexadecanol, dihydrogen phosphate, compound with 2,2'-iminobis[ethanol] (1:1)
65122-25-0	1-Hexadecanol, dihydrogen phosphate, diammonium salt
65122-28-3	Hexadecadien-1-ol, dihydrogen phosphate
65138-75-2	Phosphoric acid, monododecyl ester, diammonium salt
65138-76-3	Phosphoric acid, monododecyl ester, monoammonium salt
65138-84-3	1-Hexadecanol, dihydrogen phosphate, compound with 2,2'-iminobis[ethanol] (1:2)
65151-42-0	1,5-Naphthalenedisulfonic acid, 3,3'-[carbonylbis(imino-4,1-phenyleneazo)]bis-, tetralithium salt
65151-45-3	1-Hexadecanol, dihydrogen phosphate, compound with morpholine (1:1)
65151-46-4	1-Hexadecanol, dihydrogen phosphate, compound with morpholine (1:2)
65151-78-2	Phosphoric acid, monooctadecyl ester, compound with 2,2'-iminobis[ethanol] (1:2)
65151-79-3	Phosphoric acid, monooctadecyl ester, compound with morpholine (1:1)
65151-80-6	Phosphoric acid, monooctadecyl ester, compound with morpholine (1:2)
65151-84-0	Phosphoric acid, monooctyl ester, compound with 2,2'-iminobis[ethanol] (1:1)
65151-85-1	Phosphoric acid, monooctyl ester, compound with morpholine (1:1)
65151-86-2	Phosphoric acid, monooctyl ester, compound with morpholine (1:2)
65151-91-9	Hexadecen-1-ol, dihydrogen phosphate
65180-68-9	1H-Pyrazole-3-carboxylic acid, 1-[4-[[4-[bis [2-[(2- chloroethyl)sulfonyl]ethyl]amino]-6-chloro-1,3,5-triazin-2-yl]amino]- 2-sulfophenyl]-4,5-dihydro-5-oxo-4-[(2-sulfophenyl)azo]-
65253-54-5	1H-Imidazolium, 1-ethenyl-1-methyl-, methyl sulfate, polymer with ethenylbenzene and 2-methylpropyl 2-propenoate
65629-44-9	Chromate(5-), [6-(acetylamino)-4-hydroxy-3-[(2- hydroxy-3-nitro-5-sulfopheny)azo]-2-naphthalenesulfonato(4-)][4- hydroxy-6-[(2-hydroxy-5-methylphenyl)azo]-3-[(2-hydroxy-3-nitro-5- sulfophenyl)azo]-2-naphthalenesulfonato(4-)]-, pentahydrogen
65718-42-5	Chromate(5-), bis[4-hydroxy-6-[(2-hydroxy-5- methylphenyl)azo]-3-[(2-hydroxy-3-nitro-5-sulfophenyl)azo]-2- naphtalenesulfonato(4-)]-
66071-02-1*	Fatty acids, dehydrated castor-oil, polymers with pentaerythritol, phthalic anhydride and trimethyloilethane
66558-73-4	Ethanamine, N,N',N>-[(2,4,6,8,8- pentamethylcyclotetrasiloxane-2,4,6-triyl)tris(oxy)]tris[N-ethyl-
67663-01-8	2(3H)-Furanone, 5-hexyldihydro-4-methyl-
67689-48-9	Cuprate(2-), [3-[[4,5-dihydro-3-methyl-5-oxo-1-[4- [[2-(sulfooxy)ethyl]sulfonyl]phenyl]-1H-pyrazol-4-yl]azo]-4- hydroxybenzenesulfonato(4-)]-, dihydrogen
67746-21-8*	Fatty acids, tallow, polymers with formaldehyde, phthalic anahydride and trimethylolpropane
67762-89-4*	Siloxanes and Silicones, di-Me, Me 3- (oxiranylmethoxy)propyl, reaction products with N-methylglycine sodium salt
67846-54-2	2-Anthracenesulfonic acid, 1-amino-4-[[3-[[3,6-dichloro-4-pyridazinyl) carbonyl]amino]-2,4,6-trimethyl-5-sulfophenyl]amino]-9,10-dihydro-9,10-dioxo-
67873-88-5*	1,2-Benzenedicarboxylic acid, polymer with 1,4- butanediol, (Z)-2-butenedioic acid and 1,2-ethanedoil, reaction products with 3-(triethoxysilyl)-1-propanamine
67892-59-5	Cuprate(2-), [4-hydroxy-3-[[2-hydroxy-4-[[2- (sulfooxy)ethyl]sulfonyl]phenyl]azo]-1-naphthalenesulfonato(4-)]-, dihydrogen
67923-16-4*	Siloxanes and Silicones, di-Me, [(3- mercaptopropyl)silylidyne]tris-
67939-48-4	1H-Imidazo[1,2-a]imidazole-1-carboximidamide, 2,3,5,6-tetrahydro-N-[imino(2,3,5,6-tetrahydro-1H-imidazo[1,2-a]imidazol-1-yl)methyl]-, monohydrochloride
67953-72-4	Poly(oxy-1,2-ethanediyl), .alpha.-sulfo-.omega.- [2,4,6-tris(2-methylpropyl)phenoxy]-, sodium salt
67969-70-4	9,12-Octadecadienoic acid (Z,Z)-, dimer, polymer with 2,2'-[1,4-butanediylbis (oxymethylene)]bis[oxirane] and hexahydro-1, 3-isobenzofurandione
68025-49-0	Poly[oxy(methyl-1,2-ethanediyl)], .alpha., .alpha.', .alpha.>-phosphinylidynetris [.omega.-hydroxy-, polymer with 1,1'- methylenebis[4-isocyanatobenzene]
68039-62-3	Chromate(3-), bis[(6-[(5-chloro-2-hydroxy-4-nitrophenyl)azo]-5-hydroxy-1-naphthalenesulfonato(3-)]-, trihydrogen
68039-63-4	Chromate(3-), [6-[(5-chloro-2-hydroxy-4-nitrophenyl)azo]-5-hydroxy-1-naphthalenesulfonato(3-)][3-hydroxy-4- [(2-hydroxy-1-naphthanlenyl)azo]-1-naphthalenesulfonato(3-)]-, trihydrogen
68071-46-5*	Urea, polymers with formaldehyde, phenol and sulfonated o-cresol, sodium salts
68083-43-2	Methanaminium, N-[4-[[4-(dimethylamino)phenyl] [4- (methylamino)phenyl]methylene]-2,5-cyclohexadien-1-ylidene]-N-methyl- tetracosa-.mu.-oxododecaoxo[.mu.$_{12}$ -[phosphato(3-)- 0:0:0:0':0':0':0>:0>:0>:0''': 0''':0'''']]dodecamolybdate(3-) (3:1)
68083-73-6	1,3-Isobenzofurandione, polymer with 2,2-bis[(2- propenyloxy)methyl]-1-butanol, 1,2-ethanediol, ethenylbenzene, 2,5-furandione and 1,2-propanediol
68083-96-5	Propanoic acid, 3-hydroxy-2,2-dimethyl-, 3-hydroxy- 2,2-dimethylpropyl ester, polymer with oxirane
68155-48-6	Chromate(5-), bis[6-(acetylamino)-4-hydroxy-3-[(2- hydroxy-5-nitro-3-sulfophenyl)azo]-2-naphthalenesulfonato(4-)]-, pentahydrogen
68155-90-8	Ethanol, 2-chloro-, phosphate (3:1), polymer with phosphorus oxide
68201-73-0	Chromate(5-), bis[4-hydroxy-6-[(2-hydroxy-5- methylphenyl)azo]-3-[2-hydroxy-5-nitro-3-sulfophenyl)azo]-2- naphthalenesulfonato (4-)]-, pentahydrogen

CHEMICAL SUBSTANCES PROPOSED FOR REMOVAL FROM TSCA INVENTORY—Continued

CAS Registry No.	Name
68201-74-1	Chromate(5-), bis[6-(acetylamino)-4-hydroxy-3-[(2- hydroxy-3-nitro-5-sulfophenyl)azo]-2-naphthalenesulfonato(4-)]-, pentahydrogen
68214-71-1	1H-Imidazo[1,2-a]imidazole-1-carboximidamide, 2,3,5,6-tetrahydro-N-[imino(2,3,5,6-tetrahydro-1H-imidazo[1,2- a]imidazol-1-yl)methyl]-, sulfate (1:1)
68227-48-5	2-Cyclohexene-1-octanoic acid, 5-carboxy-4-hexyl-, compound with 2,2',2>-nitrilotris[ethanol]
68227-50-9	2-Cyclohexene-1-octanoic acid, 5-carboxy-4-hexyl-, monopotassium salt
68227-90-7	Poly(oxy-1,2-ethanediyl), .alpha.-[2-(butylamino)ethyl]-.omega.-hydroxy-, compound with acetic acid (1:1)
68258-66-2	2-Naphthalenecarboxylic acid, 3-hydroxy-4-[[1- (sulfomethyl)-2-naphthalenyl]azo]-, disodium salt
68295-50-1	2,5-Furandione, polymer with 2-methylbutene, 1- pentene and 2-pentene
68324-22-1	2-Cyclohexene-1-octanoic acid, 5-carboxy-4-hexyl-, compound with 2,2'-iminobis[ethanol] (1:1)
68399-94-0	2-Anthracenesulfonic acid, 1-amino-9,10-dihydro-4- [[4-[(2-hydroxyethyl)sulfonyl]phenyl]amino]-9,10-dioxo-
68411-30-3*	Benzenesulfonic acid, C_{10-13} -alkyl derivs., sodium salts
68412-61-3*	Phosphoric acid, di-C_{6-11} -alkyl esters, compounds with morpholine
68412-62-4*	Phosphoric acid, di-C_{6-11} -alkyl esters, ammonium salts
68427-33-8	1H,3H-Naphtho[1,8-cd]pyran-6-sulfonic acid, 1,3- dioxo-, potassium salt (2:1)
68427-34-9	1,8-Napthalenedicarboxylic acid, 4-sulfo-, potassium sodium salt (2:1:4)
68440-71-1*	Siloxanes and Silicones, di-Me, Me 3- (oxiranylmethoxy)propyl
68440-72-2*	Siloxanes and Silicones, di-Me, Me 3- (oxiranylmethoxy)propyl, reaction products with 2-(methylamino)ethanesulfonic acid
68441-40-7*	Benzenediazonium, 4-[(4-sulfophenyl)azo]-, chloride, reaction products with formaldehyde-salicylic acid polymer
68459-66-1	Oxirane, 2,3-dimethyl-, polymer with ethyloxirane and methyloxirane
68512-38-9*	Heparin, reaction products with N,N-didodecyl-N- methyl-1-dodecanaminium chloride
68513-70-2*	Castor oil, polymer with 2,4-TDI and trimethylolpropane
68515-41-3*	1,2-Benzenedicarboxylic acid, di-C_{7-9} - branched and linear alkyl esters
68515-42-4*	1,2-Benzenedicarboxylic acid, di-C_{7-11} - branched and linear alkyl esters
68517-01-1	Chromium, tris(5-hexadecyl-2-hydroxybenzoato- O^1,O^2)-
68526-68-1*	Amines, di-C_{8-20} -alkylmethyl
68540-40-9	Benzoic acid, 5-hexadecyl-2-hydroxy-, calcium salt (2:1)
68551-08-6*	Alchohols, C_{9-11} -branched
68610-57-1*	Phenol, 4,4'-(1-methylethylidene)bis-, polymer with (chloromethyl)oxirane, reaction products with phenol and 2,4,4- trimethyl-1,6-hexanediamine
68610-81-1*	Benzenediazonium, 4-[(2-methoxy-5-sulfophenyl)azo]- 2-methyl-5-[(2-nitro-4-sulfophenyl)amino]-, chloride, reaction products with formaldehyde-salicylic acid polymer
68647-92-7*	Fatty acids, C_{16-18} , polymers with glycerol and phthalic anahydride
68647-93-8*	Fatty acids, C_{16-18}-unsaturated, polymers with benzoic acid, pentaerythritol and phthalic anhydride
68649-64-9*	2-Propenoic acid, polymer with 1,3-butadiene and 2- propenenitrile, reaction products with bisphenol A-epichlorohydrin polymer, 3-carboxy-1-cyano-1-methylpropyl-terminated polybutadiene and 4,4'-sulfonylbis[benzenamine]
68784-56-5*	Benzene, mono-C_{6-9} -alkyl derivs.
68815-25-8*	Sulfuric acid, mono-C_{12-15} -alkyl esters, compounds with triethanolamine
68908-59-8*	Phosphoric acid, di-C_{7-16} -alkyl esters, compounds with diethanolamine
68911-68-2*	Amines, C_{12-14} -tert-alkyl, compounds with 2(3H)-benzothiazolethione
68912-09-4	Chromate(5-), [6-(acetylamino)-4-hydroxy-3-[(2-hydroxy-5-nitro-3-sulfophenyl)azo]-2-naphthalenesulfonato(4-)][4-hydroxy-6-[(2-hydroxy-5-methylphenyl)azo]-3-[(2-hydroxy-5-nitro-3- sulfophenyl)azo]-2-naphthalenesulfonato(4-)]-, pentahydrogen
68912-10-7	Chromate(5-), [6-(acetylamino)-4-hydroxy-3-[(2-hydroxy-3-nitro-5-sulfophenyl)azo]-2-naphthalenesulfonato(4-)][4-hydroxy-6-[(2-hydroxy-5-methylphenyl)azo]-3-[(2-hydroxy-5-nitro-3- sulfophenyl)azo]-2-naphthalenesulfonato(4-)]-, pentahydrogen
68912-11-8	Chromate(5-), [6-(acetylamino)-4-hydroxy-3-[(2-hydroxy-5-nitro-3-sulfophenyl)azo]-2-naphthalenesulfonato(4-)][4-hydroxy-6-[(2-hydroxy-5-methylphenyl)azo]-3-[(2-hydroxy-3-nitro-5- sulfophenyl)azo]-2-naphthalenesulfonato(4-)]-, pentahydrogen
68922-29-1	Chromate(5-), [6-(acetylamino)-4-hydroxy-3-[(2- hydroxy-3-nitro-5-sulfophenyl)azo]-2-naphthalenesulfonato(4-)][6- (acetylamino)-4-hydroxy-3-[(2-hydroxy-5-nitro-3-sulfophenyl)azo]-2- naphthalenesulfonato (4-)]-, pentahydrogen
68953-01-5*	Fatty acids, tall-oil, esters with ethoxylated sorbitol
68953-32-2*	Fatty acids, tall-oil, mixed esters with myristyl alcohol and pentaerythritol
68953-48-0*	Fatty acids, tall-oil, lauryl esters, mixed with menhaden oil, oxidized
68954-64-3*	2-Oxepanone, homopolymer, carboxy-terminated
68954-77-8*	Phosphoric acid, di-C_{9-15} -alkyl esters
69178-36-5	3,6,9,12,15,18-Hexaoxapentatriacontanoic acid, 34- methyl-
70025-18-2*	Ethanaminium, 2-hydroxy-N,N-bis(2-hydroxyethyl)-N- methyl-, monoesters with tall-oil fatty acids, Me sulfates (salts)
70210-14-9	2-Naphthalenesulfonic acid, 6-amino-5-[[4-chloro-2- (2-chlorophenoxy)phenyl]azo]-4-hydroxy-, monosodium salt
70693-26-4*	Urea, reaction products with formaldehyde, glyoxal, melamine and methanol
70788-60-2	Ethanaminium, N,N,N-trimethyl-2-[(1-oxo-2- propenyl)oxy]-, polymer with N-(1,1-dimethyl-3-oxobutyl)-2-propenamide and methyl 2-methyl-2-propenoate
70815-11-1	9-Octadecenamide, N-(2-hydroxyethyl)-N-[2-[[2-[(2- hydroxyethyl)amino]ethyl]amino]ethyl]-, (Z)-
70815-19-9	Cobaltate(1-), [2,4-dihydro-4-[(2-hydroxy-5- nitrophenyl)azo]-5-methyl-2-phenyl-3H-pyrazol-3-onato(2-)][1-(2- hydroxyphenyl)azo]-2-naphthalenolato(2-)]-, hydrogen, compound with 1- tridecanamine (1:1)
71002-38-5	Ethanaminium, N,N,N-triethyl-2-[(1-oxo-2- propenyl)oxy]-, ethyl sulfate, polymer with 2-propenamide
71155-97-0	Phosphoric acid, monodecyl ester, compound with morpholine (1:1)
71173-57-4	3-Oxazolidinepropanesulfonic acid, 5-[2-(3-ethyl- 2(3H)-benzoxazolylidene)-1-methylethylidene]-4-oxo-2-thioxo-
71243-81-7*	Hexanedioic acid, polymer with N-(2-aminoethyl)- 1,2-ethanediamine and aziridine, reaction products with epichlorohydrin and polyethylene glycol
71294-50-3	Hexanedioic acid, polymer with N-(2-aminoethyl)-1,2- ethanediamine, (chloromethyl) oxirane, 2,2-dimethyl-1,3-propanediol, 2-(methylamino)ethanol and 4,4'-(1-methylethylidene)bis[phenol], 2- hydroxypropanoate (salt)
71477-63-3	Spiro[5H-[1]benzopyrano[2,3-d]pyrimidine-5,1'(3'H)- isobenzofuran]-7,8-diamine, N',N'-dibutyl- N⁸,N⁸-diethyl-4-methyl-
71566-78-4	Benzenesulfonic acid, dodecyl ester, compound with 4-(phenylazo)-1,3-benzenediamine (1:1)
71889-16-2	1-Propanesulfonic acid, 2-methyl-2-[(1-oxo-2- propenyl)amino]-, polymer with N-ethenyl-N-methylacetamide and 2- propenamide
72066-98-3	Hexanedioic acid, polymer with N-(2-aminoethyl)-1,2- ethanediamine, aziridine and (chloromethyl)oxirane
72089-20-4	2,7-Naphthalenedisulfonic acid, 4-amino-6-[[4-[[[4-[(2,4-diaminophenyl)azo]phenyl]amino]sulfonyl]phenyl]azo]-5-hydroxy-3-[(4-nitrophenyl)azo]-
72175-36-1	9,10-Anthracenedione, 2-[2-(2-methoxyethoxy)ethoxy]-
72245-24-0*	Benzoic acid, 2-hydroxy-, reaction products with formaldehyde, coupled with diazotized 5-amino-8-[[4-[(4-nitro-2- sulfophenyl)amino] phenyl]azo]-2-naphthalenesulfonic acid disodium salt
72245-25-1*	Cobalt, 4-amino-5-hydroxy-6-[(2-hydroxy-5- nitrophenyl)azo]-1,7-naphthalenedisulfonate 2-[[5-(aminosulfonyl)-2- hydroxyphenyl]azo]-3-oxo-N-phenylbutanamide sodium complexes
72251-76-4*	2,7-Naphthalenedisulfonic acid, 4-[[2,4-dihydroxy(hydroxymethyl)phenyl]azo]-5-hydroxy-, coupled with diazotized 2-[(4-aminophenyl)amino]-5-nitrobenzenesulfonic acid monosodium salt
72269-57-9	1H-Thioxantheno[2,1,9-def]isoquinoline-1,3(2H)- dione, 2-(1-oxooctadecyl)-
72269-58-0	1-Naphthalenesulfonic acid, 4-hydroxy-3-[[4-[[[3- [[2-(sulfooxy)ethyl]sulfonyl]phenyl] amino]carbonyl]phenyl]azo]-

CHEMICAL SUBSTANCES PROPOSED FOR REMOVAL FROM TSCA INVENTORY—Continued

CAS Registry No.	Name
72403-26-0*	Benzoic acid, 2-hydroxy-, reaction products with formaldehyde, coupled with 2-[(4-aminophenyl)amino]-5- nitrobenzenesulfonic acid monosodium salt
72987-40-7	2,7-Naphthalenedisulfonic acid, 4-hydroxy-3-[[1- sulfo-6-[[2-(sulfooxy)ethyl]sulfonyl]-2-naphthalenyl]azo]-
73049-37-3*	Amides, C_{12-18} and C_{18}- unsaturated, N,N'-(methylenedi-1,4-phenylene)bis-
73157-49-0	1H-Pyrazole-3-carboxylic acid, 1-[3-[(4-amino-9,10- dihydro-9,10-dioxo-3-sulfo-1-anthracenyl)amino]-5-sulfophenyl]-4,5- dihydro-5-oxo-4-[[4-[[2-(sulfooxy)ethyl]sulfonyl]phenyl]azo]-, 3-methyl ester
73297-17-3	Cobaltate(1-), [4-hydroxy-3-[(2-hydroxy-1- naphthalenyl)azo]benzenesulfonamidato(2-)][8-[(2-hydroxyphenyl)azo]-2- naphthalenolato(2-)]-, hydrogen, compound with 3-[(2-ethylhexyl)oxy]- 1-propanamine (1:1)
73297-20-8	Xanthylium, 3-(diethylamino)-9-[2- (ethoxycarbonyl)phenyl]-6-(ethylamino)-, [2,4-dihydro-4-[(2-hydroxy-5- nitrophenyl)azo]-5-methyl-2-phenyl-3H-pyrazol-3-onato(2-)][2-[(4,5- dihydro-3-methyl-5-oxo-1-phenyl-1H-pyrazol-4-yl)azo]benzoato(2-)]chromate(1-)
73378-64-0*	Copper, [29H,31H-phthalocyaninato(2-)- N^{29},N^{30},N^{31},N^{32}]-, chlorosulfonyl derivs., reaction products with 9-methyl-1-decanamine
73378-65-1*	Copper, [29H,31H-phthalocyaninetetrasulfonyl tetrachloridato(2-)- N^{29},N^{30},N^{31},N^{32}]-, reaction products with 4-methyl-1-pentenamine
73507-73-0	Cobaltate(3-), bis[2-hydroxy-5-nitro-3-[[2-oxo-1- [(phenylamino)carbonyl]propyl]azo] benzenesulfonato(3-)]-, sodium dihydrogen
74411-37-3	Chromate(3-), bis[3-[(4,5-dihydro-3-methyl-5-oxo-1- phenyl-1H-pyrazol-4-yl)azo]-2-hydroxy-5-nitrobenzenesulfonato(3-)]-, trihydrogen, compound with 3-[(2-ethylhexyl)oxy]-1-propanamine (1:1)
74411-39-5	Chromate(1-), [2,4-dihydro-4-[(2-hydroxy-5- nitrophenyl)azo]-5-methyl-2-phenyl-3H-pyrazol-3-onato(2-)][2-[(4,5- dihydro-3-methyl-5-oxo-1-phenyl-1H-pyrazol-4-yl)azo]benzoato(2-)]-, hydrogen, compound with 3-[(2-ethylhexyl)oxy]-1-propanamine (1:1)
75113-51-8	Ethanol, 2,2'-[[3-methyl-4-[[4-[[2- (sulfooxy)ethyl]sulfonyl]phenyl]azo]phenyl]imino]bis-, bis(hydrogen sulfate) (ester)
75150-07-1	Cuprate(4-), [3-[[8-[[4-[bis[2-[(2- chloroethyl)sulfonyl]ethyl]amino]-6-chloro-1,3,5-triazin-2-yl]amino]- 1-hydroxy-3,6-disulfo-2-naphthalenyl]azo]-4-hydroxy-1,5- naphthalenedisulfonato(6-)]-, tetrahydrogen
75701-43-8	1,3-Benzenedicarboxylic acid, polymer with 1,4- butanediol, dimethyl 1,4-benzenedicarboxylate, 2,2-dimethyl-1,3- propanediol, 1,2-ethanediol and nonanedioic acid
78280-22-5	2-Anthracenesulfonic acid, 1-amino-9,10-dihydro- 9,10-dioxo-4-[[4-[[2-(sulfoxy)ethyl]sulfonyl]phenyl]amino]-, potassium sodium salt
78592-92-4	Chromate(1-), bis[4-[[4-(ethylsulfonyl)-2- hydroxyphenyl]azo]-2,4-dihydro-5-methyl-2-phenyl-3H-pyrazol-3-onato(2-)]-, hydeogen compound with 1,6-hexanediamine (1:1)
81457-66-1*	Amines, C_{16-18} -alkyl, bis[2,4-dihydro-4- [(2-hydroxy-5-nitrophenyl)azo]-5-methyl-2-phenyl-3H-pyrazol-3-onato(2-)]chromate(1-) (1:1)
83899-28-9*	Phosphoric acid, C_{8-16} -alkyl esters, compounds with 2-ethyl-1-hexanamine
85631-50-1*	Diphosphoric acid, C_{4-20} -alkyl esters, potassium salts
90247-37-3*	Diphosphoric acid, C_{4-20} -alkyl esters
90247-38-4*	Diphosphoric acid, C_{4-20} -alkyl esters, ammonium salts
90247-39-5*	Diphosphoric acid, C_{4-20} -alkyl esters, compounds with diethanolamine
90247-40-8*	Diphosphoric acid, C_{4-20} -alkyl esters, compounds with morpholine
90247-41-9*	Diphosphoric acid, mixed C_{16-18} - alkadienyl and C_{14-18} -alkenyl esters
101377-63-1*	Copper, [29H,31H-phthalocyaninato(2-)- N^{29},N^{30},N^{31},N^{32}]-, sulfo[[4- [[2-(sulfooxy)ethyl]sulfonyl]phenyl] amino]sulfonyl derivs., potassium sodium salts
106906-32-5	Xanthylium, 9-(2-carboxyphenyl)-3,6- bis(diethylamino)-,salt with dodecylbenzenesulfonic acid (1:1)
112764-80-4*	Amines C_{12-14} -alkyl, bis[3-hydroxy-4- [(2-hydroxy-1-naphthalenyl)azo-7-nitro-1-naphthalenesulfonato(3-)]chromate(3-) (3:1)
112764-81-5*	Amines C_{16-18} -alkyl, [3-hydroxy-4-[(2- hydroxy-1-naphthalenyl)azo]-7-nitro-1-naphthalenesulfonato(3-)][1-[2- hydroxy-4-nitorphenyl)azo]-2-naphthalenolato(2-)] chromate(2-) (2:1)
112764-82-6*	Amines C_{16-18} -alkyl, [3-hydroxy-4-[(2- hydroxy-1-naphthalenyl)azo]-7-nitro-1-naphthalenesulfonato(3-)][1-[(2- hydroxy-5-nitrophenyl)azo]-2-naphthalenolato(2-)] chromate(2-) (2:1)

The following Zeolites are listed on the TSCA Inventory, as a result of errors in processing. The Zeolites are considered mixtures, components of which are separately reportable under TSCA. In order to correct these errors, EPA intends to remove these chemical substances from the Inventory.

68608-42-4*	Zeolites, manganese-containing.
68918-02-5*	Zeolites, calcium-iron-magnesium-vanadium- containing.
68989-20-8*	Zeolites, CaA
68989-21-9*	Zeolites, KA
68989-22-0*	Zeolites, NaA
68989-23-1*	Zeolites, NaX

* CAS Registry numbers followed by an asterisk represent chemical substances of unknown or variable composition, complex reaction products, or biological materials. These substances have nonspecific registrations and lack accepted molecular formula representatives.

Accordingly, EPA proposes the delisting of the 217 chemical substances listed above from the TSCA Inventory.

Dated: August 15, 1989.

Linda A. Travers,
Director,
Information Management Division,
Office of Pesticides and Toxic Substances.

BILLING CODE 6560-50-D

FEDERAL MARITIME COMMISSION

Notice of Agreement(s) Filed

The Federal Maritime Commission hereby gives notice of the filing of the following agreement(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of the Federal Maritime Commission, 1100 L Street, NW., Room 10220. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments are found in § 572.603 of Title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 224–010875–002.

Title: Maryland Port Administration Terminal Agreement.

Parties: Maryland Port Administration, Ceres Marine Terminals, Inc. (Ceres).

Synopsis: The Agreement provides that the basic agreement (Agreement No. 224–010975) will continue on a month-to-month basis for a term of 3 months pending the final negotiations of a long term lease. The Agreement also provides for Ceres to release 945 square feet of shed space originally leased under the basic agreement.

By Order of the Federal Maritime Commission.

Dated: August 21, 1989.

Joseph C. Polking,

Secretary.

BILLING CODE 6730-01-M

Petition No. P3–89 Maximum Container Weights; Filing of Petition for Rulemaking

Notice is given that a petition for rulemaking has been filed by the South Europe/USA Freight Conference, American Trucking Associations, and ATA Intermodal Council.

Petitioners request that the Commission issue a uniform tariff rule prescribing maximum weights for containers which can be transported in the U.S. foreign commerce and placing responsibility on shippers to comply with all applicable laws and regulations pertaining to road weight limitations. Petitioners propose a rule which would, in the case of an overweight container, authorize carriers to either remove excess cargo from a container and forward the excess as a separate freight collect shipment or to discharge the container to the consignee at any port. Moreover, the proposed rule would place joint and several liability on shippers, consignees and cargo owners for damages, fines and penalties resulting from overweight containers which are supplied or stored by shippers, consignees or cargo owners, or on their behalf.

To facilitate thorough consideration of the petition, interested persons are requested to submit comments regarding the petition no later than October 20, 1989. Comments shall be directed to the Secretary, Federal Maritime Commission, Washington, DC 20573–0001 and shall consist of an original and 15 copies. Comments shall also be served on the filing parties as follows: (1) Attorneys for South Europe/U.S.A. Freight Conference—Stanley O. Sher, Marc J. Fink, Dow, Lohnes & Albertson, 1255 Twenty-third Street NW., Suite 500, Washington, DC 20037; and (2) Attorney for American Trucking Associations and ATA Intermodal Council—Kenneth E. Siegel, Associate General Counsel, American Trucking Associations, 2200 Mill Road, Alexandria, VA 22314.

Copies of the petition are available for examination at the Washington, DC, Office of the Commission, 1100 L Street NW., Room 11101.

Notice of the filing of a related petition for rulemaking regarding the overweight container issue has also been issued this date. See P4–89 Elimination of "Per Container" Rates—Notice of Filing of Petition for Rulemaking.

Joseph C. Polking,

Secretary.

BILLING CODE 6730-01-M

Petition No. P4–89 Elimination of "Per Container" Rates; Filing of Petition for Rulemaking

Notice is given that a petition for rulemaking has been filed by the Transpacific Westbound Rate Agreement, American Trucking Associations, and ATA Intermodal Council.

Petitioners request that the Commission promulgate rules to preclude common carriers from publishing and assessing rates on a "per container" basis with respect to certain commodities which are shown to contribute to overweight container abuses and that the Commission publish a list of such commodities in its rules.

To facilitate thorough consideration of the petition, interested persons are requested to respond to the petition no later than October 20, 1989. Responses shall be directed to the Secretary, Federal Maritime Commission, Washington, DC 20573–0001, and shall consist of an original and 15 copies. Responses shall also be served on the filing parties as follows: (1) Attorneys for Transpacific Westbound Rate Agreement—R. Frederic Fisher, Lillick & Charles, Two Embarcadero Center, Suite 2700, San Francisco, CA 94111, and (2) Attorney for American Trucking Associations and ATA Intermodal Council—Kenneth E. Siegel, Associate General Counsel, American Trucking Associations, 2200 Mill Road, Alexandria, VA 22314.

Copies of the petition are available for examination at the Washington, DC, Office of the Commission, 1100 L Street, NW., Room 11101.

Notice of the filing of a related petition for rulemaking regarding the overweight container issue has also been issued this date. See P3–89 Maximum Container Rates—Notice of Filing of Petition for Rulemaking.

BILLING CODE 6730-01-M

FEDERAL RESERVE SYSTEM

Deposit Guaranty Corp., et al.; Formations of; Acquisitions by; and Mergers of Bank Holding Companies

The companies listed in this notice have applied for the Board's approval under section 3 of the Bank Holding Company Act (12 U.S.C. 1842) and § 225.14 of the Board's Regulation Y (12 CFR 225.14) to become a bank holding company or to acquire a bank or bank holding company. The factors that are considered in acting on the applications are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank or to the offices of the Board of Governors. Any comment on an application that requests a hearing must include a statement of why a written presention would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute and summarizing the evidence that would be presented at a hearing.

Unless otherwise noted, comments regarding each of these applications must be received not later than September 14, 1989.

A. Federal Reserve Bank of Atlanta (Robert E. Heck, Vice President) 104 Marietta Street, NW., Atlanta, Georgia 30303:

1. *Deposit Guaranty Corp.*, Jackson, Mississippi; to acquire 100 percent of the voting shares of Commercial National Corporation, Shreveport, Louisiana, and thereby indirectly acquire Commercial National Bank in Shreveport, Shreveport, Louisiana.

B. Federal Reserve Bank of Dallas (W. Arthur Tribble, Vice President) 400 South Akard Street, Dallas, Texas 75222:

1. *Amarillo Delaware Bancorp, Inc.*, Wilmington, Delaware; to become a bank holding company by acquiring 100 percent of the voting shares of Amarillo National Bank, Amarillo, Texas.

Board of Governors of the Federal Reserve System, August 18, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

The Nippon Credit Bank, Ltd., et al.; Applications To Engage de Novo in Permissible Nonbanking Activities

The companies listed in this notice have filed an application under § 225.23(a)(1) of the Board's Regulation Y (12 CFR 225.23(a)(1)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to commence or to engage *de novo*, either directly or through a subsidiary, in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than September 14, 1989.

A. Federal Reserve Bank of New York (William L. Rutledge, Vice President) 33 Liberty Street, New York, New York 10045:

1. *The Nippon Credit Bank, Ltd.*, Tokyo, Japan; to engage *de novo* through its subsidiary, Trading Desk Systems, Inc., New York, New York, in providing to others data processing and data transmission services, facilities (including data processing and data transmission hardware, software, documentation or operating personnel), data bases, or access to such services, facilities, or data bases by any technological means, provided that: (i) The data to be processed or furnished will be financial, banking, or economic, and the services will be provided pursuant to a written agreement so describing and limiting the services; (ii) the facilities will be designed, marketed, and operated for the processing and transmission of financial, banking, or economic data; and (iii) the hardware provided in connection therewith will be offered only in conjunction with software designed and marketed for the processing and transmission of financial, banking, or economic data, and where the general purpose hardware will not constitute more than 30 percent of the cost of any packaged offering pursuant to § 225.25(b)(7) of the Board's Regulation Y.

B. Federal Reserve Bank of Chicago (David S. Epstein, Vice President) 230 South LaSalle Street, Chicago, Illinois 60690:

1. *First Sioux Bancshares, Inc.*, Sioux Center, Iowa; to engage *de novo* through its subsidiary, First Sioux Financial, Sioux Center, Iowa, in the combination of investment advice and brokerage activities pursuant to §§ 225.25 (b)(15) and (b)(4) of the Board's Regulation Y. These activities will be conducted in the State of Iowa.

Board of Governors of the Federal Reserve System, August 18, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 4150-04-M

Centers for Disease Control

National Committee on Vital and Health Statistics (NCVHS) Executive Subcommittee; Meeting

In accordance with the Federal Advisory Committee Act (Pub. L. 92-463), notice is hereby given that the NCVHS Executive Subcommittee established pursuant to 42 U.S.C. 242k, section 306(k)(2), of the Public Health Service Act, as amended, announces the following meeting.

Name: NCVHS Executive Subcommittee.

Time and Date:

3:00 p.m.–7:00 p.m.—September 11, 1989;

8:00 a.m.–6:00 p.m.—September 12, 1989;

8:00 a.m.–12:00 noon—September 13, 1989.

Place: 235 West Main Street, Charlottesville, Virginia 22901.

Status: Open.

Purpose: The purpose of this meeting is for the Subcommittee to review activities and work plans of the full Committee and other Subcommittees and to make plans for the November 1989 NCVHS meeting.

Contact Person for More Information: Substantive program information as well as summaries of the meeting and roster of Committee members may be obtained from Gail F. Fisher, Ph.D., Executive Secretary, NCVHS, Room 2-12, Center Building, 3700 East West Highway, Hyattsville, Maryland 20782, telephone (301) 436-7050.

Dated: August 18, 1989.

Robert L. Foster,

Assistant Director, Office of Program Support, Centers for Disease Control.

BILLING CODE 4160-18-M

Health Care Financing Administration

Region X—Seattle; Statement of Organization, Functions, and Delegations of Authority

Part F. of the statement of organization, functions and delegations of authority for the Department of Health and Human Services, Health Care Financing Administration (HCFA), (**Federal Register**, Vol. 46, No. 223, pp. 56927–56929, dated Thursday November 19, 1981; Vol. 48, No. 198, pp. 46446–46447, dated Wednesday, October 12, 1983; Vol. 53, No. 195, pp. 39525–39526, dated Friday, October 7, 1988; Vol. 54, No. 95, pp. 21476–21479, dated Thursday, May 18, 1989; and Vol. 54, No. 102, pp. 22955–22958, dated Tuesday, May 30, 1989) is amended to reflect a reorganization within Region X (Seattle), Office of the Associate Administrator for Operations (AAO). The regional office is reorganizing from a functional structure to a programmatic structure with respect to the administration of the Medicare and Medicaid programs. The reorganization abolishes the current Division of Program Operations and Division of Financial Operations and replaces them with the Division of Medicare and the Division of Medicaid. The organizational alignment and functional statements are identical to those approved within the last 2 years in Regions I, II, III, IV, VII, VIII and IX. The appropriate section titles in the **Federal Register** are being updated to identify the current organizational alignment in each regional office. No changes are being made to the functional statements.

The specific amendments to Part F. are described below:

- Section FP.20.D.2., Division of Financial Operations (FPD(V, VI and X)C) is amended by deleting Region X from the title. The new section title reads: Section FP.20.D.2., Division of Financial Operations (FPD(V and VI)C).
- Section FP.20.D.3., Division of Program Operations (FPD(V, VI and X)D) is amended by deleting Region X from the title. The new section title reads: Section FP.20.D.3., Division of Program Operations (FPD(V and VI)D).
- Section FP.20.D.4., Division of Medicaid (FPD(I–IV and VII–IX)E) is amended by including Region X in the title. The new section now reads: Section FP.20.D.4., Division of Medicaid (FPD I–IV and VII–X)E).
- Section FP.20.D.5., Division of Medicare (FPD(I–IV and VII–IX)F) is amended by including Region X in the title. The new section title reads: Section FP.20.D.5., Division of Medicare (FPD(I–IV and VII–X)F).

Robert A. Streimer,

Acting Associate Administrator for Management.

[FR Doc. 89-19974 Filed 8-23-89; 8:45 am]

BILLING CODE 4120-01-M

Health Resources and Services Administration

Designation of Medically Underserved Populations Including Areas Recommended by the Chief Executive Officer and Local Officials of a State

AGENCY: Health Resources and Services Administration, HHS.

ACTION: Notice.

SUMMARY: Under the provisions of section 330(b)(6) of the Public Health Service (PHS) Act, 42 U.S.C. 254c(b)(6), as amended by Public Law 99-280, the Governor of the State of Oklahoma has asked the Secretary of Health and Human Services (HHS) to designate a specific population within the State as a medically underserved population (MUP). Also, under section 330(b)(3) of the PHS Act, areas in the States of Michigan, California and Ohio have been proposed for MUP designation. This notice provides an opportunity for local officials and appropriate Community Health Center organizations of States of Oklahoma, Michigan, California and Ohio to provide recommendations and to comment on the proposal to designate as MUPs the populations described in this notice.

DATE: Comments should be in writing and should be received by September 25, 1989.

If no adverse comments are received within this period, the populations specified in this notice will be designated as MUPs by the Secretary, effective 30 days after publication. If adverse comments supported by objective data are received, the Secretary will, within 75 days from the date of publication of this notice, review the data and comments received together with the data already provided and any relevant information otherwise available, provide written responses to the commenters, and grant, modify or deny designation of the population(s) as MUPs, as appropriate, based on the review.

ADDRESS: Mail comments to Ms. Rhoda Abrams, Director, Office of Program and Policy Development, Bureau of Health Care Delivery and Assistance, 5600 Fishers Lane, Room 7A-08, Rockville, Maryland 20857.

FOR FURTHER INFORMATION CONTACT: Mr. Richard Bohrer, Director, Division of Primary Care Services, Bureau of Health Care Delivery and Assistance, 5600 Fishers Lane, Room 7A-55, Rockville, Maryland 20857, (301) 443-2260.

SUPPLEMENTARY INFORMATION: Section 330 of the PHS Act provides that grants may be made to public and nonprofit

private entities to plan, develop and operate Community Health Centers which serve medically underserved populations. Section 330(b)(3) of the PHS Act (42 U.S.C. 254c(b)(3)) and implementing regulations define a medically underserved population as the population of an urban or rural area designated by the Secretary as an area with a shortage of personal health services or a population group designated by the Secretary as having a shortage of such services. On September 2, 1975, and October 15, 1976, the Department of Health and Human Services published criteria in the **Federal Register** for use in designating and prioritizing such medically underserved areas (MUAs), and the Secretary has made designations and redesignations of MUAs using these criteria. According to the published criteria, a population must have an Index of Medical Underservice (IMU) score of 62 or less to be recommended for additions to the MUA list.

The PHS Act, as amended in 1986 by Public Law 99-280, provides at section 330(b)(6) that the Secretary may also designate a medically underserved population (MUP) which does not meet the published medically underserved population criteria if the chief executive officer and the local officials of the State in which such a population is located recommend the designation of that population, based on unusual local conditions which are a barrier to access to, or availability of, personal health services. The amendments to section 330 made by Public Law 99-280 also provide (in section 330(b)(5)) that the Secretary must notify and consult with the chief executive officer of the State, local officials of the State, and the State organization, if any, which represents a majority of Community Health Centers in such State, before designating or terminating designation of MUPs.

HHS is currently developing a regulation which will specify MUP criteria, procedures for designation of populations which meet those criteria, procedures for designation of recommended populations which do not meet the MUP criteria but have unusual conditions, and procedures for providing the notifications and opportunities for comment required by the law. The Secretary has determined that it would be inappropriate to delay acting on the request of the Governor of Oklahoma or on the requests from the States of Michigan, California and Ohio until the regulations are published. Therefore, the Health Resources and Services Administration (HRSA) is publishing this notice as a way of seeking comments and recommendations on these proposed designations from local officials of the affected areas, from the organizations which represent a majority of the Community Health Centers in the States involved, and from other interested or affected parties.

The MUP justifications which have been submitted by the Governors and/or States and which are presented in this Notice have been reviewed by HRSA and are considered acceptable to support the designations of the populations or areas listed below was MUPs, unless adverse comments are received as a result of publication of this Notice.

The populations and areas which have been recommended for designation as MUPs are:

(1) Oklahoma—Eastern Oklahoma County

The Governor of the State of Oklahoma is requesting that the population of census tracts 1080.03, 1080.05, 1080.10, 1080.11, 1081.03, 1088.01, 1088.02, 1088.03, 1088.04, 1089, 1090 of eastern Oklahoma County, which represent the service area of the Mary Mahoney Memorial Health Center, be designated as a Medically Underserved Population (MUP). According to the request, when Federal poverty guidelines are applied, nearly 3,500, or roughly 50 percent of the Mary Mahoney Health Center's patients are not able to pay for medical services. Also, many of these patients do not qualify for programs such as Medicare or Medicaid.

Staff analysis indicates that not all of the requested area is clearly underserved. Census tracts 1080.03, 1080.05, and 1081.03 had only single-digit poverty levels in the 1980 census. Tracts 1080.10 and 1080.11 had 10% poverty, also below the U.S. average, and are within or immediately contiguous to Midwest City, where significant numbers of primary care physicians are located.

However, a smaller area consisting of tracts 1088.01, 1088.02, 1088.03, 1088.04, 1089, and 1090 (including Nicoma Park, Choctaw, and Jones) has an above-average poverty level of 15.7%, a population-to-primary care physician ratio of 2400:1 (demonstrating overutilization), and is further from Midwest City, thus indicating more limited access. Therefore, given the Governor's recommendation, HRSA will concur with designation of this smaller area if no objections are received.

(2) Michigan—Portions of Flint and Beecher (in Genesee County)

The Office of Health and Medical Affairs of the State of Michigan is requesting that census tracts 1, 2, 3, 103.02, 103.03, 103.04, 122.01 and 122.02 of Genesee County be designated as a MUP. This area is located along the far north side of the city of Flint and the contiguous unincorporated area further to the north, known as Beecher. This area is an extremely depressed, urban area that has a large minority population, and suffers from chronic high unemployment rates. An area immediately south of this, within Flint, has already been designated as an MUA; an area almost identical to the already-designated MUA plus the proposed MUP has previously been designated as a primary care health manpower shortage area (HMSA).

The requested area scores 49.9 on the Index of Medical Underservice (IMU):

Factor	Percent/ratio	Weighted score
Infant Mortality (deaths per 1000 live births)	23.2	13.1
Population 65+ (as a percent of total population)	4.6	20.2
Population Below Poverty (as a percent of total population)	24.7	10.9
Primary Care Physician to Population Ratio (primary care physicians per 1000 population 1000 population)	.246	5.7
Total Index of Medical Underservice Score		49.9

This score is significantly lower than the maximum value of 62.0 used to indicate underservice.

(3) Michigan—Portions of Ypsilanti (in Washtenaw County)

The Office of Health and Medical Affairs of the State of Michigan is requesting that census tracts 25.01, 25.02 and 26.00 of Washtenaw County be designated as an MUP. This area is located in the city of Ypsilanti, Michigan. It is a low-income area that is economically isolated, despite its inclusion in the Ann Arbor-Ypsilanti metropolitan area and its proximity to the Detroit metropolitan area. The area is also isolated by several geographic boundaries—the Huron River to the east, Interstate Highway 94 to the south and southwest, and Michigan Avenue to the north. There are large concentrations of populations which have been deinstitutionalized from nearby mental hospitals and a large concentration of public housing. Durable goods manufacturing plants have laid off significant numbers of individuals over the past few years which has severed access to needed health benefits. The population's IMU score is well below the 62 upper limit:

Factor	Percent/ ratio	Weighted score
Infant Mortality	20.2	16.4
Population 65+	12.4	19.1
Population Below Poverty	33.0	5.8
Primary Care Physician to Population Ratio	.382	10.7
Total IMU Score		51.8

(4) California—Vacaville Area (in Solano County)

The Office of Statewide Health Planning and Development of the State of California is requesting that census tracts 2529.02, 2529.03, 2532.02 and 2532.03 in the Vacaville Division of Solano County, served by the Vacaville Community Clinic, be designated as an MUP.

Slightly more than 11 percent of the primary-service area population is of Hispanic origin, which approximates the countywide distribution of 10.5 percent. The California Employment Development Department estimates that in 1985 the average monthly number of farmworkers in Solano County was 2,390—ranging from 1,530 in March to 3,380 in September. Of these, 29.9 percent were migrant workers and 20.7 percent were local seasonal workers. The characteristics of this migrant population that place added demands on health services are well known: life expectancy that is 60 percent of the U.S. average; higher infant mortality; and more than twice the national death rate from accidents, tuberculosis, influenza, and pneumonia.

In addition to the farmworkers, the area has a second "migratory" group—wives, relatives, dependents, and friends of inmates who are incarcerated at the California Medical Facility. Most are, by definition, single-female parents and children, according to anecdotal clinic records, they often live two or more families to a dwelling. Also, they appear in the census count of their permanent address rather than the census count for the Vacaville area.

In addition to geographic barriers and service deficiencies, several socioeconomic characteristics of the target population tend to isolate medically indigent and Medi-Cal eligible patients from existing health services. Most are probably below the poverty level and are Medi-Cal enrollees whose access to other providers in the county is increasingly limited, owing to their transitory lifestyle. In addition, many have social problems, including alcohol and drug abuse and smoking.

In summary, the proposed MUP population has higher percentages than the areawide population—up to five times higher—of persons who are poor or near poor, on fixed incomes, aged, disabled, and with social handicaps, such as single-parent status and lack of education. It should be clear that they are also up to five times as vulnerable to inadequate health services as is the areawide population.

The Vacaville Census Division of Solano County is currently designated as a primary care HMSA. Primary-care services are available in varying capacities in contiguous Vallejo and Fairfield. Vallejo, however, is more than 30 minute travel time away from the target area under the HMSA guidelines (20 miles under normal conditions on primary roads, 15 miles on mountainous terrain or on secondary roads) and therefore is not readily accessible to the population. Fairfield is more than 20 minutes travel time away and Solano County's Fairfield clinic, the only other area provider of services to the medically indigent, has reached service capacity.

The proposed Vacaville area's IMU score is below the 62.0 upper limit:

Factor	Percent/ ratio	Weighted score
Infant Mortality	9.3	24.8
Population 65+	16.8	16.1
Population Below Poverty	16.6	16.2
Physician to Population Ratio	.1811	2.8
		59.9

(5) Ohio—Columbus South Side (in Franklin County)

The Scioto Valley Health Systems Agency of the State of Ohio is requesting that 18 census tracts in Franklin County (52, 55, 56.10, 56.20, 57, 58.10, 58.20, 59, 60, 61, 87.10, 87.20, 87.30, 88.11, 88.12, 88.13, 88.21, 88.22) be designated as an MUP. The area is on the south side of Columbus, Ohio and is served by the South Side Family Health Center. This is a high need area with a large minority population. It is bounded by the outer belt, I270; the Scioto River to the west; and major roads and railroads. An area immediately to the north has already been designated as an MUA.

The proposed Columbus South Side area's IMU score is below the 62.0 upper limit.

Factor	Percent/ ratio	Weighted score
Infant Mortality	14.1	20.5
Population 65+	10.2	19.6
Population Below Poverty	19.8	14.9
Primary Care Physician to Population Ratio	.17	2.8
Total IMU Score		57.8

(6) Ohio—Lower Linden Area of Columbus (in Franklin County)

The Department of Health of the State of Ohio is requesting that the Lower Linden area of Columbus, Ohio (census tracts 7.1, 7.2, 7.3, 9.1, 14.0, 15.0, 75.11 and 75.20) be designated as an MUP. The area is currently designated as a primary care Health Manpower Shortage Area. This is the service area for the St. Stephen Clinic, a comprehensive primary care clinic funded by the Columbus City Health Department. Not only does the area have a high poverty rate (26.50), a high infant mortality rate (18.73 percent), and an inadequate number of primary care physicians, but, because of high poverty rates in contiguous tracts, it is unlikely that resources in these contiguous areas would be available for utilization. The area's IMU score is well below the 62.0 upper limit.

Factor	Percent/ ratio	Weighted score
Infant Mortality	18.73	16.4
Population 65+	7.2	20.1
Population Below Poverty	26.5	9.3
Physician to Population Ratio	.28	5.7
Total IMU Score		51.5

This data has been reviewed by the Bureau of Health Care Delivery and Assistance and found to be accurate.

Dated: August 18, 1989.

John H. Kelso,

Acting Administrator.

BILLING CODE 4160-15-M

National Institutes of Health

National Institute on Aging; Meeting of the Board of Scientific Counselors

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the Board of Scientific Counselors, National Institute on Aging, September 14–15, 1989, to be held at the Gerontology Research Center, Baltimore, Maryland. The meeting will be open to the public from 9:00 a.m. on Thursday, September 14 until approximately 5:00 p.m. and will again be open to the public from 9:00 a.m. on Friday, September 15 until 12:00 noon. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in section 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92-463, the meeting will be closed to the public on September 14 from 5:00 p.m. until recess, and again on September 15 from 1:00 p.m. until adjournment for the review, discussion, and evaluation of individual programs and projects conducted by the National Institutes of Health, NIA, including consideration of personnel qualifications and performance, and the competence of individual investigators, the disclosure of which would constitute a clearly unwarranted invasion of person privacy.

Ms. June C. McCann, Committee Management Officer, NIA, Building 31, Room 5C02, National Institutes of Health, Bethesda, Maryland 20892, (telephone: 301/496-9322) will provide a summary of the meeting and a roster of committee members. Dr. George R. Martin, Scientific Director, NIA, Gerontology Research Center, Baltimore City Hospitals, Baltimore, Maryland 21224, will furnish substantive program information.

(Catalog of Federal Domestic Assistance Program No. 13.866, Aging Research, National Institutes of Health)

Dated: August 15, 1989.

Betty J. Beveridge,

Committee Management Officer, NIH.

BILLING CODE 4140-01-M

National Institute on Aging; Meeting of the National Advisory Council on Aging

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the National Advisory Council on Aging, National Institute on Aging (NIA), on September 21–22, 1989. On September 21 the Council will meet in Building 31, Conference Room 6, National Institutes of Health, Bethesda, Maryland. This meeting will be open to the public from 8:00 a.m. until 2:00 p.m. for a status report by the Director, National Institute on Aging; reports on the Behavioral and Social Research Program; Cancer and Aging; Long Term Care Research; and for discussions of program policies and issues, recent legislation, and other items of interest.

The Council will meet on Friday, September 22 in Conference Room 1-117 at the Gerontology Research Center in Baltimore, Maryland. This meeting will be open to the public from 9:00 a.m. to adjournment for a report on the NIA Intramural Research Program. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92-463, the meeting of the Council will be closed to the public on September 21 from 2:00 p.m. to recess for the review, discussion, and evaluation of individual grant applications.

These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material and personal information concerning individuals associated with the applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Ms. June McCann, Council Secretary for the National Institute on Aging, National Institutes of Health, Building 31, Room 5C02, Bethesda, Maryland 20892 (301/496-9322), will provide a summary of the meeting and a roster of committee members upon request.

BILLING CODE 4140-01-M

National Institute of Allergy and Infectious Diseases; Meetings of National Advisory Allergy and Infectious Diseases Council, Acquired Immunodeficiency Syndrome Subcommittee, Allergy and Immunology Subcommittee, Microbiology and Infectious Diseases Subcommittee

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the National Advisory Allergy and Infectious Diseases Council, National Institute of Allergy and Infectious Diseases, and its subcommittees on September 28–29, 1989 at the National Institutes of Health, Building 31C, Conference Room 10, Bethesda, Maryland 20892.

The meeting will be open to the public on September 28 from approximately 8:30 a.m. to 8:45 a.m. for opening remarks of the Institute Director and from 10:15 a.m. to recess for meetings of the Council subcommittees. On September 29 the meeting will be open to the public from approximately 8:30 a.m. until 12:15 p.m. for discussion of procedural matters, Council business, and a report from the Institute Director which will include a discussion of budgetary matters. The primary program will include remarks by the Acting Director, NIH; a report on the Intramural Research Program; an update on the National Vaccine Plan; a report on the establishment of STD centers; and, a report from each of the Council subcommittees.

In accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5, U.S.C. and section 10(d) of Public Law 92-463, the meeting of the NAAIDC Acquired Immunodeficiency Syndrome Subcommittee, NAAIDC Allergy and Immunology Subcommittee and the NAAIDC Microbiology and Infectious Diseases Subcommittee will be closed to the public for approximately three hours for review, evaluation, and discussion of individual grant applications. It is anticipated that this will occur from 8:45 a.m. until approximately 10:15 a.m. on September 28, in conference rooms 4, 8 and 9 respectively. The meeting of the full Council will be closed from approximately 12:15 p.m. until adjournment on September 29 for the review, discussion, and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications, disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Ms. Patricia Randall, Office of Research Reporting and Public Response, National Institute of Allergy and Infectious Diseases, Building 31, Room 7A32, National Institutes of Health, Bethesda, Maryland 20892, telephone (301-496-5717), will provide a summary of the meeting and a roster of the committee members upon request.

Dr. John W. Diggs, Director, Extramural Activities Program, NIAID, NIH, Westwood Building, Room 703, telephone (301-496-7291), will provide substantive program information.

BILLING CODE 4140-01-M

National Cancer Institute; Meeting

Pursuant to Public Law 92–463, notice is hereby given of the meeting of the Board of Scientific Counselors, Division of Cancer Etiology on October 26–27, 1989. The meeting will be held in Building 31, C Wing, Conference Room 10, National Institutes of Health, 9000 Rockville Pike, Bethesda, Maryland 20892.

This meeting will be open to the public from 1:00 p.m. to recess on October 26 and from 9:00 a.m. to adjournment on October 27 for discussion and review of the Division budget and review of concepts for grants and contracts. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in section 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92–463, the meeting will be closed to the public from 9:00 a.m. to approximately 12:00 Noon on October 26 for the review, discussion and evaluation of individual programs and projects conducted by the Division of Cancer Etiology. These programs, projects, and discussions could reveal personal information concerning individuals associated with the programs and projects, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Mrs. Winifred Lumsden, Committee Management Officer, National Cancer Institute, Building 31, Room 10A06, National Institutes of Health, Bethesda, Maryland 20892 (301/496–5708) will provide summaries of the meeting and rosters of committee members, upon request.

Dr. David McB. Howell, Executive Secretary of the Board of Scientific Counselors, Division of Cancer Etiology, National Cancer Institute, Building 31, Room 11A06, National Institutes of Health, Bethesda, Maryland 20892 (301/496–6927) will furnish substantive program information.

BILLING CODE 4140–01–M

National Institute of Diabetes and Digestive and Kidney Diseases; Meeting of the Board of Scientific Counselors

Pursuant to Public Law 92–463, notice is hereby given of the meeting of the Board of Scientific Counselors, National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), September 21, 22, and 23, 1989, National Institutes of Health, Building 2, Room 102, Bethesda, Maryland 20892. This meeting will be open to the public on September 21 from 8 p.m. to 10 p.m., September 22 from 9 a.m. to 12 noon and again from 2 p.m. to 4:30 p.m., and September 23 from 9 a.m. to 10:30 a.m. The open portion of the meeting will be devoted to scientific presentations by various laboratories of the NIDDK Intramural Research Program. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in section 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92–463, the meeting will be closed to the public on September 21 from 7:30 p.m. to 8 p.m., September 22 from 12 noon to 2 p.m. and again from 4:30 p.m. to recess, and September 23 from 10:30 a.m. to adjournment for the review, discussion and evaluation of individual intramural programs and projects conducted by the NIDDK, including consideration of personnel qualifications and performance, the competence of individual investigators, and similar items, disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Summaries of the meeting and rosters of the members will be provided by the Committee Management Office, National Institute of Diabetes and Digestive and Kidney Diseases, Building 31, Room 9A19, Bethesda, Maryland 20892. Further information concerning the meeting may be obtained by contacting the office of Dr. Jesse Roth, Executive Secretary, Board of Scientific Counselors, National Institutes of Health, Building 10, Room 9N–222, Bethesda, Maryland 20892, (301) 496–4128.

BILLING CODE 4140–01–M

National Institute of Diabetes and Digestive and Kidney Diseases; Meeting of the National Diabetes and Digestive and Kidney Diseases Advisory Council and its Subcommittees

Pursuant to Public Law 92–463, notice is hereby given of a meeting of the National Diabetes and Digestive and Kidney Diseases Advisory Council and its subcommittees, National Institute of Diabetes and Digestive and Kidney Diseases, on September 25–26, 1989, Wilson Hall, Building 1, National Institutes of Health, Bethesda, Maryland. The meeting will be open to the public September 25, from 8:30 a.m. to 12 noon and again on September 26 from 1 p.m. to adjournment to discuss administrative details relating to Council business and special reports. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92–463, the subcommittee and full Council meeting will be closed to the public for the review, discussion and evaluation of individual grant applications. The following subcommittees will be closed to the public on September 25 from 1 p.m. to recess: Diabetes, Endocrine and Metabolic Diseases; Digestive Diseases and Nutrition; and Kidney, Urologic and Hematologic Diseases. The full Council meeting will be closed on September 26 from 8:30 a.m. to approximately 12 noon.

These deliberations could reveal confidential trade secrets or commercial property, such as patentable materials, and personal information concerning individuals associated with the applications, disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Further information concerning the Council meeting may be obtained from Dr. Walter Stolz, Executive Secretary, National Diabetes and Digestive and Kidney Diseases Advisory Council, NIDDK, Westwood Building, Room 657, Bethesda, Maryland 20892, (301) 496–7277.

A summary of the meeting and roster of the members may be obtained from the Committee Management Office, NIDDK, Building 31, Room 9A19, National Institutes of Health, Bethesda, Maryland 20892, (301) 496–6917.

BILLING CODE 4140–01–M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[ID-060-09-4212-08]

Management Framework Plans; Coeur d'Alene District

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of action; amendment of the Emerald Empire and Chief Joseph Management Framework Plans, Coeur d'Alene District, Idaho.

NOTICE: Notice is hereby given that the Emerald Empire and Chief Joseph Management Framework Plans have been amended to categorize all District administered lands into either Management Areas or the Adjustment Area.

SUMMARY: Through the Bureau's land use planning process, District administered lands have been categorized so as to permit land tenure adjustments. Nineteen Management Areas have been identified. These areas contain public lands which have been determined to be suitable for long-term retention and other lands which may abe suitable for acquisition. The Adjustment Area contains public lands which have been determined to be nonessential for long-term public ownership. Under this amendment, all public lands currently within Management Areas will be retained in public ownership. The long-term objective being to expand the public land base within the Management Areas by exchanging public land in the Adjustment Area for non-public land in Management Areas. All lands acquired will be managed in accordance with current land use plans.

Any landownership adjustments which may be considered as a result of this land use plan amendment, will involve additional public participation with appropriate notification through the **Federal Register**, news media, and letters to affected and interested parties. A site-specific environmental analysis will be required for each ownership adjustment proposal.

SUPPLEMENTARY INFORMATION: Detailed information about the plan amendment can be obtained by contacting Ted Graf, District Planning Coordinator, Bureau of Land Management, Coeur d'Alene District Office, 1808 N. Third Street, Coeur d'Alene, Idaho 83814, phone (208) 765-1511.

Planning Protest. Any party that participated in the plan amendments and is adversely affected by the amendments may protest this action only as it affects issues submitted for the record during the planning process. The protest shall be in writing and filed with the Director (760), Bureau of Land Management, 18th and C Streets NW., Washington DC 20240, within 30 days of this notice. The procedures for filing a protest are contained in 43 CFR 1610.5-2. In the absence of any planning protests, this action will become the final determination of the Department of the Interior and the plan amendments will be in affect.

Dated: August 10, 1989.

Fritz U. Rennebaum,

District Manager.

Shoshone District Grazing Advisory Board; Meeting

AGENCY: Bureau of Land Management (BLM), Interior.

SUMMARY: This notice sets forth the schedule and proposed agenda for a meeting of the Shoshone District Grazing Advisory Board.

DATE: Thursday, October 12, 1989, at 9:00 a.m.

ADDRESS: BLM District Office, 400 West F Street, Shoshone, ID 83352.

FOR FURTHER INFORMATION CONTACT: K. Lynn Bennett, District Manager, Shoshone District Office, P.O. Box 2B, Shoshone, ID 83352. Telephone (208) 886-2206 or FTS 554-6110.

SUPPLEMENTARY INFORMATION: The proposed agenda for the meeting includes the following items: (1) The proposed range improvement (8100) fund allocation for 1990 projects, (2) a field inspection of completed projects funded by the Advisory Board contributions, (3) responsibility for maintenance of range improvements, (4) District Fire Rehabilitation Plan, (5) District riparian program update, and (6) the Idaho water adjudication.

Operation and administration of the Board will be in accordance with the Federal Advisory Committee Act of 1972 (Pub. L. 92-463; 5 U.S.C. Appendix 1) and Department of the Interior regulations, including 43 CFR part 1984.

The meeting will be open to the public. Anyone may present an oral statement between 10:00 and 11:00 a.m. or may file a written statement regarding matters on the agenda. Oral statements will be limited to ten minutes. Anyone wishing to make an oral statement should notify the Shoshone District by Tuesday, October 10, 1989. Records of the meeting will be available in the Shoshone District Office for public inspection or copying within 30 days after the meeting.

K. Lynn Bennett,

District Manager.

Realty Action; Recreation and Public Purposes Act Classification; Idaho

AGENCY: Bureau of Land Management, Interior.

ACTION: The following lands in Jerome County, Idaho have been examined and found suitable for classification for lease or conveyance to Jerome County, Idaho under the provisions of the Recreation and Public Purposes Act (R&PP), as amended (43 U.S.C. 869 *et. seq.*). The County proposes to use the land for an agricultural museum and visitor information center.

T. 9 S., R. 17 E., Boise Meridian
  Sec. 14: S2NW4, NE4SW4, N2NW4SW4, N2S2NW4SW4, SE3SW4NW4SW4, S2SE4NW4SW4, NE4NE4SW4SW4, N2N2SE4SW4, S2NE4SE4SW4, SE4NW4SE4SW4, NE4SE4SE4SW4; containing 180 acres.

The lands are not needed for Federal purposes. Lease or conveyance is consistent with current BLM land use

planning and would be in public interest.

The lease/patent, when issued will be subject to the following terms, conditions and reservations:

1. Provisions of the Recreation and Public Purposes Act and to all applicable regulations of the Secretary of the Interior.
2. A right-of-way for ditches and canals constructed by the authority of the United States.
3. All minerals shall be reserved to the United States, together with the right to prospect for, mine, and remove the minerals.
4. The following rights-of-way:

Serial No.	Holder	Use
I-015016	ID Dept. of Transportation.	I-84 Highway.
I-2031	ID Dept. of Transportation.	Land for Highway R/W.
I-504	ID Dept. of Transporation.	Land for Loop Road.
I-13654	Jerome County	Road Right-of-Way.
I-20205	Jerome County	Road Right-of-Way.
I-26906	Crossroads of Idaho, Inc.	Road, utilities, and sign right-of-way.

Detailed information concerning this action is available for review at the Shoshone District BLM Office at 400 West F Street, Shoshone, Idaho.

Upon publication of this notice in the **Federal Register**, the lands will be segregated from all other forms of appropriation under the public land laws, including the general mining laws, except for lease or convenyance under the Recreation and public Purposes Act and leasing under the mineral leasing laws. For a period of 45 days from the date of publication on this notice, interested parties may submit comments regarding the proposed lease/conveyance or classification of the lands to the District Manager, BLM Shoshone District Office, P.O. Box 2-B, Shoshone, ID 83352. Any adverse comments will be reviewed by the State Director. In the absence of any adverse comments, the classification will become effective 60 days from the date of publication of this notice.

K. Lynn Bennett,

District Manager.

BILLING CODE 4310-GG-M

[NM-010-4212-20/GP9-0110]

Realty Action on Proposed Land Disposal in Rio Arriba County, New Mexico

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of realty action on proposed land disposal.

SUMMARY: This notice is to advise the public that the Albuquerque District, of the Bureau of Land Management (BLM), is proposing to dispose of approximately 30.44 acres of public land near the Village of Dixon within Rio Arriba County, State of New Mexico.

SUPPLEMENTARY INFORMATION: The BLM has determined that the acres of public land described below are suitable for disposal under the Color-of-Title Acts of 1928 (45 Stat. 1069), 1932 (47 Stat. 53; 43 U.S.C. 178), and Sales under section 203 of the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. 1713 (1976).

New Mexico Principal Meridian

Dixon II, New Mexico Public Land Disposal Block

T. 23 N., R. 10 E.,
  Sec. 28, lots 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126;
  Sec. 29, lot 20.

Comprising approximately 16.28 acres.

Disposal of these lands is consistent with: (1) The approved Land Use Recommendations of the BLM's 1979 Rio Grande Management Framework Plan, (2) The 1988 Taos Resource Management Plan, (3) Their location as well as the physical characteristics and the private ownership of adjoining lands, make them difficult and uneconomical to manage as public lands, so disposal would best serve the public interest, (4) This Notice of Realty Action will be published once a week for three weeks in a newspaper of general circulations and will be sent to the New Mexico Congressional Delegation and the relevant congressional committees by BLM. The specific parcels of public land will be disposed of using the following "Tract Disposal Criteria" in descending order of priority:

1. *Color of Title.* Color-of-Title disposal will be made to any applicant within the disposal area who qualifies under the Color-of-Title Acts.
2. *Non-Competitive (Direct) Sale.* Public lands within the disposal block will be sold without competition at Fair Market Value to those individuals who occupied the parcels before June 11, 1979 (the date land use plans were approved) but who do not qualify for title under one of the color-of-title acts.

The terms and conditions applicable the disposal are:

1. The patents will contain a reservation to the United States for ditches and canals.
2. All disposals are for surface estate only. The patents will contain a reservation to the United States for all minerals.
3. Tracts which lie within the 100 year floodplain of the Rio Embudo will be subject to EO 11988 which precludes the seeking of compensation from the United States or its agencies in the event existing or future facilities on those tracts are damaged by flood.
4. All disposal will be made subject to prior existing rights.

Additional information pertaining to this disposal including the environmental documents are available for review at the Taos Resource Area Office, Plaza Montevideo, Cruz Alta Road, Taos, New Mexico 87571, or telephone (505) 758-8851. For a period of 45 days from the date of this notice, interested parties may submit written comments to the Taos Resource Area Manager. Any adverse comments will be evaluated by the New Mexico State Director, Bureau of Land Management, who may vacate or modify this realty action and issue a final determination.

In the absence of any action by the State Director, this realty action will become the final determination of the Department of the Interior.

Dated: August 14, 1989.

Robert Dale,

District Manager.

Resource Management Plan and Environmental Assessment; Pinedale Resource Area

AGENCY: Bureau of Land Management, Interior.

ACTION: Preparation of a Coordinated Resource Management Plan and Environmental Assessment for the Big Piney-LaBarge Area in the Pinedale Resource Area, Rock Springs District, Wyoming.

SUMMARY: The Pinedale Resource Area is initiating a coordinated resource management plan (CRMP) for the Big Piney-LaBarge area, west of Highway 189. The objective of the plan is to integrate several activity plans, resource concerns, and anticipated future oil and gas development. An environmental assessment will be prepared, providing analysis of proposed goals and actions provided in the CRMP.

DATES: The CRMP and environmental assessment are scheduled for completion in the spring of 1990.

ADDRESS: The documents will be available at the Pinedale Resource Area, P.O. Box 768, Pinedale, Wyoming 82941.

FOR FURTHER INFORMATION CONTACT: If you wish to be placed on the mailing list or if you wish to provide resource information for the CRMP, contact Arlan Hiner at the address above or phone (307) 367–4358.

SUPPLEMENTARY INFORMATION: The CRMP will look at integrated resource concerns, such as wildlife habitat, watershed management, livestock grazing, vegetation, soils, etc. in the Big Piney-LaBarge area.

Specific resource management prescriptions, projects, and actions will be developed. The management prescriptions will be developed in accordance with the direction provided in the current land use plan (Pinedale approved RMP). Initial review of the project indicated that an EIS is not necessary and that an environmental assessment will provide in-depth analysis of alternatives. If, after completion and public review of the EA, a determination is made to prepare an EIS, this notice will serve as the Notice of Intent to prepare an EIS.

Donald H. Sweep,

District Manager.

Minerals Management Service

[DES 89–17]

Availability of the Draft Supplement to the Final Environmental Impact Statement for the Proposed 5-Year Outer Continental Shelf Oil and Gas Leasing Program for Mid-1987 to Mid-1992

Pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969, the Department of the Interior's Minerals Management Service has prepared a draft supplement to the final Environmental Impact Statement (SEIS) for the 5-Year Outer Continental Shelf Oil and Gas Leasing Program Mid-1987 to Mid-1992 revising the cumulative impact analysis on migratory species for the Alaska and Pacific Outer Continental Shelf Regions.

Information on the availability of the draft SEIS can be obtained from: Regional Director, Alaska Region, Minerals Management Service, 949 East 36th Street, Anchorage, Alaska 99508–4302, phone: (907) 261–4677; Area Coordinator, Pacific Region, Minerals Management Service, 1340 West Sixth Street, Los Angeles, California 90017, phone: (213) 894–4480; and Chief, Branch of Environmental Evaluation, Minerals Management Service, Mail Stop 644, 381 Elden Street, Herndon, Virginia 22070, phone: (703) 787–1674.

Copies of the draft SEIS will be available for review in public libraries located throughout the coastal States. Information regarding the locations of libraries where copies of the statements will be available may be obtained from the offices listed above.

In accordance with 30 CFR 256.2(b), public hearings are tentatively schedueld for the week of September 25th in Los Angeles, California; Sacramento, California; Portland, Oregon; and Anchorage, Alaska, for the purpose of receiving comments and suggestions relating to the draft SEIS. The exact dates, times, and locations of the hearings will be announced by **Federal Register** Notice in the near future.

Comments resulting from reviews of the draft SEIS and written materials prepared as part of testimony at the public hearings will be accepted until October 17, 1989. All comments should be mailed to Minerals Management Service, Mail Stop 644, 381 Elden Street, Herndon, Virginia 22070. Hand deliveries to the Department of the Interior may be made to Room 4230, 18th and C Streets, NW., Washington, DC 20240. Envelopes or packages should be marked "5-Year Program draft SEIS."

After the public hearing testimony and written comments on the draft SEIS have been reviewed and analyzed, a final EIS will be prepared.

Dated: August 21, 1989.

William D. Bettenberg,

Associate Director for Offshore Minerals Management, Minerals Management Service.

Approved:

Jonathan P. Deason,

Director, Office of Environmental Project Review.

BILLING CODE 4310-MR-M

UNITED STATES INTERNATIONAL TRADE COMMISSION

[Investigation No. 731–TA–431 (Final)]

Aluminum Sulfate From Venezuela

AGENCY: United States International Trade Commission.

ACTION: Institution of a final antidumping investigation and scheduling of a hearing to be held in connection with the investigation.

SUMMARY: The Commission hereby gives notice of the institution of final antidumping investigation No. 731–TA–731 (Final) under section 735(b) of the Tariff Act of 1930 (19 U.S.C. 1673d(b)) (the act) to determine whether an industry in the United States is materially injured, or is threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports from Venezuela of aluminum sulfate, provided for in subheading 2833.22.00 of the Harmonized Tariff Schedule of the United States (previously reported under item 417.16 of the Tariff Schedules of the United States), that have been found by the Department of Commerce, in a preliminary determination to be sold in the United States at less than fair value (LTFV). Unless the investigation is extended, Commerce will make its final LTFV determination on or before October 18, 1989 and the Commission will make its final injury determination by December 6, 1989 (see sections 735(a) and 735(b) of the act (19 U.S.C. 1673d(a) and 1673d(b))).

For further information concerning the conduct of this investigation, hearing procedures, and rules of general application, consult the Commission's Rules of Practice and Procedure, part 207, subparts A and C (19 CFR part 207, as amended, 53 FR 33034 (Aug. 29, 1988) and 54 FR 5220 (Feb. 2, 1989)), and part 201, subparts A through E (19 CFR part 201).

EFFECTIVE DATE: August 9, 1989.

FOR FURTHER INFORMATION CONTACT: Debra Baker (202–252–1180), Office of Investigations, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436. Hearing-impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on 202–252–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–252–1000.

SUPPLEMENTARY INFORMATION:

Background. This investigation is being instituted as a a result of an affirmative preliminary determination by the Department of Commerce that imports of aluminum sulfate from Venezuela are being sold in the United States at less than fair value within the meaning of section 733 of the act (19 U.S.C. 1673b). The investigation was requested in a petition filed on March 29, 1989 by General Chemical de Puerto Rico, Inc., Dorado, Puerto Rico. In response to that petition the Commission conducted a preliminary antidumping investigation and, on the basis of information developed during the course of that investigation, determined that there was a reasonable indication that an industry in the United States was materially injured by reason of imports of the subject merchandise (54 FR 22632, May 25, 1989).

Participation in the investigation. Persons wishing to participate in this investigation as parties must file an entry of appearance with the Secretary to the Commission, as provided in § 201.11 of the Commission's rules (19 CFR 201.11), not later than twenty-one (21) days after the publication of this notice in the **Federal Register**. Any entry of appearance filed after this date will be referred to the Chairman, who will determine whether to accept the late entry for good cause shown by the person desiring to file the entry.

Public service list. Pursuant to § 201.11(d) of the Commission's rules (19 CFR 201.11(d)), the Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to this investigation upon the expiration of the period for filing entries of appearance. In accordance with §§ 201.16(c) and 207.3 of the rules (19 CFR 201.16(c) and 207.3), each public document filed by a party to the investigation must be served on all other parties to the investigation (as identified by the public service list), and a certificate of service must accompany the document. The Secretary will not accept a document for filing without a certificate of service.

Limited disclosure of business proprietary information under a protective order and business proprietary information service list. Pursuant to § 207.7(a) of the Commission's rules (19 CFR 207.7(a)), the Secretary will make available business proprietary information gathered in this final investigation to authorized applicants under a protective order, provided that the application be made not later than twenty-one (21) days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive business proprietary information under a protective order. The Secretary will not accept any submission by parties containing business proprietary information without a certificate of service indicating that it has been served on all the parties that are authorized to receive such information under a protective order.

Staff report. The prehearing staff report in this investigation will be placed in the nonpublic record on October 13, 1989, and a public version will be issued thereafter, pursuant to § 201.21 of the Commission's rules (19 CFR 207.21).

Hearing. The Commission will hold a hearing in connection with this investigation beginning at 9:30 a.m. on October 26, 1989 at the U.S. International Trade Commission Building, 500 E Street SW., Washington, DC. Requests to appear at the hearing should be filed in writing with the Secretary to the Commission not later than the close of business (5:15 p.m.) on October 16, 1989. A nonparty who has testimony that may aid the Commission's deliberations may request permission to present a short statement at the hearing. All parties and nonparties desiring to appear at the hearing and make oral presentations should attend a prehearing conference to be held at 9:30 a.m. on October 19, 1989, at the U.S. International Trade Commission Building. Pursuant to § 207.22 of the Commission's rules (19 CFR 207.22) each party is encouraged to submit a prehearing brief to the Commission. The deadline for filing prehearing briefs is October 23, 1989.

Testimony at the public hearing is governed by § 207.23 of the Commission's rules (19 CFR 207.23). This rule requires that testimony be limited to a nonbusiness proprietary summary and analysis of material contained in prehearing briefs and to information not available at the time the prehearing brief was submitted. Any written materials submitted at the hearing must be filed in accordance with the procedures described below and any business proprietary materials must be submitted at least three (3) working days prior to the hearing (see § 201.6(b)(2) of the Commission's rules (19 CFR 201.6(b)(2))).

Written submissions. Prehearing briefs submitted by parties must conform with the provisions of § 207.22 of the Commission's rules (19 CFR 207.22) and should include all legal arguments, economic analyses, and factual materials relevant to the public hearing. Posthearing briefs submitted by parties must conform with the provisions of § 207.24 (19 CFR 207.24) and must be submitted not later than the close of business on November 2, 1989. In addition, any person who has not entered an appearance as a party to the investigation may submit a written statement of information pertinent to the subject of the investigation on or before November 2, 1989.

A signed original and fourteen (14) copies of each submission must be filed with the Secretary to the Commission in accordance with § 201.8 of the Commission's rules (19 CFR 201.8). All written submissions except for business proprietary data will be available for public inspection during regular business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary to the Commission.

Any information for which business proprietary treatment is desired must be submitted separately. The envelope and all pages of such submissions must be clearly labeled "Business Proprietary Information." Business proprietary submissions and requests for business proprietary treatment must conform with the requirements of §§ 201.6 and 207.7 of the Commission's rules (19 CFR 201.6 and 207.7).

Parties which obtain disclosure of business proprietary information pursuant to § 207.7(a) of the Commission's rules (19 CFR 207.7(a)) may comment on such information in their prehearing and posthearing briefs, and may also file additional written comments on such information no later than November 7, 1989. Such additional comments must be limited to comments on business proprietary information received in or after the posthearing briefs.

Authority: This investigation is being conducted under authority of the Tariff Act of 1930, title VII. This notice is published pursuant to § 207.20 of the Commission's rules (19 CFR 207.20).

By order of the Commission.

Issued: August 16, 1989.

Kenneth R. Mason,

Secretary.

BILLING CODE 7035-01-M

[ICC Order No. P-103]

Passenger Train Operation; Belt Railway Co. of Chicago

The National Railroad Passenger Corporation (AMTRAK) has established through passenger train service between Chicago, Illinois and New Orleans, Louisiana, Train Nos. 58 & 59, the City of New Orleans. These train operations require the use of tracks and other facilities of the Illinois Central Railroad Company (IC). A portion of the IC tracks near Gilman, Illinois are temporarily out of service because of a derailment. An alternate route is available via the Missouri Pacific System that requires the use of approximately 2,000 feet of track of The Belt Railway Company of Chicago, between 80th and 83rd Streets in Chicago.

It is the opinion of the Commission that such an operation is necessary in the interest of the public and the commerce of the people; that notice and public procedure are impracticable and contrary to the public interest; and that good cause exists for making this order effective upon less than thirty days' notice.

It is ordered, (a) Pursuant to authority vested in me by order of the Commission decided January 13, 1988, and of the authority vested in the Commission by section 402(c) of the Rail Passenger Service Act of 1970 (45 USC 562(c)), The Belt Railway Company of Chicago is directed to operate trains of the National Railroad Passenger Corporation over approximately 2,000 feet of track between 80th and 83rd Streets in Chicago, Illinois in order to permit a rerouting around the derailment utilizing the Missouri Pacific System.

(b) In executing the provisions of this order, the common carriers involved shall proceed even if no agreements or arrangements may now exist between them with reference to the compensation terms and conditions applicable to said operations. The compensation terms and conditions shall be, during the time this order remains in force, those which are voluntarily agreed upon by and between said carriers; or upon failure of the carriers to so agree, the compensation terms and conditions shall be as hereafter fixed by the Commission upon petition of any or all of said carriers in accordance with pertinent authority conferred upon it by the Interstate Commerce Act and by the Rail Passenger Service Act of 1970, as amended.

(c) *Application.* The provisions of this order shall apply to intrastate, interstate, and foreign commerce.

(d) *Effective date.* This order shall become effective at 6:00 p.m., (CDT), August 2, 1989.

(e) *Expiration date.* The provisions of this order shall expire at 6:00 p.m., (CDT), August 3, 1989, unless otherwise modified, amended, or vacated by order of this Commission.

This order shall be served upon The Belt Railway Company of Chicago and the National Railroad Passenger Corporation, and a copy of this order shall be filed with the Director, Office of the Federal Register.

Issued at Washington, DC, August 2, 1989.

William J. Love, Agent.

Noreta R. McGee,

Secretary.

BILLING CODE 7035-01-M

[ICC Order No. P-104]

Passenger Train Operation; Chicago Central & Pacific Railroad Co.

The National Railroad Passenger Corporation (AMTRAK) has established through passenger train service between Chicago, Illinois and Seattle, Washington, Train Nos. 7 & 8, the Empire Builder. These train operations require the use of tracks and other facilities of the Soo Line Railroad Company (SL). A portion of the SL tracks between Grand Crossing and West Salem, Wisconsin are out of service because of track work and bridge repair. An alternate route is available via the Burlington Northern Railroad that requires the use of the Chicago & Centeral Pacific Railroad Company tracks between Portage and Savanna, Illinois.

It is the opinion of the Commission that such an operation is necessary in the interest of the public and the commerce of the people; that notice and public procedure are impracticable and contrary to the public interest; and that good cause exists for making this order effective upon less than thirty days' notice. *It is ordered,* (a) Pursuant to authority vested in me by order of the Commission decided January 13, 1988, and of the authority vested in the Commission by section 402(c) of the Rail Passenger Service Act of 1970 (45 USC 562(c)), Chicago & Central Pacific Railroad Company is directed to operate trains of the National Railroad Passenger Corporation between Portage and Savanna, Illinois, in order to permit a rerouting utilizing the Burlington Northern Railroad.

(b) In executing the provisions of this order, the common carriers involved shall proceed even if no agreements or arrangements may now exist between them with reference to the compensation terms and conditions applicable to said operations. The compensation terms and conditions shall be, during the time this order remains in force, those which are voluntarily agreed upon by and between said carriers; or upon failure of the carriers to so agree, the compensation terms and conditions shall be as hereafter fixed by the Commission upon petition of any or all of said carriers in accordance with pertinent authority conferred upon it by the Interstate Commerce Act and by the Rail Passenger Service Act of 1970, as amended.

(c) *Application.* The provisions of this order shall apply to intrastate, interstate, and foreign commerce.

(d) *Effective date.* This order shall become effective at 7:00 a.m., (CDT), August 7, 1989.

(e) *Expiration date.* The provisions of this order shall expire at 7:00 a.m., (CDT), August 8, 1989, unless otherwise modified, amended, or vacated by order of this Commission.

This order shall be served upon the Chicago Central & Pacific Railroad Company and the National Railroad Passenger Corporation, and a copy of

this order shall be filed with the Director, Office of the Federal Register.

Issued at Washington, DC., August 4, 1989.

William J. Love, Agent.

Noreta R. McGee,

Secretary.

BILLING CODE 7035-01-M

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

Manufacturer of Controlled Substances; Registration

By Notice dated November 3, 1988, and published in the **Federal Register** on November 10, 1988, (53 FR 45605), Hoffmann-La Roche Inc., 340 Kingsland Street, Nutley, New Jersey 07110, made application to the Drug Enforcement Administration to be registered as a bulk manufacturer of the basic classes of controlled substances listed below:

Drug	Schedule
Tetrahydrocannabinols (7370)	I
Alphaprodine (9010)	II
Levorphanol (9220)	II

No comments or objections have been received. Therefore, pursuant to section 303 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 and title 21, Code of Federal Regulations, § 1301.54(e), the Deputy Assistant Administrator hereby orders that the application submitted by the above firm for registration as a bulk manufacturer of the basic classes of controlled substances listed above is granted.

Dated: August 10, 1989.

Gene R. Haislip,

Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration.

BILLING CODE 4410-09-M

DEPARTMENT OF LABOR

Employment and Training Administration

Drug-Free Workplaces

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice.

SUMMARY: Governmentwide interim final rules issued by the Office of Management Budget (OMB), implementing the November 18, 1988, Drug-Free Workplace Act of 1988, require Department of Labor (DOL) grantees and contractors to certify that they will provide drug-free workplaces as a precondition of receiving a grant or contract from DOL. The rules are explained in a Training and Employment Information Notice (TEIN) No. 1-89 issued July 3, 1989, and published at the end of this document. Attachment No. 1 to the TEIN, as **Federal Register** Notice, is not reprinted with this notice.

EFFECTIVE DATE: July 3, 1989.

FOR FURTHER INFORMATION CONTACT: James MacDonald or Renee Parker, Division of Debt Management, Office of Grants and Contracts Management, Employment and Training Administration, Department of Labor, Room N-4671, 200 Constitution Avenue NW., Washington, DC 20210. Telephone (202) 535-0704.

SUPPLEMENTARY INFORMATION: The interim final rules for grantees, effective as of March 18, 1989, and published January 31, 1989, in the Federal Register at 54 FR 4946, are incorporated as an amendment to the governmentwide common rules pertaining to nonprocurement debarment and suspension. The Department of Labor's rule was published on the same date in the Federal Register at 54 FR 4959 and codified at 29 CFR part 98. The interim final rules relating to contracts are detailed in amendments to the Federal Acquisition Regulation published January 31, 1989, in the Federal Register at 54 FR 4967 and codified at 48 CFR parts 1, 9, 23, and 52.

The interim final rules require grantees to make a drug-free certification as a precondition to the awarding of a grant. Additionally, section B of the drug-free certification requires grantees to submit the listing of the "site(s) for the performance of work" done in connection with the specific grant. A grantee, which is a State, may elect to make a single annual certification to the Department of Labor (DOL). After the effective date of March 18, for calendar year 1989, the certifications must be received prior to the award of new funds. This notice summarizes and announces the issuance of the Training and Employment Information Notice 1-89.

Signed at Washington, DC., this 11th day of August 1989.

Roberts T. Jones,

Assistant Secretary of Labor.

TRAINING AND EMPLOYMENT INFORMATION NOTICE NO. 1-89

TO: STATE JTPA LIAISONS
STATE EMPLOYMENT SECURITY AGENCIES
STATE WORKER ADJUSTMENT LIAISONS

FROM: ROBERTS T. JONES
Assistant Secretary of Labor

SUBJECT: Drug-Free Workplace Regulatory Requirements

1. Purpose. To explain the responsibilities of the Employment and Training Administration (ETA) and its grantees under the Drug-Free Workplace Act regulatory requirements.

2. References. Drug-Free Workplace Act of 1988 (Pub. L. 100-690, Title V, Subtitle D; 41 U.S.C. 701 et seq.); 29 CFR Part 98 (Federal Register 54 FR 4946); and Training and Employment Information Notice (TEIN) No. 21-88.

3. Background. On November 18, 1988, Congress enacted the Drug-Free Workplace Act requiring Federal agency contractors and grantees to certify that they will provide a drug-free workplace as a pre-condition of receiving a contract or a grant from a Federal agency.

The Office of Management and Budget (OMB) coordinated the participation of over 30 Federal agencies, including the

RESCISSIONS	EXPIRATION DATE Continuing

DISTRIBUTION

BILLING CODE 4510-30-C

Department of Labor, in the development of regulatory requirements to ensure prompt compliance, prompt issuance of final rules, and uniform government-wide implementation of the Act.

The governmentwide rule was issued as an interim final rule, published in the Tuesday, January 31, 1989, Vol. 54, No. 19 **Federal Register**. As an interim final rule, this regulation is fully in effect and binding after its effective date of March 18, 1989. Comments were solicited and some of the rules may be revised.

The Federal Acquisition Regulation (FAR) rules for contracts are contained in the same **Federal Register** notice but are not covered in this information notice which is addressed only to grantee organizations.

The common rule for grants amends the governmentwide nonprocurement debarment and suspension common rule at 29 CFR part 98 to allow agencies to make use of existing debarment and suspension remedies as an ultimate consequence of noncompliance with the requirements of the Drug-Free Workplace Act. It should be noted that, in contrast to the debarment common rule, the drug-free common rule applies only to prime grantees and does not extend to subgrantees.

These requirements are effective for all grants awarded on or after March 18, 1989 or for existing grants if modified "in such a manner that it would be considered a new commitment."

4. *Definitions:* Controlled substance means a controlled substance as it is used in schedules I through V of section 202 of the Controlled Substances Act (21 U.S.C. 812), and as further defined by regulation at 21 CFR 1300.11 through 1300.15. Neither the regulations nor this TEIN expand upon the definition.

Grantee means a person who applies for or receives a grant directly from a Federal agency. (See definition of "person" at 29 CFR 98.105(n))

The term "employee" is intended to include persons hired by the grantee to manage the program and serve participants but is not intended to include the program participants.

Certifications are to be signed by the Governor or by a State official authorized to commit the State and its agencies to the requirements of the Drug-Free Workplace regulations.

5. *Requirements.* The ETA may not award a grant unless the certification has been made that the potential grantee will maintain a drug-free workplace.

As a pre-condition to receiving a grant, a potential grantee shall certify to the ETA that it will maintain a drug-free workplace by:

(a) Publishing and distributing to each employee a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the grantee's workplace, and specifying the action that will be taken against employees for violation of such prohibition.

(b) Establishing a drug-free awareness program to inform employees about (1) the dangers of drug abuse in the work-place, (2) the grantee's drug-free workplace policy, (3) any available drug counseling and rehabilitation, and (4) the penalties for drug-abuse violations happening in the workplace.

(c) Providing each employee with a statement including language required by (a) above and (d) requiring the employee to abide by the statement and to notify the grantee with five days if he or she is convicted of a drug violation in the workplace.

(e) Notifying the Grant Officer within 10 days of receiving notice of any drug violation conviction. (Such notifications shall be sent to the appropriate ETA Grant Officer.) If the ETA was notified at the time of the violation through the Incident Report system, a supplemental report should be submitted at the time of notice of conviction.

(f) Within 30 days of such notice, taking one of the following actions—a personnel action against the employee up to and including termination, or requiring such employee to participate satisfactorily in a drug-abuse assistance or rehabilitation program. (See the attached certification for more specific language on all of the above requirements.)

6. *Frequency of Certification.* The rules require grantees to make the drug-free certification for each grant. A grantee, which is a State, however, may elect to make a single annual certification to the Department of Labor (DOL). Thus, if a State receives grants from the DOL under a number of different programs, only one certification to DOL has to be made. Therefore, States may choose to make a certification with each grant application or they may choose to make one annual certification.

Certifications from States making one annual certification to DOL should be sent to: U.S. Department of Labor, Office of Procurement and Grants Management, Room S1522, FPB Attn.: Mr. Richard Strom, 200 Constitution Avenue NW., Washington, DC 20210.

After the effective date of March 18, 1989, the annual certification for Calendar Year 1989 must be received prior to receiving any new grants or the award of new funds. Although not required, it is requested that the annual certification for all subsequent calendar years be received by January 31.

Since States may be the recipients of several grant awards from ETA, both at the National and Regional Office levels, although not required, the States are strongly encouraged to include a copy of the single annual certification with each grant application. This will facilitate the processing of grants.

7. *Listing of Worksites.* Section B of the attached sample certification requires the listing of the "site(s) for the performance of work" done in connection with the specific grant. Space is provided for a street address, city, county, State, and zip code.

The common rules defines Drug-Free workplace as a "site for the performance of work" done in connection with a specific grant * * * (29 CFR 98.605(a)(4)). In the preamble to the common rule, it states that the term "site for the performance of work" is taken directly from the statute and it is intended that the grantee will determine what the "site for the performance of work" is and specify such in the grantee's certification (Section by Section Analysis–54 FR 4948). In determining the number of "site(s) for performance of work," to be listed, it should be noted that only the "prime grantee," and not "subgrantees," are covered by requirements under this subpart. Although not specifically addressing the number of sites to be listed, the preamble states that, if a Federal agency provides financial assistance to a State agency, which in turn passes through the assistance to several local agencies, only the State agency that receives the assistance directly from the Federal agency receives the "grant." Consequently, it is only the State agency that is required to make a drug-free workplace certification under the regulation (Section by Section Analysis–54 FR 4948). Again, emphasizing the limits of the requirements, the preamble states that only "prime grantees" and not "sub-grantees" are covered by requirements * * * even when the prime grantee is only an office that passes Federal funds through to subgrantees who actually do the work (Section by Section Analysis–54 FR 4949).

8. *Grounds for Suspension, Termination or Debarment.* Grantees found in violation of any of the following will be subject to the imposition of sanctions set forth in the Act: (a) Submission of a false certification; (b) Failure to comply with the requirements of the certification; and (c) Failure by the grantee to make a good faith effort to maintain a drug-free workplace. Lack of a good faith effort would be indicated by such a number of the grantee's employees having been convicted under criminal drug statutes for violations occurring in the workplace. Circumstances of grantees vary widely so that the actual number of violations will be determined on a case by case basis.

The preamble specifically states that criminal drug violations by employees not occurring in the workplace are not grounds for a sanction. Likewise, evidence of drug abuse by employees in the workplace that does not result in a criminal conviction is not a ground for a sanction.

9. *Sanctions.* Sanctions set forth in the Drug-Free Workplace Requirements include: (a) Suspension (i.e., withholding) of payments under the grant; (b) Suspension or termination of the grant; and (c) Suspension or debarment of the grantee. The decision of which sanction or sanctions to apply in a particular case is left to the discretion of the Federal grantor agency.

In determining the level of organization at which a sanction should be imposed in case of a violation of the certification requirements, the intent of the regulation, where appropriate, is to focus on the "department, division, or other unit" of the grantee responsible for performance under the grant. For example, if several different organizational units of a State agency receives grants from a Federal agency, and one of the State organizational units violates a requirement of the regulation, sanctions could be imposed on that organizational unit, not on the entire State agency. On the other hand, where it is appropriate, in the context of a particular Federal grant program, to view the entire grantee organization as responsible for the implementation of drug-free workplace requirements under this rule, the entire organization could be subject to sanctions.

If the third sanction is exercised, the debarred grantee is ineligible for the award of any grant from any Federal agency for a period, to be specified in the final decision, not to exceed five years. The rules include a provision which allows the agency head to issue a written waiver of any of these sanctions if the agency head determines that such a waiver would be in the public interest. The determination of the "public interest" is within the discretion of the agency head (i.e., in the DOL, the Secretary of Labor) and this waiver authority may not be delegated.

The review and administrative appeal available to grantees can be found in the debarment procedures at 29 CFR 98.310. The debarment regulations at 29 CFR 98.200 state that debarment or suspension does not affect a person's (organization's) eligibility for statutory entitlements or mandatory awards * * *.

10. *Coverage.* For the purpose of the Drug-Free Workplace Act, *grants* include block grants and entitlement grant programs, *whether or not* they are exempted from coverage under the grants management common rule (Uniform Administrative Requirements for Grants and Cooperative Agreements to State and Local Governments).

Subgrantees are not required to make a drug-free workplace certification under the regulation.

11. *Exemptions.* Exemptions include grants providing technical assistance in the form of in-kind services; other assistance in the form of loans, loan guarantees, interest subsidies, insurance; direct appropriations; and any veterans' benefits to individuals.

Current grantees, whose grants were approved and awarded prior to the effective date of this regulation, are not required to make certifications in order to continue receiving payments under existing grants.

Grantees are not required to make a certification prior to a no-cost time extension of an existing grant.

12. *Costs.* A grantee's costs incurred specifically to comply with these requirements are to be regarded as allowable costs under the grant, provided that the costs meet the usual criteria for allowability.

Employers are not required by the common rule to provide or pay for rehabilitation programs.

13. *Effective Date.* This Training and Employment Information Notice shall be effective as of the date of issuance.

14. *Inquiries.* Questions concerning this information notice should be directed to James MacDonald on (202) 535–0704.

15. *Attachments.* (1) **Federal Register**. Notice—"The Drug-Free Workplace Requirements; Notice and Interim Final Rules," (2) A sample "Certification Regarding Drug-Free Workplace Requirements."

Attachment—Certification Regarding Drug-Free Workplace Requirements

This certification is required by the regulations implementing the Drug-Free Workplace Act of 1988, 29 CFR part 98, §§ 98.305, 98.320 and subpart F.

In addition, this certification is a material representation of fact upon which reliance is placed when the agency determines to award the grant. If it is later determined that the grantee knowingly rendered a false certification, or otherwise violates the requirements of the Drug-Free Workplace Act, the agency, in addition to any other remedies available to the Federal Government, may take action authorized under the Drug-Free Workplace Act.

A. The prospective grantee certifies that it will provide a drug-free workplace by:

(a) Publishing a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the grantee's workplace and specifying the actions that will be taken against employees for violation of such prohibition;

(b) Establishing a drug-free awareness program to inform employees about—

(1) The dangers of drug abuse in the workplace;

(2) The grantees policy of maintaining a drug-free workplace;

(3) Any available drug counseling, rehabilitation, and employee assistance programs; and

(4) The penalties that may be imposed upon employees for drug abuse violations occurring in the workplace;

(c) Making it a requirement that each employee to be engaged in the performance of the grant be given a copy of the statement required by paragraph (a);

(d) Notifying the employee in the statement required by paragraph (a) that, as a condition of employment under the grant, the employee will—

(1) Abide by the terms of the statement and

(2) Notify the employer of any criminal drug statute conviction for a violation occurring in the workplace no later than five days after such conviction;

(e) Notifying the agency within ten days after receiving notice under subparagraph (D)(2), with respect to any employee or otherwise receiving actual notice of such conviction;

(f) Taking one of the following actions, within 30 days of receiving notice under subparagraph (d)(2), with respect to any employee who is so convicted—

(1) Taking appropriate personnel action against such an employee, up to and including termination; or

(2) Requiring such employee to participate satisfactorily in a drug abuse assistance or rehabilitation program approved for such purposes by a Federal, State, or local health, law enforcement, or other appropriate agency;

(g) Making a good faith effort to continue to maintain a drug-free

workplace through implementation of

equipment and computer-assisted

of Standards, Regulations and

received in that office on or before

Paul F. Holloway, Deputy Director

Endowment for the Arts, Washington

workplace through implementation of paragraphs (a), (b), (c), (d), (e) and (f).

B. The grantee shall insert in the space provided below, or include as a separate attachment, a listing of the site(s) for the performance of work done in connection with the specific grant:

BILLING CODE 4510-30-M

Job Training Partnership Act; Announcement of Proposed Noncompetitive Grant Awards

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice of intent to award noncompetitive grants.

SUMMARY: The Employment and Training Administration (ETA) announces its intent to award a grant on a noncompetitive basis to Industrial Technology Institute for the Provision of specialized job training and placement services under the authority of the Job Training Partnership Act (JTPA).

DATES: It is anticipated that this grant agreement will be executed by September 15, 1989, and will be funded for 18 months. Submit comments by 4:45 p.m. (Eastern Time), on September 8, 1989.

ADDRESS: Submit comments regarding the proposed assistance award to: U.S. Department of Labor, Employment and Training Administration, Room C-4305, 200 Constitution Avenue NW., Washington, DC 20210, Attention: Gwendolyn Baron-Simms; Reference FR-DAA-102.

SUPPLEMENTARY INFORMATION: The Employment and Training Administration (ETA) announces its intent to award a noncompetitive grant to the Industrial Technology Institute. The proposed grantee will conduct a study of the training and occupational impacts of programmable automation upon U.S. manufacturing in six States: Michigan, Illinois, Ohio, Wisconsin, Indiana, and Minnesota. Examples of programmable automation include: robotics, computer numerical control equipment, computer-assisted design equipment and computer-assisted engineering. A carefully drawn sample of 150 facilities identified as major users of programmable automation will be drawn from a unique data base completed by the Industrial Technology Institute in the summer of 1986. The data base consists of 1400 cases representing 22,000 durable goods manufacturers in Michigan, Illinois, Ohio, Wisconsin, Indiana, and Minnesota. Funds for this activity are authorized by the Job Training Partnership Act (JTPA), as amended, Title IV-Federally Administered Programs. The proposed funding is approximately $89,516 and the project will be completed in 18 months.

Signed at Washington, DC, on August 14, 1989.

Robert D. Parker,

ETA Grant Officer.

BILLING CODE 4510-30-M

Mine Safety and Health Administration

[Docket No. M-89-112-C]

Dorchester Mining Company, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Dorchester Mining Company, Inc., P.O. Box 2560, Wise, Virginia 24293 has filed a petition to modify the application of 30 CFR 75.1710 (cabs and canopies) to its No. 1 Mine (I.D. No. 44-06337) located in Dickenson County, Virginia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that cabs or canopies be installed on the mine's electric face equipment.
2. The mine is in the Dorchester coal seam, and ranges in height from 40 to 54 inches. The rock partings in this area change often making mining heights very inconsistent. The coal seam also has several dips and an uneven bottom throughout the mine.
3. The use of cabs or canopies on the mine's electric face equipment would result in a diminution of safety because the canopies would:

(a) Dislodge roof bolts; and

(b) Create inadequate visibility and cramped conditions for the operators.

4. For these reasons, petitioner requests a modification of the standard.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. All comments must be postmarked or received in that office on or before September 25, 1989. Copies of the petition are available for inspection at that address.

Dated: August 16, 1989.

Patricia W. Silvey,

Director, Office of Standards, Regulations and Variances.

[FR Doc. 89-19698 Filed 8-23-89; 8:45 am]

BILLING CODE 4510-43-M

[Docket No. M-89-110-C]

Leeco, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Leeco, Inc., 100 Coal Drive, London, Kentucky 40741 has filed a petition to modify the application of 30 CFR 75.1710 (cabs and canopies) to its Mine No. 62 (I.D. No. 15-16412) and its Mine No. 63 (I.D. No. 15-16413) both located in Perry County, Kentucky. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the requirement that cabs or canopies be installed on the mines' electric face equipment.
2. The mines are in the Hazard No. 4 coal seam, and range in height from 39 to 70 inches.
3. The use of cabs or canopies on the mine's electric face equipment would result in a diminution of safety to the miners because the canopies would:

(a) Reduce the equipment operator's vision and seating position causing fatigue, reduced mental alertness, and unsafe operation;

(b) Hinder the operator's escape from the compartment in the event of an emergency; and

(c) Strike and dislodge permanent overhead roof support, due to the undulating character of the coal seam.

4. For these reasons, petitioner requests a modification of the standard in mining heights less than 56 inches.

Request for Comments

Persons interested in this petition may furnish written comments. These comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virignia 22203. All comments must be postmarked or received in that office on or before September 25, 1989.

Copies of the petition are available for inspection at that address.

Dated: August 15, 1989.

Patricia W. Silvey,

Director, Office of Standards, Regulations and Variances.

BILLING CODE 4510-43-M

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice 89-58]

Performance Review Board; Senior Executive Service

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of Membership of SES Performance Review Board.

SUMMARY: The Civil Service Reform Act of 1978, Pub. L. 95-454 (section 405) requires that appointments of individual members to a Performance Review Board be published in the **Federal Register**.

The performance review function for the Senior Executive Service in the National Aeronautics and Space Administration is being performed by the NASA Performance Review Board and the NASA Senior Executive Committee. The latter performs this function for senior executives who report directly to the Administrator or the Deputy Administrator. The following individuals are serving on the Committee and the Board:

Senior Executive Committee

Samuel W. Keller, Chairperson, Associate Deputy Administrator, NASA Headquarters.

C. Howard Robins, Jr., Associate Administrator for Management, NASA Headquarters.

Franklin D. Martin, Assistant Administrator for Exploration, NASA Headquarters.

Thomas P. Murphy, Non-NASA Member.

Performance Review Board

Franklin D. Martin, Chairperson, Assistant Administrator for Exploration, NASA Headquarters.

Ann P. Bradley, Executive Secretary, Assistant Associate Administrator for Personnel Management, NASA Headquarters.

Margaret G. Finarelli, Deputy Associate Administrator for External Relations, NASA Headquarters.

Charles T. Force, Associate Administrator for Space Operations, NASA Headquarters.

BILLING CODE 7510-01-M

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Advancement Grant Advisory Panel; Meeting

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), as amended, notice is hereby given that a meeting of the Advancement Grant Advisory Panel to the National Council on the Arts will be held on September 14-15, 1989, from 9:00 a.m.-5:30 p.m. in Room 714 of the Nancy Hanks Center, 1100 Pennsylvania Avenue NW., Washington, DC 20506.

This meeting is for the purpose of Panel review, discussion, evaluation, and recommendation on applications for financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended, including discussion of information given in confidence to the Agency by grant applicants. In accordance with the determination of the Chairman published in the **Federal Register** of February 13, 1980, these sessions will be closed to the public pursuant to subsections (c)(4), (6) and (9)(B) of section 552b of title 5, United States Code.

Further information with reference to this meeting can be obtained from Ms. Yvonne M. Sabine, Advisory Committee Management Officer, National Endowment for the Arts, Washington, DC 20506, or call (202) 682-5433.

Yvonne M. Sabine,

Director, Council and Panel Operations, National Endowment for the Arts.

BILLING CODE 7537-01-M

Dance Advisory Panel; Meeting

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), as amended, notice is hereby given that a meeting of the Dance Advisory Panel (Challenge III Section) to the National Council on the Arts will be held on September 19, 1989, from 9:00 a.m.-5:00 p.m. in Room 714 of the Nancy Hanks Center, 1100 Pennsylvania Avenue NW., Washington, DC 20506.

A portion of this meeting will be open to the public on September 19, 1989, from 4:00 p.m.-5:00 p.m., time permitting. The topic for discussion will be policy issues.

The remaining portion of this meeting on September 19, 1989, from 9:00 a.m.-4:00 p.m. is for the purpose of Panel review, discussion, evaluation, and recommendation on applications for financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended, including information given in confidence to the agency by grant applicants. In accordance with the determination of the Chairman published in the **Federal Register** of February 13, 1980, these sessions will be closed to the public pursuant to subsection (c)(4), (6) and (9)(B) of section 552b of title 5, United States Code.

If you need special accommodations due to a disability, please contact the Office for Special Constituencies, National Endowment for the Arts, 1100 Pennsylvania Avenue NW., Washington; DC 20506, 202/682-5532, TTY 202/682-5496 at least seven (7) days prior to the meeting.

Further information with reference to this meeting can be obtained from Ms. Yvonne M. Sabine, Advisory Committee Management Officer, National Endowment for the Arts, Washington, DC 20506, or call 202/682-5433.

Yvonne M. Sabine,

Director, Council and Panel Operations, National Endowment for the Arts.

NUCLEAR REGULATORY COMMISSION

Regulatory Guide; Issuance, Availability

The Nuclear Regulatory Commission has issued a new guide in its Regulatory Guide Series. This series has been developed to describe and make available to the public such information as methods acceptable to the NRC staff for implementing specific parts of the Commission's regulations, techniques used by the staff in evaluating specific problems or postulated accidents, and data needed by the staff in its review of applications for permits and licenses.

Regulatory Guides 3.65, "Standard Format and Content of Decommissioning Plans for Licensees Under 10 CFR parts 30, 40, and 70," identifies the information needed by the NRC staff for evaluations involving decommissioning. The guide also provides a format for submitting this information in a decommissioning plan.

Comments and suggestions in connection with (1) items for inclusion in guides currently being developed or (2) improvements in all published guides are encouraged at any time. Written comments may be submitted to the Regulatory Publications Branch, Division of Freedom of Information and Publications Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555.

Regulatory guides are available for inspection at the Commission's Public Document Room, 2120 L Street NW., Washington, DC. Copies of issued guides may be purchased from the Government Printing Office at the current GPO price. Information on current GPO prices may be obtained by contacting the Superintendent of Documents, U.S. Government Printing Office, Post Office Box 37082, Washington, DC 20013–7082, telephone (202) 275–2060 or (202) 275–2171. Issued guides may also be purchased from the National Technical Information Service on a standing order basis. Details on this service may be obtained by writing NTIS, 5285 Port Royal Road, Springfield, VA 22161.

Authority: 5 U.S.C. 552(a).

Dated at Rockville, Maryland, this 17th day of August 1989.

For the Nuclear Regulatory Commission.

Themis P. Speis,

Deputy Director for Generic Issue Resolution, Office of Nuclear Regulatory Research.

[FR Doc. 89–19991 Filed 8–23–89; 8:45 am]

BILLING CODE 7590-01-M

Availability of Draft Technical Position on Methods of Evaluating the Seismic Hazard at a Geologic Repository

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of availability.

SUMMARY: The Nuclear Regulatory Commission (NRC) is announcing the availability of the "Draft Technical Position on Methods of Evaluating the Seismic Hazard at a Geologic Repository."

DATE: The comment period expires October 23, 1989.

ADDRESSES: Send comments to Chief, Regulatory Publications Branch, Division of Freedom of Information and Publications Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555. Copies of this document may be obtained free of charge upon written request to Marlene Creviston, Repository Licensing and Quality Assurance Project Directorate, Division of High-Level Waste Management, U.S. Nuclear Regulatory Commission, Mail Stop 4–H–3, Washington, DC 20555, Telephone 1/800/368–5642, Ext. 20440. Local callers should dial 301/492–3387.

FOR FURTHER INFORMATION CONTACT: Kenneth Kalman, Project Manager, Repository Licensing and Quality Assurance Project Directorate, Division of High-Level Waste Management, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Telephone 301/492–0426.

SUPPLEMENTARY INFORMATION: This Technical Position (TP) is undertaken by the Division of High-Level Waste Management (DHLWM) to provide regulatory guidance to the U.S. Department of Energy (DOE) on appropriate methodologies that address seismic hazard at a geologic repository. This paper considers the seismic hazard for the construction and operation period through permanent closure ("preclosure"), and the period following permanent closure ("postclosure"). This position also considers differences that may exist, during the preclosure, among the surface facilities and the underground facility. Finally, the applicability of existing methodologies for evaluating seismic hazard to a geologic repository is discussed. The term seismic hazard, as used in this TP, is meant to encompass the hazard due to either vibratory ground motion or coseismic faulting, or both, that can affect the design and performance of the geologic repository.

Dated at Rockville, Maryland this 1st day of August 1989.

For the Nuclear Regulatory Commission.

John J. Linehan,

Director, Repository Licensing and Quality Assurance Project Directorate Division of High-Level Waste Management Office of Nuclear Material Safety and Safeguards.

BILLING CODE 7590-01-M

[Docket No. 30-05004]

Consideration of Amendment to Pathfinder Atomic Plant License and Opportunity for Hearing Northern States Power Co.

The United States Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Byproduct Material License No. 22–08799–02 issued to Northern States Power Company (the licensee) for possession of the Pathfinder Atomic Plant located in Minnehaha County, South Dakota.

The licensee requested the amendment in a letter dated July 18, 1989, which included as enclosures a decommissioning plan, an environmental report, and a safety analysis report.

The amendment would authorize the licensee to perform final decommissioning of the fuel handling building and the reactor building in accordance with the licensee's decommissioning plan.

The fuel handling building and reactor building contain radioactivity and radioactive components, parts, and waste generated as a result of operation of the Pathfinder Atomic Plant from 1964 through 1967 to produce electricity under License No. DPR–11. The reactor was last operated in September, 1967. Subsequent to final shutdown all fuel was removed from the reactor and shipped offsite, the reactor was permanently disabled, and the facility was repowered with three package boilers burning fossil fuel. The fuel handling and reactor buildings were partially dismantled and decontaminated, placed in a safe-storage condition and isolated from the balance of plant. Following completion of these actions in 1971, the 10 CFR part 50 license was surrendered and a separate license issued pursuant to 10 CFR part 30 was amended to authorize possession only of residual radioactive materials as byproduct material.

Prior to issuance of the proposed amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended, and the Commission's regulations.

The Commission hereby provides notice that this is a proceeding on an application for a license amendment falling within the scope of subpart L, Informal Hearing Procedures for Adjudications in Materials Licensing Proceedings, of the Commission's Rules of Practice for Domestic Licensing Proceedings in 10 CFR part 2. Pursuant to § 2.1205(a) any person whose interest may be affected by this proceeding may file a request for a hearing. In accordance with § 2.1205(c), a request for a hearing must be filed within thirty (30) days of the date of publication of this **Federal Register** notice. The request for a hearing must be filed with the Office of the Secretary either:

(1) By delivery to the Docketing and Service Branch of the Office of the Secretary at One White Flint North, 11555 Rockville Pike, Rockville, MD 20852;

(2) By mail or telegram addressed to the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch;

In addition to meeting other applicable requirements of 10 CFR part 2 of the Commission's regulations, a request for a hearing filed by a person other than an applicant must describe in detail:

(1) The interest of the requestor in the proceeding;

(2) How that interest may be affected by the results of the proceeding, including the reasons why the requestor should be permitted a hearing, with particular reference to the factors set out in § 2.1205(g);

(3) The requestor's areas of concern about the licensing activity that is the subject matter of the proceeding; and

(4) The circumstances establishing that the request for a hearing is timely in accordance with § 2.1205(c).

Each request for a hearing must also be served, by delivering it personally or by mail to:

(1) The applicant, Northern States Power Company, to the attention of Mr. David Musolf, Manager, Nuclear Support Services, 414 Nicollet Mall, Minneapolis, Minnesota 55401; and

(2) The NRC staff, by delivery to the Executive Director for Operations, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852, or by mail addressed to the Executive Director for Operations, U.S. Nuclear Regulatory Commission, Washington, DC 20555. Any hearing that is requested and granted will be held in accordance with the Commission's Informal Hearing Procedures for Adjudications in Materials Licensing Proceedings in 10 CFR part 2, subpart L.

For further details with respect to the proposed action, see the licensee's request for license amendment dated July 18, 1989, which is available for inspection at the Commission's Public Document Room, 2120 L Street NW., Washington, DC.

Dated at Rockville, Maryland this 17th day of August, 1989.

For the Nuclear Regulatory Commission.

John T. Greeves,

Deputy Director, Division of Low-Level Waste Management and Decommissioning, Office of Nuclear Material Safety and Safeguards.

BILLING CODE 7590-01-M

Philadelphia Electric Company

[Docket Nos. 50-352-OL-2, 50-353-OL-2 (Severe Accident Mitigation Design Alternative)]

(Limerick Generating Station, Units 1 and 2); Appointment of Adjudicatory Employee

Commissioners: Kenneth M. Carr, Chairman, Thomas M. Roberts, Kenneth C. Rogers, James R. Curtiss.

In accord with the requirements of 10 CFR 2.4, notice is hereby given that Mr. Darrel Nash, a Commission employee in the Office of Nuclear Reactor Regulation, has been appointed as a Commission adjudicatory employee within the meaning of § 2.4 to advise the Commission on issues in the above-captioned proceeding related to consideration under the National Environmental Policy Act of severe accident mitigation design alternatives.

Mr. Nash has not been engaged in the performance of any investigative or litigating function in connection with the Limerick facility or in any factually-related proceeding.

Until such time as a final decision is issued in the above-captioned matter, interested persons outside the agency and agency employees performing investigation or litigating functions in the limerick proceeding are required to observe the restrictions of 10 CFR 2.780 and 2.781 in their communications with Mr. Nash.

It is so ordered.

Dated at Rockville, Maryland this 18th day of August, 1989.

For the Commission.

Samuel J. Chilk,

Secretary of the Commission.

BILLING CODE 7590-01-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-27146; File No. SR-PSE-89-19]

Self-Regulatory Organizations; Pacific Stock Exchange, Inc.; Filing of Proposed Rule Change Relating to Clearing Symbol "Give-Up" for Transactions on the Intermarket Trading System ("ITS")

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), 15 U.S.C. 78s(b)(1), notice is hereby given that on July 13, 1989, the Pacific Stock Exchange, Inc. ("Exchange" or "PSE") filed with the Securities and Exchange Commission ("Commission" or "SEC") the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Item 1. Text of the Proposed Rule Change

The PSE propopses to amend Rule I, section 17(h), to require Equity Floor Brokers to "give-up" Options Market Maker clearing symbols for equity trades originating on the Options Trading Floor and sent out over the Intermarket Trading System ("ITS"). (Brackets indicate language to be deleted, italics indicates new language.)

Rule I

ITS Clearing Member Give-Up

Sec. 17 (a)-(g) No change.

(h) For each ITS transaction executed for an Exchange Options Floor Member, an Equity Floor Broker shall immediately "give-up" the proper Options Floor Member clearing symbol through which the transaction is to be cleared.

II. Self-Regulatory Organization's Statement on the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B) and (C) below, of the most significant aspects of such statements.

(A) Self-Regulatory Organization's Statement on the Purpose of, and Statutory Basis for, the Proposed Rule Change

The proposed PSE Rule I, section 17(h), will require Equity Floor Brokers to "give-up" Options Market Maker clearing symbols for equity trades originating on the Options Trading Floor and sent out over the Intermaket Trading System ("ITS").

The purpose of the proposed rule is to close a loop hole that presently results in substantial lost revenue in the form of outgoing ITS transaction charges. Without an Options Market Maker clearing symbol, the Exchange currently has no way of directly billing the Options Market Maker for equity trades sent on the ITS system by an Equity Floor Broker. Estimated revenue lost in 1988 was approximately $40,000-$50,000.

The proposed rule is presently an informal Exchange policy, and while a few Equity Floor Brokers do "give-up" the Options Market Maker clearing symbol, it is not mandatory. As a result, a strong enforcement stance is not possible. By requiring Equity Floor Brokers to "give-up" the Options Market Maker clearing symbol, the Exchange can begin to generate the lost transaction revenue and institute formal disciplinary action against those failing to abide by the rule provisions.

The proposed rule change is consistent with section 6(b)(4) of the Act, 15 U.S.C. 78f(b)(4), in that it provides for the equitable allocation of reasonable fees among PSE members.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change imposes a burden on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants or Others

Written comments on the proposed rule change were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of the publication of this notice in the **Federal Register** or within such longer period: (1) As the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding; or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change; or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned, self-regulatory organization. All submissions should refer to the file number in the caption above and should be submitted by September 14, 1989.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

Dated: August 17, 1989.

Jonathan G. Katz,

Secretary.

[FR Doc. 89-20007 Filed 8-23-89; 8:45 am]

BILLING CODE 8010-01-M

[Release No. 34-27147; File No. SR-PHLX-88-32]

Self-Regulatory Organizations; Philadelphia Stock Exchange, Inc.; Order Approving Technical Amendment to Equity Specialist Evaluation Rules

I. Introduction

On October 11, 1988, the Philadelphia Stock Exchange, Inc. ("Exchange" or "Phlx") submitted to the Securities and Exchange Commission ("Commission" or "SEC"), pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b-4 thereunder,[2] a proposed rule change which provides for a technical amendment to existing Exchange Rule 515.01. The proposed rule change clarifies the operation of the Exchange's equity specialist evaluation rules.

Notice of the filing of the proposed rule change and its terms of substance was provided by the issuance of a Commission release (Securities Exchange Act Release No. 26731, April 17, 1989) and by publication in the **Federal Register** (54 FR 16438H, April 24, 1989). No comments were received in connection with the proposal.

II. Description of the Proposal

Under PHLX Rule 515.01, the operations of PHLX equity specialists are reviewed on a quarterly basis utilizing objective performance data gathered through the Exchange's Equity Specialist Statistical Evaluation Questionnaire ("Equity Statistical Questionnaire").[3] The Equity Statistical Questionnaire consists of 15 weighted questions covering a wide spectrum of equity specialist functions and activities. The Equity Statistical Questionnaire is divided into four categories—PACE, ITS, General and Primary Issues—with each section containing one or more evaluation categories. Specialist units are ranked from worst to best on an overall basis and in each of the ratings categories.[4] Under existing PHLX Rule 515.01, any specialist units ranking in the bottom 15% in overall ratings for two consecutive quarters, or in the bottom 15% on the PACE, ITS or General sections of the survey for three consecutive quarters, will be judged to have performed below minimum standards and are automatically subject to special scrutiny by the Exchange's Allocation, Evaluation and Securities Committee ("Committee"). As a result, a special review of the specialist will be undertaken by the Committee within the following 60 days to determine whether the specialist's performance has improved. If the Committee concludes that the equity specialist's performance has not improved, it may institute reallocation proceedings, although reallocation of the specialist's registered securities is discretionary.

The Exchange is proposing to amend PHLX Rule 515.01 to reflect the fact that although the Committee will automatically review an equity specialist following a substandard rating, the review does not itself automatically result in a reallocation proceeding. As discussed above, currently the language in PHLX Rule 515.01 provides that an equity specialist unit that ranks in the bottom 15% of the ratings over certain periods of time "will be deemed to have performed below minimum standards." This same specialist unit, however, would not automatically be subject to a reallocation proceeding. Rather, the rule provides that, under these circumstances, the Committee "may institute proceedings to determine whether to remove and reallocate one or more securities." The Exchange, in reviewing this rule, determined to correct this apparent inconsistency. Accordingly, the Exchange is proposing this technical amendment so that the language of the rule is consistent with the actual operation of the Exchange's evaluation procedures.

III. Discussion and Conclusion

The Commission's Division of Market Regulation ("Division") has long favored the incorporation of relative performance measures into specialist evaluation programs "so that specialist who were regularly among the lowest ranked specialists would be subject to performance reviews, regardless of whether their performance met an arbitrarily determined level of acceptable performance."[5] PHLX Rule 515.01 currently employs such relative performance measures, since any equity specialist units ranking in the bottom 15% in overall ratings for two consecutive quarters, or in the bottom 15% on the PACE, ITS or General sections of the survey for three consecutive quarters, are automatically subject to a special review of the Committee within the following 60 days to determine whether the specialist's performance has improved. If the Committee concludes that the equity specialist's performance has not improved, it may institute reallocation proceedings, although reallocation of the specialist's registered securities is discretionary. Moreover, pursuant to PHLX Rule 515.01, mandatory Committee reviews are required if a unit performed below minimum standards on a prior occasion, did not have a specialty stock reallocated, and continues over the next year to demonstrate performance weakness.[6] In such cases the Committee may commence reallocation proceedings if it concludes such action is warranted. The PHLX is proposing to clarify the language of PHLX Rule 515.01 to reflect its actual operation.

In response to questions by Commission staff about how the proposed rule change would affect the PHLX's relative performance criteria, the Exchange responded by emphasizing the fact that the proposed rule change in no way represents a departure from the relative performance standards applicable to PHLX equity specialists.[7] The Exchange contended that although the proposed rule change does not modify the operation of PHLX Rule 515.01, the language of the rule is at variance with the operation of the rule. Finally, the Exchange voiced its continued commitment to employing relative rankings when evaluating equity specialist performance.

The Division agrees with the Exchange's contention that the proposed rule change is technical in nature, and in no way does the change modify the operation of the Exchange's allocation rules or lessen the Exchange's commitment to an effective equity specialist evaluation program that employs relative performance rankings. The current rule does not automatically subject an equity specialist whose performance is below the specified thresholds to a reallocation proceeding. Yet the rule as stated could be construed to deem that the specialist's performance is substandard, a label which may not be warranted. To the extent that there is any opprobrium attached to such a label it may be unjustified. The Commission agrees that that it could appear questionable for an exchange to determine that a specialist's performance is substandard, but then determine not to commence a reallocation proceeding. Thus, the Commission believes it is appropriate for the Exchange to amend the rule's language to render it consistent with the rules's operation.

---

[1] 15 U.S.C. 78s(b)(1) (1982).

[2] 17 CFR 240.19b-4 (1989).

[3] The Exchange's surveillance staff compiles the statistical data and transmits it directly to the Committee for evaluation purposes.

[4] A mean and standard deviation are computed to arrive at overall ratings as well as ratings for the individual PACE, ITS and General categories. Categories may each have different weightings in determining a firm's evaluation overall and on each section.

[5] SEC, Division of Market Regulation, The October 1987 Market Break, at 4-29 (February 1988).

[6] *See, supra* note 6, and accompanying text.

[7] *See* Letter from Richard T. Chase, Executive Vice-President, PHLX, to Howard Kramer, Assistant Director, SEC, Division of Market Regulation, dated February 8, 1989.

For the reasons discussed above, the Commission finds that the proposed rule change is consistent with the requirements of the section 6 of the Act and the rules and regulations thereunder applicable to a national securities exchange. In particular, the Commission finds that the proposed rule change is consistent with section 6(b)(5) of the Act,[8] in that it is designed to promote just and equitable principles of trade and strengthen the Exchange's specialist system as well as further investor protection and the public interest in fair and orderly auction markets on national securities exchanges.

It is therefore ordered, Pursuant to section 19(b)(2) of the Act,[9] that the proposed rule change is hereby approved

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[10]

Dated: August 17, 1989.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

[File No. 1-9070]

Self-Regulatory Organizations; Order Granting Application To Strike From Listing and Registration by the American Stock Exchange, Inc.; Adams-Russell, Inc.

August 16, 1989.

The American Stock Exchange, Inc. ("Exchange") has filed an application with the Securities and Exchange Commission ("Commission") pursuant to section 12(d) of the Securities Exchange Act of 1934 and Rule 12d2–2(c) promulgated thereunder to strike the above specified security from listing and registration thereon.

The reasons alleged for striking this security from listing and registration include the following:

The delisting policies of the Exchange provide that consideration may be given to the suspension or removal of any security when, among other things, it appears that the extent of public distribution or the aggregate market value of the security has become so reduced as to make further dealings on the Exchange inadvisable.

In applying these policies, the Exchange gives consideration to suspending dealings in, or removing from the list, a common stock issue if the number of shares publicly held (exclusive of holdings of officers, directors, controlling shareholders or other family or concentrated holdings) is less than 200,000.

The common stock of Adams-Russell, Inc. ("Company") (common stock, par value 1¢) does not qualify for continued listing under these policies for the following reasons:

Pursuant to an offering circular dated June 14, 1989, a wholly-owned subsidiary of M/A–COM, Inc. offered to purchase all of the Company's outstanding common shares at $15.50 each. That offer expired on July 12, 1989. As a result of the offer only 150,998 shares of the Company's common stock remain publicly held.

The Commission, having considered the facts stated in the application and having due regard for the public interest and protection of investors, orders that said application be, and it hereby is, granted, effective at the opening of business on August 17, 1989.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

DEPARTMENT OF TRANSPORTATION

Notice of Applications for Certificates of Public Convenience and Necessity and Foreign Air Carrier Permits Filed Under Subpart Q During the Week Ended August 18, 1989

The following applications for certificates of public convenience and necessity and foreign air carrier permits were filed under Subpart Q of the Department of Transportation's Procedural Regulations (See 14 CFR 302.1701 et. seq.). The due date for answers, conforming application, or motion scope are set forth below for each application. Following the answer period DOT may process the application by expedited procedures. Such procedures may consist of the adoption of a show-cause order, a tentative order, or in appropriate cases a final order without further proceedings.

Docket Number: 46446

Date Filed: August 16, 1989

Due Date for Answers, Conforming Applications, or Motion to Modify Scope:

September 13, 1989

Description:

Application of Aeronautica De Cancun, S.A., pursuant to section 402 of the Act and subpart Q of the Regulations, requests a foreign air carrier permit to provide charter transportation of persons and accompanying baggage between points in the United States and points in Mexico.

Docket Number: 46448

Date Filed: August 16, 1989

Due Date for Answers, Conforming Applications, or Motion to Modify Scope:

September 13, 1989

Description:

Application for Federal Express Corporation pursuant to section 401 of the Act and subpart Q of the Regulations applies for renewal of its authority to serve Vietnam, contained in Segment 3 of Federal Express' certificate of public convenience and necessity for Route 205–F.

Docket Number: 46449

Date Filed: August 17, 1989

Due Date for Answers, Conforming Applications, or Motion to Modify Scope:

September 14, 1989

Description:

Application of British Airways PLC, pursuant to section 402 of the Act and subpart Q of the Regulations requests an amendment of its foreign air carrier permit to authorize it to engage in scheduled foreign air transportation of persons, property and mail between Bermuda and San Juan, Puerto Rico.

Docket Number: 46452

Date Filed: August 17, 1989

Due Date for Answers, Conforming Applications, or Motion to Modify Scope:

September 14, 1989

Description:

Application of Aero-Chago, S.A., pursuant to section 402 of the Act and subpart Q of the Regulations, request renewal of its Foreign Air Carrier Permit to engage in nonscheduled foreign air transportation of property and mail between points in the United States and points in the Dominican Republic.

Docket Number: 46454

Date Filed: August 18, 1989

Due Date for Answers, Conforming Applications, or Motion to Modify Scope:

September 15, 1989

Description:

---

[8] 15 U.S.C. 78f(b)(5) (1982).

[9] 15 U.S.C. 78s(b)(2) (1982).

[10] 17 CFR 200.30–3 (1989).

Application of American Airlines, Inc. pursuant to section 401 of the Act and subpart Q of the Regulations applies for a certificate of public convenience and necessity so as to authorize nonstop air service between Miami, Florida, and Toronto, Ontario, Canada.

Phyllis T. Kaylor,

Chief, Documentary Services Division.

[FR Doc. 89–20000 Filed 8–23–89; 8:45 am]

BILLING CODE 4910-62-M

Federal Highway Administration

Environmental Impact Statement; Santa Clara and San Benito Counties, California.

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of intent revision.

SUMMARY: The FHWA is issuing this notice revision to advise the public that an environmental impact statement (EIS) will be prepared for a proposed highway project in Santa Clara and San Benito Counties, California. The original notice, published Thursday, August 4, 1988, on page 29411, Vol. 53, No. 150 of the **Federal Register**, specified the project limits to be within the vicinity of Uvas Creek (post mile 5.4) west of the City of Gilroy and Route 156 (post mile 22.1). This revision expands the scope of study to include upgrading from highway to freeway status a 4.6-mile portion of U.S. Route 101 in Santa Clara County from post mile 0.0 to 4.6, and to expand a 4.6-mile portion of State Route 25 from a 2-lane to a 4-lane facility from Route 101 to the proposed Route 152 near Shore Road.

FOR FURTHER INFORMATION CONTACT: C. Glenn Clinton, District Engineer, Federal Highway Administration, P.O. Box 1915, Sacramento, California 95812–1915, Telephone: (916) 551–1314, or Hilmer A. Forsen, Study Manager, State of California, Department of Transportation, Transportation Studies Branch, P.O. Box 7310, San Francisco, California 94120, Telephone: (415) 557–9150.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the California Department of Transportation, will prepare a draft environmental impact statement covering alternative highway development proposals in the State Route 152 corridor in Santa Clara and San Benito Counties in the vicinity of Uvas Creek, west of Gilroy, Santa Clara County, to the junction of State Routes 152 and 156 in Santa Clara County, a distance of approximately 17 miles. Other project activities would include upgrading to freeway status a 4.6-mile portion of Route 101 in Santa Clara County from the San Benito County line to southern Gilroy, and to expand a 4.6-mile portion of State Route 25 from a 2-lane to a 4-lane facility from Route 101 to the proposed Route 152 near Shore Road. The earlier Notice of Intent for this project, published in the **Federal Register** on August 4, 1988, page 29411, described only work on Route 152.

Transportation improvements are needed in the area to relieve existing and anticipating traffic congestion on highways and streets in the corridor.

Alternatives to be considered, in addition to doing nothing or low-cost improvements to the existing transportation systems, include alternative alignments and selection of a route location and right-of-way protection for the construction of a freeway, expressway, conventional highway, or combination thereof.

A public information "open house" to gather information was held on May 6, 1987 in the City of Gilroy's Council Chambers. A public scoping meeting was held at the City Council Chambers on August 17, 1988. An informal public meeting was held on October 11, 1988 in Hollister at the Pacheco School. Other public information meetings will be held as necessary to inform the public on the study.

Letters describing the proposed action, giving the time and place of the meeting, and soliciting comments were sent to appropriate Federal, State, and local agencies, and to private organizations and citizens who previously expressed or were known to have interest in this proposal. Additional meetings will be scheduled with interested agencies and parties who are not already participating in this study. Those parties are urged to advise the persons, previously listed in this notice, of their interest.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues are identified, comments and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to the FHWA at the address provided herein.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research, Planning and Construction. The regulations implementing E.O. 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

Issued on August 18, 1989.

C. Glenn Clinton,

District Engineer, Sacramento, California.

[FR Doc. 89–19962 Filed 8–23–89; 8:45 am]

BILLING CODE 4910-22-M

National Highway Traffic Safety Administration

[Docket No. IP89–09; Notice 1]

Receipt of Petition for Determination of Inconsequential Noncompliance; Philips Lighting Co.

Philips Lighting Company of Somerset, NJ, has petitioned to be exempted from the notification and remedy requirements of the National Traffic and Motor Vehicle Safety Act (15 U.S.C. 1381 *et seq.*) for an apparent noncompliance with 49 CFR 571.108, Federal Motor Vehicle Safety Standard (FMVSS) No. 108, "Lamps, Reflective Devices, and Associated Equipment," on the basis that it is inconsequential as it relates to motor vehicle safety.

This Notice of receipt of a petition is published under Section 157 of the National Traffic and Motor Vehicle Safety Act (15 U.S.C. 1417) and does not represent any agency decision or other exercise of judgment concerning the merits of the petition.

Standard No. 108 requires that the base of each Type HB3 and HB4 light source be marked by its manufacturer or its importer with its HB Type Designation. In June 1989, Philips Lighting Company stamped approximately 28,800 bulbs with an HB3 designation when the proper type designation for these bulbs was HB4. Of the 28,800 noncompliant bulbs Philips Lighting Company recovered 13,800. The company is seeking exemption primarily for the 15,000 bulbs that were not recovered. However, it is also seeking exemption for the remaining unused 13,800 bulbs and any unshipped units that were similarly marked with the wrong HB number.

Philips Lighting Company supports its petition for inconsequential noncompliance with the following reasons:

1. The "HB" type is not generally used by vehicle owners to identify the proper headlamp bulb, and no confusion by owners is expected to occur as a result of the wrong HB number marking.

2. The number more likely to be used, i.e. the 9005 designation, is correctly stamped on the base and the bulbs that were installed in the correct lens and reflector assemblies, and no safety problems are anticipated.

3. Specific notice of the wrong HB number will be provided to any customer to whom Philips sells to insure that installations are correct.

Interested persons are invited to submit written data, views and arguments on the petition of Philips Lighting Company described above. Comments should refer to the docket number and be submitted to: Docket Section, National Highway Traffic Safety Administration, Room 5109, 400 Seventh Street SW., Washington, DC, 20590. It is requested but not required that five copies be submitted.

All comments received before the close of business on the closing date indicated below will be considered. The application and supporting materials, and all comments received after the closing date, will be considered to the extent possible. When the petition is granted or denied, the Notice will be published in the **Federal Register** pursuant to the authority indicated below.

Comment closing date: September 25, 1989.

Authority: Sec. 102, Pub. L. 93–492, 88 Stat. 1470 (15 U.S.C. 1417); delegations of authority at 49 CFR 1.50 and 49 CFR 501.8.

Issued on: August 21, 1989.

Ralph Hitchcock,

Acting Associate Administrator for Rulemaking.

BILLING CODE 4910-59-M

Saint Lawrence Seaway Development Corporation Advisory Board; Meeting

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463; 5 U.S.C. App. I) notice is hereby given of a meeting of the Advisory Board of the Saint Lawrence Seaway Development Corporation, to be held at 2:00 p.m., September 11, 1989, at the Corporation's Administration Headquarters, Room 5424, 400 Seventh Street SW., Washington, DC. The agenda for this neeting will be as follows: Opening Remarks, Consideration of Minutes of Past Meeting; Review of Programs; Business, Closing Remarks.

Attendance at meeting is open to the interested public but limited to the space available. With the approval of the Administrator, members of the public may present oral statements at the meeting. Persons wishing further information should contact not later than September 6, 1989, Marc C. Owen, Advisory Board Liaison, Saint Lawrence Seaway Development Corporation, 400 Seventh Street SW., Washington, DC 20590; 202/366–0091.

Any member of the public may present a written statement to the Advisory Board at any time.

Issued at Washington, DC on August 18, 1989.

Marc C. Owen,

Advisory Board Liaison.

UNITED STATES INFORMATION AGENCY

Culturally Significant Objects Imported for Exhibition; Determination

Notice is hereby given of the following determination: Pursuant to the authority vested in me by the act of October 19, 1965 (79 Stat. 985, 22 U.S.C. 2459), Executive Order 12047 of March 27, 1987 (43 FR 13359, March 29, 1978), and Delegation Order No. 85–5 of June 27, 1985 (50 FR 27393, July 2, 1985), I hereby determine that the objects to be included in the exhibit "Twelve Artists from the German Democratic Republic" (see list [1]), imported from abroad for the temporary exhibition without profit within the United States, are of cultural significance. These objects are imported pursuant to loan agreements with the foreign lenders. I also determine that the temporary exhibition or display or the listed exhibit objects at the Harvard University Art Museums in Cambridge, Massachusetts, beginning on or about September 15, 1989 to on or about November 5, 1989; the Wight Art Gallery of the University of California at Los Angeles December 3, 1989 to on or about January 21, 1990; the University of Michigan Museum of Art, Ann Arbor, beginning on or about February 9, 1990 to on or about March 25, 1990, and potentially at the Albuquerque Museum, Albuquerque, New Mexico, from mid-April to mid-June 1990, is in the national interest.

Public notice of this determination is ordered to be published in the **Federal Register.**

Dated: August 17, 1989

Alberto J. Mora,

General Counsel.

Sunshine Act Meetings

Federal Register
Vol. 54, No. 163
Thursday, August 24, 1989

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM.

TIME AND DATE: 10:00 a.m., Wednesday, August 30, 1989.

PLACE: Marriner S. Eccles Federal Reserve Board Building, C Street entrance between 20th and 21st Streets, NW., Washington, DC 20551.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees.
2. Any items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION: Mr. Joseph R. Coyne, Assistant to the Board; (202) 452–3204. You may call (202) 452–3207, beginning at approximately 5 p.m. two business days before this meeting, for a recorded announcement of bank and bank holding company applications scheduled for the meeting.

Dated: August 22, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

[FR Doc. 89–20155 Filed 8–22–89; 3:53 pm]

BILLING CODE 6210-01-M

NATIONAL SCIENCE FOUNDATION MEETING

NAME: Advisory Committee for Critical Engineering Systems.

DATE AND TIME: September 11, 8:30 a.m.–5:00 p.m.; September 12, 8:30 a.m.–12:00 pm.

PLACE: National Science Foundation, 1800 G Street, NW., Washington, DC 20550.

TYPE: Open.

CONTACT: Dr. Robert D. Hanson, Division Director, Biological & Critical Systems, National Science Foundation, 1800 G Street, NW.–Room 1132, Washington, DC 20550, Phone: 202–357–9545.

MINUTES: May be obtained from contact person listed above.

PURPOSE OF MEETING: To provide advice and recommendations concerning fundamental research for biological and critical engineering systems.

AGENDA: Review research content of the Division research programs and discuss plans for the future.

Dated: August 21, 1989.

M. Rebecca Winkler,

Committee Management Officer.

BILLING CODE 7555-01-M

SECURITIES AND EXCHANGE COMMISSION

Notice is hereby given, pursuant to the provisions of the Government in the Sunshine Act, Pub. L. 94–409, that the Securities and Exchange Commission will hold the following meeting during the week of August 22, 1989.

The Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the closed meeting. Certain staff members who are responsible for the calendared matters may also be present.

The General Counsel of the Commission, or his designee, has certified that, in his opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(4), (8), (9)(A) and (10) and 17 CFR 200.402(a) (4), (8), (9)(i) and (10), permit consideration of the scheduled matters at a closed meeting.

Commissioner Grundfest, as duty officer, voted to consider the items listed for the closed meeting in closed session.

The subject matter of the closed meeting scheduled for Tuesday, August 22, 1989, at 2:30 p.m., will be: Opinion.

At times, changes in Commission priorities require alterations in the scheduling of meeting items. For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact: Robert Rosenblum at (202) 272–2400.

Dated: August 21, 1989.

Jonathan G. Katz,

Secretary.

Part II

Environmental Protection Agency

40 CFR Parts 80 and 86

Regulation of Fuels and Fuel Additives; Fuel Quality Regulations for Highway Diesel Fuel Sold in 1993 and Later Calendar Years; Proposed Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 80 and 86

[AMS-FRL-3577-3]

RIN 2060-AC00

Regulation of Fuels and Fuel Additives; Fuel Quality Regulations for Highway Diesel Fuel Sold in 1993 and Later Calendar Years

AGENCY: Environmental Protection Agency.

ACTION: Notice of proposed rulemaking.

SUMMARY: EPA proposes in today's notice a new national program of diesel fuel quality control. The proposed action would require refiners to reduce the sulfur content of on-highway diesel fuel from current average levels of approximately 0.25 weight percent to levels not exceeding 0.05 percent by weight. The proposal would also require that on-highway diesel fuel aromatic levels be held at or below current average levels (approximately 34 percent). The proposed mechanism for capping aromatics would be to set a minimum cetane index specification of 40. Both requirements would take effect at all points throughout the distribution system on October 1, 1993. These proposed actions would result in substantial reductions in emissions of particulate matter and sulfur dioxide (SO_2).

Certification diesel fuel would be changed beginning with both the 1991 and 1994 model years to reflect the changes in commercial diesel fuel quality. Vehicles sold in model years 1991 through 1993 would be certified using 0.10 weight percent sulfur fuel, reflecting the average fuel sulfur level expected to be used over these vehicles' useful lives (as defined in CFR title 40 § 86.085-2). Beginning with the 1994 model year, the certification fuel sulfur level would be that of commercial diesel fuel (*i.e.*, not to exceed 0.05 weight percent).

DATES: EPA has not scheduled a public hearing on this Notice of Proposed Rulemaking. A hearing will be held if requested on or before September 7, 1989. Comments on this proposal will be accepted through September 25, 1989. Additional information on the submission of comments can be found under "Public Participation" in the Supplementary Information section of today's notice.

ADDRESSES: Interested parties may submit written comments (in duplicate if possible) to: Air Docket Section (A-130), U.S. Environmental Protection Agency, Attention: Docket No. A-86-03, 401 M Street, SW., Washington, DC 20460.

Materials relevant to this proposal have been placed in Docket No. A-86-03 by EPA. The docket is located at the above address in Room M-1500, Waterside Mall (ground floor), and may be inspected between 8 a.m. and 3 p.m. Monday through Friday. A reasonable fee may be charged by EPA for copying docket materials.

FOR FURTHER INFORMATION CONTACT: Mr. Charles Moulis, Standards Development and Support Branch, Emission Control Technology Division, U.S. Environmental Protection Agency, 2565 Plymouth Road, Ann Arbor, MI 48105, Telephone: (313) 668-4229.

SUPPLEMENTARY INFORMATION:

I. Introduction

This preamble presents the major issues raised by today's proposed action and discusses EPA's rationale for each aspect of that action. The following sections of the preamble describe: (1) The background of the proposal, (2) the control options which were considered during the rulemaking development process, (3) the cost to the refining industry of the proposed diesel fuel requirements, (4) the economic and environmental benefits of the proposed rulemaking, (5) the overall cost effectiveness of the proposed fuel regulations, (6) the leadtime issues involved, (7) the enforcement aspects of the proposed rulemaking, (8) the issue of diesel engine certification, and (9) the actual proposal in detail, with request for comments on specific issues.

II. Background

In March of 1985, EPA promulgated particulate emission standards of 0.25 grams per brake horsepower-hour (g/BHP-hr) for heavy-duty trucks (greater than 8,500 lbs), and 0.10 g/BHP-hr for buses, effective beginning in the 1991 model year; and 0.10 g/BHP-hr for heavy-duty trucks beginning in the 1994 model year (50 FR 10606, March 15, 1985). During the rulemaking process, manufacturers expressed concern that sulfur in diesel fuel could either plug the trap-oxidizers that EPA projected would be needed to meet the proposed particulate standard or generate significant particulate sulfate emissions that would make it difficult to meet the standards. To address this concern commenters recommended that EPA regulate the sulfur content of diesel fuel. In the preamble to the final rule, EPA responded that not enough was then known about the effect of diesel fuel sulfur on traps or particulate emissions to take regulatory action at that time, but that it would continue to study the issue and, if warranted, consider regulating diesel fuel sulfur content. In June of 1986, EPA released for public comment a study prepared under contract for EPA by Energy and Resource Consultants, Inc. (ERC), and Sobotka and Company, Inc. (SCI), entitled "Diesel Fuel Quality Effects on Emissions, Durability, Performance, and Costs" (51 FR 23437, June 27, 1986). The draft report by ERC presented the important emission- performance- and durability-related properties of diesel fuel. A version of the Department of Energy's Refinery Evaluation Modeling System (REMS) was used by SCI to estimate the cost involved in making changes in fuel composition.

As presented in the ERC report, the most important emission-related properties of diesel fuel are its sulfur and aromatics content. A reduction in fuel sulfur would directly reduce SO_2 and sulfate particulate emissions, while reducing fuel aromatics would reduce carbonaceous and organic particulate emissions. The report also concluded that back-end volatility (*e.g.*, the 90-percent distillation point) does not significantly affect particulate emissions.

ERC and SCI also concluded that, in addition to the emission benefit, a reduction of fuel sulfur from estimated present levels to 0.05 weight percent would reduce corrosive engine wear and extend engine life. A 30 percent extension in engine life was estimated and used in their cost-effectiveness analysis. This effect is difficult to quantify, however, as data which quantify the effect under in-use conditions with modern oils are scarce. According to the report, a reduction of fuel aromatics content would improve ignition quality, which would in turn improve the ability of engines to start in cold temperatures and reduce engine noise.

The REMS refinery model was used to estimate the cost of reducing fuel sulfur alone from estimated average levels of 0.274 percent to 0.05 percent. The results of the model showed that by segregating the production of highway diesel fuel from distillate burner fuels and by using existing desulfurization capacity, this sulfur reduction could be accomplished at a cost of about 1.2 cents per gallon. ERC claimed that this cost would be more than offset by the savings generated by the increased engine life resulting from desulfurization.

ERC and SCI also concluded (although EPA disagreed with this conclusion) that the desulfurization process would effect a reduction in aromatics content to about 20.3 volume percent varying from refinery to refinery. It was further estimated that an additional reduction of aromatics content to 17 percent would increase refining cost by an additional 0.4 cent per gallon.

Comments received from industry on the ERC/SCI study indicated that additional work was needed in estimating the refinery cost of controlling diesel fuel quality as well as in evaluating the effect of fuel sulfur control on engine life. As a result, EPA commissioned Southwest Research Institute (SWRI) and Bonner and Moore Consultants, Inc. (B&M) to investigate these areas further. A report prepared by SWRI entitled "Study of the Effects of Reduced Diesel Fuel Sulfur Content on Engine Wear" and a B&M report entitled "A Study on Restriction of Sulfur and Aromatics Content of Highway Diesel Fuel" were the result of this effort.

The report by SWRI gave further indication that a reduction in fuel sulfur content might result in a substantial reduction in engine wear. Data in the literature were reviewed and summarized, and an analysis of used oil samples taken from engines operating on high and low sulfur fuel was performed. As documented in the report, it was found that in a large number of used oil samples the amount of wear particles was significantly lower in cases where low sulfur fuel had been used. After reviewing the report, members of industry cautioned that still more investigation was needed before firm conclusions could be drawn regarding the effect of sulfur on engine life.

The Bonner and Moore report examined the effect of fuel quality regulations on the cost of producing diesel fuel. The costs of controlling sulfur to 0.05 weight percent, controlling aromatics to 20 volume percent, and controlling both simultaneously were estimated. Two assumptions regarding the volume of fuel controlled were made in the study. One assumption was that the current degree of segregation (or lack thereof) of heating oil and "highway" diesel fuel would be maintained. The other was that all heating oil would be produced and distributed separately, and would therefore not need to meet "on-highway" fuel specifications. Fuel control cost estimates were developed for each segregation scenario.

In addition to these contracting efforts EPA also engaged in a series of meetings with engine manufacturers. The purpose of these meetings was to monitor the progress being made toward meeting the 1991 and 1994 heavy-duty diesel particulate emission standards. Engine manufacturers repeatedly expressed the need for a reduction in sulfur levels in commercial diesel fuel.

Most recently, in a landmark initiative, members of the diesel engine manufacturing and petroleum refining industries submitted a joint proposal for on-highway diesel fuel modification to EPA. In the proposal, refiners stated that they could provide diesel fuel containing no more than 0.05 weight percent sulfur and meeting a minimum cetane index specification of 40 (as a means of capping aromatics at current levels) by October 1, 1993. Diesel engine manufacturers expressed their belief that this level of fuel quality improvement would be sufficient to allow compliance with the 1994 emission standards. To provide flexibility within the refining industry, it was suggested that only "on-highway" diesel fuel be required to meet these specifications, and that individual refiners be allowed to choose whether or not to market "on-highway" diesel. Engine manufacturers also stated that EPA should allow certification using low sulfur fuel beginning with the 1991 model year to reflect upcoming changes in commercial fuel quality.

The information received from members of industry and government contractors was incorporated into a more recent EPA study. The major focus of the analysis was to determine the cost-effectiveness of a reduction in diesel fuel sulfur content alone, and of a subsequent reduction in diesel fuel aromatics. Thus assumptions were made that would result in the most conservative cost-effectiveness estimates.

Specific topics which were evaluated in detail include the refinery cost of fuel control, the effect of fuel regulations on engine manufacturers' compliance strategies, and the effect of fuel control on engine wear, air quality and health effects.

This more recent study is published today as the Draft Regulatory Impact Analysis (Draft RIA) supporting this proposed rulemaking and has been placed in Docket A-86-03, as referenced above. Although the Draft RIA is now outdated in some aspects, it still comprises the technical basis for today's proposal.

III. Control Options

The control options which were considered in the rulemaking process include several combinations of fuel sulfur and aromatics control. Sulfur control options were considered down to levels as low as 0.05 percent by weight. The primary sulfur control scenario which was evaluated quantitatively was a sulfur reduction to 0.05 percent by weight with no change in aromatics. Intermediate levels of sulfur control were evaluated qualitatively relative to the 0.05 weight percent level.

Aromatics control options ranging from no control to a reduction to 20 volume percent were also considered. Since diesel fuel aromatics levels have been increasing over past years (due to increased blending of high-aromatic cracked stocks into diesel fuel) and the oil industry proposed to eliminate this slippage, the prospect of merely capping aromatics content at current levels to avoid future deterioration was also considered. The primary scenario evaluated quantitatively was a reduction in aromatics to 20 volume percent subsequent to a reduction of fuel sulfur to 0.05 percent by weight. Both primary control scenarios are evaluated in detail in the Draft RIA.

IV. Cost of Fuel Control

To date, several independent analyses of the cost and feasibility of diesel fuel quality control have been prepared. These include studies performed for EPA under contract by SCI and Bonner and Moore Management Consultants, Inc., and a survey conducted by the National Petroleum Refiners Association (NPRA) of member refineries. The results of these different studies show some disagreement over the total cost of diesel fuel modifications due to: (1) Uncertainties involved in the modeling process, and (2) uncertainties in the analytical techniques and assumptions made by the NPRA members in their survey responses. The major areas of modeling uncertainty include: (1) The amount of desulfurization equipment currently in place in the refining industry, (2) the availability and performance of technology required for aromatics control, and (3) the ability of the refining industry and fuel distribution system to segregate "on-highway" and "off-highway" distillate fuels. The degree to which the cost of diesel fuel modification is dependent on these areas of uncertainties is discussed in more detail below.

Of these uncertainties, the segregation issue is the most important. According to the NPRA survey, if current fuel distribution practices are maintained, about 2.4 million barrels per day (bbl/day) of distillate would have to meet the low sulfur requirement. Of these 2.4 million bbl/day, however, only 1.2 million bbl/day are used on highways. If refiners and distributors could completely segregate the on- and off-highway portions of the distillate pool,

BEST COPY AVAILABLE

the controlled volume (and regulatory cost) could be cut nearly in half. In the joint industry proposal for on-highway diesel fuel specifications, it was strongly requested that only on-highway fuel be regulated and that individual refiners be allowed to determine whether or not to market on-highway diesel fuel. The joint industry proposal also contained provisions for distinguishing between on-highway and off-highway diesel fuel (*i.e.*, fuel dying). Although EPA is unable to accurately estimate the quantity of distillate that would be segregated, the language of the joint industry proposal indicates that increased segregation of distillate fuels is likely. To bracket this likelihood, a range of costs will be presented: One assuming complete segregation of on-highway fuel and the other assuming current segregation practices.

A. Sulfur Reduction

Diesel fuel sulfur reduction is accomplished by the hydrodesulfurization process. Hydrogen is introduced at elevated temperature and pressure in distillate hydrotreaters, resulting in a reduction in fuel sulfur content. The technology is commercially proven and is currently employed to a large degree by the refining industry. Thus, regulation of fuel sulfur would merely require the extended application of an existing technology.

The near term cost of mandatory removal of sulfur from diesel fuel is affected significantly by two factors: The amount of excess desulfurization capacity that currently exists in the refining industry, and the degree to which refiners can segregate the production of on-highway diesel fuel. The amount of excess desulfurization capacity available will certainly effect the amount of capital investment required for compliance with sulfur regulations. The degree to which the refining industry can segregate distillate fuel types will impact both capital investment and operating cost requirements.

In 1986, NPRA surveyed member refineries to determine the cost of making changes in fuel quality. The results of the survey showed that while 65 of the 139 refiners which responded had no distillate desulfurization capacity, a significant amount of desulfurization capacity did exist. It was estimated that full practical utilization of existing facilities could result in the production of 315,785 bbl/day of 0.05 weight percent sulfur fuel in 1991. NPRA also concluded that increased segregation of distillate fuels would take place in some refineries, but only to a marginal degree. The NPRA survey estimated that controlling diesel fuel sulfur to 0.05 weight percent would require capital expenditures of $3.3 billion and would cost approximately 3.11 cents per gallon of diesel fuel controlled.

This cost is higher than that estimated by the EPA contractor studies. SCI, in an analysis performed subsequent to the ERC/SCI report, estimated that costs for sulfur control could be as low as 1.41 cents per gallon. This cost estimate was generated assuming that only 69 percent of current desulfurization capacity is utilized and that "on-highway" diesel fuel could be segregated. SCI estimated a cost of 2.28 cents per gallon of controlled fuel assuming no excess desulfurization capacity exists and no increased segregation of distillate products is feasible.

Bonner and Moore Consultants Inc. recently completed another study for EPA on the cost of modifying diesel fuel quality. The results of that study showed that diesel fuel sulfur control would cost 2.69 cents per gallon controlled assuming no excess desulfurization capacity is available and no increase in segregation would take place. The cost per gallon of controlled fuel was estimated to be about the same under an increased segregation scenario (off-highway diesel quality was not allowed to deteriorate in the model).

The NPRA survey's estimate of current excess desulfurization capacity and Bonner & Moore's sulfur reduction cost estimates (adjusted for after tax real rate of return on investment) were used to develop a final estimate of sulfur control costs. The Bonner and Moore costs incorporated and addressed comments which were received on the earlier SCI work, and thus were used preferentially here. These adjusted costs were calculated by EPA to be about 2.3 cents per gallon of controlled fuel assuming no increased segregation of distillate products over the base case. This figure is close to that calculated by SCI, as indicated above. A cost of 1.8 cents per gallon of controlled fuel was estimated for the complete (100 percent) segregation scenario.

B. Aromatics Control

There are a number of technical options for the removal of aromatics from diesel fuel. Hydrocracking, a technology in widespread use, can be used to mildly reduce aromatic levels in distillate fuels. A more severe process, hydrodearomatization, can also be used, although commercial experience is limited. Solvent extraction can also be used for aromatics removal and is also commercially available, but may not be practical in many refining situations. The Mobil "methanol-to-olefin-to-distillate" process can also be used to produce a low aromatic distillate fuel. Whatever process is used, significant capital investment would be required.

The 1986 NPRA survey results indicated that, not only would aromatics control be expensive, but that 53 of the 139 refineries reporting would be financially unable to install the equipment necessary to produce low aromatics fuel. The control of sulfur and aromatics would require capital investment of an additional $3.34 billion beyond that necessary for sulfur control ($6.65 billion total). This investment Plus operating expenses would raise diesel fuel prices by an additional 3.24 cents per gallon (6.35 cents per gallon for both sulfur and aromatics control).

In an analysis performed after the initial ERC/SCI report, SCI estimated aromatic control costs, assuming solvent extraction would be the technology employed for aromatics removal. Costs for controlling aromatics to 20 percent after controlling sulfur to 0.05 weight percent were estimated in its report to be 0.48 cent per gallon assuming 100 percent segregation. A control cost estimate of 1.26 cents per gallon was generated assuming no increase in fuel segregation (*i.e.*, NPRA segregation assumption).

The recently completed Bonner & Moore report estimated costs for controlling aromatics, with hydrodearomatization used as the principal technology for aromatics reduction. Incremental costs for aromatics control (the difference between sulfur and sulfur/aromatics control costs) were projected to be 2.5 cents per gallon of controlled fuel assuming no increase in fuel segregation, and 2.6 cents per gallon of controlled fuel in the increased segregation case.

Using information contained in all three of these studies, EPA estimates that, with NPRA segregation, aromatics control would cost on additional 2.1 cents per gallon of treated fuel with 0.05 weight percent sulfur control already in place. With 100 percent distillate fuel segregation, aromatics control would cost an additional 2.4 cents per gallon of treated fuel.

V. Benefits of Fuel Control

Reductions in diesel fuel sulfur and diesel fuel aromatics would result in a number of benefits (both financial and environmental) which can be weighed against the refining cost of modification. As will be described in Section A, improvements in fuel quality would allow engine manufacturers to comply

more easily with future heavy-duty diesel particulate standards and would reduce the cost and complexity of engine hardware necessary for particulate control. In Section B, the relationship between fuel sulfur and engine wear will be described and possible economic benefits will be quantified. The projected nationwide emission and air quality benefits will be presented in Section C. In Sections D and E, the projected health effects and visibility effects of emission reductions resulting from fuel control will be presented.

A. Exhaust Aftertreatment Technology Benefits

The 0.1 g/BHP-hr particulate emissions standard promulgated for heavy-duty diesel vehicles for the 1994 model year (50 *FR* 10606, March 15, 1985) will likely necessitate the use of some type of exhaust aftertreatment device. The design and the cost of the device will be affected by the quality of the fuel used. The purpose of this section is to identify the impact that the proposed fuel control will have on exhaust aftertreatment technology requirements.

The benefits of sulfur control in this area are two-fold. First of all, fuel sulfur contributes to particulate emissions directly via formation of sulfate in the engine exhaust. On average, about 2 percent of the sulfur in the fuel is emitted as sulfate particulate, or about 0.06–0.08 g/BHP-hr (including the weight of bound water). The proposed fuel sulfur regulations would reduce this amount by roughly 80 percent, greatly enhancing engine manufacturers' abilities to comply with the particulate standards.

Secondly, the use of some aftertreatment devices, particularly flow through catalysts or catalyzed traps is effectively prohibited by the current levels of sulfur in fuel. While a catalyst would significantly reduce organic particulate emissions, a highly active catalyst would also greatly increase the amount of sulfate particulate produced in the exhaust, thus negating the beneficial effects of the catalyst. When fuel sulfur is reduced, however, this effect becomes less pronounced, as the concentration of sulfur species in the exhaust is reduced proportionally. A less active catalyst formulation may be able to avoid this problem, albeit with a loss of efficiency in controlling organic particulates.

A smaller emissions benefit can also be achieved by aromatics control. Engine test results show that reductions in fuel aromatics levels result in lower emissions of carbonaceous (RCP) and soluble organic fraction (SOF) particulates. Hence, a reduction in fuel aromatics would reduce particulate formation, and subsequently reduce the need for exhaust treatment devices.

A projection of exhaust aftertreatment technology requirements was made for heavy-duty diesel vehicles for the 1994 and later model years under various fuel control scenarios. The likely aftertreatment technology mixes were determined by evaluating the cost-effectiveness of each technology type with respect to particulate control, for each heavy-duty vehicle class.

The first step in this process was to establish a distribution of baseline particulate emission levels and compositions, based on available test data, for each vehicle class. Next, various aftertreatment technologies were applied incrementally to engines in each heavy-duty class according to the cost-effectiveness of control, until aftertreatment application was sufficient to insure compliance with the particulate standards (assuming averaging within each heavy-duty subclass).

For 1994 and later model year heavy-duty diesels, due to the large contribution of sulfates to engine-out particulate, compliance with the 0.1 g/BHP-hr particulate standard will likely require fleetwide trap-oxidizer application if no fuel controls are implemented. The only exception is the heavy-heavy-duty engine class, where, with averaging, it is projected that slightly under 90 percent of vehicles will require traps.

With sulfur control, the 1994 picture is projected to be somewhat different. The enhanced feasibility of high-activity flow-through oxidation catalysts with sulfur control would allow the displacement of some traps by oxidation catalysts. On average, it is projected that approximately 35 percent of engines would require traps in all vehicle classes while an additional 29 to 55 percent, depending on engine subclass, would require flow-through oxidation catalysts.

Further reduction of aromatics to 20 volume percent would displace traps from an additional 5 percent of all engines and also decrease oxidation catalyst requirements. The only exception would be the medium heavy-duty diesel engine subclass, where trap displacement would be about 9 percent, but oxidation catalyst usage would increase about 8 percent.

The fuel economy, hardware, and maintenance costs savings associated with sulfur control for 1994 would be $324 for light-heavy duty diesels (LHDDEs), $651 for medium-heavy duty diesels (MHDDEs), $752 for heavy-heavy duty diesels (HHDDEs), and $700 for urban buses. The subsequent reduction in fuel aromatics to 20 percent would result in further savings of $31 for LHDDEs, $87 for MHDDEs, $78 for HHDDEs, and $94 for urban buses.

An analysis to determine the savings in aftertreatment costs for 1991–93 model year engines was also performed and is described in the Draft RIA. This analysis was initiated some time ago and assumed that traps would be used on a substantial number of 1991–93 engines. Presently, however, it appears that manufacturers will not use traps to comply with the 1991 model year truck standard, but instead rely on engine-related controls. The adoption of a 0.10 percent sulfur level for certification fuel is expected to reduce certification emissions by about 0.03–0.04 g/BHP-hr from what they would have been, using a 0.25 percent sulfur fuel and thus ease the manufacturers' attempts to achieve the 1991 standards. Nevertheless, since manufacturers' plans for 1991 engines are already largely fixed, EPA does not expect fuel control to affect manufacturers' plans for engine-related controls in this timeframe. Consequently, in-use emissions would remain unaffected. Some truck manufacturers not able to comply with the standard without fuel control might choose to pay nonconformance penalties (NCPs). However, since NCPs are not a net cost to society, but rather a "transfer payment" from one sector of society to another, no aftertreatment-related societal savings can be claimed for fuel control on these engines.

Traps are still expected to be the primary technology used by bus engine manufacturers to comply with the 0.10 g/BHP-hr 1991 bus standard; use of an alternative fuel, such as methanol, may also be employed. Some reduced usage of traps is likely if certification fuel sulfur were reduced. However, due to the fact that a relatively small number of bus engines would be certified over the 3-year period, this savings due to fuel control was not quantified.

B. Wear Benefits

An extensive body of data exists in the literature documenting the relationship between diesel fuel sulfur and corrosive engine wear. Because of this effect, engine oils typically contain alkaline additives which work to neutralize the acidic sulfur species present in the combustion chamber. As was postulated in the ERC/SCI study, current oil formulations may not be sufficient to completely control corrosive wear, and, consequently, a reduction in fuel sulfur levels may significantly reduce engine wear rates. Based on data available at the time, the ERC/SCI report predicted that the reduction in wear as a result of fuel sulfur controls would increase engine life by approximately 30 percent.

After the ERC/SCI report was released, Southwest Research Institute (SwRI) was commissioned by EPA to study the issue further. As stated in its report, SwRI found that engines which had operated on both high and low sulfur fuels in Southern California exhibited a reduction in wear particles found in used oil samples when operated on low sulfur fuel. While the effect of low sulfur fuel differed among engines and fleets, the vast majority of the data showed that a fuel sulfur reduction from roughly 0.3 to 0.05 weight percent resulted in a 30 to 40 percent reduction in wear particles (*i.e.*, oil iron content).

Based on these data, EPA calculates that a reduction in sulfur level to 0.05 weight percent from the national average baseline sulfur level of 0.25 weight percent would result in a wear rate reduction of about 18 percent. Estimating the financial savings to consumers of such a decrease in engine wear rates, however, is a more difficult task. Engines are currently rebuilt for a number of reasons, including excessive oil consumption, loss of power, and major engine failures. While those engines which fail due to cylinder wear-related factors would realize a benefit, many engines may not. For instance, if an engine experiences a major failure, items such as piston rings and cylinder liners will normally be replaced during rebuild. This would effectively eliminate any benefit of reduced corrosive wear which would have been realized had another engine component not failed.

Further, the relative contributions of corrosive and abrasive wear to engine life is not well understood. While both types of wear contribute to deterioration in engine performance and life, it is possible that abrasive wear contributes more to loss of oil control than does corrosive wear. With these factors in mind, an attempt to quantify the economic benefits of reduced engine wear was made.

Three different approaches were taken to this problem. The first was based on the assumption that lower fuel sulfur levels would allow engine manufacturers to extend recommended oil change intervals, with no resulting change in engine life. The second approach assumed that reduced corrosive wear would result in an extension in the life of the engine. The third approach was to assume that a reduction in wear would extend the life of both the engine and vehicle chassis. These methods provided three independent estimates of the potential cost savings.

Using the first approach, information on lifetime mileage, oil change interval, and vehicle life was used to estimate the annual number of oil changes for each diesel vehicle class. It was then assumed that oil change intervals could be extended by 18 percent, resulting in oil cost savings for owners. The results of this analysis showed present value savings of 1.6¢/gal for light-duty diesel vehicles (LDDVs), 1.2¢/gal for light-duty diesel trucks (LDDTs), 0.8¢/gal for LHDDEs, 1.3¢/gal for MHDDEs, 0.9¢/gal for HHDDEs, and 1.8¢/gal for urban buses. The benefit was assumed to apply, beginning in 1994, only to 1988 MY and later LDDVs and LDDTs, and to 1991 MY and later HDDVs. Vehicles produced in previous model years exhibit much higher particulate emissions, which may contaminate the oil and eliminate the ability to extend oil change intervals.

The second approach was to assume that there would be no change in oil change interval, but that reduced wear rates would lead to a longer engine life. The reduction in engine wear was expected to result in longer rebuild intervals only in engines which are rebuilt for reasons related to high oil consumption. Based on data obtained from an EMA survey of rebuild practices, it was estimated that 42 percent of trucks would realize the 18 percent increase in engine life as a result of sulfur control. This 18 percent increase in engine life translates into an economic benefit for the owner by delaying rebuild maintenance costs. Estimated cost savings under this scenario (averaged over the entire fleet) were 2.51¢/gal of diesel fuel consumed for MHDDEs, 2.52¢/gal for HHDDEs and 1.98¢/gal for urban buses. LDDVs, LDDTs and LHDDEs received no benefit since these engines are not normally rebuilt and there was no credit taken for extended vehicle life under this scenario.

The third approach was to estimate the cost savings assuming that reduced engine wear would result in both an extension in rebuild intervals and in total vehicle life. Under this approach, the economic benefits include both delaying maintenance costs and delaying subsequent vehicle purchases. Once again using information on rebuild practices, rebuild costs, and vehicle costs, an estimate of the cost savings on a per gallon fuel consumed basis was generated. Total costs savings estimates were 30¢/gal for LDDVs, 26¢/gal for LDDTs, 23¢/gal for LHDDEs, 11.7¢/gal for MHDDEs, 8.4¢/gal for HHDDEs, and 11.5¢/gal for urban buses. These estimates represent the highest cost savings which could potentially result from sulfur control.

In summary, EPA estimates the potential for reduced engine wear from low-sulfur fuel under three alternative truck manufacturer/owner response scenarios: (1) Extended oil change intervals with no increase in engine life, (2) no change in oil change intervals but an increase in engine life, and (3) no change in oil change intervals with increases in both engine and total vehicle life. EPA has no data to determine which scenario is most likely to occur. The annual benefits of decreased engine wear in year 2010 are estimated at between $400 million and $3.7 billion; fuel costs, however, are estimated to increase between $540 million and $1.3 billion.

Based on these estimates, the annual net benefit accruing directly to truck owners from reduced engine wear alone could be over $2 billion. Under this scenario, truck owners would be willing to pay over $2 billion more per year for low-sulfur diesel fuel than it would cost refiners to produce it. To the extent that these estimates accurately reflect the effects of the proposed regulation, there must be a reason why such large potential net gains have not materialized based on market forces alone. EPA seeks comment on this issue.

One possible explanation is that there are significant costs to truck owners of determining the actual effects of reduced sulfur fuels on engine wear. Since the effects take place inside engines over fairly long periods of time, it may not be easy to observe, isolate, and measure the effects of reduced sulfur fuels. If these information costs are sufficiently large, they could outweigh the potential net benefits of a move to low-sulfur fuel resulting from market forces alone. Under these circumstances, the information costs would effectively prevent the introduction of low-sulfur fuel.

While these cost savings estimates indicate that substantial societal benefits may result from sulfur control, it is fair to include the caveat that the data base behind this analysis is limited. It has even been argued that sulfur control would have no impact on engine wear. However, as will be seen in Section VI of today's notice, fuel sulfur control is desirable even without the inclusion of reduced engine wear benefits.

C. Emissions and Air Quality

The diesel fuel quality changes being considered would result in substantial reductions in SO_2 emissions and particulate matter formation beyond the reductions resulting from the 1994 0.1 g/BHP-hr particulate standard. In addition, emissions of CO and HC will be indirectly affected by fuel quality modification, due to the changes in aftertreatment technology strategies used by engine manufacturers to comply with the 1994 particulate standards. The projected nationwide emission reductions under the two extreme distillate fuel segregation scenarios (100 percent and NPRA segregation) resulting from fuel sulfur and aromatics control are shown in Tables 1 and 2. Because the effect of diesel fuel control on vehicle emissions changes with model year, the overall emissions and air quality impacts of fuel control varies over time. Because of this, both the near and long term effects of fuel control were evaluated.

As shown in Table l, fuel sulfur control would result in additional reductions in direct particulate matter (PM) from baseline levels (*i.e.*, particulate matter emitted from the exhaust) over that accomplished by the HDD particulate standards alone. This is because fuel sulfur control will result in particulate reductions from pre-1991 HDD and light-duty diesel engines, as well as, depending on the degree of segregation, off-highway sources. In addition, a large reduction in diesel SO_2 emissions would result, representing an 80 percent reduction from baseline levels for those emission sources where diesel fuel is controlled. This would represent a reduction of 1.0–2.5 percent in total national SO_2 emissions. Beyond that, as described in more detail in the Draft RIA, it was estimated that approximately 12 percent of urban SO_2 emissions are converted to sulfate particulates in the urban atmosphere. These atmospherically-formed particulate are referred to as indirect PM. Thus, the reduction in SO_2 emissions would result in substantial indirect PM reductions in both the short and long term as well.

TABLE 1.—PROJECTED NATIONWIDE EMISSION REDUCTIONS DUE TO DIESEL FUEL SULFUR CONTROL

[1000 tons/yr]

Pollutant	1995	2015
Total Particulate	*99–196	159–321
Directly Emitted	10–29	3–35
Indirect	89–167	156–286
SO_2	310–560	542–993
HC	14	86
CO	141	916

*Lower end of range result of 100% distillate segregation, upper end result of current segregation practices.

The emission impacts of controlling fuel aromatics to 20 volume percent were also evaluated and are shown in Table 2. Total particulate emission reductions range from 10,000 tons per year in 1995 to 600 tons per year in 2015. Small HC and CO emission reductions would also result from aromatics control. These particulate reductions are a factor of 10 to 20 smaller in the short term than those resulting from sulfur control. Due primarily to the steady state nature of off-highway diesel operation, emissions from off-highway sources should not be strongly affected by fuel aromatics levels. Thus, estimated emission reductions are constant over the range of distillate segregation scenarios.

TABLE 2.—PROJECTED NATIONWIDE EMISSION REDUCTIONS DUE TO SUBSEQUENT DIESEL FUEL AROMATICS CONTROL

[1000 tons/yr]

Pollutant	1995	2015
Direct PM	10	0.6
SO_2	0	0
HC	38	15
CO	69	96

Should the degree of segregation of distillate fuels increase significantly, it is possible that refiners may change blending practice to direct low sulfur and aromatic blend stocks to the on-highway pool. Directionally, this practice would have the undesirable side effect of increasing the sulfur and aromatic content of non-highway distillate fuels, thus decreasing environmental benefits. Although this practice might take place to some extent, EPA expects the primary approach to meeting this standard would be to desulfurize on-highway diesel fuel blend stocks. Roughly 70 percent of home heating oil is marketed in northeastern states, where limits on the sulfur content of home heating oils would effectively prohibit the shifting to high sulfur blendstocks to the off-highway pool. Thus, most of the home heating oil market is not even potentially available for such a change. The costs for fuel control presented in this preamble were generated under the assumption that the sulfur and aromatics content of the off-highway pool would not increase. To the extent the sulfur content of off-highway distillate does increase in reality, actual refining costs and emission reductions will be commensurately lower.

The air quality impacts of today's proposed rulemaking were also evaluated using a lead-surrogate model developed for previous analyses supporting diesel particulate emission standards (explained in the Draft RIA). Concentrations of various pollutants in urban areas of various sizes were projected. Model results indicate that by the year 2015, in large metropolitan areas (greater than 1,000,000 residents), annual arithmetic mean particulate concentrations would decrease by an additional 2.3–6.3 mg/m^3 as a result of sulfur control. Reductions in annual arithmetic mean concentrations of SO_2 ranging from 7.0–16.7 mg/m^3 are also projected. (These compare to current PM_{10} and SO_2 concentrations in urban areas ranging from 18–90 mg/m^3 and 3–67 mg/m^3, respectively.)

Results of similar modeling for subsequent diesel fuel aromatics control indicate that for large metropolitan areas (greater than 1,000,000 residents) in the year 2015, aromatics control would result in particulate reductions of only 0.01 mg/m^3. A more detailed analysis of the air quality impacts of today's proposal is presented in the Draft RIA.

D. Health Effects

As presented above, the fuel controls proposed today will result in reductions in emissions of diesel particulate, SO_2 and HC, and at the same time decrease the levels of ambient particles that are atmospheric products of SO_2 emissions. Because of the adverse health effects of PM, and SO_2, EPA has developed National Ambient Air Quality Standards (NAAQS). Insofar as an area is out of compliance with these standards, a reduction of these regulated pollutants would reduce health risk. The quantitative degree of benefit cannot be calculated precisely since it depends on current levels in a locality and the precise decrease in levels. Nevertheless, the health effects that can be caused by these compounds is very briefly discussed below to illustrate the utility of reducing any existing unacceptable risk.

Short- and long-term exposure to SO_2 in association with particles causes excess mortality and morbidity. People with cardiorespiratory diseases are at higher risk for mortality following long-term exposure. The increase in morbidity from long-term exposure is reflected as an increase in the prevalence of respiratory symptoms in children and adults and the frequency of respiratory illness in children. Acute exposure to low levels of SO$_2$ alone causes pulmonary function changes in asthmatics.

Upon atmospheric transformation, SO$_2$ can form a class of particles called acidic sulfates, which include ammonium sulfate (the least acidic), ammonium bisulfate, and sulfuric acid (the most acidic). Acute exposure of asthmatics to sulfuric acid can cause pulmonary function changes, and it appears that adolescent asthmatics may be more responsive. Acute exposure of animals and humans changes the ability of the lung to clear particles. Animals exposed for long terms to sulfuric acid exhibit alterations in lung function, structure, and clearance; a few of these changes may be permanent. Given the nature of these changes, some scientists have hypothesized (but not proved) that chronic sulfuric acid exposure may lead to chronic bronchitis. Preliminary estimates from an epidemiological study also raise concern about possible chronic effects. Another significant issue relates to the effects of exposure to sulfuric acid plus other chemicals. A 5-year exposure of animals to a combination of SO$_2$ plus sulfuric acid caused pulmonary function decrements and structural damage to the lungs. In some animal studies, acute exposure to sulfuric acid mixed with particles has been found to be synergistic for some types of pulmonary effects.

The non-cancer effects of exposure to low levels of diesel particles such as might occur in the ambient air are not well understood. High levels have been observed to cause effects in occupational situations and in animal studies, but for non-cancer effects, it is not currently possible to quantitatively extrapolate to lower levels.

The non-cancer health effects of exposure to light aromatic and short-chain aliphatic hydrocarbons are not well understood. Persons chronically exposed to some hydrocarbon mixtures have complained of dizziness, drowsiness, headaches, confusion, and general lethargic feeling. Animal studies of some hydrocarbons show neurotoxic and other effects. When such effects are observed, scientists often become concerned about whether children's developing nervous systems may be affected.

Although this discussion focuses on a few chemicals present in emissions that also serve as precursors to other potentially toxic atmospheric chemicals, there are likely to be more complex alterations that will have an unknown impact on health risk. For example, changes in the chemistry of a diesel particle has the potential to alter its health risk, *i.e.*, potency of a particle, which needs to be evaluated separately from a simple reduction in the mass of particles emitted. While it is clear that the emissions of some toxic chemicals will be decreased, the net health impact of all the changes involved can only be assessed with an appropriate research program.

Another area of concern related to diesel particulate control is that of cancer impacts. It might be argued that, since today's proposal will reduce sulfate emissions, there would be a corresponding increase in organic particulate emissions as manufacturers adjusted their control strategies to keep the same total emission rate. In fact, this assumption is the basis of the analysis of the cancer impacts contained in the draft RIA. However, based upon a more current assessment of expected manufacturer control strategies, the Agency no longer expects this to be the case. The position of engine manufacturers is that the 1994 standard is not feasible without sulfur control, in part because the sulfur itself contributes to the particulate level requiring control. The Agency, therefore, expects that the emission reductions associated with lower sulfur fuels will be used by manufacturers not to increase non-sulfate emissions, but to permit certification of their engines at levels sufficiently below the standard to ensure in-use compliance.

There is a second impact of lower sulfur fuels as it relates to available technology for controlling engine-out emissions. The switch to low sulfur fuel will allow the use of catalyzed devices, both catalyzed traps and flow through reduction catalysts, which could not be used without sulfur control. This change will tend to reduce the organic fraction of particulate emissions, because catalyzed devices operate preferentially on the organics. Thus, rather than increasing cancer incidences, sulfur control may actually reduce them a small amount. However, at this time there is inadequate information to make a quantitative estimate of the impact and update the analysis in the draft RIA. The Agency desires to make it clear that EPA no longer believes that the cancer impacts of sulfur control developed in the draft RIA are correct and specifically requests comment on this matter and how the question of cancer impacts should be analyzed. In addition, comments are requested regarding whether regulatory measures should be taken to encourage catalyzed devices for maximum control of the organic emissions.

The proposed cap on the aromatics levels of diesel fuel is not expected to have a significant impact on cancer incidence since it serves only to prevent the levels from increasing in the future. However, to the extent that average aromatics levels drop as the result of this cap, there could be a very small reduction in cancer due to both a decrease in total particulate emissions, and a decrease in the average carcinogenic potency of the particulates. More stringent control of aromatics would result in a somewhat larger reduction in cancer incidence. The cancer-related benefit of such stringent aromatics control is discussed further in Chapter 6 of the Regulatory Impact Analysis, and interested readers are referred to that chapter for more information. Unlike the analysis of the cancer impacts of sulfur, EPA believes the analysis for aromatics control is still fundamentally sound.

E. Visibility

Because particulate matter both scatters and absorbs light, a change in urban visibility is also projected to result from the diesel fuel modifications proposed in today's notice. The projected changes in urban ambient particulate concentrations described above were used in conjunction with a visibility model developed to support previous rulemakings implementing diesel particulate emission standards to project visibility impacts.

Baseline visibilities were determined for the year 1990 for four ranges of city size as well as for rural areas. The percent change in average visibility by the year 2015 for each population category was then determined assuming no change in non-distillate related particulate. It is projected that, with sulfur control, visibility in the year 2015 will improve by amounts ranging from 0.6 to 4.3 percent in urban areas, and will improve by 1.0 percent in rural areas, relative to baseline 2015 levels. An additional reduction of fuel aromatics to 20 volume percent would have little visibility impact.

VI. Cost-Effectiveness

The cost effectiveness of pollution control is defined as the net societal cost per ton of pollutant removed and is used to rank pollution control programs. The projections of pollutant reductions and the cost and credit elements described above were used in estimating

the cost-effectiveness of diesel fuel control according to a calendar year approach discounted over a 33-year period. The proposed reduction of diesel fuel sulfur would have impacts on the emissions of a number of different pollutants, including particulates (PM), HC, CO, and SO$_2$. However, since PM control is the major focus of this proposal, in the cost-effectiveness analysis the net cost per ton of PM controlled was determined and used in evaluating the various fuel control options. The net societal cost consists of the refinery cost of the fuel control and any fuel composition-related fuel economy penalty, less any societal cost savings "credits" resulting from fuel control. These societal cost savings include utilization of less expensive new engine technology, decreased fuel consumption as a result of reduced trap usage, and savings associated with reduced engine wear.

Since the fuel controls proposed in today's notice would affect different model years' vehicles at the same time, and to varying degrees, a calendar year approach to cost-effectiveness was used (*i.e.*, net costs and emission reductions were estimated for each calendar year). Since the effectiveness of the control changes dramatically over time (due to fleet and technology turnover) the cost-effectiveness was estimated over a 33-year period using a discount rate of 10 percent. The cost-effectiveness, including and excluding various wear credits and gaseous pollutant credits, is shown in Table 3.

TABLE 3.—33-YEAR URBAN COST-EFFECTIVENESS ANALYSIS

	Cost-Effectiveness ($/ton)
Sulfur Control	
Maximum wear credit included.	−66,148 to −19,253.
Minimum wear credit included.	−3,906 to 4,304.
No wear credit included.	2,82[illegible] to 6,773.
Aromatics Control	
Primary Analysis	310,751 to 560,378.
High Emission Reduction Sensitivity Analysis.	135,789 to 244,868.

As can be seen in Table 3, even if savings from reduced wear are not counted, the cost-effectiveness, of fuel sulfur control is at most $6,773 per ton, and is significantly less when engine wear credits are included. Table 3 shows that aromatics control is much less cost-effective than sulfur control (or the particulate standards themselves). The 33-year cost-effectiveness for aromatics control to 20 percent was calculated to be $310,000–560,000 per ton.

Intermediate sulfur control levels would be less costly to refiners. A small amount of sulfur removal can be obtained very inexpensively, since the necessary equipment already exists and need only be operated. However, any substantial degree of sulfur control will entail the building of new desulfurization capacity with roughly a constant cost per ton of sulfur removal. Since the resulting diesel emission reductions are proportional to the fuel sulfur level, the cost per ton of sulfurous emission controlled is relatively constant down to 0.05 weight percent.

The use of catalytic exhaust treatment devices requires fuels with very low sulfur levels, certainly below 0.10 weight percent and probably quite near the 0.05 weight percent level. Thus, for any sulfur level above 0.05 weight percent, much of the technology credit is lost and the cost-effectiveness would be worse than that for 0.05 weight percent. This, coupled with the oil and engine industries' own proposal of the 0.05 weight percent level, indicates that no lesser amount of control appears appropriate.

Likewise, a sulfur standard below 0.05 weight percent would not appear appropriate at this time. While such control is likely feasible for some combinations of refineries, crude oil slates, and product slates, EPA lacks evidence that such a standard would be feasible for all or even most refineries. Also, 0.05 weight percent appears to be sufficient to permit compliance with the 1994 diesel particulate standard.

With respect to aromatics control, EPA would expect some improvement in the cost-effectiveness of aromatics control as the standard were increased from 20 volume percent. However, like sulfur control, for any substantive degree of control, we expect such improvement to be much less than a factor of two, leaving the 33-year cost-effectiveness well above $150,000 per urban ton of PM control. Further, EPA's assessment is that fuel aromatics control is not necessary for compliance with emission standards, and, in fact, that any emissions effect, or overall environment benefit, would be small or negligible. Therefore, EPA believes it would be inappropriate to propose more stringent controls at this time.

At the same time, capping aromatics at current levels would likely entail only operational adjustments within the refinery and no need for new equipment. Coupled with control of only on-highway diesel fuel, we expect such a cap to entail little cost. EPA believes it is appropriate to propose such a cap today and has chosen a minimum cetane specification (recommended in the joint industry proposal) as a means of so doing. However, it is uncertain whether setting a cetane index specification is the most effective method of capping aromatics. As described more thoroughly in Section X of this preamble, EPA is requesting comments on the adequacy of this proposed specification as a means of capping aromatics.

VII. Leadtime

The effective date of the diesel fuel regulations proposed in today's rulemaking is based on two factors. One, refiners need time to design, purchase, and install the required processing equipment. Two, the benefits of sulfur control in expanding the technological options for compliance with the 1994 heavy-duty diesel particulate regulations make it highly desirable that today's proposed regulations take effect prior to the introduction of the 1994 model year. EPA contracted with SCI to study the leadtime necessary for complying with the proposed regulations, taking into account the potential burden to the refining industry of the RVP regulations proposed in 1987 (52 FR 31274). Considering the amount of capital equipment necessary, SCI concluded that, if on-highway and off-highway diesel fuel could be segregated, compliance could be achievable by late 1993, given promulgation of a final rule by mid-1990. If segregation of diesel fuels proved infeasible, SCI concluded that compliance might require a longer leadtime.

In the joint industry proposal submitted to EPA, the oil refiners proposed that diesel fuel containing no greater than 0.05 percent sulfur by weight could be supplied by October 1, 1993. The proposal indicated that segregation of on-highway and off-highway diesel would likely occur to some extent. Thus, both those organizations responsible for the joint industry proposal and SCI agree that compliance could take place by late 1993. Therefore, an effective date for today's proposed regulations of October 1, 1993 appears appropriate.

VIII. Enforcement Options and Selection

A. Introduction

The environmental goal of motor fuel regulation is to improve or protect air quality by controlling the type of fuel used in motor vehicles or motor vehicle

regulation, unless it is visibly dyed.

arises as to which fuel, or a combination

2. Enforcement Provisions

engines. Environmental benefits can be lost through misfueling, when a noncomplying or inappropriate fuel is used in a motor vehicle. Regulations could forbid misfueling itself or seek to prevent misfueling by controlling fuel distribution. To reach the environmental goal with the most efficient use of enforcement resources, motor fuel regulations are best targeted at the fuel distribution network.

As in all regulations controlling the marketing of motor fuels, the fact that motor fuel passes through the control of many parties, from refiner to retailer, before reaching the consumer, raises questions of responsibility and control when violations are identified. This aspect of the distribution system raises two principal issues pertaining to enforcement: (1) At what point in the distribution network should diesel fuel be required to meet standards, and (2) which parties should be held legally responsible for violations of these standards at the various points in the distribution network. Each of these issues will be discussed in turn.

B. Point of Application

An important consideration affecting enforcement is the issue of where in the distribution network standards will be applied. The options considered by the Agency in deciding where the diesel fuel standards should apply include:

1. At all sites in the distribution network;
2. Only sites under the control of "downstream" parties, including retail outlets and wholesale purchaser-consumers;
3. Only sites under the control of "upstream" parties, including refiners and importers;
4. Sites controlled by both "downstream" and "midstream" parties, including retail outlets, wholesale purchaser-consumers, blending facilities, bulk terminals, and bulk plants; and
5. Sites controlled by both "upstream" and "midstream" parties, including refineries, import and blending facilities, bulk terminals, and bulk plants.

In choosing among these options, some of the factors which were considered by the Agency were: (1) Which plan offers the best chance of preventing a noncomplying fuel from reaching consumers, (2) the amount of resources needed for successful enforcement of the regulations, taking into consideration the number of facilities that will have to be monitored and the difficulty of identifying the party who initially introduced the noncomplying fuel into the distribution network, and (3) which plan would most effectively encourage quality control measures and discourage fuel switching (the use of less expensive noncomplying diesel fuel).

Highway diesel engines can operate equally well on either off-highway or on-highway diesel fuel. Only on-highway diesel fuel, however, will bear the cost of additional processing required for compliance with today's proposed standards. Thus, it is likely that there will be a possibility of, and an economic incentive for, fuel switching at each point in the distribution network. Therefore, in order to ensure that unregulated diesel fuel is not used in highway vehicles, the Agency today proposes a diesel fuel standard that is applicable throughout the entire distribution network. This approach is consisted with that used in the lead in gasoline and recently promulgated volatility regulations.

C. Legal Responsibility for Violations

In general, there are three options for the assignment of legal responsibility for diesel fuel standards violations. The first option is to place legal responsibility only on the party who originally introduced the noncomplying diesel fuel into commerce. This would be the party who manufactured, blended, or initially mislabeled the noncomplying diesel fuel. Under this option, when a violation is found, the responsible party must be identified by tracing the noncomplying diesel fuel back through the distribution chain to its source.

A second option is to hold liable the regulated party offering for sale, supplying or transporting a noncomplying diesel fuel. Under this enforcement approach, the source of the noncomplying diesel fuel need not be identified. Every regulated party selling, supplying or transporting diesel fuel or offering to sell or supply, would effectively be responsible for monitoring the diesel fuel to verify that the fuel complies with standards.

The third option includes both types of liability described above but goes one step further to include a vicarious liability provision. Vicarious liability, for purposes of diesel fuel regulation, means that parties upstream in the distribution chain can be held responsible for violations which are found at downstream facilities over which they could exercise some control. vicarious liability raises a presumption of liability, that can be rebutted by the regulated party, as specified in the defenses included in the proposed regulations.

The Agency proposes that the third option, with the vicarious liability provisions, be implemented. This approach has been used by the Agency in its fuel contamination liability regulations (40 CFR 80.23). It has also been adopted in the recently promulgated volatility control regulations (40 CFR 80.27). While these two sets of regulations cover gasoline and include specifications different from those proposed in this regulation, essentially the same parties are covered by all three sets of regulations. Therefore, it is appropriate that these proposed regulations covering diesel fuel contain the same liability scheme which has previously been applied to the regulated parties. The commonality of these enforcement schemes simplifies the industry's ability to comply and enhances the Agency's enforcement of the regulations.

D. Compliance Monitoring

In the case of the lead in gasoline control regulations, industry compliance with the regulations is monitored through a combination of auditing and spot sampling in the field. The gasoline volatility regulations will be enforced primarily through spot sampling at all points in the distribution chain. Monitoring compliance with the diesel fuel standards, however, presents some enforcement problems which differ from those of gasoline. As the diesel fuel industry notes in the proposal it and other related industries and associations submitted to the Agency, the diesel fuel industry's past experience with the collection of fuel excise taxes has shown that the greater the number of suppliers and resellers, the more difficult, costly and ineffective auditing can be.

Another of the difficulties in verifying compliance with diesel fuel standards is distinguishing between diesel motor fuel which is intended for on-highway use and meets standards for on-highway diesel fuel, and diesel fuel which is intended for off-highway use and is not in compliance with on-highway diesel fuel standards. The sulfur content and cetane index of diesel fuel can only be determined through sophisticated laboratory tests which will make field compliance testing impossible.

To address this problem, the diesel fuel industry suggests that off-highway diesel fuel be dyed as a way of marking or labeling the off-highway diesel fuel. The Agency finds the industry's suggestion to be a practical one. Therefore, the Agency proposes to establish the presumption that any diesel fuel in the control of a regulated party is on-highway diesel fuel and subject to the standards of this proposed

regulation, unless it is visibly dyed. More specifically, EPA proposes that any diesel fuel which does not show visible evidence of being dyed with 1,4 dialkylamino-anthraquinone (which has a characteristic blue color and is currently used in some grades of aviation gasoline), will be considered to be subject to the proposed standards. Comments are requested on this approach, including the Agency's choice of dye and whether a concentration of dye should be specified along with the visible color requirement.

This scheme of dyeing will place the impetus on the industry to add the dye at the earliest possible point once the decision is made that the diesel fuel will be used for other than motor vehicle purposes. Once dye is added to the non-highway diesel fuel, it cannot be removed later in the distribution chain if the fuel is subsequently used for motor vehicles. Any mixing of complying and noncomplying blends will also be apparent. Requiring that on-highway diesel fuel be dyed, on the other hand, would permit distributors to wait to the last point in the distribution chain to dye the fuel, preventing EPA from enforcing the sulfur content and aromatics standards earlier in the distribution chain. However, with the off-highway fuel dyed, the decision to produce or import complying fuel will probably be made at the refinery or import facility and no dye would be added.

In addition to the usual control afforded by the use of dyes, the Agency will also collect diesel fuel samples at any point in the distribution chain. These samples will be collected according to the procedures outlined in Appendix G of these proposed regulations. These samples will then be tested according to the ASTM standard test methods for sulfur percentage (ASTM–2622–82) and cetane index (ASTM–976). The ASTM methods for determining cetane index and sulfur percentage will be incorporated by reference in the final rule.

IX. Diesel Engine Certification Fuel

EPA has consistently required that diesel fuel for certification (and subsequent compliance testing) be representative of commercially available diesel fuel. As such, it is appropriate to propose that the sulfur level of fuel used to certify 1994 and later engines be no more than 0.05 weight percent. (The current specification for aromatics and cetane appears adequate, so no change here appears necessary.) However, 1991–93 engines would operate on both current fuel (roughly 0.25 weight percent sulfur) and controlled fuel, so the question arises as to which fuel, or a combination thereof, should be used in certification.

The joint industry proposal requested that 1991–93 certification fuel contain no more than 0.05 weight percent sulfur. EPA believes this would be inappropriate since these engines would be operated on high sulfur fuel for much of their useful lives and their emissions could exceed the PM standards during this time, while just meeting the standards on low-sulfur fuel. However, it also appears inappropriate to ignore the fact that these engines would be operated on low-sulfur fuel for a portion of their useful lives. Thus, EPA believes it is appropriate to require these engines to certify on a fuel with a sulfur level representing an average of what will be used over the engines' useful life. We considered doing this for each model year individually, but this would be costly and very complex logistically, as each laboratory would have to maintain stocks of five diesel fuels for many years to come. Thus, we propose that a single average sulfur level fuel be used for 1991–93 certification. Based on mileage accumulation data taken from heavy-duty diesel vehicles, this average sulfur level is 0.10 weight percent.[1] Thus the certification levels of 1991–1993 model year engines would represent the average in-use emissions over the full useful life of these engines. It is important to note, however, that EPA believes that, for the reasons discussed previously, actual in-use emissions of these vehicles will not be affected by this change to the certification fuel.

X. Description of the Proposal

This section summarizes in detail the proposed control measures contained in today's notice. The detailed requirements may be found in their entirety in the proposed regulations published with today's notice.

A. Commercial Fuel Requirements

1. Standards

After September 30, 1993, all diesel fuel sold, supplied, offered for sale or supply, dispensed, or transported in any state for use in on-highway diesel vehicles shall contain no more than 0.05 percent sulfur by weight, and shall have a minimum cetane index of 40. EPA is aware that the effective date of compliance for refiness will be prior to September 30, 1993, because the on-highway diesel fuel must be fully available throughout the distribution system by that date.

2. Enforcement Provisions

a. *Overall Enforcement Scheme.* The proposed enforcement provisions in this notice are based on the requirement that on-highway diesel fuel have a cetane index number of at least 40 and that the percentage of sulfur by weight be no greater then 0.05 percent at all points in the distribution network. All parties in the distribution network are covered by these regulations, including refiners, importers, distributors, carriers, resellers, retail and wholesale purchaser-consumers. Any diesel fuel for use in motor vehicles must comply with these standards when introduced into commerce, sold, offered for sale, supplied, offered for supply, dispensed, or transported. Basically, once diesel fuel has been introduced into the distribution network, the fuel must comply with these standards at all points up to and including the time it leaves the pump.

The proposed regulations define cetane, cetane index, diesel fuel, sulfur percentage, refinery, retail outlet, distribution, reselling, wholesale purchaser-consumer and carrier. Methods of determining cetane index and sulfur percentage will be incorporated by reference to 40 CFR Part 80 and are ASTM standard test method and *7622–82*, respectively.

This notice also sets forth proposed regulations establishing presumptions of liability for parties found with noncomplying fuel. There is also a vicarious liability provision which holds certain upstream parties in the distribution network responsible for violations at downstream facilities over which they could have exercised some control. Defenses to vicarious liability are included in the proposed regulations.

b. *Sampling Methodology.* The proposed sampling methodology is set forth in appendix G. The sampling procedures include nozzle sampling, bottle sampling, tap sampling, and manual line sampling. The purpose of the sampling methodology is to assure that the sample taken is true and unaltered and is representative of the diesel fuel being tested.

c. *Testing Methodologies.* Two testing methodologies have been proposed. The first one, ASTM standard test method 2622–82, determines the percentage of sulfur in the diesel fuel by means of X-ray spectrometry. The second test, ASTM standard test method, is a method for estimating the ASTM cetane index of the diesel fuel from the API gravity and mid-boiling point.

The issue of what enforcement tolerance should be allowed when using these test methods will be addressed in a manner consistent with other mobile source related standards. The diesel fuel refiners and other regulated parties will be expected to meet the applicable sulfur and cetane limits as established by the regulations when finalized. They must take test variability into account in producing and marketing diesel fuel and cannot rely on the Agency to automatically provide an enforcement tolerance in addition to the absolute standards established for sulfur or cetane limits. If the sulfur content of motor vehicle diesel fuel were found to contain 0.06 weight percent sulfur and the applicable standard were 0.05 weight percent sulfur, this would be considered a violation of the regulatory standard that could subject liable parties to enforcement action.

---

[1] "Calculation of Average Fuel Sulfur Level of 1991–93 Model Year Heavy-Duty Diesels," Timothy Sprik, EPA, December, 1988.

d. *Liability provisions.* The proposed liability Provisions (40 CFR 80.29 through 80.31) are patterned after the liability scheme used in the Agency's lead contamination regulations, at 40 CFR 80.23 and are almost identical to the volatility regulations, at 40 CFR 80.27. One of the main features of these provisions is the presumption of liability where regulated parties are found offering for sale, supplying, or transporting diesel fuel which fails to meet the requirements for sulfur percentage or cetane index. It is the responsibility of the regulated party to monitor the diesel fuel which is being offered for sale, supplied or transported control to verify that the fuel complies with standards.

Another important feature of the diesel fuel enforcement provisions is the inclusion of vicarious liability provisions, much like those used successfully in the lead contamination regulations and recently promulgated in the volatility regulations. Vicarious liability means that parties upstream from the site of the violation can be held responsible for violations found at downstream facilities over which they can exercise some control. The proposed regulations will also extend vicarious liability for violations at non-branded retail outlet and wholesale purchaser-consumers to refiners and importers. This change from previous schemes places all parties on the same level in terms of oversight for assuring product quality. Years of enforcement experience with the gasoline regulations have shown that a far larger percentage of violations occur at non-branded facilities.

Defenses to vicarious liability are set forth in the proposed regulations. Basically, an upstream party can avoid vicarious liability if that party can show that the violation was caused by actions of someone other than that party's employees or agents. For the purpose of these proposed regulations, carries will be presumed to be the agents of distributors and are also presumptively liable. The specific evidence required to support this defense varies depending on which party is raising the defense, but in general a party must show proof of some kind of oversight program, such as records of testing on the diesel fuel or a contractual obligation between the upstream and the downstream parties involved.

B. Fuel Specifications for Vehicle Certification and Other Compliance Testing

Certification fuel used for 1991–1993 model year engines would contain 0.10 sulfur percentage by weight (%0.02 weight percent). Beginning with the 1994 model year, certification fuel would have a sulfur content ranging from 0.03 to 0.05 sulfur percentage by weight. All other compliance testing (e.g., recall, selective enforcement audits) would be conducted using test fuels containing the same amount of sulfur as the test fuel used in certifying the particular model year vehicle being tested. That is, 1991–1993 model year engines would be tested with fuel containing 0.10 sulfur percentage by weight (±0.02 weight percent) and 1994 and later model year engines would be tested with fuel having a sulfur content ranging from 0.03 to 0.05 sulfur percentage by weight.

C. Requests for Comment on Specific Issues

We request and encourage general and specific comments with supporting data and analysis on the following issues.

1. In the Draft RIA, the cost and feasibility of fuel sulfur and aromatics control was evaluated over the entire range of on-highway and off-highway distillate segregation scenarios. EPA requests comments on all elements of the refining cost analysis as presented in the Draft RIA. EPA specifically requests comments on the feasibility of and extent to which such segregation would likely take place, as well as the likely cost of so modifying the fuel distribution system. Comments on the amount of excess desulfurization capacity available and the time period over which it will be available are also requested. To the extent that increased capacity is required, comments are also requested on the potential for increased VOC or other emissions from refineries.

2. EPA has assessed the impact of a sulfur reduction on engine manufacturer ability to comply with the 1994 particulate standard. This assessment was based on projections of likely engine-out emissions and their composition and estimates of specific aftertreatment device costs, feasibilities and efficiencies. Please provide specific comments on each of the elements of this analysis.

3. Please comment on the effect of fuel sulfur reductions on diesel emissions.

4. We request comments on the effect of aromatics control on particulate, HC, CO, and NOx emissions, particularly the relative effect of different aromatic species (*e.g.*, mono-, di-, tri-cyclic) on emissions, and how this effect varies between older, high-emitting engines and future, low-emitting engines. We also request comment on whether cetane index or aromatics content is the cause of the occasional NOx emission effect and whether this effect would occur in-use with aromatics control.

5. We request specific comments on the assumptions and methodology used in the analysis of the effects of a fuel sulfur reduction on engine and vehicle life.

6. We request specific comments on EPA's analysis of the amount of urban sulfate particulate produced from SO_2 emissions.

7. We request comments on the credits used to value the control of emissions of gaseous pollutants in the cost effectiveness analysis presented in the Draft RIA.

8. An analysis of the potential economic benefits of trading and banking of sulfur credits in the context of this proposed regulation was performed for EPA by SCI. The SCI analysis was based on creating credits by providing fuel with lower sulfur levels than current average fuel sulfur content levels for each of the five PADDs. Results of the study (available in Public Docket A–86–03) showed that a significant savings to the refining industry would result if credits could be created and banked prior to the imposition of controls in October 1993. However, refining industry members, in the joint industry proposal to EPA, specifically stated that banking and trading would not be desirable. EPA's previous experience with lead trading and banking under the lead phasedown regulations has shown that enforcement of a bank and trading scheme applicable to sulfur content would be extremely difficult to enforce.

EPA requests comments on the merits and demerits of phased and "non-phased" (as defined by the SCI analysis) sulfur regulations, in which refiners could earn credits for achieving lower than certain specified levels of sulfur in diesel fuel prior to October 1, 1993, in exchange for permission to sell higher than 0.05 percent on-highway diesel fuel for a period thereafter. It should be recognized that if the engine exhaust characteristics of the pre- and post-1994 diesel fleet are likely to differ, full credit may not be granted, (*i.e.*, the credits could be required to be exchanged at other than 1:1 after 1994). EPA is interested in comments as to whether reductions in diesel sulfur prior to October 1, 1993, are sufficiently valuable to merit the implementation of a credit banking and trading system. Does the 0.10 sulfur percentage certification fuel specification for 1991–93 engines affect the desirability of credit trades? What reporting requirements would be necessary to enforce a banking and trading program?

9. As part of the enforcement scheme outlined in this preamble, EPA has proposed that diesel fuels intended exclusively for off-highway use could be distinguished by the addition of 1,4-dialkylamino-anthraquinone dye. The Agency is interested in comments from the industry as to the practicality of this approach. Specific issues upon which comments are sought include what specific dyes should be used and whether these dyes present any health-based risk either in the fuel or when combusted? Is any test beyond the proposed visibility standard required to identify dyed fuel? Will the inclusion of such a dye present any problems to the users of off-highway diesel fuel? Where in the distribution system can this approach be implemented. Is the dyeing rule feasible to apply to imported distillates? If so, how would it be implemented operationally? Do any countries currently use a dyeing program for diesel fuel control purpose? If so, what experience have the refiners had with the success of these programs? Cost?

10. EPA has proposed setting a minimum cetane index specification of 40 as a means of capping fuel aromatics at current levels. However, fuel survey data shows that diesel fuel aromatics correlates rather poorly with cetane index, and may not be a sufficient safeguard against future aromatics increases. EPA requests specific comments on the effectiveness with which the Proposed cetane index specification would control fuel aromatics and also on the merits and demerits of other possible means of capping fuel aromatics, including direct measurement of diesel aromatics by Fluorescent Indicator Adsorption (FIA). EPA requests comments on whether the level of such a cap should be set at current average aromatic levels (requiring the control of fuels which are currently higher than average), or at less stringent levels (e.g., 75th percentile, 90th percentile, etc.).

XI. Public Participation

Comments and the Public Docket

As in past rulemaking actions, EPA desires full public participation in arriving at our final decisions. In addition to those areas where specific comment has been requested earlier in this preamble, EPA solicits comments on all aspects of today's proposal from all interested parties. Wherever applicable, full supporting data and detailed analyses should also be submitted to allow EPA to make maximum use of the comments. Commenters are especially encouraged to provide specific suggestions for changes to any aspects of the proposal that they believe need to be modified or improved. All comments should be directed to the EPA Air Docket Section, Docket No. A–86–03 (see "ADDRESSES").

The Agency will base its decision on the discloseable public record. However, the Agency realizes that some manufacturers may want EPA to consider pertinent information that may be proprietary. Commenters desiring to submit proprietary information for consideration should clearly distinguish such information from other comments to the greatest possible extent, and clearly label it "Confidential Business Information." Submissions containing such proprietary information should be sent directly to the contact person listed above, and not to the public docket, to ensure that proprietary information is not inadvertently placed in the docket. If a commenter wants EPA to base the final rule in part on a submission labeled as confidential business information, then a nonconfidential version of the document which summarizes the key data or information should be sent to the docket.

Information covered by a claim of confidentiality will be disclosed by EPA only to the extent allowed and by the procedures set forth in 40 CFR Part 2. If no claim of confidentiality accompanies the submission when it is received by EPA, it may be made available to the public without further notice to the commenter.

XII. Statutory Authority

Authority for the actions proposed in this notice is granted to EPA by sections 114, 202, 206, 207, 208, 211, and 301 of the Clean Air Act (42 U.S.C. 7414, 7521, 7525, 7541, 7542, 7545, and 7601).

XIII. List of Subjects

40 CFR Part 80

Fuel additives, Diesel fuel, Motor vehicle pollution, Penalties, Reporting and recordkeeping requirements.

40 CFR Part 86

Administrative practice and procedures, Air pollution control, Diesel fuel, Motor vehicles, Labeling, Motor vehicle pollution, Reporting and recordkeeping requirements.

XIV. Regulatory Flexibility Analysis

Section 605 of the Regulatory Flexibility Act requires EPA to perform an analysis of the impact of proposed regulations on small entities when a significant impact on a substantial number of such entities would occur. An analysis of this issue was performed for EPA by SCI. According to the SCI report, 74 refineries, representing 8.4 percent of the total U.S. crude distillation capacity, were classified as small refiners at the beginning of 1988. SCI used aggregate refinery modeling to estimate the cost of modifying fuel quality at these facilities. The modeling results showed that, for those refineries which could finance the necessary equipment, sulfur control costs were nearly the same for small refiners as for the rest of the U.S. refining industry. Control costs to reduce both sulfur and aromatics were from 26 to 51 percent higher for small refiners.

SCI did state that the investments required for fuel control might be difficult for some small refiners to finance, and might cause some small refiners to discontinue the production of highway diesel fuel. This should not be an insurmountable problem, however, since these refiners should be able to shift their product slates to meet "off-highway" distillate needs in their geographic area, while other refiners with hydrodesulfurization capacity (or the financial ability to build it) would increase "on-highway" diesel production. The request for product slate flexibility in the joint industry proposal suggests that this approach would be taken by some refiners. Thus, this proposed regulation should not have a significant impact on a substantial number of small entities, if segregation in the distribution system takes place.

XV. Administrative Designation and Regulatory Analysis

The Administrator has determined that this proposed action would constitute a major regulation, and accordingly a Draft Regulatory Impact Analysis has been prepared as required under Executive Order 12291. This analysis includes detailed assessments of the estimated economic and environmental impacts of the regulations proposed here, as well as thorough analyses of the technological feasibility of the proposed emission standards and other regulatory provisions and the alternatives that were considered in the development of this proposal.

The Draft Regulatory Impact Analysis has been placed in the public docket referenced at the beginning of today's notice. In addition, interested parties may obtain single copies through a written request to the public contact listed previously.

This proposed regulation was submitted to the Office of Management and Budget (OMB) for review as required by Executive Order 12291. Any written comments from OMB and any EPA response to those comments are in the public docket for this rulemaking.

XVI. Reporting and Recordkeeping Requirements

This proposed rulemaking does not impose any reporting or record keeping requirements, and thus is not subject to the Paperwork Reduction Act, 44 U.S.C. 3501 et seq.

Dated: August 11, 1989.

William K. Reilly,

Administrator.

For the reasons set out in the preamble, parts 80 and 86 of Title 40 of the Code of Federal Regulations are proposed to be amended as follows:

PART 80—REGULATION OF FUELS AND FUEL ADDITIVES

1. The authority citation for part 80 continues to read as follows:

Authority: Sections 114, 211 and 301(a) of the Clean Air Act as amended, 42 U.S.C. 7414, 7545 and 7601(a).

2. Section 80.2 is proposed to be amended by adding new paragraphs (w), (x), (y), (z), (aa), (bb), (cc), (dd) and (ee) to read as follows:

80.2 Definitions.

* * * * *

(w) "Cetane index" or "Calculated cetane index" is a means for directly estimating the ASTM cetane number (a number representing the ignition properties of diesel engine fuel oils) of distillate fuels from API gravity and mid-boiling point.

(x) "Diesel fuel" means any fuel sold in any State and suitable for use in diesel motor vehicles and diesel motor vehicle engines, and which is commonly or commercially known or sold as diesel fuel.

(y) "Sulfur percentage" is the percentage of sulfur by weight in diesel fuel as determined by ASTM standard test method D–2622–82.

(z) "Refinery" means a plant at which diesel fuel is produced.

(aa) "Retail outlet" means any establishment at which diesel fuel is sold or offered for sale for use in motor vehicles.

(bb) "Distributor" means any person who transports or stores or causes the transportation or storage of diesel fuel at any point between any diesel fuel refinery and any retail outlet or wholesale purchaser-consumer's facilities.

(cc) "Reseller" means any person who purchases diesel fuel identified by the corporate, trade, or brand name of a refiner from such refiner or a distributor and resells or transfers it to retailers or wholesale purchaser-consumers displaying the refiner's brand, and whose assets or facilities are not substantially owned, leased, or controlled by such refiner.

(dd) "Wholesale purchaser-consumer" means any organization that is an ultimate consumer of diesel fuel and which purchases or obtains diesel fuel from a supplier for use in motor vehicles and receives delivery of that product into a storage tank of at least 550-gallon capacity substantially under the control of that organization.

(ee) "Carrier" means any distributor who transports or stores or causes the transportation or storage of diesel fuel without taking title to or otherwise altering either the quality or quanity of the diesel fuel.

3. New § 80.29 is proposed to be added, to read as follows:

§ 80.29 Controls and prohibitions on diesel fuel quality.

(a) *Prohibited activities.* Beginning October 1, 1993, no refiner, importer, distributor, reseller, carrier, retailer or wholesale purchaser-consumer shall manufacture, introduce into commerce, sell, offer for sale, supply, dispense, offer for supply, or transport any diesel fuel for use in motor vehicles unless the diesel fuel is free of visible evidence of the dye 1,4-dialkylamino-anthraquinone and has a cetane index of at least 40 and a sulfur percentage no greater than 0.05 percent.

(b) *Determination of compliance.* Any diesel fuel which does not show visible evidence of being dyed with 1,4-dialkylamino-anthraquinone (which has a characteristic blue color) shall be considered to be available for use in diesel motor vehicles and motor vehicle engines, and shall be subject to the prohibitions of paragraph (a) of this section. Compliance with the standards listed in paragraph (a) of this section shall be determined by the use of one of the sampling methodologies specified in Appendix G to this part.

Note: The testing methodologies specified for sulfur percentage, ASTM D–2622–82, and cetane index, ASTM D–976, will be incorporated by reference in the final regulation.

(c) *Liability.* Liability for violations of paragraph (a) of this section shall be determined according to the provisions of § 80.30.

(d) *Penalties.* Penalties for violations of paragraph (a) of this section shall be determined according to the provisions of § 80.5.

4. New § 80.30 is proposed to be added, to read as follows:

§ 80.30 Liability for violations of diesel fuel control and prohibitions.

(a) *Violations at refiners or importers facilities.* Where a violation of a diesel fuel standard set forth in § 80.29 is detected at a refinery or importer's facility, the refiner or importer shall be deemed in violation.

(b) *Violations at carrier facilities.* Where a violation of a diesel fuel standard set forth in § 80.29 is detected at a carrier's facility, whether in a transport vehicle, in a storage facility, or elsewhere at the facility, the following parties shall be deemed in violation:

(1) The carrier, except as provided in paragraph (g)(1) of this section; and

(2) The refiner or importer at whose refinery or import facility the diesel fuel was produced or imported, except as provided in paragraph (g)(2) of this section.

(c) *Violations at branded distributor or reseller facilities.* Where a violation of a diesel fuel standard set forth in § 80.29 is detected at a distributor or reseller's facility which is operating under the corporate, trade or brand name of a refiner or any of its marketing subsidiaries, the following parties shall be deemed in violation:

(1) The distributor or reseller, except as provided in paragraph (g)(3) of this section;

(2) The carrier (if any), if the carrier caused the diesel fuel to violate the standard by fuel switching, blending, mislabeling, or any other means; and

(3) The refiner under whose corporate, trade, or brand name (or that of any of its marketing subsidiaries) the distributor or reseller is operating, except as provided in paragraph (g)(4) of this section

---

(d) *Violations at unbranded distributor facilities.* Where a violation of a diesel fuel standard set forth in § 80.29 is detected at the facility of a distributor not operating under a refiner's corporate, trade, or brand name, or that of any of its marketing subsidiaries, the following shall be deemed in violation:

(1) The distributor, except as provided in paragraph (g)(3) of this section;

(2) The carrier (if any), if the carrier caused the diesel fuel to violate the standard by fuel switching, blending, mislabeling, or any other means; and

(3) The refiner or importer at whose refinery or import facility the diesel fuel was produced or imported, except as provided in paragraph (g)(2) of this section.

(e) *Violations at branded retail outlets or wholesale purchaser-consumer facilities.* Where a violation of a diesel fuel standard set forth in § 80.29 is detected at a retail outlet or at a wholesale purchaser-consumer facility displaying the corporate, trade, or brand name of a refiner or any of its marketing subsidiaries, the following parties shall be deemed in violation:

(1) The retailer or wholesale purchaser-consumer, except as provided in paragraph (g)(5) of this section;

(2) The distributor and/or reseller (if any), except as provided in paragraph (g)(3) of this section;

(3) The carrier (if any), if the carrier caused the diesel fuel to violate the standard by fuel switching, blending, mislabeling, or any other means; and

(4) The refiner whose corporate, trade, or brand name, or that of any of its marketing subsidiaries, is displayed at the retail outlet or wholesale purchaser-consumer facility, except as provided in paragraph (g)(4) of this section.

(f) *Violations at unbranded retail outlets or wholesale purchaser-consumer facilities.* Where a violation of a diesel fuel standard set forth in § 80.29 is detected at a retail outlet or at a wholesale purchaser-consumer facility not displaying the corporate, trade, or brand name of a refiner or any of its marketing subsidiaries, the following parties shall be deemed in violation:

(1) The retailer or wholesale purchaser-consumer, except as provided in paragraph (g)(5) of this section;

(2) The distributor (if any), except as provided in paragraph (g)(3) of this section;

(3) The carrier (if any), if the carrier caused the diesel fuel to violate the standard by fuel switching, blending, mislabeling, or any other mean; and

(4) The refiner or importer at whose refinery or import facility the diesel fuel was produced or imported, except as provided in paragraph (g)(2) of this section.

(g) *Defenses.* (1) In any case in which a carrier would be in violation under paragraph (b)(1) of this section, the carrier shall not be deemed in violation if he can demonstrate:

(i) Bills of lading, invoices, delivery tickets, loading tickets or other documents from the refiner or importer at whose refinery or import facility the diesel fuel was produced or imported, or the carrier, reseller, or distributor from whom the diesel fuel was received, which represented to the carrier that the diesel fuel was in compliance with the diesel fuel standards; and

(ii) Evidence of an oversight program conducted by the carrier, for monitoring the diesel fuel stored or transported by that carrier, such as periodic sampling and testing of the cetane index and sulfur percentage of incoming diesel fuel, or any other evidence that shows that care was taken to avoid blending the diesel fuel with anything which would change its cetane index or sulfur percentage; and

(iii) That the violation was not caused by the carrier or his employee or agent.

(2) In any case in which a refiner or importer would be in violation under paragraph (b)(2), (d)(3), or (f)(4) of this section, the refiner or importer shall not be deemed in violation if he can demonstrate:

(i) That the violation was not caused by him or his employee or agent; and

(ii) Test results, performed in accordance with the sampling and testing methodologies set forth in Appendix G to this part, ASTM test method D–2622–82 for sulfur percentage, or ASTM test method D–976 for cetane index, which evidence that the diesel fuel determined to be in violation was in compliance with the diesel fuel standards when it was delivered to the next party in the distribution scheme.

(3) In any case in which a distributor or reseller would be in violation under paragraph (c)(1), (d)(1), (e)(2) or (f)(2) of this section, the distributor or reseller shall not be deemed in violation if he can demonstrate:

(i) That the violation was not caused by him or his employee or agent; and

(ii) Bills of lading, invoices, delivery tickets, loading tickets or other documents from the refiner at whose refinery the diesel fuel was produced, the importer at whose facility the diesel fuel was imported, or the carrier, reseller or distributor from whom the diesel fuel was received, which represented to the distributor or reseller that the diesel fuel was in compliance with the diesel fuel standards when delivered to the distributor or reseller; and

(iii) Evidence of an oversight program conducted by the distributor or reseller, such as periodic sampling and testing of diesel fuel, for monitoring the sulfur percentage and cetane index of the diesel fuel that the distributor or reseller sells, supplies, offers for sale or supply, or transports.

(4) In any case in which a refiner would be in violation under paragraph (c)(3) or (e)(4) of this section, the refiner shall not be deemed in violation if he can demonstrate all of the following:

(i) Test results, performed in accordance with the sampling and testing methodologies set forth in Appendix G to this part, ASTM test method D–2622–82 for sulfur percentage, or ASTM test method D–976 for cetane index, at the refinery at which the diesel fuel was produced, which evidence that the diesel fuel determined to be in violation was in compliance with the diesel fuel standards when transported from the refinery;

(ii) That the violation was not caused by him or his employee or agent; and

(iii) That the violation:

(A) Was caused by an act in violation of law (other than the Act or this part), or an act of sabotage or vandalism, whether or not such acts are violations of law in the jurisdiction where the violation of the requirements of this part occurred, or

(B) Was caused by the action of a reseller or a retailer supplied by such reseller, in violation of a contractual undertaking imposed by the refiner on such reseller designed to prevent such action, and despite reasonable efforts by the refiner (such as periodic sampling and testing) to insure compliance with such contractual obligation, or

(C) Was caused by the action of a retailer who is supplied directly by the refiner (and not by a reseller), in violation of a contractual undertaking imposed by the refiner on such retailer designed to prevent such action, and despite reasonable efforts by the refiner (such as periodic sampling and testing) to insure compliance with such contractual obligation, or

(D) Was caused by the action of a distributor subject to a contract with the refiner for transportation of diesel fuel from a terminal to a distributor, retailer or wholesale purchaser-consumer, in violation of a contractual undertaking imposed by the refiner on such distributor designed to prevent such action, and despite reasonable efforts by the refiner (such as periodic sampling and testing) to ensure compliance with such contractual obligation, or

OL

(E) Was caused by a carrier or other distributor not subject to a contract with the refiner but engaged by him for transportation of diesel fuel from a terminal to a distributor, retailer or wholesale purchaser-consumer, despite reasonable efforts by the refiner (such as specification or inspection of equipment) to prevent such action, or

(F) Occurred at a wholesale purchaser-consumer facility: Provided, however, that if such wholesale purchaser-consumer was supplied by a reseller, the refiner must demonstrate that the violation could not have been prevented by such reseller's compliance with a contractual undertaking imposed by the refiner on such reseller as provided in paragraph (g)(4)(iii)(B) of this section.

(iv) In paragraphs (g)(4)(iii) (A) through (E) of this section, the term "was caused" means that the refiner must demonstrate by reasonably specific showings, by direct or circumstantial evidence, that the violation was caused or must have been caused by another.

(5) In any case in which a retailer or wholesale purchaser-consumer would be in violation under paragraph (e)(1) or (f)(1) of this section, the retailer or wholesale purchaser-consumer shall not be deemed in violation if he can demonstrate that the violation was not caused by him or his employee or agent.

(6) In paragraphs (g)(1)(iii), (g)(2)(i), (g)(3)(i), (g)(4)(ii) and (g)(5) of this section, the respective party must demonstrate by reasonably specific showings, by direct or circumstantial evidence, that it or its employee or agent did not cause the violation.

5. New Appendix C is proposed to be added to read as follows:

Appendix C—Sampling Procedures for Diesel Fuel

1. *Scope*

1.1 This method covers procedures for obtaining representative samples of diesel fuel for the purpose of testing for compliance with the cetane index and sulfur percentage standards set forth in § 80.29.

2. *Summary of Method*

2.1 It is necessary that the samples be truly representative of the diesel fuel in question. The precautions required to ensure the representative character of the samples are numerous and depend upon the tank, carrier, container or line from which the sample is being obtained, the type and cleanliness of the sample container, and the sampling procedures that are to be used. A summary of the sampling procedures and their application is presented in table 1. Each procedure is suitable for sampling a material under definite storage, transportation, or container conditions. The basic principle of each procedure is to obtain a sample in such manner and from such locations in the tank or other container that the sample will be truly representative of the diesel fuel.

3. *Description of Terms*

3.1 "Average sample" is one that consists of proportionate parts from all sections of the container.

3.2 "All-levels sample" is one obtained by submerging a stoppered beaker or bottle to a point as near as possible to the draw-off level, then opening the sampler and raising it at a rate such that it is about ¾ full (maximum 85 percent) as it emerges from the liquid. An all-levels sample is not necessarily an average sample because the tank volume may not be proportional to the depth and because the operator may not be able to raise the sampler at the variable rate required for proportionate filling. The rate of filling is proportional to the square root of the depth of immersion.

3.3 "Running sample" is one obtained by lowering an unstoppered beaker or bottle from the top of the gasoline to the level of the bottom of the outlet connection or swing line, and returning it to the top of the top of the diesel fuel at a uniform rate of speed such that the beaker or bottle is about ¾ full when withdrawn from the diesel fuel.

3.4 "Spot sample" is one obtained at some specific location in the tank by means of a thief bottle, or beaker.

3.5 "Top sample" is a spot sample obtained 6 inches (150 mm) below the top surface of the liquid (Figure 1).

3.6 "Upper sample" is a spot sample taken at the mid-point of the upper third of the tank contents (Figure 1).

3.7 "Middle sample" is a spot sample obtained from the middle of the tank contents (Figure 1).

3.8 "Lower sample" is a spot sample obtained at the level of the fixed tank outlet or the swing line outlet (Figure 1).

3.9 "Clearance sample" is a spot sample taken 4 inches (100 mm) below the level of the tank outlet (Figure 1).

3.10 "Bottom sample" is one obtained from the material on the bottom surface of the tank, container, or line at its lowest point.

3.11 "Drain sample" is one obtained from the draw-off or discharge valve. Occasionally, a drain sample may be the same as a bottom sample, as in the case of a tank car.

3.12 "Continuous sample" is one obtained from a pipeline in such manner as to give a representative average of a moving stream.

3.13 "Mixed sample" is one obtained after mixing or vigorously stirring the contents of the original container, and then pouring out or drawing off the quantity desired.

3.14 "Nozzle sample" is one obtained from a diesel pump nozzle which dispenses diesel fuel from a storage tank at a retail outlet or a wholesale purchaser-consumer facility.

4. *Sample Containers*

4.1 Sample containers may be clear or brown glass bottles, or cans. The clear glass bottle is advantageous because it may be examined visually for cleanliness, and also allows visual inspection of the sample for free water or solid impurities. The brown glass bottle affords some protection from light. The only cans permissible are those with the seams soldered on the exterior surface with a flux of rosin in a suitable solvent. Such a flux is easily removed with gasoline, whereas many others are very difficult to remove.

4.2 Container closure. Cork, rubber or glass stoppers, or screw caps of plastic or metal, may be used for glass bottles; screw caps only shall be used for cans to provide a vapor-tight closure seal. Any closure method will be satsifactory as long as no leakage will occur nor will the stopper or cap affect sample results.

4.3 Cleaning procedure. All sample containers must be absolutely clean and free of water, dirt, lint, washing compounds, naphthas, or other solvents, soldering fluxes or acids, corrosion, rust, and oil.

5. Regular *Sampling Apparatus*

5.1 Sampling apparatus is described in detail under each of the specific sampling procedures. Clean, dry, and free all sampling apparatus from any substance that might contaminate the material, using the procedure described in 4.3.

6. *Time and Place of Sampling*

6.1 When loading or discharging diesel fuel, take samples from both shipping and receiving tanks, and from the pipeline if required.

6.2 Ship or barge tanks. Sample each product after the vessel is loaded or just before unloading.

6.3 Tank cars. Sample the product after the car is loaded or just before unloading.

Note: When taking samples from tanks suspected of containing flammable atmospheres, precautions should be taken to guard against ignitions due to static electricity. Metal or conductive objects, such as gage tapes, sample containers, and thermometers, should not be lowered into or suspended in a compartment or tank which is being filled or immediately after cessation of pumping. A waiting period of approximately one minute will generally permit a substantial relaxation of the electrostatic charge; under certain conditions a longer period may be deemed advisable.

7. *Obtaining Samples*

7.1 Directions for sampling cannot be made explicit enough to cover all cases. Extreme care and good judgement are necessary to ensure samples that represent the general character and average condition of the material. Clean hands are important. Clean gloves may be worn but only when absolutely necessary, such as in cold weather, or when handling materials at high temperature, or for reasons of safety. Select wiping cloths so that lint is not introduced, contaminating samples.

7.2 As many petroleum vapors are toxic and flammable, avoid breathing them or igniting them from an open flame or a spark produced by static. Follow all safety precautions specific to the material being sampled.

8. *Handling Samples*

8.1 Container outage. Never completely fill a sample container, but allow adequate room for expansion, taking into consideration the temperature of the liquid at the time of filling and the probable maximum temperature to which the filled container may be subjected.

9. *Shipping Samples*

9.1 To prevent loss of liquid during shipment, and to protect against moisture and dust, cover with suitable vapor tight caps. The caps of all containers must be screwed down tightly and checked for leakage. Postal and express office regulations applying to the shipment of flammable liquids must be observed.

10. *Labeling Sample Containers*

10.1 Label the container immediately after a sample is obtained. Use waterproof and oilproof ink or a pencil hard enough to dent the tag, since soft pencil and ordinary ink markings are subject to obliteration from moisture, oil smearing and handling. Include the following information:

10.1.1 Date and time (the period elapsed during continuous sampling);

10.1.2 Name of the sample;

10 1.3 Name or number and owner of the vessel, car, or container;

10.1.4 Brand and grade of material; and

10.1.5 Reference symbol or identification number.

11. *Sampling procedures*

11.1 The standard sampling procedures described in this method are summarized in Table 1. Alternative sampling procedures may be used if a mutually satisfactory agreement has been reached by the party(ies) involved and EPA and such agreement has been put in writing and signed by authorized officials.

TABLE 1.—SUMMARY OF DIESEL FUEL SAMPLING PROCEDURES AND APPLICABILITY

Type of Container	Procedure	Paragraph
Storage tanks, ship and barge tanks, tank cars, tank trucks.	Bottle sampling	11.2
Storage tanks with taps.	Tap sampling	11.3
Pipe and lines	Continuous line sampling.	11.4
Retail outlet and whole-sale purchaser-consumer facility storage tanks.	Nozzle sampling	11.5

11.2 Bottle or beaker sampling. The bottle or beaker sampling procedure is applicable for sampling liquids of 16 pounds (1.12 kgf/cm^2) RVP or less in tank cars, tank trucks, shore tanks, ship tanks, and barge tanks.

11.2.1 Apparatus. A suitable sampling bottle or beaker as shown in Figure 2 is required

11.2.2 Procedure.

11.2.2.1 All-levels sample. Lower the weighted, stoppered bottle or beaker as near as possible to the draw-off level, pull-out the stopper with a sharp jerk of the cord or chain and raise the bottle at a uniform rate so that it is about ¾ full as it emerges from the liquid.

11.2.2.2 Running sample. Lower the unstoppered bottles or beaker as near as possible to the level of the bottom of the outlet connection or swing line and then raise the bottle or beaker to the top of the gasoline at a uniform rate of speed such that it is about ¾ full when withdrawn from the diesel fuel.

11.2.2.3 Upper, middle, and lower samples. Lower the weighted, stoppered bottle to the proper depths (Figure 1) as follows:

Upper sample—middle of upper third of the tank contents

Middle sample—middle of the tank contents

Lower sample—level of the fixed tank outlet or the swing-line outlet

At the selected level pull out the stopper with a sharp jerk of the cord or chain and allow the bottle or beaker to fill completely, as evidenced by the cessation of air bubbles When full, raise the bottle or beaker, pour off a small amount, and stopper immediately.

11.2.2 4 Top sample. Obtain this sample (Figure 1) in the same manner as specified in 11.2.2.3 but at six inches (150 mm) below the top surface of the tank contents.

11.2.2.5 Handling. Stopper and label bottle samples immediately after taking them, and deliver to the laboratory in the original sampling bottles.

11.3 Tap sampling. The tap sampling procedure is applicable for sampling liquids of twenty-six pounds (1.83 kgf/cm^2) RVP or less in tanks which are equipped with suitable sampling taps or lines. The assembly for tap sampling is shown in Figure 3.

11.3.1 Apparatus.

11.3.1.1 Tank taps. The tank should be equipped with at least three sampling taps placed equidistant throughout the tank height and extending at least three feet (0.9 meter) inside the tank shell. A standard ¼ inch pipe with suitable valve is satisfactory.

11.3.1.2 Tube. A delivery tube that will not contaminate the product being sampled and long enough to reach to the bottom of the sample container is required o allow submerged filling.

11.3.1.3 Sample containers. Use clean, dry glass bottles of convenient size and strength or metal containers to receive the samples.

11.3.2 Procedure.

11.3.2.1 Before a sample is drawn, flush the tap (or gage glass draincock) and line until they are purged completely Connect the clean delivery tube to the tap. Draw upper, middle, or lower samples directly from the respective taps after the flushing operation. Stopper and label the sample container immediately after filling, and deliver it to the laboratory.

11.4 Continuous sampling. The continuous sampling procedure is applicable for sampling liquids of 16 pounds (1.12 kgf/cm^2) RVP or less and semiliquids in pipelines, filling lines, and transfer lines. The continuous sampling may be done manually or by using automatic devices.

11.4.1 Apparatus.

11.4.1.1 Sampling probe. The function of the sampling probe is to withdraw from the flow stream a portion that will be representative of the entire stream. The apparatus assembly for continuous sampling is shown in Figure 4. Probe designs that are commonly used are as follows:

11.4.1.1.1 A tube extending to the center of the line and beveled at a 45 degree angle facing upstream (Figure 4(a)).

11.4.1.1.2 A long-radius forged elbow or pipe bend extending to the center line of the pipe and facing upstream. The end of the probe should be reamed to give a sharp entrance edge (Figure 4(b)).

11.4.1.1.3 A closed-end tube with a round orifice spaced near the closed end which should be positioned in such a way that the orifice is in the center of the pipeline and is facing the stream as shown in Figure 4(c).

11.4.1.2 Probe location. Since the fluid to be sampled may not in all cases be homogeneous, the location, the position and the size of the sampling probe should be such as to minimize stratification or dropping out of heavier particles within the tube or the displacement of the product within the tube as a result of variation in gravity of the flowing stream. The sampling probe should be located preferably in a vertical run of pipe and as near as practicable to the point where the product passes to the receiver. The probe should always be in a horizontal position.

11.4.1.2.1 The sampling lines should be as short as practicable and should be cleared before any samples are taken.

11.4.1.2.2 Where adequate flowing velocity is not available, a suitable device for mixing the fluid flow to ensure a homogeneous mixture at all rates of flow and to eliminate stratification should be installed upstream of the sampling tap. Some effective devices for obtaining a homogeneous mixture are as follows: Reduction in pipe size; a series of baffles; orifice or perforated plate; and a combination of any of these methods.

11.4.1.2.3 The design or sizing of these devices is optional with the user, as long as the flow past the sampling point is homogeneous and stratification is eliminated.

11.4.1.3 To control the rate at which the sample is withdrawn, the probe or probes should be fitted with valves or plug cocks.

11.4.1.4 Automatic sampling devices that meet the standards set out in 11.4.1.5 may be used in obtaining samples of diesel fuel. The quality of sample collected must be of sufficient size for analysis, and its composition should be identical with the composition of the batch flowing in the line while the sample is being taken. An automatic sampler installation necessarily includes not only the automatic sampling device that extracts the samples from the line, but also a suitable probe, connecting lines, auxiliary equipment, and a container in which the sample is collected. Automatic samplers may be classified as follows:

11.4.1.4.1 Continuous sampler, time cycle (nonproportional) type. A sampler designed and operated in such a manner that it transfers equal increments of liquid from the pipeline to the sample container at a uniform rate of one or more increments per minute is a continuous sampler.

11.4.1.4.2 Continuous sampler, flow responsive (proportional) type. A sampler that is designed and operated in such a manner that it will automatically adjust the quantity of sample in proportion to the rate of flow is a flow-responsive (proportional) sampler. Adjustment of the quantity of sample may be made either by varying the frequency of transferring equal increments of sample to the sample container, or by varying the volume of the increments while maintaining a constant frequency of transferring the increments to the sample container. The apparatus assembly for continuous sampling is shown in Figure 4.

11.4.1.4.3 Intermittent sampler. A sampler that is designed and operated in such a manner that it transfers equal increments of liquid from a pipeline to the sample container at a uniform rate of less than one increment per minute is an intermittent sampler.

11.4.1.5 Standards of installation. Automatic sampler installations should meet all safety requirements in the plant or area where used, and should comply with American National Standard Code for Pressure Piping, and other applicable codes (ANSI B31.1). The sampler should be so installed as to provide ample access space for inspection and maintenance.

11.4.1.5.1 Small lines connecting various elements of the installation should be so arranged that complete purging of the automatic sampler and of all lines can be accomplished effectively. All fluid remaining in the sampler and the lines from the preceding sampling cycle should be purged immediately before the start of any given sampling operation.

11.4.1.5.2 In those cases where the sampler design is such that complete purging of the sampling lines and the sampler is not possible, a small pump should be installed in order to circulate a continuous stream from the sampling tube past or through the sampler and back into the line. The automatic sampler should then withdraw the sample from the sidestream through the shortest possible connection.

11.4 1.5.3 Under certain conditions, there may be a tendency for water and heavy particles to drop out in the discharge line from the sampling device and appear in the sample container during some subsequent sampling period. To circumvent this possibility, the discharge pipe from the sampling device should be free of pockets or enlarged pipe areas, and preferably should be pitched downward to the sample container.

11.4.1.5.4 To ensure clean, free-flowing lines, piping should be designed for periodic cleaning.

11.4.1.6 Field calibration. Composite samples obtained from the automatic sampler installation should be verified for quantity performance in a manner that meets with the approval of all parties concerned (including EPA), at least once a month and more often if conditions warrant. In the case of time-cycle samplers, deviations in quantity of the sample taken should not exceed ±five percent for any given setting. In the case of flow-responsive samplers, the deviation in quantity of sample taken per 1,000 barrels of flowing stream should not exceed ±5 percent. For the purpose of field-calibrating an installation, the composite sample obtained from the automatic sampler under test should be verified for quality be comparing on the basis of physical and chemical properties, with either a properly secured continuous nonautomatic sample or tank sample. The tank sample should be taken under the following conditions:

11.4.1.6.1 The batch pumped during the test interval should be diverted into a clean tank and a sample taken within one hour after cessation of pumping.

11.4.1.6.2 If the sampling of the delivery tank is to be delayed beyond one hour, then the tank selected must be equipped with an adequate mixing means. For valid comparison, the sampling of the delivery tank must be completed within eight hours after cessation of pumping, even though the tank is equipped with a motor-driven mixer.

11.4.1.6.3 When making a normal full-tank delivery from a tank, a properly secured sample may be used to check the results of the sampler if the parties (including EPA) mutually agree to this procedure.

11.4.1.7 Receiver. The receiver must be a clean, dry container of convenient size to receive the sample. All connections from the sample probe to the sample container must be free of leaks. Two types of container may be used, depending upon service requirements.

11.4.1 7.1 Atmospheric container. The atmospheric container shall be constructed in such a way that it retards evaporation loss and protects the sample from extraneous material such as rain, snow, dust, and trash. The construction should allow cleaning, interior inspection, and complete mixing of the sample prior to removal. The container should be provided with a suitable vent.

11.4.1.7.2 Closed container. The closed container shall be constructed in such a manner that it prevents evaporation loss. The construction must allow cleaning, interior inspection and complete mixing of the sample prior to removal. The container should be equipped with a pressure-relief valve.

11.4.2 Procedure.

11.4.2.1 Nonautomatic sample. Adjust the valve or plug cock from the sampling probe so that a steady stream is drawn from the probe. Whenever possible, the rate of sample withdrawal should be such that the velocity of liquid flowing through the probe is approximately equal to the average linear velocity of the stream flowing through the pipeline. Measure and record the rate of sample withdrawal as gallons per hour. Divert the sample stream to the sampling container continuously or intermittently to provide a quantity of sample that will be of sufficient size for analysis.

11.4.2.2 Automatic sampling. Purge the sampler and the sampling lines immediately before the start of a sampling operation. If the sample design is such that complete purging is not possible, circulate a continuous stream from the probe past or through the sampler and back into the line. Withdraw the sample from the side stream through the automatic sampler using the shortest possible connections. Adjust the sampler to deliver not less than one and not more than 40 gallons (151 liters) of sample during the desired sampling period. For time-cycle samplers, record the rate at which sample increments were taken per minute. For flow-responsive samplers, record the proportion of sample to total stream. Label the samples and deliver them to the laboratory in the containers in which they were collected.

11.5 Nozzle sampling. The nozzle sampling procedure is applicable for sampling diesel fuel from a retail outlet or wholesale purchaser-consumer facility storage tank.

11.5.1 Apparatus. Sample containers conforming with 4.1 should be used. A spacer, if appropriate, and a nozzle extension as shown in Figures 6 and 7 shall be used when nozzle sampling.

11.5.2 Procedure. Immediately after diesel fuel has been delivered from the pump and the pump has been reset, deliver a small amount of product into the sample container. Rinse sample container and dump product into waste container. Insert nozzle extension (Figure 7) into sample container and insert pump nozzle into extension with slot over air bleed hole. Fill slowly through nozzle extension to 70–80 percent full (Figure 8). Remove nozzle extension. Cap sample container at once. Check for leaks.

12. *Special Precautions and Instructions.*

12.1 Precautions. Official samples should be taken by, or under the immediate supervision of, a person of judgement, skill, and sampling experience. Never prepare composite samples for this test. Make certain that containers which are to be shipped by common carrier conform to applicable Interstate Commerce Commission, state, and local regulations. When flushing or purging lines or containers, observe the pertinent regulations and precautions against fire, explosion, and other hazards.

12.3 Sample containers. Use containers of not less than one quart (0.9 liter) nor more than two gallons (7.6 liters) capacity, of sufficient strength to withstand the pressure to which they may be subjected. Open-type containers have a single opening which permits sampling by immersion. Closed-type containers have two openings, one in each end (or the equivalent thereof), fitted with valves suitable for sampling by water displacement or by purging.

12.4 Transfer connections. The transfer connection for the open-type container consists of an air tube and a liquid delivery tube assembled in a cap or stopper. The air tube extends to the bottom of the container. One end of the liquid delivery tube is long enough to reach the bottom of the diesel fuel chamber while the sample is being transferred to the chamber. The transfer connection for the closed-type container consists of a single tube with a connection suitable for attaching it to one of the openings of the sample container. The tube is long enough to reach the bottom of the diesel chamber while the sample is being transferred.

12.5 Sampling open tanks. Use clean containers of the open type when sampling open tanks and tank cars. An all-level sample obtained by the bottle procedure described in 11.2 is recommended. Before taking the sample, flush the container by immersing it in the product to be sampled. Then obtain the sample immediately. Pour off enough so that the container will be 70–80 percent full and close it promptly. Label the container and deliver it to the laboratory.

12.6 Sampling closed tanks. Containers of either the open or closed type may be used to obtain samples from closed or pressure tanks. If the closed type is used, obtain the sample using the water displacement procedure described in 12.8 or the purging procedure described in 12.9. The water displacement procedure is preferable because the flow of product involved in the purging procedure may be hazardous.

12.8 Water displacement procedure. Completely fill the closed-type container with water and close the valves. While permitting a small amount of product to flow through the fittings, connect the top or inlet valve of the container to the tank sampling tap or valve. Then open all valves on the inlet side of the container. Open the bottom or outlet valve slightly to allow the water to be displaced slowly by the sample entering the container. Regulate the flow so that there is no appreciable change in pressure within the container. Close the outlet valve as soon as diesel fuel discharges from the outlet; then in succession close the inlet valve and the sampling valve on the tank. Disconnect the container and withdraw enough of the contents so that it will be 70–80 percent full. If the vapor pressure of the product is not high enough to force liquid from the container, open both the upper and lower valves slightly to remove the excess. Promptly seal and label the container, and deliver it to the laboratory.

12.9 Purging procedure. Connect the inlet valve of the closed-type container to the tank sampling tap or valve. Throttle the outlet valve of the container so that the pressure in it will be approximately equal to that in the container being sampled. Allow a volume of product equal to at least twice that of the container to flow through the sampling system. Then close all valves, the outlet valve first, the inlet valve of the container second, and the tank sampling valve last, and disconnect the container immediately. Withdraw enough of the contents so that the sample container will be 70–80 percent full. If the vapor pressure of the product is not high enough to force liquid from the container, open both the upper and lower valves slightly to remove the excess. Promptly seal and label the container, and deliver it to the laboratory.

For the reasons set forth in the preamble, part 86 of title 40 of the *Code of Federal Regulations* is revised to read as set forth below:

6. The authority citation for part 86 continues to read as follows:

Authority: Secs. 202, 203, 206, 207, 208, 215, 301(a), of the Clean Air Act as Amended; 42 U.S.C. 7521, 7522, 7524, 7525, 7541, 7542, 7549, 7550 and 7601(a).

7. A new § 86.113–91 is proposed to be added to subpart B, to read as follows:

§ 86.113–91 Fuel specifications.

(a) *Otto-cycle test fuel.* (1) Gasoline having the following specifications will be used by the Administrator in exhaust and evaporative emission testing of petroleum-fueled Otto-cycle vehicles. Gasoline having the following specification or substantially equivalent specifications approved by the Administrator, shall be used by the manufacturer in exhaust and evaporative testing except that octane specifications do not apply.

Item	ASTM test method No.	Value

[4] For testing at altitudes above 1,219 m (4,000 ft) the specified range is 7.9–9.2 psi (54.5–63.4 kPa).
[5] Remainder.

(2) Unleaded gasoline representative of commercial gasoline which will be generally available through retail outlets shall be used in service accumulation for petroleum-fueled Otto-cycle vehicles. Leaded gasoline will not be used in service accumulation.

(i) The octane rating of the gasoline used shall be no higher than 1.0 Research octane number above the minimum recommended by the manufacturer and have a minimum sensitivity of 7.5 octane numbers, where sensitivity is defined as the Research octane number minus the Motor octane number.

(ii) The Reid Vapor Pressure of the gasoline used shall be characteristic of the motor fuel used during the season in which the service accumulation takes place.

(3) Methanol fuel used for exhaust and evaporative emission testing and in service accumulation of methanol-fueled Otto-cycle vehicles shall be representative of commercially available methanol fuel and shall consist of at least 50 percent methanol by volume.

(i) Manufacturers shall recommend the methanol fuel to be used for testing and service accumulation in accordance with paragraph (a)(3) of this section.

(ii) The Administrator shall determine the methanol fuel to be used for testing and service accumulation.

(4) Other methanol fuels may be used for testing and service accumulation provided:

(i) They are commercially available, and

(ii) Information, acceptable to the Administrator, is provided to show that

UMI

only the designated fuel would be used in customer service, and

(iii) Use of a fuel listed under paragraph (a)(3) of this section would have a detrimental effect on emissions or durability, and

(iv) Written approval from the Administrator of the fuel specifications must be provided prior to the start of testing.

(5) The specification range of the fuels to be used under paragraphs (a)(2), (a)(3), and (a)(4) of this section shall be reported in accordance with § 86.090–21(b)(3).

(b) *Diesel test fuel.* (1) The petroleum fuels employed for testing diesel vehicles shall be clean and bright, with pour and cloud points adequate for operability. The petroleum fuel may contain nonmetallic additives as follows: cetane improver, metal deactivator, antioxidant, dehazer, antirust, pour depressant, dye, dispersant and biocide.

(2) Petroleum fuel for diesel vehicles meetinq the following specifications, or substantially equivalent specifications approved by the Administrator, shall be used in exhaust emission testing. The grade of petroleum fuel recommended by the engine manufacturer, commercially designated as "Type 2–D" grade diesel, shall be used.

Item	ASTM test method No.	Type 2-D

(4) Methanol fuel used for exhaust and evaporative emission testing and in service accumulation of methanol-fueled diesel vehicles shall be representative of commercially available methanol fuel and shall consist of at least 50 percent methanol by volume.

(i) Manufacturers shall recommend the methanol fuel to be used for testing and service accumulation in accordance with paragraph (b)(4) of this section.

(ii) The Administrator shall determine the methanol fuel to be used for testing and service accumulation.

(5) Other fuels may be used for testing and service accumulation provided:

(i) They are commercially available, and

(ii) Information, acceptable to the Administrator, is provided to show that only the designated fuel would be used in customer service, and

(iii) Use of a fuel listed under paragraphs (b)(2) and (b)(3) or (b)(4) of this section would have a detrimental effect on emissions or durability, and

(iv) Written approval from the Administrator of the fuel specifications must be provided prior to the start of testing.

(6) The specification range of the fuels to be used under paragraphs (b)(2), (b)(3), (b)(4), and (b)(5) of this section shall be reported in accordance with § 86.090–21(b)(3).

(c) Fuels not meeting the specifications set forth in this section may be used only with the advance approval of the Administrator.

(d) *Mixtures of petroleum and methanol fuels for flexible fuel vehicles.* (1) Mixtures of petroleum and methanol fuels used for exhaust and evaporative emission testing and service accumulation for flexible fuel vehicles shall be within the range of fuel mixtures for which the vehicle was designed.

(2) Manufacturer testing and service accumulation may be performed using only those mixtures (mixtures may be different for exhaust testing, evaporative testing, and service accumulation) expected to result in the highest emissions, provided:

(i) The fuels which constitute the mixture will be used in customer service, and

(ii) Information, acceptable to the Administrator, is provided by the manufacturer to show that the designated fuel mixtures would result in the highest emissions, and

(iii) Written approval from the Administrator of the fuel specifications must be provided prior to the start of testing.

(3) The specification range of the fuels to be used under paragraph (d)(1) of this section shall be reported in accordance with § 86.090–21(b)(3).

8. A new § 86.113–94 is proposed to be added to Subpart B, to read as follows:

§ 86.113–94 Fuel specifications.

(a) *Otto-cycle test fuel.* (1) Gasoline having the following specifications will be used by the Administrator in exhaust and evaporative emission testing of petroleum-fueled Otto-cycle vehicles. Gasoline having the following specification or substantially equivalent specifications approved by the Administrator, shall be used by the manufacturer in exhaust and evaporative testing except that octane specifications do not apply.

(2) Unleaded gasoline representative of commercial gasoline which will be generally available through retail outlets shall be used in service accumulation.

(i) The octane rating of the gasoline used shall be not higher than one Research octane number above the minimum recommended by the manufacturer and have a minimum sensitivity of 7.5 octane numbers, where sensitivity is defined as the Research octane number minus the Motor octane number.

(ii) The Reid Vapor Pressure of the gasoline used shall be characteristic of the motor fuel used during the season in which the service accumulation takes place.

(3) Methanol fuel used for exhaust and evaporative emission testing and in service accumulation of methanol-fueled Otto-cycle engines shall be representative of commercially available methanol fuel and shall consist of at least 50 percent methanol by volume.

(i) Manufacturers shall recommend the methanol fuel to be used for testing and service accumulation in accordance with paragraph (a)(3) of this section.

(ii) The Administrator shall determine the methanol fuel to be used for testing and service accumulation.

(4) Other methanol fuels may be used for testing and service accumulation provided:

(i) They are commercially available, and

(ii) Information, acceptable to the Administrator, is provided to show that only the designated fuel would be used in customer service, and

(iii) Use of a fuel listed under paragraph (a)(3) of this section would have a detrimental effect on emissions or durability, and

(iv) Written approval from the Administrator of the fuel specifications must be provided prior to the start of testing.

(5) The specification range of the fuels to be used under paragraphs (a)(2), (a)(3), and (a)(4) of this section shall be reported in accordance with § 86.090–21(b)(3).

(b) *Diesel test fuel.* (1) The petroleum fuels for testing diesel engines employed for testing shall be clean and bright, with pour and cloud points adequate for operability. The petroleum fuel may contain nonmetallic additives as follows: Cetane improver, metal deactivator, antioxidant, dehazer, antirust, pour depressant, dye, dispersant, and biocide.

(2) Petroleum fuel for diesel engines meeting the specifications in Table N90–2, or substantially equivalent specifications approved by the Administrator, shall be used in exhaust emissions testing. The grade of petroleum fuel recommended by the engine manufacturer commercially designated as "Type 1–D" or "Type 2–D" grade diesel fuel shall be used.

(4) Methanol fuel used for exhaust and evaporative emission testing and in service accumulation of methanol-fueled diesel engines shall be representative of commercially available methanol fuel and shall consist of at least 50 percent methanol by volume.

(i) Manufacturers shall recommend the methanol fuel to be used for testing and service accumulation in accordance with paragraph (b)(4) of this section.

(ii) The Administrator shall determine the methanol fuel to be used for testing and service accumulation.

(5) Other fuels may be used for testing and service accumulation provided:

(i) They are commercially available, and

(ii) Information, acceptable to the Administrator, is provided to show that only the designated fuel would be used in customer service, and

(iii) Use of a fuel listed under paragraphs (b)(2) and (b)(3) or (b)(4) of this section would have a detrimental effect on emissions or durability, and

(iv) Written approval from the Administrator of the fuel specifications must be provided prior to the start of testing.

(6) The specification range of the fuels to be used under paragraphs (b)(2), (b)(3), (b)(4), and (b)(5) of this section shall be reported in accordance with § 86.090–21(b)(3).

(c) Fuels not meeting the specifications set forth in this section may be used only with the advance approval of the Administrator.

(d) *Mixtures of petroleum and methanol fuels for flexible fuel vehicles.* (1) Mixtures of petroleum and methanol fuels used for exhaust and evaporative emission testing and service accumulation for flexible fuel vehicles shall be within the range of fuel mixtures for which the vehicle was designed.

(2) Manufacturer testing and service accumulation may be performed using only those mixtures (mixtures may be different for exhaust testing, evaporative testing, and service accumulation) expected to result in the highest emissions, provided:

(i) The fuels which constitute the mixture will be used in customer service, and

(ii) Information, acceptable to the Administrator, is provided by the manufacturer to show that the designated fuel mixtures would result in the highest emissions, and

(iii) Written approval from the Administrator of the fuel specifications must be provided prior to the start of testing.

(3) The specification range of the fuels to be used under paragraph (d)(2) of this section shall be reported in accordance with § 86.090–21(b)(3).

10. A new § 86.1313–94 is proposed to be added to Subpart N, to read as follows:

§ 86.1313–94 Fuel specifications.

(a) *Otto-cycle test fuel.* (1) Gasoline having the specifications listed in Table N90–1 will be used by the Administrator in exhaust emission testing petroleum-fueled Otto-cycle engines. Gasoline having these specifications or substantially equivalent specifications approved by the Administrator, shall be used by the manufacturer in exhaust emission testing, except that the octane specification does not apply.

Department of the Interior

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Determination of Endangered Status for the Sacramento Prickly Poppy and the Virgin River Chub; Final Rules

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

RIN 1018–AA10

Endangered and Threatened Wildlife and Plants; Final Rule to Determine Argemone pleiacantha ssp. pinnatisecta (Sacramento prickly poppy) To Be an Endangered Species

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The U.S. Fish and Wildlife Service determines *Argemone pleiacantha* ssp. *pinnatisecta* (Sacramento prickly poppy) to be an endangered species, under the authority contained in the Endangered Species Act of 1973 (Act), as amended. The Sacramento prickly poppy is endemic to several canyons in the Sacramento Mountains, Otero County, New Mexico. Known populations consist of 1,310 plants, which occur on Bureau of Land Management (BLM), Lincoln National Forest, Oliver Lee State Park, New Mexico and Otero County Highway rights-of-way, and private lands. This species is threatened by livestock grazing, pipeline construction, flooding, and road construction and maintenance. Final determination that *Argemone pleiacantha* ssp. *pinnatisecta* is endangered implements the protection provided by the Act.

EFFECTIVE DATE: September 25, 1989.

ADDRESSES: The complete file for this rule is available for public inspection, by appointment, during normal business hours at the U.S. Fish and Wildlife Service Ecological Services Field Office, 3530 Pan American Highway NE., Suite D, Albuquerque, New Mexico 87107.

FOR FURTHER INFORMATION CONTACT: Charlie McDonald, Endangered Species Botanist, U.S. Fish and Wildlife Service Ecological Services Field Office, Albuquerque, New Mexico (see **ADDRESSES** above) (505/883–7877 or FTS 474–7877).

SUPPLEMENTARY INFORMATION:

Background

Argemone pleiacantha ssp. *pinnatisecta* (Sacramento prickly poppy) is a robust perennial known from nine canyons in the Sacramento Mountains of Otero County, south-central New Mexico. The Sacramento prickly poppy was first collected in 1953 by Mr. G.B. Ownbey and Mr. Findley on the western slopes of the Sacramento Mountains. Mr. Ownbey described the taxon in a monograph of the genus *Argemone* for North America and the West Indies (Ownbey 1958).

This member of the Poppy family (Papaveraceae) has 3–12 prickly stems branching from the base, and commonly grows to a height of 5–15 decimeters (20–60 inches) (Soreng 1982). The pale lemon to nearly white milky sap readily distinguishes this subspecies from the typical subspecies, which has yellow-orange sap. The attractive flowers have numerous yellow stamens and six white petals that are 3–4 centimeters (1.2–1.6 inches) long and as wide. Leaves are long, relatively narrow, and have box-shaped sinuses between spine-tipped lobes.

The Sacramento prickly poppy occurs at 1300–2200 meters (4,200–7,100 feet) elevation. At lower elevations, the surrounding vegetation is Semi-Desert Grassland; at the upper elevations the vegetation is Great Basin Conifer Woodland (Brown 1980). The Sacramento prickly poppy occurs in open, disturbed, or relatively undisturbed areas within these plant communities. The species grows in limestone canyons, or roadsides, fields, grassy flats, steep slopes, and floodplain and channel deposits. Populations are usually found where there is enhanced, but not wet, soil moisture conditions. These conditions are met on north-facing slopes, in canyon bottoms, along roadsides, and near leaks in pipelines.

The plants are located on New Mexico State and Otero County highway rights-of-way, on private land, Oliver Lee State Park, Bureau of Land Management lands, and Lincoln National Forest lands.

Soreng (1982) estimated that three populations of *Argemone pleiacantha* ssp. *pinnatisecta* contained fewer than 170 plants in 1982, and suggested that these populations were declining. Flash floods are one of the reasons for this decline: one population decreased from 100 plants to six after a flash flood scoured the canyon in 1978 (Soreng 1982). The probability of such flooding has been increased by overgrazing, which disturbs topsoil and reduces plant cover. Plant recruitment may be low because seedlings and young plants are more palatable to livestock than mature plants (Soreng 1986). Soreng suggested that regeneration was insufficient to maintain population numbers.

Malaby (1987) surveyed eight canyons and found 1,290 plants. A total of 6,330 acres of Federal, State, city, and private land was surveyed. In a 1988 survey, Malaby (1988) found 23 additional plants in two locations. Previous surveys (Hutchins 1974, Spellenberg 1977 and 1978, and Meiiji 1979) have been conducted on both BLM and BIA administered lands and only 1 population was found on BLM land.

Section 12 of the Endangered Species Act of 1973 (16 U.S.C. 1531 *et seq.*) directed the Secretary of the Smithsonian Institution to prepare a report of those plants considered to be endangered, threatened, or extinct. This report, designated as House Document No. 94–51, was presented to Congress on January 9, 1975. On July 1, 1975, the Service published a notice in the **Federal Register** (40 FR 27823) of its acceptance of the report of the Smithsonian Institution as a petition within the context of Section 4 of the Act and of its intention to review the status of the plant taxa named within. On June 16, 1976, the Service published a proposed rule in the **Federal Register** (41 FR 24523) to determine approximately 1,700 vascular plant species to be endangered species pursuant to Section 4 of the Act.

This list of 1,700 plant taxa was assembled on the basis of comments and data received by the Smithsonian Institution and the Service in response to House Document No. 94–51 and the July 1, 1975, **Federal Register** publication. *Argemone pleiacantha* ssp. *pinnatisecta* was included in the July 1, 1975, notice of review and in the June 16, 1976, proposal.

The Endangered Species Act Amendments of 1978 required that all proposals over two years old be withdrawn. A one-year grace period was given to those proposals already more than 2 years old. Subsequently, on December 10, 1979, (44 FR 70796), the Service published a notice of the withdrawal of the portion of the June 16, 1976, proposal that had not been made final, along with other proposals that had expired; this notice of withdrawal included *Argemone pleiacantha* ssp. *pinnatisecta*.

On December 15, 1980 (45 FR 82485), and September 27, 1985 (50 FR 39526), the Service published updated notices reviewing the native plants being considered for classification as threatened or endangered. *Argemone pleiacantha* ssp. *pinnatisecta* was included in these notices as a category 1 species. Category 1 comprises taxa for which the Service has sufficient biological data to support proposing them as endangered or threatend.

Section 4(b)(3)(B) of the Endangered Species Act, as amended in 1982, requires the Secretary to make findings on certain pending petitions within one year of their receipt. Section 2(b)(1) of the Act's Amendments of 1982 further requires that all petitions pending on October 12, 1982, be treated as having

been newly submitted on that date. Because *Argemone pleiacantha* ssp. *pinnatisecta* was included in the 1980 notice, the petition to list this species was treated as being newly submitted on October 12, 1982. On October 13, 1983; October 12, 1984; October 11, 19085; and October 10, 1986, the Service made the required one-year findings that listing of *Argemone pleiacantha* ssp. *pinnatisecta* was warranted, but precluded by other listing actions of higher priority. Biological data, supplied by Soreng (1982, 1986), fully support the listing of *Argemone pleiacantha* ssp. *pinnatisecta*. The proposed rule of July 13, 1987 (52 FR 26164) was based primarily on Soreng's biological data and constituted the final one-year finding required by section 4(b)(3)(B) of the Act for this species.

Summary of Comments and Recommendations

In the July 13, 1987, proposed rule and associated notifications, all interested parties were requested to submit factual reports or information that might contribute to the development of a final rule. Appropriate State agencies, county governments, Federal agencies, scientific organizations, and other interested parties were contacted and requested to comment. A newspaper notice was published in the *Alamogordo Daily News* on August 2, 1987. No public hearing was requested or held.

Three comments were received. The Nature Conservancy supports the listing, the biologist who prepared the initial status report for the Service supports the listing and provided information on population declines, and the U.S. Forest Service requested that the species not be listed. Specific issues raised in these comments are discussed below.

Comment: The Nature Conservancy agreed with the proposal to list *Argemone pleiacantha* ssp. *pinnatisecta* as endangered and requested that the Service designate critical habitat for this plant. *Response:* As discussed in the rule, the Service has determined that it would not be prudent to determine critical habitat for the plant at this time. The U.S. Forest Service, which administers much of the land on which the plant occurs, has implemented conservation measures such as reduced livestock grazing and plant propagation from seed. The Service notes that, even without critical habitat designation, the habitat of the Sacramento prickly poppy receives protection under Section 7 of the Act whenever a Federal agency is involved.

Comment: The U.S. Forest Service stated that adequate protection measures on Forest land and a greater abundance of plants than previously thought both may preclude the need for listing. In addition, they recommend additional surveys on BLM and BIA lands. They also suggest formulation of a conservation agreement with the Service. *Response:* The Service recognizes and appreciates the conservation measures enacted by the U.S. Forest Service. However, the Service believes that the plant is still in danger of extinction owing to habitat destruction and modification, scarcity, and limited distribution. Of the plants found in the 1987 Forest Service survey, 74% occurred in the Alamo Canyon System. A 1978 flood destroyed most of the plants in Alamo Canyon, and a future catastrophic event such as this is a potential threat. Of the other canyons surveyed, only two contained more than 100 plants. Soreng (pers. comm., 1987) reported that several populations had declined since his 1982 status report. Surveys have been conducted on both BLM and BIA administered lands and only 12 plants were found on BLM lands in 1988 (Howard pers. comm., 1989). Conservation agreements may be appropriate when only one landowner is involved. However, the Sacramento prickly poppy is found on Federal, State, City, and private land. A conservation agreement is not appropriate in this case.

Summary of Factors Affecting the Species

Section 4(a)(1) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and regulations (50 CFR part 424) promulgated to implement the listing provisions of the Act set forth the procedures for adding species to the Federal Lists. A species may be determined to be endangered or threatened due to one or more of the five factors described in section 4(a)(1). These factors and their application to *Argemone pleiacantha* ssp. *pinnatisecta* G.B. Ownbey (Sacramento prickly poppy) are as follows:

A. *The present or threatened destruction, modification, or curtailment of its habitat or range.* Sacramento prickly poppy habitat has been and continues to be destroyed or modified by livestock grazing, pipeline construction, flooding, and road construction and maintenance. Cattle grazing has both direct and indirect effects on the Sacramento prickly poppy. When cattle stocking rates are high, plants of this species are trampled and others are eaten (Soreng 1982). While trampling or grazing may not kill mature plants with an established tap root, these actions may kill seedlings and affect the reproduction of mature plants. Overgrazing has caused disturbance of topsoil and a reduction in plant cover throughout the range of the Sacramento pickly poppy (Soreng 1982). The poor condition of the watershed could increase the probability of flash floods. The Sacramento prickly poppy is particularly vulnerable to flooding because many plants occur on floodplain and channel deposits. Forest Service personnel noted that one population was nearly eliminated during a flash flood in 1978 (Soreng 1982).

The diversion of permanent spring water from drainages in the Sacramento Mountains to pipelines for human and livestock use has created artificially dry conditions in the areas where the Sacramento prickly poppies occur. Fletcher (pers. comm., 1986) believes the installation of a pipeline in one canyon and subsequent drying was the cause of the greatest reduction in the numbers of Sacramento prickly poppy.

Road construction, widening, and maintenance pose a threat to the Sacramento prickly poppy because a number of plants occur along roadsides. These plants are subject to destruction by mechanical disturbance, herbicide application, and soil and gravel dumping.

B. *Overutilization for commercial, recreational, scientific, or educational purposes.* Alkaloids present in the seeds and juices of other species of *Argemone* have been used in the past as purgatives and as treatments for a wide variety of ailments including ophthalmia. However, no medicinal use of the Sacramento prickly poppy is known.

C. *Disease or predation.* Although Soreng (1982) noted that the stems of some plants had been chewed by insects, and Fletcher (1978) reported insect larvae boring into the stems, such damage to Sacramento prickly poppy plants appears to be insignificant. As indicated above, grazing by cattle may be causing reduction in recruitment rates.

D. *The inadequacy of existing regulatory mechanisms.* The taxon is protected by the New Mexico Native Plant Law. This law prohibits the collection of this species unless a permit is granted by the New Mexico Department of Energy, Minerals and Natural Resources. The Forest Service has included *Argemone pleiacantha* ssp. *pinnatisecta* on its Sensitive Plant Species List. As a matter of policy, the Forest Service and BLM consider Federal candidate species in their environmental assessments and planning.

E. *Other natural or manmade factors affecting its continued existence.*

Scarcity and limited distribution make this species vulnerable to both natural and man-caused threats. Any further reduction in plant numbers could reduce the reproductive capabilities and genetic potential of the species.

The Service has carefully assessed the best scientific and commercial information available regarding the past, present, and future threats faced by this species in determining to make this rule final. Based on this evaluation, the preferred action is to list *Argemone pleiacantha* ssp. *pinnatisecta* as endangered without critical habitat. This status seems appropriate because the habitat of the few remaining populations is threatened by overgrazing, pipeline construction, flooding, and road construction and maintenance. The reasons for not designating critical habitat are discussed below.

Critical Habitat

Section 4(a)(3) of the Act, as amended, requires that to the maximum extent prudent and determinable, the Secretary designate any habitat of a species that is considered to be critical habitat at the time the species is determined to be endangered or threatened. The Service finds that designation of critical habitat is not prudent for the Sacramento prickly poppy at this time. Plants are vulnerable to taking or vandalism because of their immobility and accessibility. Any reduction in the small number of plants would be significant. Publication of critical habitat descriptions and maps would be detrimental, highlighting the easy accessibility of the plants. No benefit can be identified that would outweigh the threats of vandalism or taking that might result from such a publication. The Forest Service and BLM are aware of the locations of the Sacramento prickly poppy, have acknowledged the threats to these populations, and are considering the species during planning. All other involved parties and landowners will be notified of the location and importance of protecting this species and its habitat. Protection of this species' habitat will be addressed through the recovery process and through the section 7 jeopardy standard. Therefore, it would not be prudent to determine critical habitat for *Argemone pleiacantha* ssp. *pinnatisecta* at this time. No net benefit would accrue from designating critical habitat for the conservation of this species.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Endangered Species Act include recognition, recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing encourages and results in conservation actions by Federal, State, and private agencies, groups, and individuals. The Endangered Species Act provides for possible land acquisition and cooperation with the States and requires that recovery actions be carried out for all listed species. Such actions are initiated by the Service at the earliest opportunity. The protection required of Federal agencies and the prohibitions against certain activities involving listed plants are discussed, in part, below.

Section 7(a) of the Act, as amended, requires Federal agencies to evaluate their actions with respect to any species that is proposed or listed as endangered or threatened and with respect to its critical habitat, if any is being designated. Regulations implementing this interagency cooperation provision of the Act are codified at 50 CFR part 402. Section 7(a)(2) requires Federal agencies to ensure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of a listed species or to destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency must enter into formal consultation with the Service.

Most populations of the Sacramento prickly poppy have been found on U.S. Forest Service lands. In the past, Forest Service actions such as trail and road construction and maintenance, and designation of water rights and grazing allotments have impacted known populations. Future management activities can be planned to avoid adverse impacts on populations and potential habitat of the Sacramento prickly poppy. A 1988 field survey identified 12 plants occurring on BLM land in San Andreas Canyon. There is an existing water pipeline and grazing allotment in the area; however, BLM anticipates no future increase in the grazing allotment and BLM will coordinate with the Service and the pipeline right-of-way owner to minimize impacts from potential future pipeline improvements (Mike Howard pers. comm., 1989). Section 7(a) of the Act requires the Forest Service and BLM to consult with the U.S. Fish and Wildlife Service prior to the initiation of planned activities that may affect this listed plant. Road construction or maintenance that is done by the State or County with Federal funds and that may affect the Sacramento prickly poppy would require the Federal Highways Administration to consult with the Service.

The Act and its implementing regulations found at 50 CFR 17.61 set forth a series of general trade prohibitions and exceptions that apply to all endangered plants. All trade prohibitions of section 9(a)(2) of the Act, implemented by 50 CFR 17.61, apply. These prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to import or export any endangered plant; transport it in interstate or foreign commerce in the course of a commercial activity; sell or offer it for sale in interstate or foreign commerce; or remove it from areas under Federal jurisdiction and reduce it to possession. In addition, for listed plants, the 1988 amendments (Pub. L. 100–478) to the Act prohibit the malicious damage or destruction on Federal lands and the removal, cutting, digging up, or damaging or destroying of listed plants in knowing violation of any State law or regulation, including State criminal trespass law. Certain exceptions apply to agents of the Service and State conservation agencies. The Act and 50 CFR 17.62 and 17.63 also provide for the issuance of permits to carry out otherwise prohibited activities involving endangered species under certain circumstances. With regard to the subject of this final rule, it is anticipated that few trade permits would ever be sought or issued because the species is not common in cultivation or in the wild. Requests for copies of the regulations on plants and inquiries regarding them may be addressed to the Office of Management Authority, U.S. Fish and Wildlife Service, P.O. Box 27329, Washington, DC 20238–7329 (202/343–4955).

National Environmental Policy Act

The Fish and Wildlife Service has determined that an Environmental Assessment, as defined under the authority of the National Environmental Policy Act of 1969, need not be prepared in connection with regulations adopted pursuant to section 4(a) of the Endangered Species Act of 1973, as amended. A notice outlining the Service's reasons for this determination was published in the Federal Register on October 25, 1983 (48 FR 49244).

RIN 1018–ABOZ

Endangered and Threatened Wildlife and Plants; Determination of Endangered Status for the Virgin River Chub

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The Service determines the Virgin River chub (*Gila robusta seminuda*) to be an endangered species under the provisions of the Endangered Species Act (Act) of 1973, as amended. This species occurs in the Virgin River in Arizona, Nevada, and Utah. Threats to the Virgin River chub include habitat changes, disease, floods, toxic spills, and competition with exotic fishes. The species is particularly vulnerable to these threats because of its very limited distribution. In accordance with 4(b)(6)(C) of the Act, the final designation of critical habitat included in the proposed rule is postponed. This rule implements the full protection provided by the Act for the Virgin River chub.

EFFECTIVE DATE: September 25, 1989.

ADDRESSES: The complete file for this rule is available for inspection, by appointment, during normal business hours at the Service's Fish and Wildlife Enhancement Office, 1745 West, 1700 South, Salt Lake City, Utah 84104.

FOR FURTHER INFORMATION CONTACT: Mr. Donald L. Archer, Salt Lake City, Utah (see ADDRESSES above) (801/524–4430 or FTS 588–4430).

SUPPLEMENTARY INFORMATION:

Background

Gila robusta seminuda was first collected from the Virgin River near Washington, Utah, by members of the Wheeler Survey and described as a species intermediate between *Gila robusta* and *Gila elegans* (Cope and Yarrow 1875). Later authors have treated this chub as a subspecies of robusta along with other chubs from various stream systems in the Colorado River basin (Ellis 1914, Miller 1946, LaRivers and Trelease 1952). Holden and Stalnaker (1970) showed that the subspecific name *seminuda* should refer only to the chub in the Virgin River, and that specimens from other localities represent other subspecies of *Gila robusta*. Holden and Stalnaker (1970) and Minckley (1973) indicated that the Virgin River population is a valid subspecies, and Smith et al. (1977) supported this conclusion with extensive taxonomic analyses.

The Virgin River chub is a very silvery medium-sized minnow that averages about 20 centimeters (cm) or 8 inches (in) in total length but can grow to a length of 45 cm (18 in). *Gila robusta seminuda* can be distinguished from other subspecies by the number of rays (9 to 10) in the dorsal, anal, and pelvic fins, and the number of gill rakers (24 to 31). The back, breast, and part of the belly have small, deeply embedded scales that are difficult to see and may be absent in some individuals. This characteristic is the basis for the subspecific name *seminuda*.

A closely related form of *Gila robusta*, which appears to be an undescribed subspecies, is found in the Moapa River in Nevada. The Moapa River was originally a tributary of the Virgin River, but both are now tributaries to Lake Mead, a reservoir on the Colorado River. Although the Moapa form of *Gila robusta* has also suffered population declines in the past, has a reduced range, and presently exists at low population levels (Cross 1976, Deacon and Bradley 1972), the Moapa form is not affected by the present listing of the Virgin River chub.

Gila robusta seminuda is endemic to 134 miles of the Virgin River in southwest Utah, northwest Arizona, and southeast Nevada. Historically, the Virgin River chub is believed to have occurred throughout most of the Virgin River from its original confluence with the main stem Colorado upstream to La Verkin Creek, near the town of Hurricane, Utah. Cope and Yarrow (1875) refer to the chub's abundance near Washington, Utah, as "this species is by no means scarce, as several hundred were observed captured by boys with hook and line." However, recent studies (Cross 1975, Woundfin Recovery Team 1977–1986) suggest that a large decrease in range and numbers of this species has occurred in the last century, primarily from 1860 to 1900 when many of the present water diversions were constructed. These diversions dewatered approximately 35 miles of the chub's natural habitat. With the construction of Hoover Dam and the impoundment of Lake Mead an additional 40 miles of river was inundated, for a nearly total destruction of almost 56 percent of the chub's original habitat.

This species presently occurs in only 50 miles of the mainstream Virgin River between Mesquite, Nevada, and La Verkin Creek near Hurricane, Utah; only twice has it been recorded in a tributary (Cross 1975, Hickman 1985). It is most common in deeper areas where waters are swift, but not turbulent, and is generally associated with boulders or other cover (Minckley 1973). It occurs over sand and gravel substrates in water less than 90 °F (30 °C), and is very tolerant of high salinity and turbidity (Deacon and Holden 1977). The Virgin River chub is an omnivore, eating algae, aquatic and terrestrial insects, organic detritus, and crustaceans (Cross 1975).

In a study of the fishes of the Virgin River from 1973 to 1975, Cross (1975) found very few young-of-the-year Virgin River chubs or adults over 17.5 cm (7 in) in standard length. During this study, Cross was able to capture only 154 individual chubs, comprising only 1 percent of the 10,622 native fish specimens he collected. The Woundfin Recovery Team reported good chub reproduction in 1978, 1983 and 1986. Hickman (1988) found good reproduction in 1983 and 1986 but very little in 1984, 1985, 1987 or 1988.

The size of many riverine fish populations, such as the Virgin River chub population, often fluctuates over time due to erratic environmental conditions. It is not clear what the major influencing factors are but fish produced during successful years may dominate the population and, for long-lived species, may influence its structure for many years. Thus, the size and future survival of the population is strongly influenced by the frequency of successful reproductive years and the survival of the young of those years. Man's alteration of natural hydrologic cycles and other perturbations in the Virgin River has caused changes in this system that may have resulted in fewer periods of optimal reproduction for the Virgin River chub.

During 1988, after salvaging 1200 Virgin River chub, all fishes were eradicated from a 21-mile reach of the Virgin River in Utah from the Washington Fields diversion downstream to the head of the Virgin River Gorge. The purpose was to eradicate the exotic red shiner (*Notropis lutrensis*). A few months later the fish population below Quail Creek Reservoir was further impacted by a devastating flood which resulted from the collapse of a dike retaining about 25,000 acre feet of water in the Quail Creek Reservoir. This event is believed to have had a devastating impact on the entire fish population in 85 miles of the Virgin River.

Potential threats to the species' survival include further water removal, additional impoundments, sedimentation, pollution, channel alteration, disease, and competition and/or predation by introduced species. The threats are magnified by the low numbers and naturally limited range of this fish and its consequent vulnerability to extensive losses from a single threat or even a single event.

Lands along those portions of the Virgin River occupied by the Virgin River chub are administered by the Bureau of Land Management (BLM), the States of Utah and Arizona, and private landowners. In Arizona about 80 to 90 percent of the lands along the river are administered by BLM, with private land being concentrated in the vicinity of Littlefield. In Utah, about 13 miles of the lands along the river are managed by BLM, the State owns 4 parcels with small amounts of river frontage, and the remainder is privately owned. In Nevada, lands along the river above the town of Mesquite are privately owned.

On August 23, 1978, the Service published a proposal to list the Virgin River chub as endangered with critical habitat (43 FR 37668). On September 30, 1980, the Service withdrew the above proposal, because it was not finalized within 2 years of its initial publication in the **Federal Register** (45 FR 64853) as required by the Endangered Species Act Amendments of 1978. On December 30, 1982, *Gila robusta seminuda* was included on the Vertebrate Notice of Review (47 FR 58454) in category 1. Category 1 includes those taxa for which the Service currently has substantial biological information to support proposing to list the species as endangered or threatened. In April 1983 the Woundfin Recovery Team recommended that this chub, which is found in the same river as the endangered woundfin (*Plagopterus argentissimus*), be added to the Federal list as endangered. Under contract with the Service, a status report on the Virgin River chub was prepared by Mr. C.O. Minckley. This 1983 report recommended that the chub be listed as endangered with critical habitat. On June 24, 1986, the Service published in the **Federal Register** (51 FR 22949) a proposal to list the Virgin River chub as endangered and to designate its critical habitat.

Summary of Comments and Recommendations

In the June 24, 1986, proposed rule (51 FR 22949) and associated notifications, all interested parties were requested to submit factual reports or information that might contribute to the development of a final rule. The original comment period closed on August 25, 1986, but was reopened on September 18, 1986 (51 FR 33096), to accommodate the public hearing and remained open until December 15, 1986. Appropriate State agencies, county and city governments, Federal agencies, scientific organizations, and other interested parties were contacted and requested to comment. Newspaper notices summarizing the proposed rule and inviting general public comment were published in the *Daily Spectrum* on July 28, 1986, and in the *Deseret News* on July 31, 1986. Comments were received from 40 entities and are discussed below. Comments given at the public hearing are also summarized.

Requests for a public hearing were received from John S. Williams, Executive Director, Five County Association of Governments, St. George, Utah; Jerry B. Lewis, Chairman, Washington County Commission, St. George, Utah; Callister, Duncan and Nebekes, Attorneys-at-Law, Salt Lake City, Utah; Tom Hatch, Chairman, Color Country Resource Conservation and Development, Cedar City, Utah; Norman H. Bangerter, Governor, State of Utah, Salt Lake City; and Robert A. Stark, Mayor, Washington City, Utah. A public hearing was held in St. George, Utah, on October 15, 1986. Interested parties were contacted and notified of the hearings, and a notice of the hearing was published in the **Federal Register** on September 8, 1986 (51 FR 33096). Newspaper notices announcing the public hearing were published in the *Daily Spectrum* on October 5, 1986, and in the *Deseret News* on September 19, 1986. A total of 30 people attended the hearing. A transcript of this hearing is available for inspection (see **ADDRESSES**). The 17 oral comments received in the hearings are also summarized below.

Because of the need for a prompt determination of endangered status for the Virgin River chub, and because of the complexity of the economic analysis that must accompany the final rule designating critical habitat, the Service has decided for the present to make final only the listing portion of the proposed rule. Section 4(b)(6)(C) of the Act allows the Service to postpone the designation of critical habitat for up to one additional year from the date of publication of the proposed rule. The final decision on the designation of critical habitat for the Virgin River chub will be made at a later date. Therefore, comments received regarding the proposed critical habitat designation will not be discussed here, but will be addressed in the final notice on critical habitat.

Comments from 32 parties were received: 12 supported the proposal; seven questioned or opposed the proposal and 13 either commented on information in the proposal but expressed neither support nor opposition, were nonbiological or irrelevant to the proposal, or contained only economic or other comments related to critical habitat designation.

Of the 30 people attending the public hearing, 16 people representing 17 parties presented oral statements. Seven parties opposed the listing, six supported the listing, and four parties either commented on information in the proposal but expressed neither support nor opposition, gave nonbiological comments, or provided economic or other comments related to critical habitat designation.

All letters and written or oral statements received during the comment period and public hearings are combined in the following discussion. All comments are available for public inspection (see **ADDRESSES**).

Comments supporting the proposal were received from Arizona Game and Fish Department, Arizona Department of Commerce, Nevada Department of Wildlife, Desert Fishes Council, American Society of Ichthyologists and Herpetologists, Utah Wildlife Federation, American Fisheries Society, Southern Utah Residents Concerned about the Environment, and seven other interested parties,

Comments questioning or in opposition to the proposal were received from Governor Norman Bangerter, Washington County Commission, Washington County Water Conservancy District, Washington County Farm Bureau, Utah Farm Bureau Federation, Five County Association of Governments, Color Country Resource Conservation and Development, Washington City, Cities of Hurricane and St. George, and two other interested parties.

Requests for information or comments that expressed neither support nor opposition, were nonbiological, economic, or related to critical habitat were received from Senator Orin Hatch, Senator Jake Garn, Arizona Department of Water Resources, Arizona State Land Department, Utah Department of Natural Resources, Soil Conservation Service (Utah Office), Bureau of Reclamation Upper Colorado Regional Office and Lower Colorado Regional Office, Federal Highways Administration, Washington Office of the Bureau of Land Management (responding for the Arizona State Office), Colorado River Basin Salinity Control Forum, and three interested parties.

Summaries of substantive comments addressing the listing of the Virgin River chub are covered in the following discussion. Comments of similar content are placed in a number of general groups. These comments and the Service's responses are given below:

Issue 1: Listing the Virgin River chub will adversely affect future economic development of southern Utah, particularly by affecting water resource development. In addition, listing is not necessary because existing regulations and controls, along with better water planning, are sufficient to protect the chub.

Response: The Act requires the Service to list a species "solely on the basis of the best scientific and commercial data available", regardless of the economic impacts. However, the Service does not intend to curtail the future economic development of the area by listing this species. Rather, the Service's intent is to provide the legal platform whereby the conservation of this species will be recognized in future planning. The Act only requires Federal agencies that carry out, fund, or permit projects to provide for the conservation of only those species that are listed as endangered or threatened. The listing of the woundfin as endangered, in 1970, has not impacted ongoing irrigation projects nor has it prevented the construction of Quail Creek Reservoir. Listing the Virgin River chub means that the Service will continue to work with other Federal agencies when they plan a project that may affect the continued survival of the species. The record demonstrates that endangered species rarely cause the abandonment of a project, but rather cause the project to proceed in a manner that provides for the conservation of the species. In addition to working with other Federal agencies, the Service hopes to develop a cooperative relationship with State and local governments and private local user groups to work towards the conservation and recovery of the species.

Issue 2: The 1984 studies by Hickman (Hickman 1985) seem to show an increase in chub abundance since Cross sampled the population in the early 1970's (Cross 1975).

Response: Hickman's data (1985, 1988) is not directly comparable with Cross (1975) because Hickman used more efficient sampling gear and sampled at different sampling sites. While Hickman has collected many more chubs, his sampling efforts greatly exceeded that of Cross. Hickman's observations relative to reproductive success concur with that of the Woundfin Recovery Team, which shows that the chub has spawned successfully only 3 of the past 12 years (1978, 1983, and 1986). This lack of breeding success has continued through the 1988 spawning season. The Service does not interpret 3 years of reproductive success out of the past 12 years as either establishing a trend or as acceptable evidence that the species is not endangered.

Issue 3: Listing the Virgin River chub is premature; the Service should wait until additional biological data are gathered or until ongoing studies are complete.

Response: The available biological data indicate that the Virgin River chub is sufficiently reduced in numbers and range, and is faced with threats serious enough to warrant listing this species as endangered.

Issue 4: The endangered woundfin inhabits some of the same reaches of the Virgin River as the Virgin River chub. Why does the Service need to list the Virgin River chub when the protection of the Act given to the woundfin will be good enough to protect the Virgin River chub too?

Response: The Virgin River chub fully meets the requirements for listing as endangered as defined by the Act, therefore, the Service is required to list the species. If the Virgin River chub is not listed, its habitat needs will not be taken into account when planning for the habitat needs of the woundfin. Hickman's (1985) results indicate that both young-of-the-year and larger chubs may frequent the same areas as the woundfin, but according to current ecological theory, their habitat requirements cannot be identical. Therefore, the habitat for the chub cannot be adequately considered and protected in the planning and recovery process for the woundfin.

Issue 5: Several commenters disagreed with the Service's conclusion that habitat alteration is a threat to the species. They questioned whether any significant alteration has occurred, and argue that in the past the species has coexisted with development and can be expected to continue to coexist.

Response: The Service believes that habitat alterations, particularly impoundments and irrigation diversions that have already occurred, have significantly changed and reduced the habitat of the Virgin River chub and have contributed to the species' decline. The Virgin River chub has persisted in this greatly modified river, but further alteration and destruction of the species' habitat can only contribute to its decline. Ways in which habitat alteration and destruction have affected the Virgin River chub are discussed under "Factor A" of the "Summary of Factors Affecting the Species."

Issue 6: Chubs are more abundant in heavily impaired habitat (between the Washington Fields Diversion to the Arizona State line) than they are in what appears to be better habitat.

Response: The available data does not support this statement. Virgin River chub abundance is generally highest where the best feeding and holding habitats occur. These habitats are not spread evenly throughout the river, but are usually found where the better flows occur in the river. Highly impacted areas, such as immediately below Washington Fields Diversion, have lower concentrations of chubs.

Issue 7: The Service's population estimates are artificially low because flooding has decreased the number of fish.

Response: It is true that recent flood events appear to have negatively affected the chub populations in some areas. These floods are catastrophic events that have reduced the chub populations, thus the Service's population estimates are not "artificially low." Because there has been a major reduction in the species range, substantial changes in its native habitat, and infrequent spawning success, it will be much harder for these populations to recover to preflood numbers.

Issue 8: The fish is not a valid species or subspecies.

Response: Taxonomic experts unanimously agree that *Gila robusta seminuda* is a valid subspecies. The Virgin River chub has several features that distinguish this subspecies from other subspecies in the genus.

Issue 9: Instead of listing, why can't the Service form a committee, like that formed for the Upper Colorado River fishes, to oversee recovery actions and resolve water use conflicts?

Response: The available data indicate that the Virgin River chub fully meets all the criteria necessary for listing as endangered. Therefore, the Service is required to list the species. Once listed, the chub will receive the same protection the woundfin, Colorado squawfish, humpback chub, and bonytail chub receive. Recovery efforts for the latter three species are coordinated by both the Upper Colorado River Coordinating Committee and the Colorado River Fishes Recovery Team. Virgin River Chub recovery will be coordinated by the Woundfin Recovery Team, which will be renamed the Virgin River Fishes Recovery Team. Without listing, there would be little reason to consider chub habitat needs in any planning for the Virgin River.

Issue 10: Several commenters provided or commented on new data that have been collected since the publication of the proposed rule.

Response: The Service is aware of these data and has incorporated them into the final rule.

Summary of Factors Affecting the Species

After a thorough review and consideration of all information available, the Service has determined that the Virgin River chub should be classified as an endangered species. Procedures found at section 4(a)(1) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and regulations (50 CFR part 424) promulgated to implement the listing provisions of the Act were followed. A species may be determined to be endangered or threatened due to one or more of the five factors described in section 4(a)(1). These factors and their application to the Virgin River chub (*Gila robusta seminuda*) are as follows:

A. *The present or threatened destruction, modification, or curtailment of its habitat or range.* As with most desert river systems, the Virgin River has been extensively modified to accommodate human needs, which include irrigation, municipal and industrial uses, recreation, and limited hydropower production. Types of river modifications include: Conversion of flowing waters into still waters by impoundment; alteration of flow regimes (including conversion of perennial waters to intermittent or no flow, and the reduction, elimination, or modification of natural flooding patterns); alteration of water temperatures (either higher or lower); alteration of silt and bed loads; increase in water salinity; loss of marshes and backwaters; and alteration of stream channel characteristics from a well-defined, surface level, vegetated channel with a diversity of substrates and habitats, into a shallower, wider stream bed with little riparian vegetation, uniform substrates, and little habitat diversity. Causes of such alterations include: impoundments, water diversions, riparian vegetation destruction and alteration, channel down cutting, erosion, road construction, channelization, flood control, agricultural use of the stream banks, water pollution, and other watershed disturbances.

Water diversions and impoundments have caused the most obvious negative effects to the Virgin River chub population. Diversions have dewatered or reduced to shallow, braided streams some 35 miles of the Virgin River. These early changes in the Virgin River undoubtedly caused reductions in the abundance of native fishes, including the Virgin River chub, but the changes did not reduce the chubs to the point of extinction.

The Virgin River chub population has persisted in the river despite major river modifications and loss of habitat. Further modifications proposed along the Virgin River and its tributaries are likely to reduce habitat to a point that the river will no longer support the chub and the species will become extinct. Planned modifications to Virgin River tributaries include the following actions. The Washington County Conservancy District has identified four potential reservoir sites including: Ash Creek above Toquerville, the East Fork of the Virgin River, North Creek above the town of Virgin, and Bullock Reservoir on the North Fork of the Virgin River (Thompson 1986). In addition, the Soil Conservation Service has several projects proposed in the Virgin River basin in Utah, including flood control and irrigation projects (Holt, *in litt.*). To avoid negative impacts to the chub, these projects will have to be carefully planned to provide for the conservation of the chub and its habitat.

B. *Overutilization for commercial, recreational, scientific, or educational purposes.* The Service has no evidence to suggest overuse of this fish for any of these purposes.

C. *Disease or predation.* The Asian fish tapeworm (*Bothriocephalus acheilognathi*) poses a major threat to the Virgin River chub (Deacon 1986, Heckmann *et al.* 1986). This parasite was first recorded in Virgin River chubs in the St. George area by Heckmann *et al.* (1986), but probably occurred in chub populations in the lower river since 1979 (Heckmann *et al.* 1986). Fish heavily infected with tapeworms may be less able to cope with environmental stresses created by river modifications and to compete with exotic fishes than are uninfected fish. Heckmann *et al.* (1986) found that parasite loads were correlated with water quality, flow rates, and habitat disturbance, with the highest number and frequency occurring in disturbed sites. Heckmann *et al.* (1986) has speculated that the Asian tapeworm was introduced into the Virgin River via the non-native red shiner (*Notropis lutrensis*).

Unlike other portions of the Colorado River basin, the Virgin River has had relatively few exotic predatory fish species. In the past 70 years, only a few exotic predatory fish, such as green sunfish (*Lepomis cyanellus*), black bullhead (*Ictalurus melas*), and largemouth bass, have been able to invade the Virgin River, and then only with limited success. This lack of success is due primarily to the naturally high salinity, temperature, and turbidity of the stream and its highly fluctuating flows. The extreme physical conditions appear to have inhibited the invasion of many exotic species. Actions that alter natural environmental conditions may create conditions more favorable to exotic fishes.

The red shiner (*Notropis lutrensis*), an exotic species, is a relatively recent addition to the ichthyofauna of the upper Virgin River system. Red shiners have been found below the Virgin River Gorge for more than 25 years, where their increase has corresponded to a decrease in native fishes. Red shiners have been implicated in the decline of several other native species, are considered to be a threat to the federally endangered woundfin, and may present a significant threat to early life stages of the chub. In the St. George area, the red shiner (*Notropis lutrensis*) became established in 1985 and dominated fish collections within one year. In 1988 a major renovation effort was undertaken to remove the red shiner from 21 miles of the upper river and prevent its reinvasion through the construction of a barrier dam at the head of the Virgin River Gorge. The success of this undertaking continues to be evaluated. The red shiner's recent invasion demonstrates the seriousness of the threat of exotic fish invasions to all native species in the Virgin River.

D. *The inadequacy of existing regulatory mechanisms.* The State of Arizona currently lists the Virgin River chub under Group 2 of the Threatened Native Wildlife of Arizona (Arizona Game and Fish Commission 1982). Group 2 includes those animals whose continued presence in Arizona is now in jeopardy. The State of Nevada lists the species as sensitive (Nevada Board of Wildlife Commissioners 1981), a category which includes those species that may be candidates for classification to a more restrictive status. The State of Utah lists the Virgin River chub as threatened, meaning it is likely to become endangered in the foreseeable future. These State listings protect the chub from unregulated taking. However, none of these State listings provide habitat protection for the chub.

In 1986, Utah passed a law which provides the Utah Division of Wildlife Resources with the opportunity to acquire water rights for in-stream flow purposes to protect fish and wildlife habitat. This provision may allow the State to work with cooperating agencies and individuals to protect sensitive, endangered or threatened species and their habitats. The Nevada water law has no provisions for the acquisition and protection of in-stream water rights for the preservation of fish and wildlife in their habitat.

E. *Other natural or manmade factors affecting its continued existence.* The reduced numbers and range of the Virgin River chub make it particularly vulnerable to the threats discussed above. Because the Virgin River chub exists under continued and expanding levels of stress, any activity that affects the quantity or quality of its habitat will also affect the subspecies.

The Service has carefully assessed the best scientific and commercial information available regarding the past, present, and future threats faced by this species in determining to make this rule final. Based on this evaluation, the Service has decided to list the Virgin River chub as endangered. A decision to take no action would constitute failure to properly classify the Virgin River chub pursuant to the Endangered Species Act and would exclude this chub from the protection provided by the Act. A decision to propose only threatened status would not adequately reflect the small population size, the reduced range, and the multiple threats faced by this fish. For the reasons given below, critical habitat designation is being postponed. Designation of critical habitat will be addressed in a subsequent **Federal Register** notice.

Critical Habitat

Section 4(a)(3) of the Act requires that to the maximum extent prudent and determinable, the Secretary designate critical habitat at the time a species is determined to be endangered or threatened. Section 4(b)(6)(C) further indicates that a concurrent critical habitat determination is not required, and that the final decision on designation may be postponed for one additional year from the date of publication of the proposed rule, if the Service finds that a prompt determination of endangered or threatened status is essential to the conservation of the species involved. The Service considers that a prompt determination of endangered status for the Virgin River chub is essential. As a proposed species, the Virgin River chub is eligible only for the limited consideration given under the conference requirement of section 7(a)(4) of the Act, as amended. This does not require a limitation on the commitment of resources on the part of concerned Federal agencies or applicants for Federal permits. Therefore, to ensure that the full benefits of section 7 and other conservation measures provided by the Act will apply to the Virgin River chub, prompt determination of endangered status is essential.

Section 4(b)(2) of the Act requires the Service to consider economic impacts of designating a particular area as critical habitat. The Service received considerable information during the comment period on the possible economic impacts of designating critical habitat. Critical habitat designation is being deferred to allow time to undertake a full economic analysis.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Endangered Species Act include recognition, recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing encourages and results in conservation actions by Federal, State, and private agencies, groups, and individuals. The Endangered Species Act provides for possible land acquisition and cooperation with the States and requires that recovery actions be carried out for all listed species. Such actions are initiated by the Service following listing. Potential recovery actions for the Virgin River chub include: (1) Conducting studies on larval drift and the impact of parasites and red shiners; (2) chemical elimination of all fish from below Washington Fields Diversion and restocking the reclaimed river with native species (including the chub); (3) construction of a fish passage barrier below Riverside, Nevada; (4) recommending water management policies; and (5) providing legally protected in-stream flow. The protection required of Federal agencies and prohibitions against taking and harm are discussed, in part, below.

Section 7(a) of the Act, as amended, requires Federal agencies to evaluate their actions with respect to any species that is proposed or listed as endangered or threatened and with respect to its critical habitat, if any is being designated. Regulations implementing this interagency cooperation provision of the Act are codified at 50 CFR part 402. Section 7(a)(2) requires Federal agencies to ensure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of a listed species or to destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency must enter into consultation with the Service.

Portions of the Virgin River flow through Bureau of Land Management lands, the Soil Conservation Service is involved in irrigation water conservation and water quality improvement, potential water projects on the river would be under the jurisdiction of the Bureau of Reclamation, and most construction and alteration activities in the river require an authorizing permit from the U.S. Army Corps of Engineers under section 404 of the Clean Water Act. These agencies will have to consult with the Service if their actions may affect the Virgin River chub or its critical habitat. In addition, Federal agencies that fund, authorize, or construct flood control, agricultural, hydropower facilities, channelization, and highway and bridge construction projects would also have to consult with the Service prior to the action.

The Act and its implementing regulations found at 50 CFR 17.21 set forth a series of general prohibitions and exceptions that apply to all endangered wildlife. These prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to take, import or export, ship in interstate commerce in the course of commercial activity, or sell or offer for sale in interstate or foreign commerce any listed species. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken illegally. Certain exceptions apply to agents of the Service and State conservation agencies.

Permits may be issued to carry out otherwise prohibited activities involving endangered wildlife species under certain circumstances. Regulations governing permits are at 50 CFR 17.22 and 17.23. Such permits are available for scientific purposes, to enhance the propagation or survival of the species, and/or for incidental take in connection with otherwise lawful activities. In some instances, permits may be issued during a specific period of time to relieve undue economic hardship that would be suffered if such relief were not available.

National Environmental Policy Act

The Fish and Wildlife Service has determined that an Environmental Assessment, as defined under the authority of the National Environmental Policy Act of 1969, need not be prepared in connection with regulations adopted pursuant to section 4(a) of the Endangered Species Act of 1973, as amended. A notice outlining the Service's reasons for this determination was published in the **Federal Register** on October 25, 1983 (48 FR 49244).

Service, Endangered Species Biologist, Albuquerque, New Mexico 87103 (505/766–3972 or FTS 474–3972). Donald Archer, U.S. Fish and Wildlife Service, Salt Lake City, Utah (801/524–4430 or FTS 588–4430) reviewed the rule and provided information on the 1988 eradication project and 1989 flood.

List of Subjects in 50 CFR Part 17

Endangered and threatened wildlife, Fish, Marine mammals, Plants (agriculture).

Regulation Promulgation

Accordingly, part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulation, is amended as set forth below:

PART 17—[AMENDED]

1. The authority citation for part 17 continues to read as follows:

Authority: Pub. L. 93–205, 87 Stat. 884; Pub. L. 94–359, 90 Stat. 911; Pub. L. 95–632, 92 Stat. 3751; Pub. L. 96–159, 93 Stat. 1225; Pub. L. 97–304, 96 Stat. 1411; Pub. L. 100–478, 102 Stat. 2306; Pub. L. 100–653, 102 Stat. 3825 (16 U.S.C. 1531 et seq.); Pub. L. 99–625, 100 Stat. 3500, unless otherwise noted.

2. Amend § 17.11(h) by adding the following, in alphabetical order under "Fishes," to the List of Endangered and Threatened Wildlife.

§ 17.11 Endangered and threatened wildlife.

Briefings on How To Use the Federal Register
For information on briefings in Washington, DC, and Atlanta, GA, see announcement on the inside cover of this issue.

BEST COPY AVAILABLE

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $340 per year in paper form; $195 per year in microfiche form; or $37,500 per year for the magnetic tape. Six-month subscriptions are also available at one-half the annual rate. The charge for individual copies in paper or microfiche form is $1.50 for each issue, or $1.50 for each group of pages as actually bound, or $175.00 per magnetic tape. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or charge to your GPO Deposit Account or VISA or Mastercard.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 54 FR 12345.

THE FEDERAL REGISTER
WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: The Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:
1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

ATLANTA, GA

WHEN: September 20; at 9:00 a.m.
WHERE: Room 808, 75 Spring Street, SW.
Richard B. Russell Federal Building
Atlanta, GA
RESERVATIONS: Call the Federal Information Center

Title 3—

The President

Presidential Determination No. 89-17 of July 8, 1989

Determination Pursuant to Section 2(c)(1) of the Migration and Refugee Assistance Act of 1962, as Amended

Memorandum for Secretary of State

Pursuant to Section 2(c)(1) of the Migration and Refugee Assistance Act of 1962 (the "Act), as amended, 22 U.S.C. 2601 (c) (1), I hereby determine that it is important to the national interest to meet unexpected urgent needs for assistance of Afghan refugees and displaced persons. I further determine, pursuant to Section 2 (c) (1) of the Act, that up to $23 million shall be made available to meet these needs from the United States Emergency Refugee and Migration Assistance Fund in accordance with the pertinent provisions in the Foreign Operations, Export Financing, and Related Programs Appropriations Act, 1989 (P.L. 100-461).

You are authorized and directed to inform the appropriate committees of the Congress of this Determination and the obligation of funds under this authority.

This Determination shall be published in the Federal Register.

Presidential Determination No. 89-19 of July 20, 1989

Determination Pursuant to Section 2(c)(1) of the Migration and Refugee Assistance Act of 1962, as Amended

Memorandum for the Secretary of State

Pursuant to Section (2)(c)(1) of the Migration and Refugee Assistance Act of 1962, as amended, 22 U.S.C. 2601(c)(1), in order to meet unexpected urgent refugee and migration needs around the world, I hereby determine that it is important to the national interest that $6 million be made available from the Emergency Refugee and Migration Assistance Fund (Emergency Fund) to meet unexpected urgent needs of African, Indochinese, and Palestinian refugees, victims of conflict and displaced persons. Of this $6 million, $2 million will be contributed to the International Committee of the Red Cross (ICRC) for assistance to the victims of the conflict in Lebanon; $3 million will be contributed to the United Nations High Commissioner for Refugees (UNHCR) to assist refugees in Africa and Southeast Asia; and $1 million will be contributed to the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) to support emergency assistance programs in the Occupied Territories.

You are directed to inform the appropriate committees of the Congress of this Determination and the obligation of funds under this authority.

This Determination shall be published in the Federal Register.

Rules and Regulations

Federal Register
Vol. 54, No. 164
Friday, August 25, 1989

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Office of the Secretary

7 CFR Part 2

Revision of Delegations of Authority

AGENCY: Office of the Secretary, USDA.

ACTION: Final rule.

SUMMARY: This rule amends the delegations of authority from the Secretary of Agriculture to the Inspector General to include providing physical protection for the Deputy Secretary as part of the Inspector General's responsibility for the personal security of the Secretary. This amendment also adds a delegation designating the Inspector General as the Departmental liaison official with the General Accounting Office (GAO) for all GAO audit related matters.

This amendment is needed to assure that the delegations properly reflect the responsibilities inherent in a security program to protect top level Department officials, and to more clearly define the responsibilities for coordination with GAO to avoid possible overlap or conflict between agencies in carrying out assigned responsibilities.

EFFECTIVE DATE: August 25, 1989.

FOR FURTHER INFORMATION CONTACT: Paula Hayes, Assistant Inspector General for Policy Development and Resources Management, Office of Inspector General, USDA, Washington, DC 20250 (202-447-6979).

SUPPLEMENTARY INFORMATION: This amendment expands the delegation of authority for Secretarial security to include the other individuals covered by 18 U.S.C. 351 which pertains, in part, to violent crimes against the head of a Cabinet department and the second ranking official in such department.

This rule is a rule of agency procedure and practice related to internal agency management. Therefore, pursuant to 5 U.S.C. 553, it is found upon good cause that notice and other public procedures with respect thereto are impractical and contrary to public interest, and good cause is found for making this rule effective less than 30 days after publication in the **Federal Register.**

Further, since this rule relates to internal agency management, it is exempt from the provisions of Executive Order No. 12291.

Finally, this action is not a rule as defined by the Regulatory Flexibility Act and, thus, is exempt from the provisions of that Act.

List of Subjects in 7 CFR Part 2

Authority delegations (Government agencies).

For the reasons set out in the preamble, Title 7, Subtitle A, Part 2, Subpart D of the Code of Federal Regulations, is amended as set forth below.

PART 2—DELEGATIONS OF AUTHORITY BY THE SECRETARY OF AGRICULTURE AND GENERAL OFFICERS OF THE DEPARTMENT

1. The authority citation for 7 CFR part 2 continues to read as follows:

Authority: 5 U.S.C. 301 and Reorganization Plan No. 2 of 1953, except as otherwise noted.

2. Section 2.33 is amended by revising paragraph (b) and adding a new paragraph (c) to read as follows:

§ 2.33 Delegations of Authority to the Inspector General.

* * * * *

(b) Provide for the personal security of the Secretary and the Deputy Secretary.

(c) Serve as liaison official for the Department for all audits of USDA performed by the General Accounting Office.

* * * * *

Dated: August 16, 1989.

Clayton Yeutter,
Secretary of Agriculture.

[FR Doc. 89-20097 Filed 8-24-89; 8:45 am]
BILLING CODE 3410-33-M

Agricultural Marketing Service

7 CFR Part 910

[Lemon Regulation 680]

Lemons Grown in California and Arizona; Limitation of Handling

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: Regulation 680 establishes the quantity of fresh California-Arizona lemons that may be shipped to market at 300,000 cartons during the period August 27 through September 2, 1989. Such action is needed to balance the supply of fresh lemons with market demand for the period specified, due to the marketing situation confronting the lemon industry.

DATES: Regulation 680 (7 CFR 910.980) is effective for the period August 27 through September 2, 1989.

FOR FURTHER INFORMATION CONTACT: Beatriz Rodriguez, Marketing Specialist, Marketing Order Administration Branch, F&V, AMS, USDA, Room 2523, South Building, P.O. Box 96456, Washington, DC 20090-6456; telephone: (202) 475-3861.

SUPPLEMENTARY INFORMATION: This final rule has been reviewed under Executive Order 12291 and Departmental Regulation 1512-1 and has been determined to be a "non-major" rule under criteria contained therein.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service has determined that this action will not have a significant economic impact on a substantial number of small entities.

The purpose of the RFA is to fit regulatory action to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Agricultural Marketing Agreement Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 85 handlers of lemons grown in California and Arizona subject to regulation under the lemon marketing order and approximately 2500 producers in the regulated area. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.2) as those having annual gross revenues for the last three years of less than $500,000, and small agricultural service firms are defined as those whose gross annual receipts are less than

$3,500,000. The majority of handlers and producers of California-Arizona lemons may be classified as small entities.

This regulation is issued under Marketing Order No. 910, as amended (7 CFR part 910), regulating the handling of lemons grown in California and Arizona. The order is effective under the Agricultural Marketing Agreement Act (the "Act," 7 U.S.C. 601–674), as amended. This action is based upon the recommendation and information submitted by the Lemon Administrative Committee (Committee) and upon other available information. It is found that this action will tend to effectuate the declared policy of the Act.

This regulation is consistent with the California-Arizona lemon marketing policy for 1989–90. The Committee met publicly on August 22, 1989, in Los Angeles, California, to consider the current and prospective conditions of supply and demand and unanimously recommended a quantity of lemons deemed advisable to be handled during the specified week. The Committee reports that overall demand for lemons is good.

Pursuant to 5 U.S.C. 553, it is further found that it is impracticable, unnecessary, and contrary to the public interest to give preliminary notice and engage in further public procedure with respect to this action and that good cause exists for not postponing the effective date of this action until 30 days after publication in the **Federal Register** because of insufficient time between the date when information became available upon which this regulation is based and the effective date necessary to effectuate the declared purposes of the Act. Interested persons were given an opportunity to submit information and views on the regulation at an open meeting. It is necessary, in order to effectuate the declared purposes of the Act, to make these regulatory provisions effective as specified, and handlers have been appraised of such provisions and the effective time.

List of Subjects in 7 CFR Part 910

Arizona, California, Lemons, Marketing agreements and orders.

For the reasons set forth in the preamble, 7 CFR part 910 is amended as follows:

PART 910—LEMONS GROWN IN CALIFORNIA AND ARIZONA

1. The authority citation for 7 CFR part 910 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

2. Section 910.980 is added to read as follows:

Note: This section will not appear in the Code of Federal Regulations.

§ 910.980 Lemon Regulation 680.

The quantity of lemons grown in California and Arizona which may be handled during the period August 27, 1989, through September 2, 1989, is established at 300,000 cartons.

Dated: August 23, 1989.

Eric M. Forman,

Acting Director, Fruit and Vegetable Division.

[FR Doc. 89–20218 Filed 8–24–89; 8:45 am]

BILLING CODE 3410-02-M

---

7 CFR Part 967

[FV–89–061FR]

Expenses and Assessment Rate for Celery Grown in Florida; Committee Address Change

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final Rule.

SUMMARY: This final rule authorizes expenditures and establishes an assessment rate under Marketing Order No. 967 for the 1989–90 fiscal year established under the celery marketing order. An annual budget of expenses is prepared by the Florida Celery Committee (Committee), the agency responsible for local administration of the celery marketing order, and submitted to the U.S. Department of Agriculture (Department) for approval. Authorization of this budget will allow the Committee to incur expenses that are reasonable and necessary to administer this program. Funds to administer this program are derived from assessments on handlers.

In addition, this final rule will revise the administrative rules and regulations under the celery marketing order to reflect the Committee's new mailing address.

EFFECTIVE DATES: August 1, 1989, through July 31, 1990, for the expenses and assessment rate (§ 967.325). August 25, 1989, for the address change (§ 967.141).

FOR FURTHER INFORMATION CONTACT: Beatriz Rodriguez, Marketing Specialist, Marketing Order Administration Branch, F&V, AMS, USDA, P.O. Box 96456, Room 2525–S, Washington, DC 20090–6456; telephone: (202) 475–3861.

SUPPLEMENTARY INFORMATION: This final rule is effective under Marketing Agreement and Order No. 967 (7 CFR part 967), both as amended, regulating the handling of celery grown in Florida. The marketing agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the Act.

This final rule has been reviewed under Executive Order 12291 and Departmental Regulation 1512–1 and has been determined to be a "nonmajor" rule under criteria contained therein.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this final rule on small entities.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately seven handlers of celery grown in Florida who are subject to regulation under the celery marketing order, and approximately 13 producers of celery in the production area. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.2) as those having average gross annual revenues for the last three years of less than $500,000, and small agricultural service firms are defined as those whose gross annual receipts are less than $3,500,000. The majority of celery handlers and producers may be classified as small entities.

The celery marketing order requires that the assessment rate for a particular fiscal year shall apply to all assessable celery handled from the beginning of such year. An annual budget of expenses is prepared by the Committee and submitted to the Department for approval. The Committee consists of handlers, producers, and a public member. They are familiar with the Committee's needs and with the costs for goods, services, and personnel in their local areas and are thus in a position to formulate an appropriate budget. The budget is formulated and discussed in public meetings. Thus, all directly affected persons have an opportunity to participate and provide input.

The assessment rate recommended by the Committee is derived by dividing anticipated expenses by expected shipments of the commodity. Because that rate is applied to actual shipments, it must be established at a rate which will produce sufficient income to pay the Committee's expected expenses. The recommended budget and rate of assessment are usually acted upon by the Committee before a season starts, and expenses are incurred on a continuous basis. Therefore, the budget and assessment rate approvals must be expedited so that the Committee will have funds to pay its expenses.

The Committee met on May 24, 1989, and unanimously recommended 1989–90 fiscal year expenditures of $131,500, ($127,000 from income and $4,500 from the reserve) and an assessment rate of $0.02 per 60-pound crate of celery shipped. In comparison, 1988–89 fiscal year budgeted expenditures were $126,000, and the assessment rate was $0.02 per 60-pound crate.

Major expenditure categories in the 1989–90 budget include $60,000 for administration, $54,500 for promotion, merchandising, and public relations, $8,800 for travel, and $5,000 for research. Assessment income for 1989–90 is estimated at $120,000, based on a crop of 6,000,000 crates of celery. An additional $7,000 is expected to be received from interest. Additional reserve funds may be used to meet any deficit in assessment income.

While this final action will impose some additional costs on handlers, the costs are in the form of uniform assessments on all handlers. Some of the additional costs may be passed on to producers. However, these costs would be significantly offset by the benefits derived from the operation of the marketing order. Therefore, the Administrator of the AMS has determined that this action will not have a significant economic impact on a substantial number of small entities.

This action adds a new § 967.325 and is based on Committee recommendations and other information. A proposed rule was published in the July 24, 1989, issue of the **Federal Register** (54 FR 30754). Comments on the proposed rule were invited from interested persons until August 3, 1989. No comments were received.

In addition, at its May 24, 1989, meeting the Committee unanimously recommended revising § 967.141(a) in the rules and regulations under the celery marketing order to reflect the Committee's new mailing address. Therefore, the post office box number will be changed from 20067 to 140067 in § 967.141(a).

After consideration of the information and recommendation submitted by the Board and other available information, it is found that this final rule will tend to effectuate the declared policy of the Act.

This rule should be expedited because the Committee needs to have sufficient funds to pay its expenses, which are incurred on a continuous basis. In addition, handlers are aware of this action which was recommended by the Committee at public meetings. Further, the address change is administrative in nature and as such has no regulatory effect. Therefore, it is found that good cause exists for not postponing the effective date of these actions until 30 days after publication in the **Federal Register** (5 U.S.C. 553).

List of Subjects in 7 CFR Part 967

Celery, Florida, Marketing agreements and orders.

For the reasons set forth in the preamble, 7 CFR part 967 is amended as follows:

PART 967—CELERY GROWN IN FLORIDA

1. The authority citation for 7 CFR part 967 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31t. 31, as amended; 7 U.S.C. 601–674.

2. New § 967.325 is added to read as follows:

Note: This section will not appear in the annual Code of Federal Regulations.

§ 967.325 Expenses and assessment rate.

Expenses of $131,500, by the Florida Celery Committee are authorized, and an assessment rate $0.02 per crate of celery is established for the 1989–90 fiscal year ending July 31, 1990. Unexpended funds from the 1989–90 fiscal year may be carried over as a reserve.

3. Section 967.141(a) is amended by revising paragraph (a) to read as follows:

Note: This section will appear in the Code of Federal Regulations.

§ 967.141 Nomination procedures.

(a) Names of candidates together with evidence of qualification for public membership on the Florida Celery Committee shall be submitted to the Committee at its business office, 4401 East Colonial Drive, or P.O. Box 140067, Orlando, Fla. 32814, no later than April 15.

7 CFR Part 987

[Docket No. FV–89–069FR]

Expenses and Assessment Rate for Marketing Order Covering Domestic Dates Produced or Packed in Riverside County, California

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This final rule authorizes expenditures and establishes an assessment rate under Market Order 987 for the 1989–90 crop year established for that order. This action is needed for the California Date Administrative Committee (committee) to incur operating expenses during the 1989–90 crop year and to collect funds during that year to pay those expenses. This will facilitate program operations. Funds to adminsiter this program are derived from assessments on handlers.

EFFECTIVE DATES: October 1, 19[illegible] through September 30, 1990.

FOR FURTHER INFORMATION CONTACT: Patrick Packnett, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, P.O. Box 96456, Room 2525–S, Washington, DC 20090–6456, telephone (202) 475–3862.

SUPPLEMENTARY INFORMATION: This final rule is issued under Marketing Agreement and Marketing Order No. 987 (7 CFR part 987) regulating the handling of dates produced or packed in Riverside County, California. The marketing agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the Act.

This rule has been reviewed under Executive Order 12291 and Departmental Regulation 1512–1 and has been determined to be a "non-major" rule under criteria contained therein.

Pursuant to the requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this final rule on small entities.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

Thus, both statutes have small entity orientation and compatibility.

There are approximately 25 handlers of California dates regulated under this marketing order each season, and approximately 135 date producers in the regulated area. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.2) as those having annual gross revenues for the last three years of less than $500,000, and small agricultural service firms are defined as those whose gross annual receipts are less than $3,500,000. The majority of the handlers and producers of California dates may be classified as small entities.

The California date marketing order, administered by the Department of Agriculture (Department), requires that the assessment rate for a particular crop year shall apply to all assessable dates handled from the beginning of such year. An annual budget of expenses is prepared by the committee and submitted to the Department for approval. The members of the committee are date handlers and producers. They are familiar with the committee's needs and with the costs for goods, services and personnel in their local area and are thus in a position to formulate an appropriate budget. The budget formulated and discussed in public meetings. Thus, all directly affected persons have an opportunity to participate and provide input.

The assessment rate recommended by the committee was derived by dividing anticipated expenses by expected shipments of dates (in hundredweight). Because that rate is applied to actual shipments, it must be established at a rate which will produce sufficient income to pay the committee's expected expenses.

The committee met on June 8, 1989, and unanimously recommended 1989–90 crop year expenditures of $361,460 and an assessment rate of $1.30 per hundredweight of assessable dates shipped under M.O. 987. In comparison, 1988–89 crop year budgeted expenditures were $394,500 and the assessment rate was $1.30 per hundredweight.

The major expenditure item this year is $325,000 for continuation of the committee's market promotion program. The industry is faced with a serious oversupply of product dates, and the committee considers this program necessary to stimulate sales. The rest of the anticipated expenditures are for program administration and are budgeted at about last year's amounts with the exception of $5,400 budgeted for liability insurance for the committee's officers and management.

Income for the 1989–90 season is expected to total $363,550. Such income consists of $362,050 in assessment revenue based on shipments of 27,850,000 pounds of dates and $1,500 in interest income.

The committee also unanimously recommended that any unexpended funds or excess assessments from the 1988–89 crop year be placed in its reserves. The committee's reserves are well within authorized limits.

Notice of this action was published in the July 12, 1989, issue of the Federal Register (54 FR 29342). The comment period ended August 11, 1989. No comments were received.

While this action will impose some additional costs on handlers, the costs are in the form of uniform assessments on all handlers. Some of the additional costs may be passed on to producers. However, these costs will be significantly offset by the benefits derived from the operation of the marketing order. Therefore, the Administrator of the AMS has determined that this action will not have a significant economic impact on a substantial number of small entities.

After consideration of the information and recommendations submitted by the committee, and other available information, it is found that this final rule will tend to effectuate the declared policy of the Act.

List of Subjects in 7 CFR Part 987

California, Dates, Marketing agreements and orders.

For the reasons set forth in the preamble, 7 CFR part 987 is amended as follows:

PART 987—DOMESTIC DATES PRODUCED OR PACKED IN RIVERSIDE COUNTY, CALIFORNIA

1. The authority citation for 7 CFR part 987 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

2. A new § 987.334 is added to read as follows:

Note: This section will not appear in the Code of Federal Regulations.

§ 987.334 Expenses and assessment rate.

Expenses of $361,460 by the California Date Administrative Committee are authorized, and an assessment rate of $1.30 per hundredweight of assessable dates is established for the crop year ending September 30, 1990. Unexpended funds from the 1988–89 crop year may be carried over as a reserve.

Dated: August 21, 1989.

William J. Doyle,

Acting Deputy Director, Fruit and Vegetable Division.

BILLING CODE 3410-02-M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Airspace Docket No. 89–ANM–06]

Control Zone, Miles City, MT

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends the Miles City, Montana Control Zone. The amendment is necessary to provide continuously accurate information to the aviation public. A temporary reduction in personnel staffing at Miles City has resulted in reduced weather observations which would otherwise be available 24 hours a day. Consequently, the effective hours of the Control Zone must be amended on a periodic basis.

EFFECTIVE DATE: 0901 u.t.c., September 25, 1989.

FOR FURTHER INFORMATION CONTACT: Ted Melland, ANM–536, Federal Aviation Administration, Docket No. 89–ANM–01, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168, Telephone: (206) 431–2536.

SUPPLEMENTARY INFORMATION:

History

On April 19, 1989, the FAA proposed to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to amend the Miles City, Montana Control Zone (54 FR 15777).

Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. The Montana State Aeronautics Division objected on the basis that weather services should be available 24 hours a day. The FAA concurs; however, reorganization of FAA and National Weather Service facilities is focused on providing services where most needed until automated weather observation equipment can be installed at relatively low activity locations. No other comments were received. Section 71.171 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6E dated January 3, 1989.

The Rule

This amendment to part 71 of the Federal Aviation Regulations will provide a means whereby pilots will have access to continuously updated hours of control zone operation. Subsequent changes will be published for pilot reference by Notice to Airmen (NOTAM) and in the Airport/Facility Directory.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, Control zones.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 71 of the Federal Aviation Regulations (14 CFR part 71) is amended as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Public Law 97–449, January 12, 1983); 14 CFR 11.69.

§ 71.171 [Amended]

2. Section 71.171 is amended as follows:

Miles City, Montana Control Zone [Amended]

Add "The Control Zone shall be effective during the specified dates and times established in advance by a Notice To Airmen. The effective date and time will thereafter be continuously published in the Airport/Facility Directory."

Issued in Seattle, Washington, on August 3, 1989.

Temple H. Johnson, Jr.,

Manager, Air Traffic Division, Northwest Mountain Region.

[FR Doc. 89–20057 Filed 8–24–89; 8:45 am]

14 CFR Part 71

[Airspace Docket No. 89–ANM–2]

Salt Lake City Transition Area, Salt Lake City, UT

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends the Salt Lake City, Utah, 1,200 feet transition Area. Additional controlled airspace is necessary to provide low altitude holding outside of Salt Lake City Approach Control's airspace.

EFFECTIVE DATE: 0901 u.t.c., September 21, 1989.

FOR FURTHER INFORMATION CONTACT: Bob Brown, ANM–535, Federal Aviation Administration, Docket No. 89–ANM–2, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168, Telephone: (206) 431–2536.

SUPPLEMENTARY INFORMATION:

History

On May 10, 1989, the FAA proposed to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to amend the 1,200 foot Transition Area for Salt Lake City, Utah, (54 FR 20145). The action proposed to provide additional controlled airspace for low altitude holding outside of Salt Lake City Approach Control's existing airspace.

Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No comments objecting to the proposal were received. The proposed amendatory language contained a typographical error which is corrected herein. On the next-to-the-last line in the proposed amendment (54 FR 20146), reference is made to "the east edge of * * * R–6406 * * *" The final rule has been corrected to refer to "the east edge of * * * R–6406B * * *" This minor correction does not change the scope of the proposal, and the rule is otherwise adopted as proposed. Section 71.181 of part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6E dated January 13, 1989.

The Rule

This amendment is part 71 of the Federal Aviation Regulation will provide additional controlled airspace for low altitude holding outside of Salt Lake City Approach Control's existing airspace. The airspace is intended to segregate aircraft operating in visual flight rules conditions from other aircraft operating in instrument flight rules conditions. The area will be depicted on appropriate Aeronautical Charts, thereby enabling pilots to circumnavigate the area or otherwise comply with instrument flight rules procedures.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

14 CFR Part 95

[Docket No. 25992; Amdt. No. 352]

IFR Altitudes; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts miscellaneous amendments to the required IFR (instrument flight rules) altitudes and changeover points for certain Federal airways, jet routes, or direct routes for which a minimum or maximum en route authorized IFR altitude is prescribed. These regulatory actions are needed because of changes occurring in the National Airspace System. These changes are designed to provide for the safe and efficient use of the navigable airspace under instrument conditions in the affected areas.

DATES: Effective: September 21, 1989.

FOR FURTHER INFORMATION CONTACT: Paul J. Best, Manager, Flight Procedures Standards Branch (AFS-420), Technical Programs Division, Flight Standards Service Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone: (202) 267-8277.

SUPPLEMENTARY INFORMATION: This amendment to part 95 of the Federal Aviation Regulations (14 CFR part 95) prescribes new, amended, suspended, or revoked IFR altitudes governing the operation of all aircraft in IFR flight over a specified route or any portion of that route, as well as the changeover points (COPs) for Federal airways, jet routes, or direct routes as prescribed in part 95. The specified IFR altitudes, when used in conjunction with the prescribed changeover points for those routes, ensure navigation aid coverage that is adequate for safe flight operations and are free of frequency interference. The reasons and circumstances which create the need for this amendment involve matters of flight safety, operational efficiency in the National Airspace System, and are related to published aeronautical charts that are essential to the user and provide for the safe and efficient use of the navigable airspace. In addition, those various reasons or circumstances require making this amendment effective before the next scheduled charting and publication date of the flight information to assure its timely availability to the user. The effective date of this amendment reflects those considerations. In view of the close and immediate relationship between these regulatory changes and safety in air commerce, I find that notice and public procedure before adopting this amendment are unnecessary, impracticable, and contrary to the public interest and that good cause exists for making the amendment effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 95

Aircraft, Airspace.

Issued in Washington, DC on August 15, 1989.

Robert L. Goodrich,
Director of Flight Standards.

Adoption of the Amendment

Accordingly and pursuant to the authority delegated to me by the Administrator, part 95 of the Federal Aviation Regulations (14 CFR part 95) is amended as follows.

PART 95—[AMENDED]

1. The authority citation for part 95 continues to read as follows:

Authority: 49 U.S.C. 1348, 1354 and 1510; 49 U.S.C. 106(g) (Revised, Pub. L. 97-449, January 12, 1983); and 14 CFR 11.49(b)(2).

2. Part 95 is amended to read as follows:

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

31 CFR Part 515

Cuban Assets Control Regulations

AGENCY: Office of Foreign Assets Control, Department of the Treasury.

ACTION: Final rule.

SUMMARY: This rule revises the Cuban Assets Control Regulations, 31 CFR part 515 (the "Regulations"), by establishing restrictions on the amount of currency that travelers to Cuba may carry with them for transactions subject to the Regulations.

EFFECTIVE DATE: August 25, 1989.

FOR FURTHER INFORMATION: William B. Hoffman, Chief Counsel (telephone: 202/376-0408), or Steven I. Pinter, Chief of Licensing (telephone: 202/376-0236), Office of Foreign Assets Control, Department of the Treasury, 1331 G Street NW., Washington, DC 20220.

SUPPLEMENTARY INFORMATION: This rule places a $100 per day limit on transactions ordinarily incident to travel within Cuba, currently authorized in § 515.560(c)(2).

In addition, § 515.569 is added to the Regulations which specifies the amount of currency that a person authorized to engage in transactions related to Cuban travel may carry for transactions in Cuba which are subject to the Regulations. Persons traveling under the general licenses contained in § 515.560 (a) and (b) may carry $100 per day for authorized travel-related expenses and $100 for the purchase of merchandise in Cuba intended for importation into the United States as accompanied baggage. Carrying funds for living expenses in Cuba and for the purchase of merchandise there is not authorized for persons traveling to Cuba as fully sponsored or hosted visitors.

Any person traveling to Cuba may also carry family remittances for the support or emigration of close relatives of the traveler and members of his household to the extent authorized by § 515.563 of the Regulations (for support, $500 per household in any three-month period; for emigration from Cuba, a one-time payment of $500 per recipient). This provision does not authorize any person traveling to Cuba to carry family remittances on behalf of another person.

Persons wishing to carry additional currency for transactions in Cuba subject to the Regulations or wishing to carry family remittances to Cuba on behalf of another person must obtain a specific license from the Office of Foreign Assets Control.

Because the Regulations involve a foreign affairs function, Executive Order 12291 and the provisions of the Administrative Procedure Act, 5 U.S.C. 553, requiring notice of proposed rulemaking, opportunity for public participation, and delay in effective date, are inapplicable. Because no notice of proposed rulemaking is required under the Administrative Procedure Act or any other law, the provisions of the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.*, are also inapplicable.

Cuba, Currency, Travel and transportation expenses.

PART 515—[AMENDED]

1. The "Authority" citation for part 515 continues to read as follows:

Authority: 50 U.S.C. App. 5, as amended; 22 U.S.C. 2370(a); Proc. 3447, 27 FR 1085, 3 CFR 1959–1963 Comp. p. 157; E.O. 9193, 7 FR 5205, 3 CFR 1938–1943 Cum. Supp. p. 1174; E.O. 9989, 13 FR 4891, 3 CFR 1943–1948 Comp. p. 748.

§ 515.560 [Amended]

2. Paragraph (c)(2) of § 515.560 is revised to read as follows:

* * * * *

(c) * * *

(2) All transactions ordinarily incident to travel within Cuba, including payment of living expenses and the acquisition in Cuba of goods for personal consumption there, provided the total for such expenses does not exceed $100 per day unless otherwise specifically licensed pursuant to the procedures contained in § 515.801.

3. Section 515.569 is added to read as follows:

§ 515.569 Currency carried by travelers to Cuba.

(a) Persons authorized to engage in transactions related to Cuban travel pursuant to § 515.560 (a) or (b) may carry currency for living expenses in Cuba and the purchase in Cuba of goods for personal consumption there in an amount not to exceed $100 per day. In addition, each such person may carry an additional $100 for the purchase of merchandise in Cuba intended for importation as accompanied baggage pursuant to § 515.560(c)(3).

(b) Persons authorized to engage in transactions related to fully sponsored or hosted travel to Cuba pursuant to § 515.560(j) may not carry currency to pay for living expenses or the purchase of goods in Cuba except as specifically licensed pursuant to, or exempted from the application of, this part.

(c) Persons authorized to engage in transactions related to Cuban travel pursuant to § 515.560 (a), (b), or (j) may also carry family remittances for the support and/or emigration of close relatives of the traveler who reside in Cuba, at the times and in the amounts authorized by § 515.563. No such remittances may be carried by a traveler on behalf of remitters who are not members of the traveler's household, as defined in § 515.563(c).

(d) Persons traveling to Cuba may carry currency for transactions in Cuba subject to this part in amounts greater than those authorized by this section only pursuant to a specific license issued pursuant to § 515.801.

(e) For purposes of this section, the term "currency" used means money, cash, drafts, notes, travelers checks, negotiable instruments, or scrip, having a specified or readily determinable face value or worth, but does not include gold or other precious metals in any form.

Dated: July 31, 1989.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[KY-044; FRL-3633-4]

Approval and Promulgation of Implementation Plans for Kentucky; Redistribution of Allowable Sulfur Dioxide Emissions at TVA's Paradise Steam Plant

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA today approves a redistribution of allowable sulfur dioxide emissions at the Paradise Steam Plant of the Tennessee Valley Authority (TVA). This redistribution was submitted to EPA as a State Implementation Plan (SIP) revision by the Kentucky Natural Resources and Environmental Protection Cabinet on June 29, 1987. The revised limits are contained in permit 0-87-012 issued by Kentucky on June 29, 1987. The revision allows unit-specific sulfur dioxide emission limits of 1.2 pounds per million BTU heat input (lb/mmBTU) on Units 1 and 2 and 5.4 lb/mmBTU on Unit 3.

Overall, these limits are equivalent to the 3.1 lb/mmBTU emission limit specified for each unit in the current SIP. Dispersion modeling shows that the revision will not jeopardize the attainment and maintenance of the National Ambient Air Quality Standards. This SIP revision was evaluated under the full criteria of an ordinary SIP revision, and not under the streamlined criteria allowed when a SIP revision qualifies as a "bubble" under EPA's Emissions Trading Policy Statement. This revision to 401 KAR 61:015, section 3 was proposed on May 15, 1989 (54 FR 20863).

EFFECTIVE DATE: This action will become effective September 25, 1989.

ADDRESSES: Copies of the State submittal and other relevant documents are available for public inspection during normal business hours at the following locations:

Public Information Reference Unit, Environmental Protection Agency, 401 M Street SW., Washington, DC 20460
U.S. Environmental Protection Agency, Region IV, Air Programs Branch, 345 Courtland Street NE., Atlanta, Georgia 30365
Kentucky Natural Resources and Environmental Protection Cabinet, Department of Environmental Protection, 18 Reilly Road, Frankfort Office Park, Frankfort, Kentucky 40601.

FOR FURTHER INFORMATION CONTACT: Richard A. Schutt, U.S. Environmental Protection Agency, Region IV, Air Programs Branch at the above listed address or at (404) 347-2864 or FTS 257-2864.

SUPPLEMENTARY INFORMATION: The Paradise Steam Plant is a three-unit coal-fired facility operated by the Tennessee Valley Authority (TVA) and located in Muhlenberg County, Kentucky. Units 1 and 2 have an electric generating capacity of 704 megawatts (MW) each and are served by 600-foot (183-meter) stacks. Unit 3, with a generating capacity of 1150 MW, is served by an 800-foot (244-meter) stack. Since they were constructed prior to December 31, 1970, all three stacks were grandfathered from the stack height regulations.

Muhlenberg County is currently classified in 40 CFR part 81 as nonattainment for the secondary National Ambient Air Quality Standards (NAAQS) for sulfur dioxide. On October 31, 1980 (45 FR 72153), EPA approved Kentucky's most recent SIP submittal for Muhlenberg County under part D of the Clean Air Act. This SIP revision requires each unit at the Paradise Plant to meet an emission limit of 3.1 lb./mmBTU. A federally enforceable consent decree in 1979 had early established limits of 0.9 lb./mmBTU for Units 1 and 2 and 5.7 lb./mmBTU for Unit 3, which are equivalent to the 3.1 lb./mmBTU emission limit specified for each unit in the part D SIP. In 1983, the TVA constructed a coal-washing plant and installed scrubbers on Units 1 and 2 to meet these emission limits. Monitoring data for Muhlenberg County showed no exceedances of the NAAQS for 1984–1986.

Based on its experience in operating the sulfur dioxide control system at Paradise, the TVA requested a redistribution of the allowable sulfur dioxide emission rates for the three units. The revised emission rates are 1.2 lb./mmBTU for Units 1 and 2 and 5.4 lb./mmBTU for Unit 3. Although the scrubbers on Units 1 and 2 are capable of meeting a standard of 0.9 lb./mmBTU, they can only do so reliably if these units burn coal with a sulfur content equivalent to 5 lb. SO_2/mmBTU or less. The revised unit-specific emission limits will result in substantial cost savings because they would enable TVA to fine-tune the washing process and produce a coal that conforms more closely to pollution control requirements. On a plantwide basis, the revised emission limits are equivalent to the 3.1 lb./mmBTU emission limit specified for each unit in the current SIP for Paradise.

An evaluation estimating ambient sulfur dioxide concentrations resulting from the revised emission limits and assessing the attainment of ambient sulfur dioxide air quality standards for the Paradise Steam Plant has been completed. The modeling techniques used in the initial demonstration supporting this SO_2 redistribution are, for the most part, based on modeling guidance in place at the time that the analysis was performed, i.e., the EPA "Guideline on Air Quality Models (1978)." Following the submittal of the modeling analysis to the Regional Office (March 1987), revisions were required. The models used in the revision followed the guidance in place at that time (51 FR 32176, September 9, 1986). Since that time, revisions to modeling guidance have been promulgated by EPA (53 FR 592, January 6, 1988). Because the modeling analysis was substantially complete prior to publication of the revised guidance, EPA accepts the analysis. The grandfathering of the modeling analysis is also based on a July 9, 1986, memorandum from EPA Region IV to EPA's Office of Air Quality Planning and Standards listing sources, including TVA Paradise, which should be grandfathered under the then current EPA modeling guidance. This evaluation includes an inventory of sources within 50 km of Paradise and estimates of ambient sulfur dioxide concentrations using screening techniques and coarse receptor grids to identify extreme concentrations. Fine-grid analyses and estimates of ambient background concentrations are also included. The modeling analysis was based on block averaging. For further information on this evaluation, the reader may consult a Technical Support Document which contains a more detailed discussion on the model input, the annual-average screening analysis, the short-term analysis, and the background concentrations utilized to estimate the ambient sulfur dioxide concentrations resulting from the revised emission limits. This document is available at the EPA address given above.

After a public hearing held on March 23, 1987, the Kentucky Natural Resources and Environmental Protection Cabinet adopted this redistribution pursuant to the provisions of Regulation 401 KAR 61:015, section 3. The emission limits are specified in permit number 0-87-012 issued by Kentucky on June 29, 1987. Kentucky Regulation 401 KAR 50:015, Documents incorporated by reference, incorporates 40 CFR part 60, Method 6 entitled "Determination of sulfur dioxide emissions from stationary sources". This method is listed under 401 KAR 50:015 section 1(c)(1)(l), and is the method required for sulfur dioxide compliance determinations for Paradise Units 1–3. The revisions to 401 KAR 61:015, section 3 was submitted by the Kentucky Natural Resources and Environmental Protection Cabinet on June 29, 1987. EPA proposed approval on May 15, 1989 (54 FR 20863). No comments were received during the public comment period.

Final Action

EPA is today finalizing a redistribution of allowable sulfur dioxide emissions at Tennessee Valley Authority's (TVA's) Paradise Steam Plant. This redistribution allows unit-specific sulfur dioxide emission limits of 1.2 lb./mmBTU on Units 1 and 2 and 5.4 lb./mmBTU on Unit 3. These limits are equivalent to the 3.1 lb./mmBTU emission limit specified for each unit in the current SIP for Paradise. Modeling has demonstrated that the ambient air quality standards are protected when the plant is operated at the revised emission limits. The State authority for this revision is provided in Regulation 401 KAR 61:015, section 3.

This action has been classified as a Table 2 action by the Regional Administrator under the procedures published in the Federal Register on January 19, 1989 (54 FR 2214–2225). On January 6, 1989, the Office of Management and Budget waived Table 2 and 3 SIP revisions (54 FR 2222) from the requirements of section 3 of Executive Order 12291 for a period of two years.

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any state implementation plan. Each request for revision to the state implementation plan shall be considered separately in light of specific technical, economic, and environmental factors and in relation to relevant statutory and regulatory requirements.

Under section 307(b) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by October 24, 1989. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

40 CFR Part 148

[FRL-3635-4]

Underground Injection Control Program; Hazardous Waste Disposal Injection Restrictions, Additional Effective Dates; First Third Wastes; Correction

AGENCY: Environmental Protection Agency.

ACTION: Final rule; correction.

SUMMARY: EPA is correcting an error in the final rule establishing effective dates prohibiting the underground injection of selected hazardous wastes. This action is mandated by section 3004(g) of the Resource Conservation and Recovery Act (RCRA). These rules were effective on June 7, 1989, and published in the Federal Register on June 14, 1989 (54 FR 25416 *et seq.*).

FOR FURTHER INFORMATION CONTACT: Bruce Kobelski, Office of Drinking Water (WH-550), U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460, (202) 382-5508.

EFFECTIVE DATE: June 7, 1989.

SUPPLEMENTARY INFORMATION: On June 14, 1989, the Agency published rules establishing effective dates prohibiting the land disposal by injection of certain wastes covered by section 3004(g) of RCRA. (These rules were signed effective on June 7, 1989.)

At that time the Agency banned the underground injection of K101 and K102 wastes, consistent with the policy of banning the future underground injection of wastes that are not currently being disposed of in this manner.

Pursuant to sections 3004 (g) and (m), however, such a ban cannot take place without the establishment of treatment standards for the waste in question. Treatment standards have been established only for the wastewater and low arsenic (less than 1% total arsenic) nonwastewater subcategories of the K101 and K102 waste groups (see 53 FR 31170 *et seq.*). The Agency should have banned only these subcategories from underground injection, leaving the high arsenic (greater than or equal to 1% total arsenic) nonwastewater subcategories of K101 and K102 under the effect of the "soft hammer" provisions of section 3004(g)(6)(A).

The Agency is today issuing a technical amendment to § 148.14(a) to clarify that the wastewater and low arsenic nonwastewater subcategories of K101 and K102 are banned from underground injection on June 7, 1989. Treatment standards and effective dates for the high arsenic nonwastewater subcategories of K101 and K102 will be established at a later date.

List of Subjects in 40 CFR Part 148

Administrative practice and procedure, Confidential business information, Environmental protection, Hazardous materials, Hazardous materials transportation, Hazardous waste, Intergovernmental relations, Reporting and recordkeeping requirements, Waste treatment and disposal, Water supply, Water pollution control.

Dated: August 17, 1989.

Rebecca W. Hanmer,

Acting Assistant Administrator for Water.

The following correction is made in FRL-3556-8, Underground Injection Control Program: Hazardous Waste Disposal Injection Restrictions, Additional Effective Dates; First Third Wastes; Final Rule, published in the Federal Register on June 14, 1989 (54 FR 25416 *et seq.*) and amended on June 23, 1989 (54 FR 26594 *et seq.*).

PART 148—[AMENDED]

1. The authority citation for part 148 continues to read as follows:

Authority: Sec. 3004, Resource Conservation and Recovery Act, 42 U.S.C. 6901 *et seq.*

2. Section 148.14(a) is revised to read as follows:

§ 148.14 Waste specific prohibitions—first third wastes.

(a) Effective June 7, 1989, the wastes specified in 40 CFR 261.31 as EPA Hazardous Waste numbers F006 (nonwastewaters) and the wastes specified in 40 CFR 261.32 as EPA Hazardous Waste numbers K001, K015 (wastewaters), K016 (at concentrations greater than or equal to 1%), K018, K019, K020, K021 (nonwastewaters generated by the process described in the waste listing description and disposed after August 17, 1988, and not generated in the course of treating wastewater forms of these wastes), K022

(nonwastewaters), K024, K030, K036 (nonwastewaters generated by the process described in the waste listing description and disposed after August 17, 1988, and not generated in the course of treating wastewater forms of these wastes), K037, K044, K045, nonexplosive K046 (nonwastewaters), K047, K048, K060 (nonwastewaters generated by the process described in the waste listing description and disposed after August 17, 1988, and not generated in the course of treating wastewater forms of these wastes), K061 (nonwastewaters), noncalcium sulfate K069 (nonwastewaters generated by the process described in the waste listing description and disposed after August 17, 1988, and not generated in the course of treating wastewater forms of these wastes), K086 solvent washes, K087, K099, K101 (all wastewaters and less than 1% total arsenic nonwastewaters), K102 (all wastewaters and less than 1% total arsenic nonwastewaters), and K103 are prohibited from underground injection.

[BERC-483-IFC]

RIN 0938-AE32

Medicare Program; Demonstration Project to Develop a Uniform Cost Reporting System for Hospitals

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Interim final rule with comment period.

SUMMARY: This interim final rule with comment period implements the provisions of section 4007(c) of the Omnibus Budget Reconciliation Act of 1987, as amended by section 411(b)(6)(C) of the Medicare Catastrophic Coverage Act of 1988, which require that the Secretary conduct a demonstration project to develop a uniform cost reporting system for hospitals under the Medicare program. Under this rule, all hospitals in the States of California and Colorado are required to participate in this demonstration project. For the duration of the demonstration, those hospitals are required to submit the cost report currently required under Medicare regulations and additional worksheets specifically developed for the demonstration in a uniform, electronic format.

DATES: *Effective Date:* This final rule is effective for cost reporting periods beginning on or after July 1, 1989 and before July 1, 1991

Comment Date: Comments will be considered if we receive them at the appropriate address, as provided below, no later than 5:00 p.m. on October 23, 1989.

ADDRESS: Mail comments to the following address: Health Care Financing Administration, Department of Health and Human Services, Attention: BERC-483-IFC, P.O. Box 26676, Baltimore, Maryland 21207.

If you prefer, you may deliver your comments to one of the following addresses:

Room 309-G, Hubert H. Humphrey
Building, 200 Independence Ave. SW.,
Washington, DC.

Room 132, East High Rise Building, 6325
Security Boulevard, Baltimore,
Maryland.

Due to staffing and resource limitations, we cannot accept facsimile (FAX) copies of comments. If comments concern information collection or recordkeepng requirements, please address a copy of comments to:

Office of Management and Budget,
Office of Information and Regulatory
Affairs, Room 3208, New Executive
Office Building, Washington, DC
20503, Attention: Allison Herron.

In commenting, please refer to file code BERC-483-IFC. Comments received timely will be available for public inspection as they are received, generally beginning approximately three weeks after publication of a document, in Room 309-G of the Department's offices at 200 Independence Ave. SW., Washington, DC, on Monday though Friday of each week from 8:30 a.m. to 5:00 p.m. (phone: 202-245-7890).

FOR FURTHER INFORMATION, CONTACT: David Goldberg, (301) 966-4512.

SUPPLEMENTARY INFORMATION:

I. Background

Under Medicare, hospitals are paid for inpatient hospital services they furnish to beneficiaries under Part A (Hospital Insurance). Currently, most hospitals are paid for their inpatient hospital services under the prospective payment system in accordance with section 1886(d) of the Social Security Act (the Act) and 42 CFR part 412. Under this system, Medicare payment is made at a predetermined, specific rate for each hospital discharge based on the information contained on actual bills submitted.

Those hospitals and hospital units that are excluded from the prospective payment system generally are paid based on the reasonable cost of services furnished to beneficiaries. The inpatient operating costs of these hospitals and hospital units are subject to the rate-of-increase limits, in accordance with section 1886(b) of the Act and 42 CFR 413.40.

Sections 1815(a) and 1833(e) of the Act provide that no payments will be made to a hospital unless its has furnished the information requested by the Secretary needed to determine the amount of payments due the hospital under the Medicare program. In general, hospitals submit this information through cost reports that cover a 12-month period of time. Even though most prospective payment hospitals are paid on the basis of actual bills submitted, these hospitals continue to receive payment for certain costs, such as capital-related costs, on a reasonable cost basis and are required to submit cost reports. Section 1886(f)(1)(A) of the Act, as amended by section 411(b)(6)(B) of the Medicare Catastrophic Coverage Act of 1988 (Pub. L. 100-360), which was enacted on July 1, 1988, provides that the Secretary will maintain a system for reporting costs of hospitals paid under the prospective payment system.

Regulations at § 413.20(a) require that hospitals "maintain sufficient financial records and statistical data for proper determination of costs * * * ." In addition, hospitals must use standardized definitions and follow accounting, statistical, and reporting practices that are widely accepted in the hospital and related fields. Under the provisions of §§ 413.20(b) and 413.24(f), hospitals are required to submit cost reports annually, with the reporting period based on the hospital's accounting year (generally a consecutive 12-month period). Section 413.20(d) requires that hosptials furnish to their fiscal intermediary the information necessary to ensure proper payment by Medicare. The hospital must allow the fiscal intermediary to examine the records and documents maintained by the hospital in order to ascertain the validity of the data submitted by the hospital.

II. Summary of New Legislation

On December 22, 1987, the Omnibus Budget Reconciliation Act of 1987 (Pub. L. 100-203) was enacted. Section 4007 of Public Law 100-203, which was subsequently amended by section 411(b)(6) of Public Law 100-360, sets forth several provisions concerning the reporting of hospital information under the Medicare program. Section 4007(a) of Public Law 100–203 requires the Secretary to develop and put into effect by June 1, 1989, a data base of the operating costs of inpatient hospital services for all hospitals receiving payment under Medicare. Section 4007(b) of Public Law 100–203 provides that, for cost reporting periods beginning on or after October 1, 1989, the Secretary will place into effect a standardized electronic cost reporting format for hospitals under Medicare. This provision now appears as section 1886(f)(1) (A) and (B) of the Act.

Section 4007(c)(1) of Public Law 100–203 requires the Secretary to provide for a demonstration project to develop and determine the costs and benefits of establishing a uniform system of cost reporting for hospitals participating in the Medicare program. Under the authority of this statutory provision, the Secretary will require hospitals in at least two States to participate in the demonstration. Section 4007(c)(2) of Public Law 100–203, as amended by section 411(b)(6)(C) of Public Law 100–360, specifies that these hospitals must report the following information to the Secretary:

- Hospital discharges (classified by class of primary payer).
- Patient days (classified by class of primary payer).
- Licensed beds, staffed beds, and occupancy.
- Inpatient charges and revenues (classified by class of primary payer).
- Outpatient charges and revenues (classified by class of primary payer).
- Inpatient and outpatient hospital expenses (by cost center classified for operating and capital).
- Reasonable costs.
- Other income.
- Bad debt and charity care.
- Capital acquisitions.
- Capital assets.

Section 4007(c)(3) of Public Law 100–203 provides that the Secretary will develop the system so as to facilitate the submittal of the information in the report in and electronic form and to be compatible with the needs of the Medicare prospective payment system. Section 4007(c)(5)(A) of Public Law 100–203, as amended by section 411(b)(6)(C)(viii) of Public Law 100–360, authorizes the Secretary to establish a definition of the term "bad debt and charity care" for the purpose of the demonstration project. Section 4007(c)(5)(B) of Public Law 100–203, as amended by section 411(b)(6)(C)(ix) of Public Law 100–360, provides that the term "class", with respect to payers, means at least the Medicare program, State Medicaid programs, other third party payers, and other persons (including self-paying individuals). As amended by section 411(b)(6)(C)(vi) of Public Law 100–360, section 4007(c)(2) of Public Law 100–203 also specifies that the Secretary will develop a definition of "outpatient visit" for purposes of reporting hospital information.

III. Provisions of this Interim Final Rule

A. General

This interim final rule implements section 4007(c) of Public Law 100–203, which requires the Secretary to provide for a demonstration project to develop and determine the costs and benefits of establishing a uniform cost reporting system to be used by Medicare participating hospitals. The system will be used to report balance sheet and other information specified in the legislation. The Conference Report that accompanied Public Law 100–203 indicates that we are expected to develop a reporting format to collect additional information on hospital costs, revenues, and charges within one year of enactment of Public Law 100–203. (See H.R. Rep. No. 495, 100th Cong., 1st Sess. 538 (1987).) The report further specifies that the reporting format will be similar to the reporting formats used in the statewide reporting systems in California and New York. In addition, the Secretary is expected to implement the new cost reporting format to collect data in the States selected for the demonstration for the remaining years of the project. Subsequent meetings with the Congressional staff led to an agreement that implementation of this project would be delayed 6 months.

B. Selection of the States to Participate in the Demonstration

Section 4007(c)(1) of Public Law 100–203 provides that the Secretary must select at least two States in which all of the hospitals must participate in the demonstration. Because of the relatively short time period we have to implement the demonstration, we have decided that it is more feasible to limit the demonstration to two States. As required by the law, one of the States selected must currently maintain a uniform system of hospital reporting. The Conference Report states that "The conferees intend that the Secretary will select the State of California to meet this requirement. The Secretary is also required to select the second demonstration State from among those States which do not presently operate such a system." (H.R. Rep. No. 495, 100th Cong., 1st Sess. 538 (1987).)

While section 4007(c) of Public Law 100–203 does not specifically require the Secretary to select California as one of the States whose hospitals participate in the demonstration, the Conference Report makes it clear that Congress intended that California be chosen. Thus, we have selected California to take part in the demonstration as representative of the States that maintain a uniform reporting system.

Besides California, eight States (that is, New York, New Jersey, Massachusetts, Maryland, Washington, Florida, Connecticut, and Arizona) maintain a system of uniform hospital reporting. Since it is the intent of the conferees that the other State chosen should not have a uniform reporting system, those eight States are not eligible to take part in the demonstration unless more than two States are selected.

In order to select the other State that will participate in the demonstration (that is, the State that does not have a uniform reporting system), we obtained from HCFA's Hospital Cost Report Information System (HCRIS) a list of the number of hospitals in each State as follows;

- Number of hospitals by type (that is, short-term, long-term, psychiatric, rehabilitation, and other).
- Number of urban and rural hospitals.
- Number of hospitals serving a disproportionate share of low-income patients and their percentage of the total hospitals in the State.
- Number of teaching hospitals expressed as a percentage of the total hospitals in the State.
- Number of hospitals by type of control (that is, voluntary, nonprofit, proprietary, and governmental).
- Number of hospitals by bed size category (for example, 0–99 beds, 100–199 beds).

The individual State statistics were compared to similar data for the United States as a whole. Based on these comparisons, and other considerations such as geographic location and the total number of hospitals that would be involved, we narrowed our selection to four States: Ohio, Illinois, Virginia, and Colorado. We believe that the cross section of hospitals in these four States is fairly representative of the cross section of hospitals in the country as a whole.

Accordingly, we met with representatives of the State hospital associations of these four States. Based upon our discussions, we selected Colorado to be the second State to participate in the demonstration. Besides being fairly representative of the rest of the country, Colorado has a

significant number of small rural hospitals, which are the hospitals upon which we believe the introduction of electronic cost report submission may have the greatest impact.

Under section 4007(c) of Pubic Law 100–203, the reporting system developed under the demonstration is to facilitate the submittal of information in an electronic form. In addition, under section 4007(b) of Public Law 100–203, effective with cost reporting periods beginning on or after October 1, 1989, electronic reporting is mandatory for hospitals in all States except in those instances where the Secretary determines implementation would result in financial hardship. Therefore, the inclusion in the early stage of the development of the system of a State with many small rural hospitals is important to help resolve those hospitals' problems with electronic processing. For these reasons, Colorado has been selected for the demonstration project as the representative of the State that does not have a uniform reporting system for its hospitals.

C. Implementation of the Demonstration

This demonstration is intended to accomplish the following objectives:

- More timely collection of cost report data.
- Collection of more uniform data.
- The reporting and collecting of additional data.

The demonstration will begin with cost reporting periods beginning on or after July 1, 1989. It will encompass two full consecutive cost reporting period cycles. Hospitals in the two States participating in this demonstration are required to file annually the current form, Hospital and Hospital Health Care Complex Cost Report (HCFA 2552–89), and additional worksheets developed specifically for the demonstration project. At least one interim report will be required under the demonstration. This interim report will be for the first six-month period in which the hospital participates in the demonstration project. The purpose of the interim report is twofold. First, it will be used to evaluate the accuracy of the data source hospitals use to collect the additional data. Second, it will be used to test the electronic submission process. The need for subsequent interim reports will be evaluated once the demonstration has been implemented.

The cost report developed for purposes of the demonstration is an expanded version of the current form HCFA 2552–89. Additional worksheets will be developed to allow for the collection of additional data elements. For example, the statistics will be expanded to collect patient days and discharges by classes of primary payer such as Maternal and Child Health (title V of the Act), Medicare (title XVIII of the Act), Medicaid (title XIX of the Act), other third party payers, and other persons (including self-paying individuals).

With respect to electronic reporting, the reports must be submitted in a standardized electronic format. The hospitals' electronic programs must be able to produce a standardized output file that can be used in any intermediary's automated system.

The specifications for this system are currently being developed. We have convened a workgroup comprising representatives of the health care industry, Medicare fiscal intermediaries, the State of California, Colorado and California State hospital associations, the Prospective Payment Assessment Commission, and HCFA. The workgroup will finalize the specific methodology that will be used in the design of the demonstration cost report.

We anticipate that through the data collected during the demonstration we will be able to determine definitions for bad debt and charity care and outpatient visits.

As previously indicated, all hospitals in the States of California and Colorado are required to participate in the demonstration project. The HCFA intermediaries will work with hospitals to develop the capability to submit the additional data that are required and to submit the cost reports electronically. However, if a hospital refuses to submit the data or refuses to submit the cost reports electronically, Medicare payments to that hospital may be suspended under the provisions of sections 1815(a) and 1833(e) of the Act. As explained above, sections 1815(a) and 1833(e) of the Act provide that no Medicare payments will be made to a hospital unless it has furnished the information requested by the Secretary needed to determine the amount of payments due the hospital under the Medicare program. Regulations at § 405.371(d) provide for suspension of Medicare payments to a hospital by the intermediary if the hospital has failed to submit information requested by the intermediary that is needed to determine the amount due the hospital under Medicare. The general procedures that are followed when Medicare payment to a hospital is suspended for failure to submit information that is needed by the intermediary to determine Medicare payment (that is, when a hospital fails to furnish a cost report or furnishes an incomplete cost report or fails to furnish other needed information) are located in section 2231 of the Intermediary Manual (HCFA Pub. 13). These procedures includes timeframes for "demand letters" to hospitals, which in addition to reminding hospitals to file timely and complete cost reports, explain possible adjustments to Medicare payments of a hospital and the right to request a 30-day extension of the due date. HCFA or the fiscal intermediary will suspend payments only after exhausting all reasonable attempts to obtain the requested information.

Hospitals participating in the demonstration project and fiscal intermediaries may obtain help including advice in completing the cost reporting forms and worksheets by calling toll free 1–800–525–5274.

As explained above, section 4007(c)(1) of Public Law 100–203 requires the Secretary to provide for this demonstration project, which will be used to develop and determine the costs and benefits of establishing a uniform system of cost reporting for hospitals. In addition, section 4007(c)(3) of Public Law 100–203 requires the Secretary to develop the uniform system of cost reporting for hospitals so as to facilitate the submittal of the information in the cost report in an electronic form and to be compatible with the needs of the Medicare prospective payment system. We believe that the requirements in section 4007(c)(1) and (c)(3) of Public Law 100–203 (that the Secretary provide for this demonstration project that will be used to develop a uniform system of cost reporting which will facilitate electronic reporting) taken together with sections 1815(a) and 1833(e) of the Act (which provide that no Medicare payments will be made to a hospital unless it has furnished the information requested by the Secretary needed to determine the amount of payments due the hospital under the Medicare program) provide us with the authority to suspend payments to a hospital in this demonstration project that does not submit its information in an electronic form.

IV. Regulatory Impact Analysis

A. Executive Order 12291

Executive Order 12291 (E.O. 12291) requires us to prepare and publish a regulatory impact analysis for any final rule such as this that meets one of the E.O. criteria for a "major rule"; that is, that would be likely to result in—

- An annual effect on the economy of $100 million or more;
- A major increase in costs or prices for consumers, individual industries,

OL
54
SS
1
6
4
AG
25
989
MI

Federal, State, or local government agencies, or geographic regions; or

- Significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

This final rule is not a major rule under E.O. 12291 criteria, and a regulatory impact analysis is not required.

B. Regulatory Flexibility Act

We generally prepare a regulatory flexibility analysis that is consistent with the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 through 612) unless the Secretary certifies that a final rule such as this will not have a significant economic impact on a substantial number of small entities. For purposes of the RFA, all hospitals are treated as small entities.

Section 1102(b) of the Social Security Act requires the Secretary to prepare a regulatory impact analysis if a notice may have a significant impact on the operations of a substantial number of small rural hospitals. Such an analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital with fewer than 50 beds located outside of a Metropolitan Statistical Area (MSA).

As discussed in detail above, section 4007(c)(1) of Public Law 100–203, as amended by section 411(b)(6)(C) of Public Law 100–360, requires that we undertake a demonstration project that will develop and assess the costs and benefits of establishing a uniform system of cost reporting for hospitals participating in the Medicare program. We estimate that it will affect approximately 634 hospitals: 542 in California and 92 in Colorado (Hospital Statistics, 1987 Edition).

We believe that certain benefits will accrue to the Medicare hospitals, State Medicaid agencies, and private insurance companies in California and Colorado as a result of participating in this demonstration project. Among them will be an improvement in the quality and management of information in relation to cost reports, and an ability to more easily adapt to the reporting format that will be instituted as an outcome of the demonstration project.

Section 4007(c)(6) of Public Law 100–203 (42 USC 1395ww note) indicates that the Secretary must set aside at least a total of $3,000,000 for fiscal years 1988, 1989, and 1990 from existing research funds or from operation funds to develop the format of the demonstration project and for data collection and analysis, but total funds must not exceed $15,000,000. Under the demonstration, costs will be incurred by HCFA, the fiscal intermediaries, and hospitals. HCFA will incur costs for the development and operation of two types of software. One software package is needed to permit intermediaries to receive and process cost reports under the new standard electronic reporting format. The second software package will enable hospitals to submit cost report input data electronically to their intermediaries. The intermediaries will directly incur the cost to collect and process cost report data to be forwarded to HCFA, and validate hospitals' reporting processes of the new data under the demonstration.

The statute does not explicitly require HCFA to pay hospitals for their costs incurred under the demonstration project. However, hospitals participating in the demonstration project will be required to perform several broad functions. These hospitals will need to submit their cost reports electronically; collect and report the additional data specified in the legislation; and submit at least one interim cost report. We recognize that in the performance of these functions hospitals will incur additional costs. However, we also recognize that all hospitals will not incur these additional costs to the same extent. For example, some hospitals may already be collecting part or all of the additional information required by the statute but which is not included in the current Medicare cost report. Also, implementation of the electronic format for cost reports will not have the same financial impact on all hospitals.

We plan to make specific payments to hospitals for the incremental costs that are reasonable in amount and can be directly identified as having been incurred solely because of the demonstration project; that is, costs incurred for the collection, reporting, and electronic submission of the additional data. These payments should represent the cost of collecting the additional data, reporting the additional data, and the electronic submission of the additional data only. For hospitals paid based on reasonable cost (that is, hospitals not subject to the prospective payment system), the payment of the incremental costs incurred because of the demonstration project is justified on the basis of section 1861(v)(1)(A) of the Act, which states in part:

> The reasonable cost of any services shall be the cost actually incurred, excluding therefrom any part of incurred cost found to be unnecessary in the efficient delivery of needed health services, and shall be determined in accordance with the regulations establishing the method or methods to be used, and the items to be included, in determining such costs for various types or classes of institutions, agencies and services; * * * Such regulations may provide for determination of the costs of services on a per diem, per unit, per capita, or other basis, may provide for using different methods in different circumstances. * * *

We believe that this departure from the usual Medicare reasonable cost payment rules is appropriate as the incremental costs would not have been incurred but for the hospitals' participation in this demonstration.

For hospitals paid under the prospective payment system, payment of these incremental costs is appropriate as these costs are not covered by the standard prospective payment rate. We therefore intend to pay prospective payment hospitals for the incremental costs of participating in this demonstration under the authority of section 1886(d)(5)(iii) of the Act, which states "The Secretary shall provide by regulation for such other exceptions and adjustments to such payment amounts under this subsection as the Secretary deems appropriate. * * *"

In addition, as noted above, section 1886(f)(1) of the Act was recently amended by section 411(b)(6)(B) of Public Law 100–360 to continue the requirement that prospective payment hospitals must submit Medicare cost reports. The cost report for the hospitals participating in the demonstration consists of the current HCFA–2552–89 and the additional demonstration worksheets. The incremental costs will be reported on the Medicare cost report and paid on a reasonable cost basis, that is, as a pass-through cost.

At this time, we are unable to estimate the costs that will be incurred by each hospital participating in this demonstration. We plan to ascertain, to the extent possible, the incremental costs that hospitals incur during the course of this project. Hospitals will be expected to have supporting documentation available to support their claims. However, payments may not necessarily equal the hospital's total incremental costs incurred since those costs are substantially part of administrative and general costs. Therefore, we do not guarantee that hospitals will be paid for all of the incremental costs incurred for the collection, reporting, and electronic submission of the additional data.

We do not anticipate paying hospitals for the cost of electronically submitting their annual Medicare cost report. Since almost all hospitals will be required by

section 4007(b) of Public Law 100–203 to submit cost reports electronically effective with cost reporting periods beginning on or after October 1, 1989, we believe it would be inappropriate to make specific payments for these costs to hospitals in the demonstration when all other hospitals will not be similarly compensated. For prospective payment hospitals, these costs are covered by the standard prospective payment rate and for all other hospitals they are included in the reasonable costs reported. Therefore, Medicare's proportionate inpatient share is included in the diagnostic related group (DRG) payment for prospective payment hospitals and for all other hospitals in the reasonable cost unit of payment. For all hospitals, Medicare's proportionate outpatient share is paid based on cost.

V. Other Required Information

A. Waiver of Prior Public Comment Period and 30-Day Delay in Effective Date

We ordinarily publish a proposed notice of rulemaking in the **Federal Register** for substantive rules and provide a period for public comment. Also, we normally publish rules of this kind 30 days before the effective date. However, we may waive these procedures if we find good cause that notice and comment and a delayed effective date are impractical, unnecessary, or contrary to the public interest. When we do so, we incorporate our findings in the notice to be issued.

Section 4039(g) of Public Law 100–203 provides that we may issue regulations to implement the amendments made by subtitle A of title IV of Public Law 100–203 on an interim or other basis as may be necessary. The Conference Report that accompanied Public Law 100–203 indicates that HCFA should develop the reporting format authorized under section 4007(c) within one year of enactment. (See H.R. Rep. No. 495, 100th Cong., 1st Sess. 538 (1987).) Notwithstanding the 6-month delay mentioned earlier, it is clear that undergoing a proposed rulemaking process for this final rule with comment period and providing a 30-day delay in effective date would be impractical and, in terms of notifying affected parties of the provisions of the legislation as soon as possible, would not be in the public interest. Therefore, we find good cause to waive publication of a proposed notice and the 30-day delay in effective date and to issue an interim final rule. Nevertheless, we are providing a 60-day comment period as indicated at the beginning of this interim final rule.

Because of the large number of items of correspondence we normally receive on a rule, we are not able to acknowledge or respond to them individually. However, we will consider all comments that we receive by the date and time specified in the "DATE" section of this preamble and, if we decide that changes are necessary as a result of our consideration of timely comments, we will issue a final rule and respond to the comments in the preamble of that rule.

B. Paperwork Reduction Act

Section of 403.408 of this final rule contains information collection requirements that are subject to the Office of Management and Budget (OMB) review under the Paperwork Reduction Act of 1980. As required by section 3504(h) of the Paperwork Reduction Act of 1980, we have submitted a copy of this interim final rule to OMB for its review of these information collection requirements. This section of the "Uniform Cost Reporting System for Hospitals" rule sets forth the information submission requirements for the cost reports of hospitals under this demonstration project. Public reporting burden for this collection of information is estimated to be 150 hours per response. A notice will be published in the **Federal Register** after approval is obtained.

During the course of the demonstration, we will be measuring the burden associated with the additional information submitted by hospitals participating in the demonstration. We will adjust the burden hours as needed at the completion of the first year of the demonstration. Organizations and individuals desiring to submit comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, should direct them to the OMB official whose name appears in the "ADDRESS" section of this preamble.

C. List of Subjects in 42 CFR Part 403

Health insurance, Intergovernmental relations, Medicare, Reporting and recordkeeping requirements.

42 CFR part 403 is amended as set forth below.

PART 403—SPECIAL PROGRAMS AND PROJECTS

A new subpart D is added to read as follows:

Subpart D—Demonstration Project to Develop a Uniform Hospital Cost Reporting System

Sec.
403.400 Basis and scope.
403.402 Definition.
403.406 Selection of States to participate in the demonstration.
403.408 Requirements for hospitals in States participating in the demonstration.
403.410 Payments to hospitals participating in the demonstration.

Subpart D—Demonstration Project to Develop a Uniform Hospital Cost Reporting System

Authority: Sections 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1345hh) and section 4007(c) of Public Law 100–203, as amended (42 U.S.C. 1395ww note).

§ 403.400 Basis and scope.

(a) *Basis.* This subpart implements the provisions of section 4007(c) of Public Law 100–203 by establishing a demonstration project to develop a uniform cost reporting system for hospitals under Medicare.

(b) *Scope of subpart.* This subpart sets forth the requirements that those hospitals participating in demonstration project must meet.

§ 403.402 Definition.

For purposes of this subpart, *"class"*, with respect to payers, means the Medicare program, the State Medicaid programs, Maternal and Child Health programs (title V of the Act), other third-party payers, and all other payers, which includes self-paying individuals.

§ 403.406 Selection of States to participate in the demonstration.

(a) *General rule.* At least two States must participate in the demonstration, and the following requirements must be met:

(1) At least one State must currently maintain a uniform system of hospital reporting.

(2) At least one State must not currently maintain a system of uniform hospital reporting.

(b) *Selection of States.* The following two States are selected to participate in the demonstration project:

(1) California, as the State that maintains a uniform system of hospital cost reporting.

(2) Colorado, as the State that does not maintain a uniform system of hospital cost reporting.

§ 403.408 Requirements for hospitals in States participating in the demonstration.

(a) *General.* For cost reporting periods beginning on or after July 1, 1989 and

---

---

before July 1, 1991, all hospitals in California and Colorado must submit the cost report required under §§ 413.20 and 413.24 of this chapter and the data specified in (b) below.

(b) *Cost reporting requirements for the demonstration.* Hospitals are required to submit a demonstration project cost report that includes the following information:

(1) Hospital discharges (classified by class of primary payer).

(2) Patient days (Classified by class of primary payer).

(3) Licensed beds, staffed beds, and occupancy.

(4) Inpatient charges and revenues (classified by class of primary payer).

(5) Outpatient charges and revenues (classified by class of primary payer).

(6) Inpatient and outpatient hospital expenses (by cost center classified for operating and capital).

(7) Reasonable costs.

(8) Other income.

(9) Bad debt and charity care.

(10) Capital acquisitions.

(11) Capital assets.

(c) *Due date for demonstration project cost report.* Due dates for demonstration cost reports are established by HCFA through instructions but are no more often than the due dates specified in § 413.24(f) of this chapter for hospital cost reports.

(d) *Interim reporting.* Hospitals participating in the demonstration project are required to submit an interim report covering the first six months in which the hospital participates in the demonstration project. Hospitals are required to submit additional interim reports requested by HCFA on the due dates established by HCFA.

(e) *Reporting format.* Demonstration project cost reports must be submitted in an electronic format. The hospital's electronic programs must be capable of producing an output file compatible with their respective intermediary's automated systems.

§ 403.410 Payments to hospitals participating in the demonstration.

(a) *General.* Hospitals participating in the demonstration project are paid on a reasonable cost basis for 100 percent of the incremental costs (as defined in paragraph (b) of this section) incurred as a result of that participation. To prevent duplicate payments, payments made to a hospital under the provisions of this section are subtracted from the hospital's total allowable costs subject to cost finding and apportionment.

(b) *Incremental costs.* Incremental costs are those costs that are reasonable and can be identified directly as having been incurred solely because of participation in the demonstration project. They do not represent any of the same costs that are incurred by other hospitals not participating in the demonstration project or costs that would have otherwise been incurred by hospitals participating in the demonstration. These costs include those attributable to the collection, reporting, and electronic submission of the additional data specified in § 403.408(b). Incremental costs do not include those costs incurred because of the requirement in section 4007(b) of Public Law 100–203 for the electronic submission of annual cost reports.

BILLING CODE 4120-01-M

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MM Docket No. 88–178; RM–6118, 6439]

Radio Broadcasting Services; Kremmling and Widefield, CO

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: This document substitutes Channel 292C2 for Channel 292A at Kremmling, Colorado, and modifies the license for Station KRKY–FM accordingly, in response to a petition filed by Grand Lake Broadcasting, Inc. Coordinates used for Channel 292C2 at Kremmling are 40–04–58 and 106–22–39, with a site restriction of 2.3 kilometers (1.4 miles) northeast of the community to prevent a short-spacing to Channel 291A at Basalt, Colorado. This document also substitutes Channel 292C2 for Channel 292A at Widefield, Colorado, and modifies the license for Station KKLI–FM accordingly, at the request of Tipple Communications, Inc. (COLO). Coordinates used for Channel 292C2 at Widefield are 38–44–47 and 104–51–37. See 53 FR 17084, May 13, 1988. With this action, the proceeding is terminated.

EFFECTIVE DATE: October 2, 1989.

FOR FURTHER INFORMATION CONTACT: Michael Ruger, Mass Media Bureau (202) 632–6302.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Report and Order, MM Docket No. 88–178, adopted July 31, 1989, and released August 16, 1989. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Dockets Brach (Room 230), 1919 M Street, NW, Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractors, International Transcription Service, (202) 857–3800, 2100 M Street, NW, Suite 140, Washington, DC 20037.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Report and Order, MM Docket No. 87–591, adopted July 31, 1989, and released August 18, 1989. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street NW., Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractors, International Transcription Service, (202) 857–3800, 2100 M Street NW., Suite 140, Washington, DC 20037.

List of Subjects in 47 CFR Part 73

Radio broadcasting.

PART 73—[AMENDED]

1. The authority citation for part 73 continues to read as follows:

Authority: 47 U.S.C. 154, 303.

§ 73.202 [Amended]

2. Section 73.202(b), the Table of FM Allotments, is amended by adding Signal Mountain, Channel 251A, under Tennessee.

Federal Communications Commission.

Karl A. Kensinger,

Chief, Allocations Branch, Policy and Rules Division, Mass Media Bureau.

BILLING CODE 6712-01-M

---

47 CFR Part 73

[MM Docket No. 88–375; FCC 89–232]

FM Broadcast Service; Amendment of Part 73 of the Rules To Provide for Additional FM Station Class (Class C3) and To Increase Maximum Transmitting Power for Class A FM Stations

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: The Commission amends its rules to increase the maximum permitted effective radiated power for Class A FM broadcast stations from 3000 to 6000 watts, and revises the minimum distance separation requirements applicable to Class A stations in order to maintain protection for the service of FM stations of all classes. For existing Class A stations, the Commission will implement the power increase on a selective basis, rather than as a blanket increase. Existing stations at locations that do not meet one or more of the revised requirements are "grandfathered." That is, modifications and relocations of such stations will be allowed under the previous power limit and distance separation requirements. The purpose of this action, which will allow the majority of existing Class A FM broadcast stations to operate with increased power, is to enable Class A stations to provide better service to their listeners.

EFFECTIVE DATE: October 2, 1989.

ADDRESS: Federal Communications Commission, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: James E. McNally, Jr., Mass Media Bureau, (202) 632–9660.

SUPPLEMENTARY INFORMATION: Public reporting burden for this collection of information is estimated to vary from 20 hours to 1039 hours per response with an average of 97 hours and 4 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing the burden, to the Federal Communications Commission, Office of the Managing Director, Washington, DC 20554, and to the Office of Management and Budget, Paperwork Reduction Project (3060–0029), Washington, DC 20503.

Following is a summary of Commission's Second *Report and Order* in MM Docket No. 88–375, adopted July 13, 1989 and released August 18, 1989. The full text of this action is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street NW., Washington, DC. The complete text of this action may also be purchased from the Commission's copy contractors, International Transcription Services, (202) 857–3800, 2100 M Street NW., Suite 140, Washington, DC 20037.

Summary of the Second Report and Order

1. On July 20, 1988, the Commission adopted a *Notice of Proposed Rule Making ("Notice")* (53 FR 38743, October 3, 1988) proposing rule amendments that would potentially permit improvements in the facilities of the majority of Class A FM broadcast stations in the United States. Specifically, the Commission proposed the creation of a new intermediate class of FM broadcast stations in Zone II, and a general increase in the maximum permitted transmitting power for Class A FM broadcast stations from 3000 to 6000 watts.

2. In response to the *Notice*, the Commission received 98 formal comments, 16 reply comments, and several hundred informal letters and inquiries. The proposal to create a new intermediate FM station classification (Class C3) received virtually unanimous support from commenting parties. On March 30, 1989, the Commission adopted a *First Report and Order* (54 FR 16363, April 24, 1989; corrected 54 FR 19374, May 5, 1989), amending 47 CFR Part 73 to provide for the new Class C3 FM broadcast station class.

3. The commenters also generally support the proposal to increase the maximum permitted transmitting power for Class A FM broadcast stations. Most of the commenters agreed with the Commission's assessment of the benefits of increased power for Class A FM stations. Additionally, the vast majority of comments submitted by licensees of Class A stations related specific coverage problems experienced by their particular stations which they believe the proposed power increase would help to solve. These problems generally fall into the categories of terrain shielding and obstruction shadowing, temperature inversions and other propagation vagaries, building penetration difficulty, and signal domination by larger class FM stations.

4. In the *Notice*, the Commission proposed to increase the maximum permitted ERP for Class A FM broadcast stations from 3000 to 6000 watts, while leaving the reference antenna height above average terrain at 100 meters (328 feet). Also, the Commission outlined two possible methods (termed "METHOD 1" and "METHOD 2") for implementing the Class A power increase, the requested further public comment addressing the advantages and drawbacks of each method. Under METHOD 1, the Commission would raise the maximum ERP limit for all Class A FM stations while retaining the existing minimum co-channel and adjacent channel spacings. Grandfathered shortspaced stations would be allowed to increase ERP subject to the provisions of 47 CFR 73.213.

5. METHOD 2 would permit the increase in power for only those Class A stations able to meet appropriate new separation distances. Service gains would not be as great as with METHOD 1, but adverse effects on existing stations would be minimized. METHOD 2 would create two categories of Class A FM stations—those allowed to increase power to 6000 watts, and those remaining limited to 3000 watts. Grandfathered short-spaced stations would fall into the latter category; however, some of these stations might be able to increase power if mutual agreements could be reached with all involved stations, and if it were shown that such an increase would serve the public interest.

6. In general, comments of most Class A FM broadcast station licensees favor a "blanket" power increase; that is, they request that the Commission allow all Class A stations to increase power without regard to the individual situations of the stations. Accordingly, between the two methods proposed, most Class A licensees prefer METHOD 1, which is closer to the blanket upgrade approach. These licensees oppose a selective upgrade approach, such as METHOD 2, based on increased distance separation requirements. Some of the reasons cited by these commenters in support of the blanket upgrade are:

(a) The blanket approach would allow all Class A stations to increase power, whereas the selective approach would exclude many Class A stations, particularly in the urban northeast, where the competitive imbalance is most severe.

(b) The blanket approach would be relatively simple to administer, whereas the selective approach would involve additional paperwork and delay associated with a case-by-case implementation.

(c) Under the blanket approach, all Class A stations would be on an equal footing, whereas under the selective approach, there would be two categories of Class A station, 3000 watt and 6000 watt.

(d) Under the blanket approach, all Class A stations could increase power at their current locations, whereas under the selective approach, costly relocations could be necessary in order for some Class A stations to increase power.

7. On the other hand, comments filed by many broadcast organizations, consulting engineering firms, and most licensees of Class B FM stations strongly oppose any form of blanket power increase for Class A stations. These commenters favor increased power for Class A stations, but only where no interference would result. Thus they believe that any Class A power increase must be administered on a selective basis, and favor METHOD 2. The principal reasons given by these commenters for their opposition to a blanket Class A power increase are:

(a) A blanket power increase for Class A stations would cause unacceptable interference to the current service of Class B and B1 stations, whereas a selective power increase would protect this service.

(b) A blanket power increase would cause overall degradation of the FM service.

(c) A blanket power increase would destroy the technical integrity of the minimum distance separation requirements.

8. The Commission stated in the *Notice* that regardless of which method for implementing a Class A power increase were to be selected, it would be preferable to minimize the administrative burdens on licensees and FCC staff. While noting that it generally proceeds upon individual applications in upgrading FM facilities, the Commission expressed concern that employment of a strictly case-by-case approach would result in excessive processing delays, even for problem-free applications.

9. Thus, the Commission proposed to employ procedures combining elements of both the blanket approach and the case-by-case approach. Specifically, it was proposed to allow Class A stations that can effect the power increase by simple technical means to do so without individual prior approval. In such cases, the station licensee would be required only to file FCC Form 302, together with a supplemental exhibit within ten days after the power increase is made. In all other cases, the Class A station licensee would be required to file FCC Form 301 and obtain prior approval for the power increase.

10. *Class A power limit raised to 6000 watts.* The record clearly shows that a substantial number of the persons most familiar with the day to day operation of Class A stations firmly believe that the current 3000 watt power level is inadequate for these stations to be technically and economically competitive in the current radio marketplace environment, and that the proposed increase to 6000 watts would make a significant improvement in the ability of these stations to serve the public. In consideration of this evidence, the Commission is amending 47 CFR 73.211 to raise the maximum effective radiated power limit for Class A FM broadcast stations from 3000 to 6000 watts. The current reference antenna HAAT of 100 meters for Class A stations other than those located in Puerto Rico and the Virgin Islands is retained. Equivalent combinations of lower ERP and higher antenna HAAT, such as 4000 watts with 125 meters, will be permitted under the new limit (see 47 CFR 73.211(b)(2)).

11. *Increased minimum power requirement for Class B1 and C3.* The minimum power requirement for each FM station class (47 CFR 73.211) generally corresponds to the maximum power limit for the next lower station class. This helps to avoid ambiguity in station classification. In view of the increase in the maximum power limit for Class A, the Commission is also raising the minimum power requirement for Class B1 and C3 stations accordingly. Currently Class B1 and C3 stations must operate with an ERP greater than 3000 watts. In this order, 47 CFR 73.211 is revised to require that Class B1 and C3 stations must operate with an ERP greater than 6000 watts. The Commission did not propose the reclassification of existing Class B1 authorizations in the *Notice*, therefore, no reclassification procedures for them are being established at this time.

12. *Selective implementation method chosen.* After careful review of the record, in particular the engineering statements and other comments that support or oppose, on technical grounds, each of the proposed methods, the Commission concludes that the Class A power increase should be implemented on a selective basis, rather than as a blanket increase. The Commission further concludes that the minimum distance separation requirements applicable to Class A stations should be adjusted to account for the increase in transmitting power. The rules adopted are thus similar to proposed METHOD 2, however, they also incorporate some aspects of proposed METHOD 1. For example, increased power operation by existing grandfathered short-spaced stations will be permitted, subject to 47 CFR 73.213. In addition, amended 47 CFR 73.1619 will allow the licensees of fully-spaced Class A stations that can effect the power increase by simple technical means to do so prior to filing an application.

13. *New minimum distance separation requirements for Class A stations.* The purpose of minimum distance separation requirements for FM stations is to allow FM assignments to be made without excessive delay on an administratively convenient "go — no go" basis. FM stations are entitled only to such coverage protection as the separation requirements provide. Consequently, if the maximum power limit for Class A stations is to be raised and involuntary loss of currently protected service area is to be prevented, it follows that the distance separation requirements applicable to Class A stations must be increased. The Commission is adopting new requirements that will maintain present protection.

14. *Grandfathered short-spaced stations.* The Commission has decided to grandfather all existing stations that do not meet the new distance separation requirements. A new category of grandfathered short-spaced stations under 47 CFR 73.213, comprising these stations, will be created. For stations in this new category, the Commission will allow (1) Class A stations broadcasting with no more than the current maximum facilities (3000 watts ERP and an antenna HAAT of 100 meters, or equivalent lower ERP and higher HAAT) and newly short-spaced stations of all other classes, and (2) Class A stations operating with more than 3000 watts ERP, but with no greater interference potential than a station operating at the current maximum facilities to be modified or relocated provide that the appropriate separation requirements are met. The first provision preserves the freedom to modify or relocate, under the terms of the current rules, the newly-grandfathered Class A stations that do not increase power above the current limit and the stations of other classes that become short-spaced to Class A stations as a result of the Commission's revision of 47 CFR 73.207 in this order. The second provision allows licensees of newly-grandfathered Class A stations using an antenna HAAT less than 100 meters the option to increase power above 3000 watts. Although a power increase under these circumstances will not expand service area beyond that of a 3000 watt, 100 meter Class A station, it may still prove to be of some value in overcoming the building penetration and temperature inversion interference problems frequently cited by commenters.

15. The Commission will also consider applications by newly created short-spaced Class A stations, on a case-by-case basis, in the following limited circumstances. In the case of Class A stations which are newly short-spaced to each other and which seek mutual increases in facilities, the Commission will allow such increases in power provided that all Class A stations seeking the increase first obtain the consent of any other stations who may be affected by the change, and that the increase is otherwise consistent with the public interest. Unilateral increases will be permitted if a station has obtained the consent of all other stations which may be affected, and the increase is consistent with the public interest. The Commission notes that agreement among stations which may be affected is a necessary but not sufficient condition to granting a power increase. As between Class A and other facilities, the Commission will examine each request to insure that no fully spaced or less short spaced site is available.

16. *IF distance separation requirements.* Because IF interference may potentially affect all of the FM stations in an area, in addition to the two IF-related stations, the Commission will not allow agreements for short-spaced IF related stations. To increase power beyond the current 3000 watt, 100 meter maximum facilities, a Class A station's antenna site must meet the modified IF distance separation requirements of 47 CFR 73.207.

17. *Public radio service.* The Commission believes that any adverse effect of the Class A power increase on public radio service operating in the upper portion of the reserved spectrum will be minimal. For second and third adjacent channel stations the distance separation requirements are increased only for the Class A to Class A and Class A to Class C1 relations. The other second and third adjacent requirements are unchanged. The IF distance separation requirements are increased slightly (by 1 to 2 km typically), but some of these requirements were recently reduced and the two changes offset each other to some extent. Moreover, there are very few IF-related station pairs anyway. Consequently, the only significant increases affecting the upper portion of the reserved band are in the first adjacent minimum distance separation requirements. Also, for those stations that are affected, the commercial Class A station is limited to

the current 3000 watt, 100 meter maximum facilities or other facilities with no greater interference potential, unless consent is obtained from all affected stations, including the NCE-FM station(s). Therefore, the Commission concludes that this action will not have significant adverse impact upon public radio service, and that no special restrictions or requirements in connection with the power increase for Class A stations operating on Channels 221, 222 and 223 are necessary.

18. *Administrative procedures.* To allow as many Class A stations as possible to upgrade without unnecessary delay and expense, the Commission is adopting administrative procedures similar to those proposed in the *Notice*. Specifically, in November of this year, the Commission will publish a list of licensed Class A stations at sites that appear to meet all of the appropriate minimum distance separation requirements.[1] Of the stations on this list [2], those for which the power increase can be implemented by replacing a non-directional antenna with a higher gain non-directional antenna, changing the transmitter output power [3], changing the type or length of the transmission line, and/or installing or removing certain components in the transmission line, may begin operation with increased ERP on or after December 1, 1989, but prior to the filing of an application for such operation. In such cases, licensees will be required to file FCC Form 302, together with a supplemental exhibit addressing environmental matters within 10 days after the power increase is made.[4] This automatic authority does not extend to stations for which an increase in facilities would expose workers or the general public to levels of rf radiation in excess of the "Radio Frequency Protection Guides" recommended in "American National Standard Safety Levels with respect to Human Exposure to Radio Frequency Electromagnetic Fields, 300 kHz to 100 GHz," (ANSI C95. 1–1982) by the Institute of Electrical and Electronics Engineers, Inc., 345 East 47th Street, New York, New York 10017. Such stations may not operate with increased facilities until measures are taken to prevent workers and the general public from being exposed to the excess levels of rf radiation or unless they first receive authorization from the Commission.

19. In all other respects, the rules adopted herein will become effective on October 2, 1989. Applications and petitions filed prior to October 2, 1989 must comply with, and will be processed in accordance with, the current rules. Applications on FCC Form 301 to increase Class A station power pursuant to the rules adopted herein (for stations that will be newly grandfathered, or for some other reason will be unable to utilize the FCC Form 302 procedure described above) may be filed on or after October 2, 1989. Because some Class A stations not meeting the new distance separation requirements may nevertheless be able to increase power by utilizing the contour protection provisions of 47 CFR 73.215, such stations will be exempt from the temporary 5 mile (8 kilometer) limit on short-spaced locations under this rule.

Final Regulatory Flexibility Analysis

I. Need and Purpose of this Action

The Commission is increasing the maximum permitted power for Class A FM broadcast stations. The principal purpose of this action is to provide additional opportunities for improvement of the facilities of existing Class A FM broadcast stations. The need for such improvement was outlined in the *Notice* and confirmed by the majority of the commenting parties. Existing Class A stations will be allowed to increase to the new power limit on a selective basis.

II. Summary of Issues Raised by the Public Comments in Response to the Initial Regulatory Flexibility Analysis

No commenters addressed the Initial Regulatory Flexibility Analysis.

III. Significant Alternatives Considered and Rejected

The Commission considered the alternative of allowing existing Class A stations, other than grandfathered short-spaced stations, to increase power on an across-the-board basis, rather than a selective basis. However, the Commission determined that to do so could reduce the expected coverage areas of certain other classes of FM broadcast stations, and that to impose such a reduction would not be in the public interest.

20. The action contained herein has been analyzed with respect to the Paperwork Reduction Act of 1980 and has been found to impose a modified information collection requirement on the public. Implementation of any modified requirement will be subject to approval by the Office of Management and Budget as prescribed by the Act.

21. *It is ordered,* pursuant to authority contained in Sections 4 and 303 of the Communications Act of 1934, as amended, 47 U.S.C. 154 and 303, and effective October 2, 1989, That part 73 of the Commission's Rules, 47 CFR part 73, is amended as set forth below, and That authority to order Class A station licensees found to have improperly increased power to return to licensed parameters is delegated to the Chief, Mass Media Bureau.

Federal Communications Commission.

Donna R. Searcy,

Secretary.

List of Subjects in 47 CFR Part 73

Radio broadcasting, FM broadcast stations, Class A.

For the reasons set forth in the preamble. 47 CFR Part 73 is amended as follows:

PART 73—[AMENDED]

1. The authority citation for Part 73 continues to read as follows:

Authority: 47 U.S.C. 154 and 303.

2. 47 CFR 73.207 is amended by revising the numbers of the first seven rows of Table A in paragraph (b)(1), by revising the introductory texts of paragraphs (b)(2) and (b)(3), and by revising the numbers in the first row of the table in paragraph (c), to read as follows:

§ 73.207 Minimum distance separation between stations.

* * * * *

(b) * * *

(1) Domestic allotments and assignments must be separated from each other by not less than the distances in Table A which follows:

---

[1] It may be necessary to exclude Canadian and Mexican border area Class A stations from the initial list and to publish subsequent lists for those stations when international coordination procedures are complete.

[2] Because the appearance of a particular station does not constitute a modification of license, the Commission may correct the list of stations by adding or deleting stations included or excluded by administrative error without affording subject stations the opportunity for hearing.

[3] This includes replacement of the transmitter with one capable of higher power output.

[4] If an FCC Form 302 or supplement reveals any discrepancy from the licensed parameters of record (*e.g.*, geographical coordinates, antenna heights), the Commission delegates authority to the Chief, Mass Media Bureau, to order that the Class A station be returned to its licensed parameters, and to require the station licensee to file other forms or informational showings as necessary.

TABLE A.—MINIMUM DISTANCE SEPARATION REQUIREMENTS IN KILOMETERS (MILES)

Relation	Co-channel	200 kHz	400/600 kHz	10.6/10.8 MHz
A to A	115 (71)	72 (45)	31 (19)	10 (6)
A to B1	143 (89)	96 (60)	48 (30)	12 (7)
A to B	178 (111)	113 (70)	69 (43)	15 (9)
A to C3	142 (88)	89 (55)	42 (26)	12 (7)
A to C2	166 (103)	106 (66)	55 (34)	15 (9)
A to C1	200 (124)	133 (83)	75 (47)	22 (14)
A to C	226 (140)	165 (103)	95 (59)	29 (18)

* * * * *

(1) Under the Canada-United States FM Broadcasting Agreement, domestic U.S. allotments and assignments within 320 kilometers (199 miles) of the common border must be separated from Canadian allotments and assignments by not less than the distances given in Table B, which follows. When applying Table B, U.S. Class C2 allotments and assignments are considered to be Class B; also, U.S. Class C3 allotments and assignments and U.S. Class A assignments operating with more than 3 kW ERP and 100 meters antenna HAAT (or equivalent lower ERP and higher antenna HAAT based on a class contour distance of 24 km) are considered to be Class B1.

* * * * *

(3) Under the Mexico-United States FM Broadcasting Agreement, domestic U.S. allotments and assignments within 320 kilometers (199 miles) of the common border must be separated from Mexican allotments and assignments by not less than the distances given in Table C, which follows. When applying Table C, U.S. Class C2, C3 and B1 allotments and assignments are considered to be Class B; U.S. Class C1 allotments and assignments are considered to be Class C; also, U.S. Class A assignments operating with more than 3 kW ERP and 100 meters antenna HAAT average terrain (or equivalent lower ERP and higher antenna HAAT based on a class contour distance of 24 km) are considered to be Class B.

* * * * *

(c) The distances listed below apply only to allotments and assignments on Channel 253 (98.5 MHz). The Commission will not accept petitions to amend the Table of Allotments, applications for new stations, or applications to change the channel or location of existing assignments where the following minimum distances (between transmitter sites, in kilometers) from any TV Channel 6 allotment or assignment are not met:

MINIMUM DISTANCE SEPARATION FROM TV CHANNEL 6 (82–88 MHz)

FM class	TV zone I	TV zones II and III
A	17	22

* * * * *

3. 47 CFR 73.210 is amended by revising paragraphs (b)(1), (b)(2)(i) and (b)(3)(i) to read as follows:

§ 73.210 Station classes.

* * * * *

(b) * * *

(1) Determine the reference distance of the station using the procedure in paragraph (b)(1)(i) of § 73.211. If this distance is less than or equal to 28 km, the station is Class A; otherwise,

(2) * * *

(i) If this distance is greater than 28 km and less than or equal to 39 km, the station is Class B1.

* * * * *

(3) * * *

(i) If this distance is greater than 28 km and less than or equal to 39 km, the station is Class C3.

* * * * *

4. 47 CFR 73.211 is amended by revising paragraphs (a)(1)(ii) and (a)(1)(iv), by republishing the introductory text of paragraph (b)(1) and by revising the numbers in the first row of the table in the introductory text of paragraph (b)(1), by revising paragraph (b)(1)(ii), and by revising the first row in the table in paragraph (b)(3) to read as follows:

§ 73.211 Power and antenna height requirements.

(a) * * *

(1) * * *

(ii) The ERP for Class B1 stations must exceed 6 kW.

* * * * *

(iv) The ERP for Class C3 stations must exceed 6 kW.

* * * * *

(b) *Maximum limits.* (1) Except for stations located in Puerto Rico or the Virgin Islands, the maximum ERP in any direction, reference HAAT, and distance to the class contour for each FM station class are listed below:

Station class	Maximum ERP	Reference HAAT in meters (ft)	Class contour distance in kilometers
A	6kW (7.8 dBk)	100 (328)	28

* * * * *

(ii) If a station's ERP is equal to the maximum for its class, its antenna HAAT must not exceed the reference HAAT, regardless of the reference distance. For example, a Class A station operating with 6 kW ERP may have an antenna HAAT of 100 meters, but not 101 meters, even though the reference distance is 28 km in both cases.

* * * * *

(3) For stations located in Puerto Rico or the Virgin Islands, the maximum ERP in any direction, reference HAAT, and distance to the class contour for each FM station class are listed below:

Station class	Maximum ERP	Reference HAAT in meters (ft)	Class contour distance in kilometers
A	6kW (7.8 dBk)	240 (787)	42

* * * * *

5. 47 CFR 73.213 is amended by adding a new paragraph (c) to read as follows:

§ 73.213 Grandfathered short-spaced stations.

* * * * *

(c) Stations at locations authorized by grant of applications filed prior to October 2, 1989 that became short-spaced as a result of the revision of § 73.207 in the *Second Report and Order* in MM Docket No. 88–375 may be modified or relocated in accordance with paragraph (c)(1) or (c)(2) of this section. New stations on channel allotments made by order granting petitions to amend the Table of FM

Allotments which were filed prior to October 2, 1989, may be authorized in accordance with paragraph (c)(1) or (c)(2) of this section. No other stations will be authorized pursuant to these paragraphs.

(1) *Applications for authorization under requirements equivalent to those of prior rules.* Each application for authority to operate a Class A station with no more than 3000 watts ERP and 100 meters antenna HAAT (or equivalent lower ERP and higher antenna HAAT based on a class contour distance of 24 km) must specify a transmitter site that meets the minimum distance separation requirements in this paragraph. Each application for authority to operate a Class A station with more than 3000 watts ERP (up to a maximum of 5800 watts), but with an antenna HAAT lower than 100 meters such that the distance to the predicted 0.05 mV/m (34 dBμV/m) F(50,10) field strength contour does not exceed 98 km must specify a transmitter site that meets the minimum distance separation requirements in this paragraph. Each application for authority to operate an FM station of any class other than Class A must specify a transmitter site that meets the minimum distance separation requirements in this paragraph with respect to Class A stations operating pursuant to this paragraph or paragraph (c)(2) of this section, and that meets the minimum distance separation requirements of § 73.207 with respect to all other stations.

MINIMUM DISTANCE SEPARATION REQUIREMENTS IN KILOMETERS (MILES)

Relation	Co-channel	200 kHz	400/600 kHz	10.6/10.8 MHz
A to A	105 (65)	64 (40)	27 (17)	8 (5)
A to B1	138 (86)	88 (55)	48 (30)	11 (6)
A to B	163 (101)	105 (65)	69 (43)	14 (9)
A to C3	138 (86)	84 (52)	42 (26)	11 (6)
A to C2	163 (101)	105 (65)	55 (34)	14 (9)
A to C1	196 (122)	129 (80)	74 (46)	21 (13)
A to C	222 (138)	161 (100)	94 (58)	28 (17)

(2) *Applications for authorization of Class A facilities greater than 3000 watts ERP and 100 meters HAAT.* Each application to operate a Class A station with an ERP and HAAT such that the reference distance would exceed 24 kilometers must contain an exhibit demonstrating the consent of the licensee of each co-channel, first, second or third adjacent channel station (for which the requirements of § 73.207 are not met) to a grant of that application. Each such application must specify a transmitter site that meets the applicable IF-related channel distance separation requirements of § 73.207. Applications that specify a transmitter site which is short-spaced to an FM station other than another Class A station which is seeking a mutual increase in facilities may be granted only if no alternative fully-spaced site or less short-spaced site is available. Licensees of Class A stations seeking mutual increases in facilities need not show that a fully spaced site or less short spaced site is available. Applications submitted pursuant to the provisions of this paragraph may be granted only if such action is consistent with the public interest.

§ 73.215 [Amended]

6. 47 CFR 73.215 is amended by removing the NOTE that follows paragraph (b)(2)(ii).

7. 47 CFR 73.610 is amended by revising the introductory text of paragraph (f) and the first row of numbers in the table in paragraph (f) as follows:

§ 73.610 Minimum distance separations between stations.

* * * * *

(f) The distances listed below apply only to allotments and assignments on Channel 6 (82–88 MHz). The Commission will not accept petitions to amend the Table of Allotments, applications for new stations, or applications to change the channel or location of existing assignments where the following minimum distances (between transmitter sites, in kilometers) from any FM Channel 253 allotment or assignment are not met:

MINIMUM DISTANCE SEPARATION FROM FM CHANNEL 253 (98.5 MHz)

FM class	TV zone I	TV zones II & III
A	17	22

* * * * *

8. 47 CFR 73.1690 is amended by revising paragraph (b)(2) and adding a new paragraph (c)(4) and a NOTE following that new paragraph, to read as follows:

§ 73.1690 Modification of transmission systems.

* * * * *

(b) * * *

(2) Change in the operating power from that specified on the station authorization, except as provided in paragraph (c)(4) of this section.

* * * * *

(c) * * *

(4) On or after December 1, 1989, increase in the effective radiated power of eligible Class A FM stations pursuant to MM Docket 88–375, when such increase is effected by:

(i) Replacement of a non-directional antenna with another non-directional antenna having higher gain, provided that the height above ground of the center of radiation is within ±2 meters of that specified in the station authorization; and/or

(ii) Increase in the power input to the antenna, as a result of adjustment of the transmitter output power, change in the type or length of the transmission line, and/or installation of filters or diplexers.

Note: Class A stations eligible for a power increase pursuant to paragraph (c)(4) are those which appear on a list issued by the Commission in November 1989.

BILLING CODE 6712-01-M

---

47 CFR Part 74

[MM Docket 86–112, FCC 89–276]

Satellite and Terrestrial Microwave Feeds to Noncommercial Educational FM Translators

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: The action taken herein amends the Commission's rules regarding applications for noncommercial FM translators assigned to reserved channels (channels 200–220), owned and operated by their primary stations and proposing to use alternate signal delivery. Certain applicants may be required to make a special showing that an alternative noncommerical FM frequency remains available. The rule modified herein strikes a balance between the public interest embodied in ensuring the development and expansion of local public radio service and increasing noncommerical FM service to unserved and underserved areas.

EFFECTIVE DATE: October 2, 1989.

ADDRESS: Federal Communications Commission, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Scott Roberts, Mass Media Bureau, (202) 632–6302.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Memorandum Opinion and Order in MM Docket No. 86–112, adopted August 4, 1989, and released August 18, 1989. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 239), 1919 M Street NW., Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractor, International Transcription Service, (202) 857–3800, 2100 M Street Northwest, Suite 140, Washington, DC 20037.

Summary of the Memorandum Opinion and Order

1. On October 31, 1985, the Moody Bible Institute petitioned the Commission to permit noncommercial educational FM (NCE–FM) translators to rebroadcast signals delivered via satellite and terrestrial microwave facilities. Moody further proposed that such signal delivery be limited to NCE–FM translators on reserved channels (200–220) and owned and operated by the primary station to be rebroadcast. The Commission initiated a rule making proceeding in response to the Moody petition, culminating in a Report and Order deleting the requirement that NCE–FM translators assigned to reserved channels and owned and operated by their primary stations receive signals from their primary stations, or another translator, directly over-the-air. The revised rules permit use of signal delivery means that include, but are not limited to, satellite and terrestrial microwave facilities.

2. As a consequence of that action, the Commission received petitions for reconsideration. Petitioners uniformly opposed the rule change adopted in the Report and Order, arguing that the new rule undermines the concept of localism, increases interference problems, and thwarts the growth of fullpower FM service to the public. In general, petitioners asked that the Commission vacate or substantially modify the alternative signal delivery rule.

3. Subsequent to the reconsideration period, several of these petitioners submittted a Joint Proposal intended to resolve the issues raised in the docket. The Joint Proposal proposes to allow use of alternative signal delivery to NCE–FM translators which are owned and operated by the licensee of the primary station to be rebroadcast if these translators comply with a series of conditions that are designed, according to these parties, to assure continued interference-free radio service in the NCE–FM band and to allow expansion of service through the use of NCE–FM translators.

4. Upon consideration of the commenters' concerns on this issue expressed in the Joint Proposal, the Commission concluded that the rules adopted in the Report and Order, permitting unrestricted use of alternative signal delivery for licensee owned and operated NCE–FM translators, should be amended to incorporate certain provisions of the Joint Proposal. Thus, the amended rules provide that an applicant for an NCE–FM translator seeking authorization to use alternative signal delivery will have to make a showing that at least one alternative NCE–FM frequency that provides comparable signal coverage to the same area encompassed by the applicant's proposed 1 mV/m contour remains available. Applicants will be required to make such a showing during a transitional period that will extend until October 1, 1992. Applicants need not make such a showing if the proposed NCE–FM translator is within 80 kilometers of the 1 mV/m contour of the primary station to be rebroadcast or is greater than 160 kilometers from any NCE–FM radio station.

5. In justifying its decision, the Commission stated that the limitations imposed on unrestricted alternative signal delivery authority will have minimal effect in most cases. While NCE–FM translator applicants proposing to locate more than 80 kilometers outside of the 1 mv/m contour of the primary station, or within 160 kilometers from any NCE–FM radio station must establish the availability of at least one other frequency for an additional translator, the Commission does not anticipate that in most rural areas this requirement will be difficult to show or represent a significant constraint. This is because there are likely to be many unused frequencies in such areas. It is only in densely populated urban areas that it may be relatively difficult to demonstrate that there would be an additional channel available for another translator. However, in urban areas there is also likely to already exist a number of full-service noncommercial and commercial stations. Hence, in such areas the benefits from authorizing a translator to rebroadcast the signal of a distant FM station should be less than in rural areas, because listeners are likely to already be exposed to a variety of local FM stations.

6. The rules adopted herein have been analyzed with respect to the Paperwork Reduction Act of 1980 and found to impose new or modified requirements or burdens on the public. Implementation of these new or modified requirements will be subject to approval by the Office of Management and Budget as prescribed by the Act.

7. The Secretary shall cause a copy of this Memorandum Opinion and Order to be sent to the Chief Counsel for Advocacy of the Small Business Administration.

8. Accordingly, *it is ordered*, That under the authority contained in sections 4(i) and 303 of the Communications Act of 1934, as amended, part 74 of the Commission's rules and regulations is amended as set forth below effective October 2, 1989. *It is further ordered*, That the Petitions for Reconsideration filed by the Association of Maximum Service Telecasters, Inc.; the National Association of Broadcasters; Salem Broadcasting Services; and, a joint petition for reconsideration filed by National Public Radio, the National Federation of Community Broadcasters, the Intercollegiate Broadcasting Systems, Inc., the Office of Communication of the United Church of Christ, and the People For the American Way are granted to the extent adopted herein and denied in all other aspects. Finally, the petition for rule making filed by the Association of Maximum Service Telecasters is denied.

9. *It is furthered ordered*, That this proceeding is terminated.

List of Subjects in 47 CFR Part 74

FM broadcast translator stations, FM broadcast booster stations.

Part 74 of title 47 of the Code of Federal Regulations is amended as follows:

PART 74—[AMENDED]

1. The authority citation for part 74 continues to read as follows:

Authority: 47 U.S.C. 154, and 303.

2. Section 74.1231 is amended by revising paragraph (b) to read as follows:

§ 74.1231 Purpose and permissible service.

* * * * *

(b) Except as provided in paragraphs (f) and (g) of this section, an FM translator may be used only for the purpose of retransmitting the signals of an FM broadcast station or another FM translator station which have been received directly through space, converted, and suitably amplified. However, a noncommercial educational FM translator operating on a reserved channel (Channels 200–220) and owned and operated by the licensee of the primary noncommercial educational FM station it rebroadcasts may use alternative signal delivery means including, but not limited to, satellite and microwave facilities, if the applicant complies with either paragraph (b)(1) or (2) of this section:

(1) The applicant demonstrates that:

(i) The transmitter site of the proposed FM translator station is within 80 kilometers from the predicted 1 mV/m contour of the primary station to be rebroadcast; or,

(ii) The transmitter site of the proposed FM translator station is more than 160 kilometers from the transmitter site of any authorized full service noncommercial educational FM station; or,

(iii) The application is mutually exclusive with an application containing the showing as required by § 74.1231(b)(2)(i) or (ii); or,

(iv) The application is filed after October 1, 1992.

(2) If the transmitter site of the proposed FM translator station is more than 80 kilometers from the predicted 1 mV/m contour of the primary station to be rebroadcast or is within 160 kilometers of the transmitter site of any authorized full service noncommercial educational FM station the applicant must show that:

(i) An alternative frequency can be used at the same site as the proposed FM translator's transmitter location and can provide signal coverage to the same area encompassed by the applicant's proposed 1 mV/m contour; or,

(ii) An alternative frequency can be used at a different site and can provide signal coverage to the same area encompassed by the applicant's proposed 1 mV/m contour.

BILLING CODE 6712-01-M

INTERSTATE COMMERCE COMMISSION

49 CFR Parts 1003, 1011, 1181, 1182, 1183, 1186, 1187, and 1188

[Ex Parte No. MC-179]

Purchase, Merger, and Control of Motor Passenger and Water Carriers

AGENCY: Interstate Commerce Commission.

ACTION: Final rules.

SUMMARY: The Commission is adopting final regulations, as set forth below, governing: (1) Applications under 49 U.S.C. 11343–11344 to purchase, merge, or acquire control of motor passenger and water carriers; and (2) requests for temporary authority under 49 U.S.C. 11349 during the pendency of: (a) Applications to transfer operating rights of motor and water carriers under 49 U.S.C. 10926; and (b) applications and petitions for exemption to purchase, merge, or acquire control of motor and water carriers under 49 U.S.C. 11343–11344. Application Forms OP–F–44 and OP–F–45, now used for motor passenger finance transactions, are discontinued, and temporary authority Form OP–F–46 is revised. More general application requirements keyed to the applicable statutory burden of proof have been adopted in lieu of Forms OP–F–44 and OP–F–45, and safety fitness has been incorporated as an issue in passenger finance applications. To assist applicants in determining whether their finance applications are within the jurisdictional scope of 49 U.S.C. 11343, the rules for identifying applicable gross operating revenues have been consolidated in a new Part 1188. Temporary authority procedures have been consolidated in a new part 1187. Additionally, we have codified authority for rendering initial decisions in motor passenger and water carrier finance proceedings under 49 U.S.C. 11343–11344 to the Motor Carrier Board. The final rules in the above areas are the same as those proposed, with only minor modifications.

Finally, we have codified in parts 1181, 1182, and 1186 (which cumulatively cover all motor finance transactions) the longstanding requirement that the party to whom motor carrier operating rights are being transferred certify that it is not domiciled in Mexico nor owned or controlled by persons of Mexico. The proposed rules were published on March 24, 1989 at 54 FR 12252.

EFFECTIVE DATE: September 24, 1989.

SUPPLEMENTARY INFORMATION: Additional information is contained in the Commission's decision. To purchase a copy of the full decision, write to, call, or pick up in person from: Dynamic Concepts, Inc., Room 2229, Interstate Commerce Commission Building, Washington, DC 20423. Telephone: (202) 289–4357/4359. [Assistance for the hearing impaired is available through TDD services at (202) 275–1721.]

Environmental and Energy Considerations

This action will not significantly affect either the quality of the human environment or the conservation of energy resources.

Regulatory Flexibility Analysis

We affirm our prior certification. The rules we are adopting will have an indirect and positive but not significant impact on a substantial number of small entities. With one minor exception concerning the certification of safety ratings by motor passenger applicants, the rules will not impose additional reporting, recordkeeping, or compliance requirements on applicants. Conversely, the total information requirements for all applicants have been reduced appreciably, and the revised rules will not duplicate, overlap, or conflict with any existing Federal rule.

Paperwork Reduction Analysis

We estimate that an average of 25 burden hours per response are required to complete the collection of information involved with the proposed revised temporary authority form OP–F–46. This represents no change from the estimate applicable to the current form, inasmuch as we propose no significant changes to that form. However, whereas OMB's current approval is based on an estimate of 300 responses per year, only 175 such responses were collected during the 1988 fiscal year. In view of program changes already reflected in *Transfer Rules, supra,* we estimate a further dramatic reduction in the number of temporary authority applications filed in connection with small carrier transfers since such transactions now may be consummated 10 days after filing the application. Therefore, we now estimate that only 125 annual responses will be collected, thus reducing the total estimated annual reporting hours to 3,125.

It is estimated that an average of 60 burden hours per response are required to complete the collection of information involved with finance applications submitted in lieu of current forms OP–F–44 and OP–F–45, proposed to be discontinued. The present OMB approval of form OP–F–44 estimates 14 annual responses, with an average reporting burden of 80 hours per response; the approval of form OP–F–45 estimates 11 annual responses with an average reporting burden of 120 hours per response. We estimate that the total number of annual responses in these areas will remain unchanged at 25, which tends to be confirmed by the statistic that a total of 20 such applications were filed during the 1988 fiscal year. However, our proposed simplification and streamlining of these matters through elimination of the forms and the needlessly detailed data they require would, we estimate, reduce the average burden per response to only 60 hours. Accordingly, the total estimated annual reporting hours would be reduced to 1,500.

These estimates include time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Comments concerning the accuracy of this burden estimate or suggestions for reducing this burden should be directed to the section of Administrative Services, Interstate Commerce Commission, and to the Office of Management and Budget, Paperwork Reduction Project (OMB No. 3120–0079), Washington, DC 20503.

Authority: 5 U.S.C. 559 and 49 U.S.C. 10321, 11321, 11341, 11343, 11344, and 11345a.

Subpart A—Applications

§ 1182.1 Applications covered by these rules.

These rules govern applications for authority under 49 U.S.C. 11343–11344 to consolidate, merge, purchase, or lease operating rights and properties of a motor carrier of passengers or a water carrier, or to acquire control of one or more motor carriers of passengers or water carriers through ownership of stock or otherwise.

§ 1182.2 Starting the application process.

There is no application form for these proceedings. Applicants for authority under 49 U.S.C. 11343–11344 to consolidate, merge, purchase, or lease operating rights and properties of a motor carrier of passengers or a water carrier, or to acquire control of one or more motor carriers of passengers or water carriers, through ownership of stock, or otherwise, shall file a pleading containing the information described in 49 CFR 1182.3. *See* 49 CFR 1002.2(f)(21) for filing fees.

§ 1182.3 Content of applications.

(a) The application must contain the following information:

(1) Full name, address, and signature of each of the parties to the transaction.

(2) Copies or descriptions of the pertinent operating authorities of the parties.

(3) A description of the proposed transaction.

(4) Identification of any ICC-regulated carriers affiliated with the parties, a brief description of their operations, and a summary of the intercorporate structure of the corporate family from top to bottom.

(5) If applicants are motor carriers, a jurisdictional statement that the aggregate gross operating revenues from interstate operations conducted by them and their motor carrier affiliates, if any, exceeded $2 million for a period of 12 consecutive months, ending not more than six months preceding the date of the parties' agreement covering the transaction. *See* 49 CFR part 1186.

(6) A statement indicating whether the transaction will or will not significantly affect the quality of the human environment and the conservation of energy resources.

(7) Information to demonstrate that the proposed transaction is consistent with the national transportation policy and the public interest, including particularly:

(i) The effect of the proposed transaction on competition within the involved transportation markets;

(ii) The effect of the proposed transaction on accommodating significant transportation needs; and

(iii) If the proceeding involves a motor passenger or rail carrier, the effect of the proposed transaction on the adequacy of transportation to the public; the effect on the public interest of including, or failing to include, other carriers in the area invovled in the proposed transaction (if applicable); the total fixed charges that result from the proposed transaction; and the interest of carrier employees affected by the proposed transaction. *See* 49 U.S.C. 111344(b)(2).

(8) Certification of the U.S. Department of Transportation safety fitness rating of each motor passenger carrier involved in the transaction, whether that carrier is a party to the transaction or is affiliated with a party to the transaction.

(9) If motor passenger carriers are involved in the transaction, certification by the party acquiring any operating rights through the transaction that it has sufficient insurance coverage under 49 U.S.C. 10927 for the service it intends to provide.

(10) If water carriers are involved in the transaction, information to show that the acquiring party is fit, willing, and able properly to perform the service authorized by the certificate or permit involved and to conform to the applicable statutory and administrative requirements.

(11) If motor passenger carriers are involved in a purchase of assets or merger transaction, certification by the party acquiring any operating rights through the transaction that it is not domiciled in Mexico nor owned or controlled by persons of that country.

(b) The application shall contain applicants' entire case unless: (1) The Commission finds, on its own motion or that of a party to the proceeding, that additional evidentiary submissions are required to resolve the issues in a particular case; or (2) the application contains an impediment. (*See* 49 CFR 1182.12.)

(c) Any statements submitted on behalf of an applicant supporting the transaction shall be verified. Pleadings consisting strictly of legal argument, however, need not be verified.

(d) If an application or supplemental pleading contains false or misleading information, the granted application is void *ab initio*.

§ 1182.4 Directly related applications.

(a) Directly related applications shall be filed along with the proposed acquisition transaction in a single submission. Such applications are those filed under other provisions of title 49, subtitle IV, U.S. Code, "Transportation," that either directly affect or are directly affected by the application filed under 49 U.S.C. 11343–11344. Typically, they include requests to obtain new operating authority, or to modify or convert existing operating authority. Whenever an application is filed under these rules and a directly related application also is filed, each application shall make reference to the other.

(b) Whenever possible, the Commission will decide directly related applications in a consolidated proceeding. In such cases, the statutory time frames governing the lead proceeding under 49 U.S.C. 11343–11344 will be applied.

§ 1182.5 Filing the application.

(a) Each application shall be filed with the Commission as provided at 49 CFR 1182.15. In addition, one copy shall be delivered to the Commission's Regional Office for the region in which each party's headquarters is located. Upon written request of a State, one copy shall be delivered, by first-class mail.

(b) In their application, the parties shall certify that they have delivered copies of the application as provided in paragraph (a) of this section.

§ 1182.6 Commission review of the application.

(a) All applications will be reviewed for correctness and completeness. Minor errors will be corrected with notification to the applicants. Incomplete applications may be rejected.

(b) A summary of the application will be published in the *ICC Register* to give notice to the public. The summary for an application involving motor carriers also will be published in the **Federal Register**. It will be published in the form of a tentative grant of authority. (*See also* 49 CFR 1182.12, regarding applications published with impediments.)

(c) If the published notice does not properly describe the authority sought, applicants shall inform the Commission within 10 days after the publication date.

Subpart B—Protests

§ 1182.7 Protests.

(a) Protests to an application shall be filed (received at the Commission) within 45 days after the date the application is published.

(b) Failure to file a timely protest waives further participation in the proceeding. If no one opposes the application, the published tentative grant of authority will automatically become effective at the close of the comment period.

§ 1182.8 Notice.

A copy of the application will be available for inspection at the Commission's offices in Washington, DC, or at the Regional Office for each applicant's domicile. Interested persons may request a copy of the application by writing to the Commission-designated contract agent (as identified in the *ICC Register*), Room 2229, Interstate Commerce Commission Building, Washington, DC 20423, and including a check or money order for $10 made payable to such contract agent; or, by contacting the contract agent at (202) 289–4357/4359 [TDD for hearing impaired (202) 275–1721] and arranging billing acceptable to the agent.

§ 1182.9 Contents of a protest.

(a) Protests shall be verified.

(b) The protest shall contain all information upon which the protestant plans to rely, including the grounds for the protest and the protestant's interest in the proceeding.

(c) A protest may include a request that the Commission allow:

(1) Additional evidentiary submissions from the parties to a proceeding; or

(2) Further procedural steps to develop the evidentiary record (*e.g.*, discovery).

The request must demonstrate that this procedure is necessary to resolve the specific issues giving rise to the request. If the Commission finds, whether on its own motion or that of a party, that the record requires supplementation, a decision will be issued indicating the additional information required and the time frames within such information must be submitted.

§ 1182.10 Filing a protest.

(a) The protest is to be sent to the Commission with the docket number of the proceeding conspicuously placed on the top of the first page of the protest.

(b) A copy of the protest shall be served on applicant's representative(s).

§ 1182.11 Withdrawing a protest.

A protestant wishing to withdraw from a proceeding shall concurrently inform the Commission and the applicants in writing.

Subpart C—General Requirements

§ 1182.12 Amendments.

(a) After notice of an application is published, applicants may not amend their proposal unless specifically required to do so by the Commission because of an "impediment" in the application (*e.g.*, a jurisdictional problem, unresolved fitness issue, or question concerning possible unlawful control). Any such impediment will be indicated in the published notice.

(b) If an impediment is noted, applicants file a pleading suggesting a "cure" to the impediment and/or containing legal argument, within 20 days after the date the notice is published. Applicants must subsequently serve any protestant(s) with a copy of their pleading. Failure to comply with these provisions may result in dismissal of the application.

(c) Protestants wishing to file a reply to the applicants' pleading must do so within 20 days after the date applicants' pleading is filed.

(d) If replies to applicants' pleading are filed, applicants may file a rebuttal within 15 days after the date the replies were due. This optional pleading will be in addition to any evidence previously submitted by applicants in the application or the reply to protests.

§ 1182.13 Replies.

(a) If the application is opposed, applicants may file a reply to the protest(s). This reply statement is due at the Commission within 60 days after the date of publication of the application.

(b) The reply statement may not contain new evidence. It shall only rebut or further explain matters previously raised.

(c) The reply statement shall be verified unless it consists strictly of legal argument. A copy of the reply statement shall be served on protestants.

§ 1182.14 Withdrawing an application.

If applicants wish to withdraw an application, they shall jointly request dismissal in writing as provided at 49 CFR 1182.15.

§ 1182.15 Copies.

An original and one copy of all applications filed under this part and all other pleadings and material relating to such applications must be filed with the Commission in Washington, DC, and, if mailed, addressed to "Office of the Secretary, Interstate Commerce Commission, Washington, DC 20423."

§ 1182.16 Certificate of service.

(a) Where the rules require service of a pleading on another party, that pleading shall be mailed or delivered by hand concurrently with its service on the Commission.

(b) The pleading shall contain a statement (certificate of service) that the pleading has been mailed or hand delivered in accordance with paragraph (a) of this section.

(c) All motions and replies shall be served on all parties.

§ 1182.17 Verification of statements.

(a) All applications and related pleadings (except motions to strike, replies thereto, and other pleadings that consist only of legal argument) must be verified by the person offering the statement.

(b) The manner of verification must be as follows:

I, __________, verify
(name and title of witness)
under penalty of perjury, under the laws of the United States of America, that all information supplied in connection with this application is true and correct. Further, I certify that I am qualified and authorized to file this application or pleading. I know that willful misstatements or omissions of material facts constitute Federal criminal violations punishable under 18 U.S.C. 1001 by imprisonment up to five years and fines up to $10,000 for each offense. Additionally, these misstatements are punishable as perjury under 18 U.S.C. 1621, which provides for fines up to $2,000 or imprisonment up to five years for each offense.

____
(Signature and Date)

§ 1182.18 Statutory findings.

The following findings are made for applications to consolidate, purchase, merge, lease operating rights and properties, or acquire control of motor passenger carriers or water carriers under 49 U.S.C. 11343–11344:

We find, with the exception of those applications involving impediments (*e.g.*, jurisdictional problems, unresolved fitness questions, or questions involving possible unlawful control) that each applicant has demonstrated, in accordance with the applicable provisions of 49 U.S.C. 11321, 11343, 11344, and 11349, and with the Commission's rules and regulations, that the proposed transaction should be authorized as stated. This finding shall not be deemed to exist where the application is opposed. Except where specifically noted, this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

PART 1186—EXEMPTION OF CERTAIN TRANSACTIONS UNDER 49 U.S.C. 11343

10. The authority citation for part 1186 continues to read as follows:

Authority: 49 U.S.C. 10321 and 11343(e) and 5 U.S.C. 553.

11. In § 1186.2, a new paragraph (e) is added to read as follows:

§ 1186.2 Notice of exemption.

* * * * *

(e) In purchase of assets or merger transactions, certification by the party acquiring any motor carrier operating rights through the transaction that it is not domiciled in Mexico nor owned or controlled by persons of that country.

12. Section 1186.4 is revised to read as follows:

§ 1186.4 Temporary authority.

Parties may simultaneously request temporary authority during the pendency of the exemption proceeding by submitting Form OP–F–46 in accordance with the regulations at 49 CFR part 1187.

13. Part 1187 is added to read as follows:

PART 1187—TEMPORARY AUTHORITY IN MOTOR AND WATER CARRIER FINANCE PROCEEDINGS

Sec.
1187.1 Applications governed by these rules.
1187.2 Procedures used generally.
1187.3 Applications.
1187.4 Commission action.
1187.5 Protests.

Authority: 5 U.S.C. 559 and 49 U.S.C. 10321, 10926, 11341, 11343, 11344, and 11349.

§ 1187.1 Applications governed by these rules.

These rules govern the handling of applications filed for temporary authority to operate motor property carrier, motor passenger carrier, and water carrier properties sought to be acquired in separately filed applications or petitions for exemption under:

(a) 49 U.S.C. 11343–11344 (for authority to consolidate, purchase, merge, or lease operating rights and properties of, or to acquire control of, motor property carriers, motor passenger carriers, and water carriers); or

(b) 49 U.S.C. 10926 (for the transfer of certificates and permits of motor property carriers, motor passenger carriers, and water carriers).

§ 1187.2 Procedure used generally.

Since the basis for filing applications for temporary authority under these rules is to prevent destruction of or injury to motor carrier or water carrier properties sought to be acquired under 49 U.S.C. 11343–11344 or 10926, these rules are designed to permit the Commission to decide expeditiously temporary authority applications. The Commission has no obligation to give public notice of applications filed under these rules for temporary authority. Cases are decided without hearing or other formal proceeding. However, the rules do permit the Commission, when feasible, to publish notice of temporary authority applications, and such applications may be opposed.

§ 1187.3 Applications.

(a) *Starting the application process.* Persons seeking temporary authority under this section shall complete application form OP–F–46. (*See* 49 CFR part 1003 and § 1002.2(f)(24) regarding forms and filing fees.) An application for temporary authority may only be filed concurrently with or after the filing of a related application or petition for exemption under 49 U.S.C. 11343–11344 or 10926.

(b) *Information to be submitted by applicants.* The application form constitutes applicants' entire case and shall contain all of the information on which applicants intend to rely.

(c) *Where the application is sent.* The original and one copy of the application shall be sent to the Office of the Secretary, Interstate Commerce Commission, Washington, DC 20423, along with the application fee. In addition, one copy of the application shall be sent by applicants to each of the persons and State officials specified on the application form. When an application for temporary authority is filed after the filing and publication of notice of the related acquisition transaction (under 49 U.S.C. 11343–11344 or 10926), applicants also shall serve a copy of the temporary authority application on all parties of record in the related transaction as of the date of the filing.

§ 1187.4 Commission action.

(a) Where an application for temporary authority is filed concurrently with the related acquisition application or petition for exemption, notice of filing of the temporary authority application will appear in the published notice of the corresponding permanent application or petition.

(b) The temporary authority application (and protests, if any) will be submitted to an appropriate decisional body for disposition as soon as possible after filing. These rules do not provide for any specific time period for the filing of opposition to concurrently filed temporary authority applications. A temporary authority request may be acted upon before the publication of the related permanent application or petition for exemption.

§ 1187.5 Protests.

(a) *Who can oppose an application.* A protest to an application for temporary authority filed under these rules may be filed only by persons who oppose or intend to oppose the related permanent application or petition for exemption filed under 49 U.S.C. 11343–11344 or 10926.

(b) *Contents of a protest.* A protest to an application for temporary authority shall be in writing. The protest shall state the protestant's interest in the proceeding and the specific grounds on which protestant relies in opposing the temporary authority application. The protest also shall indicate that a copy has been served on applicants' representative(s).

(c) *To whom the protest is sent.* The original and one copy of the protest shall be sent to the Office of the Secretary, Interstate Commerce Commission, Washington, DC 20423. A copy of the protest shall be served on applicants' representative(s).

14. Part 1188 is added to read as follows:

PART 1188—GROSS OPERATING REVENUES OF CARRIERS INVOLVED IN FINANCE PROCEEDINGS

Sec.
1188.1 Computation of gross operating revenues of carriers involved in unifications.
1188.2 Deduction of revenues from sources other than regulated transportation.

Authority: 5 U.S.C. 559 and 49 U.S.C. 10321, 11341, 11343, 11344, and 11345a.

§ 1188.1 Computation of gross operating revenues of carriers involved in unifications.

In proceedings involving consolidation, merger, or acquisition of control of motor carriers under 49 U.S.C. 11343, the aggregate gross operating revenues of carriers attributable to transportation from the use of their respective operating rights subject to subchapter II of chapter 105 of the Act shall be deemed to have exceeded $2 million for the period of 12 consecutive months ending not more than six months preceding the date of the agreement of the parties covering the transaction, within the meaning of 49 U.S.C. 11343(d)(1), unless otherwise shown, under each of the following circumstances:

(a) At the end of the preceding calendar year the carriers involved in the transaction filed reports with the Commission, as required by 49 U.S.C. 11145, showing annual gross operating revenues from motor carrier operations totaling more than $2 million, and none of the carriers has sold or otherwise disposed of any portion of its operating rights subsequent to the end of the preceding calendar year;

(b) A carrier involved in the transaction filed a quarterly report or reports for subsequent quarters, and a reasonable estimate of its annual gross operating revenues and the reported annual gross operating revenues of the other carriers involved in the transaction for the preceding calendar year aggregates more than $2 million; or

(c) A reasonable estimate of: (1) The annual gross operating revenues of any carrier which sold or otherwise disposed of any portion of its operating rights or which began new operations or extended existing operations subsequent to the end of the preceding calendar year; and (2) the reported annual gross operating revenues of the other carriers involved in the transaction for the preceding calendar year aggregates more than $2 million.

§ 1188.2 Deduction of revenues from sources other than regulated transportation.

(a) In determining whether a proposed transaction is subject to the provisions of 49 U.S.C. 11343, applicant motor carriers and their affilitate motor carriers must select the same 12-month period and indicate the 12-month period selected, as provided in § 1188.1, and must disclose the gross revenues received by each such carrier during the critical period selected and the revenues derived from sources other than transportation subject to subchapter II of chapter 105 of the Act. Such latter revenues may be deducted from the gross revenues for the purpose of determining jurisdiction.

(b) Applicants shall show the amounts which they claim should be deducted, the sources from which the revenues were derived, and the circumstances under which transportation performed is claimed not to have been subject to subchapter II of chapter 105 of the Act, in transfer proceedings under 49 CFR part 1181 or in support of a motion for dismissal of proceedings under 49 CFR part 1182 or 1186.

(c) Applicants shall not be required to show that the revenues computed under § 1188.1 were dervived from transportation subject to subchapter II of chapter 105 of the Act.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 918

[Docket No. AO–162–A6; AMS–FV–88–039]

Fresh Peaches Grown in Georgia; Secretary's Decision and Referendum Order on Proposed Further Amendment of Marketing Agreement and Order No. 918

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule and referendum order.

SUMMARY: This decision recommends further amendment of Marketing Agreement and Marketing Order No. 918 (7 CFR part 918), covering Georgia peaches, and directs a referendum to be conducted to determine if the growers of Georgia peaches favor the various amendment proposals. If approved, these proposals would amend the provisions of the marketing agreement and order to: (1) Limit the terms of office of Industry Committee (committee) members to six consecutive one-year terms; (2) change committee voting procedures on size regulation recommendations by requiring at least one affirmative member vote from each of the three growing districts; (3) authorize container and pack regulations and container marking regulations; (4) add authority for positive lot identification procedures for inspected peaches; (5) authorize production research and marketing research and development projects; (6) require a referendum at least every six years to determine if growers are in favor of continuing the marketing order; (7) add provisions protecting the confidentiality of information provided by handlers; (8) add provisions specifying that the Secretary and the Committee may verify the correctness of reports filed by handlers and compliance with recordkeeping requirements; and, (9) make any necessary conforming changes. The amendment proposals are designed to improve the administration, operations, and functioning of the marketing order.

DATES: The referendum shall be conducted during the period September 1 through 22, 1989. The representative period for the purposes of the referendum herein ordered is August 15, 1988, through August 14, 1989.

FOR FURTHER INFORMATION CONTACT: G. J. Kelhart, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, P.O. Box 96456, Room 2525–S, Washington, DC 20090–6456; telephone: (202) 475–3919, or John R. Toth, Officer-In-Charge, Southeast Marketing Field Office, Florida Citrus Building, 500 Third Street, NW, P.O. Box 2276, Winter Haven, Florida 33883–2276; telephone: (813) 299–4770. Copies of this decision may be obtained from either of the above named individuals.

SUPPLEMENTARY INFORMATION: Prior documents in this proceeding: Notice of Hearing issued April 6, 1988, and published in the **Federal Register** on April 11, 1988 (53 FR 11867); and Recommended Decision issued April 12, 1989, and published in the **Federal Register** April 17, 1989 (54 FR 15218).

This administrative action is governed by the provisions of sections 556 and 557 of title 5 of the United States Code and, therefore, is excluded from the requirements of Executive Order 12291 and Departmental Regulation 1512–1.

Preliminary Statement

This proposed amendment of the order was formulated on the record of a public hearing held at Byron, Georgia, on April 28, 1988, to consider the proposed further amendment of Marketing Agreement and Order No. 918 (7 CFR part 918), both as amended, regulating the handling of fresh peaches grown in Georgia, hereinafter referred to collectively as the order. The hearing was held pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 *et seq.*), hereinafter referred to as the Act, and the applicable rules of practice and procedure governing proceedings to formulate marketing agreements and marketing orders (7 CFR part 900). The Notice of Hearing contained amendment proposals submitted by the committee, which locally administers the order. Those proposals pertained to: (1) Limiting the terms of office of committee members to six consecutive one-year terms; (2) changing committee voting procedures on size regulation recommendations by requiring at least one affirmative member vote from each of the three growing districts; (3) authorizing container and pack regulations and container marking regulations; (4) adding authority for positive lot identification procedures for inspected peaches; (5) authorizing production research and marketing research and development projects; (6) requiring a referendum at least every six years to determine if growers are in favor of continuing the marketing order. The notice also included proposals by the Fruit and Vegetable Division, Agricultural Marketing Service, U.S. Department of Agriculture (Department), to: (1) add provisions protecting the confidentiality of information provided by handlers; (2) add provisions specifying that the Secretary and the Committee may verify the correctness of reports filed by handlers and compliance with recordkeeping requirements; and (3) make any necessary conforming changes.

Upon the basis of the evidence introduced at the hearing and the record thereof, the Administrator of the Agricultural Marketing Service (AMS), on April 12, 1989, filed with the Hearing Clerk, U.S. Department of Agriculture, a Recommended Decision containing a notice of the opportunity to file written exceptions thereto by May 17, 1989. No exceptions were filed.

Small Business Consideration

In accordance with the provisions of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), the Administrator of the Agricultural Marketing Service has determined that this action would not have a significant economic impact on a substantial number of small entities. Small agricultural producers have been defined by the Small Business Administration (SBA) (13 CFR 121.2) as those having annual gross revenues for the last three years of less than $500,000. Small agricultural service firms, which include handlers under this marketing agreement and order, are defined as those firms with gross annual receipts of less than $3,500,000.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Interested persons were invited in the Notice of Hearing to present evidence at the hearing on the probable regulatory and informational impact of the proposed changes on small businesses. Marketing orders issued pursuant to the Act and rules issued thereunder are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both the RFA and the Act are compatible with respect to small entities.

Approximately 30 handlers of Georgia peaches are subject to regulation under the order. In addition, there are approximately 265 peach growers in Georgia. The majority of these handlers and growers may be classified as small entities.

The proposed amendment of § 918.26 to limit the terms of office of committee members to six consecutive one-year terms would facilitate a regular rotation in committee membership and broaden industry participation in committee decision making. This would strengthen the program with no adverse impact on small entities.

Revising § 918.30(a) to alter committee voting procedures to require at least one affirmative vote from each of the three representation districts for any recommendation on size regulations would ensure that there was support for such recommendations in each district. The proposal should benefit small entities in all representation districts.

The proposal to add a new § 918.61a would authorize the committee, with the approval of the Secretary, to establish container, pack, and container-marking regulations in order to facilitate the efficient marketing of Georgia peaches and benefit growers and handlers. Such authority could reduce container and other marketing costs which would benefit small entities. Any savings would be directly proportional to the quantity of peaches handled. The impact of any particular proposed container, pack, and container-marking regulations would, of course, be considered at the time that such proposal would be made.

The proposed change amending § 918.64, would authorize the committee, with the approval of the Secretary, to establish positive lot identification procedures for peaches inspected under the order and would facilitate the committee's compliance effort by providing it with a reliable means of tying the inspection certificates it receives to the lots covered by the certificates. This could benefit both growers and handlers because the minimum quality and size requirements established under the order are important to the industry in fostering consumer satisfaction and increasing the demand for Georgia peaches. Hence, any advantages resulting from these procedures would be expected to outweigh any additional costs incurred by growers and handlers for positive lot identification. The additional costs would be proportional to the quantity of peaches handled. The impact of any particular proposal pertaining to positive lot identification would be considered at the time it is made.

The proposed addition of § 918.72 would authorize the committee, with the approval of the Secretary, to establish or provide for the establishment of production research and market research and development projects in order to facilitate research on many of its production and marketing problems. Such projects would benefit growers and handlers and would not adversely impact small entities. Any costs associated with this provision would be outweighed by the benefits of such projects.

The proposed amendment to § 918.81 would require a continuance referendum at least every six years which would provide growers a more frequent opportunity to periodically vote on whether the order should be continued. Such referenda would not adversely affect small entities.

The proposed amendment to § 918.76 containing provisions which would require confidential information provided by handlers to be protected from disclosure would improve operation of the order and would not adversely affect small entities.

The addition of § 918.77 authorizing the Secretary and the committee to verify the correctness of reports filed by handlers and to check handler compliance with recordkeeping requirements also would improve operation of the order and would not adversely affect small entities.

All of the proposed changes set forth in this document are designed to enhance the administration, operation, and functioning of the order.

The proposed amendments to the order would not have a significant impact on the recordkeeping and reporting burdens of the Georgia peach industry. Moreover, the proposed changes would not appreciably change the reporting and recordkeeping requirements under the Paperwork Reduction Act of 1980 (44 U.S.C. Chapter 35), which have been previously approved by the Office of Management and Budget, (OMB) under OMB No. 0581–0135. The action includes proposed amendments that would require information to be retained by handlers for at least two years. The evidence of record indicates that handlers generally maintain such information in the normal course of business for periods longer than two years. The information collection and recordkeeping requirements contained in this proposed action will be submitted to the OMB for approval. The requirements will not become effective prior to OMB approval.

Findings and Conclusions

Discussions and rulings included in the discussions of the material issues, findings, and general findings of the Recommended Decision set forth in the **Federal Register** (54 FR 15218; April 17, 1989) are hereby approved and adopted subject to the following modification:

In the findings and conclusions, a new paragraph is added at the end of Material Issue (5) on page 15223 to include a necessary conforming change relating to authorizing the committee, with the approval of the Secretary, to use funds, other than assessments collected from handlers, to pay expenses for projects conducted pursuant to proposed § 918.72. That paragraph should read as follows:

Currently, § 918.40 specifies that funds to cover committee expenses shall be acquired by the levying of assessments on handlers. In connection with authorizing the committee, with the approval of the Secretary, to use funds, other than those from assessments, to pay expenses for projects conducted pursuant to proposed § 918.72, the following sentence should be added as a conforming change at the end of § 918.40: "For projects conducted pursuant to § 918.72, other funds approved by the Secretary may also be used."

Rulings on Exceptions

The period for filing exceptions to the Recommended Decision ended May 17, 1989. No exceptions were filed.

Marketing Agreements and Orders

Annexed hereto and make part hereof are the documents entitled, "Order Amending the Order, As Amended, Regulating the Handling Of Fresh Peaches Grown In Georgia" and "Marketing Agreement, As Amended, Regulating the Handling of Fresh Peaches Grown In Georgia." These documents have been decided upon as the detailed and appropriate means of effectuating the foregoing conclusions.

It is hereby ordered, That this entire decision, except the annexed marketing agreement, be published in the Federal Register. The regulatory provisions of the marketing agreement are identical with those contained in the order as hereby proposed to be amended by the annexed order which is published with this decision.

Referendum Order

It is hereby directed that a referendum be conducted in accordance with the procedure for the conduct of referenda (7 CFR 900.400 *et seq.*), to determine whether the issuance of the annexed order, as amended and as hereby proposed to be further amended, regulating the handling of fresh peaches grown in Georgia, is approved or favored by growers, as defined under the terms of the order, who were engaged in the production for market of fresh peaches in the production area in Georgia. The representative period for such referendum is hereby determined to be August 15, 1988, through August 14, 1989.

The agents of the Secretary to conduct such referendum are hereby designated to be John R. Toth and William G. Pimental, Southeast Marketing Field Office, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, Florida Citrus Building, 500 3rd Street NW., (or Post Office Box 2276), Winter Haven, Florida 33883–2276, telephone: (813) 299–4770, and George Kelhart, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, P.O. Box 96456, Room 2525–S, Washington, DC 20090–6456; telephone: (202) 475–3919.

Order Amending The Order, As Amended, Regulating The Handling Of Fresh Peaches Grown in Georgia[1]

Findings and Determinations

The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

Findings upon the basis of the hearing record. Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 *et seq.*), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR part 900), a public hearing was held upon proposed further amendment of the marketing agreement, as amended, and Order No. 918, as amended (7 CFR part 918), regulating the handling of fresh peaches grown in Georgia.

Upon the basis of the record it is found that:

General Findings

(1) The order, as amended, and as hereby further amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(2) The order, as amended, and as hereby further amended, regulates the handling of fresh peaches grown in the production area in the same manner as, and is applicable only to persons in the respective classes of commercial and industrial activity specified in the marketing agreement and order upon which hearings have been held;

(3) The order, as amended, and as hereby further amended, is limited in its application to the smallest regional production area which is practicable, consistent with carrying out the declared policy of the Act, and the issuance of several orders applicable to subdivisions of the production area would not effectively carry out the declared policy of the Act;

(4) The order, as amended, and as hereby further amended, prescribes, so far as practicable, such different terms applicable to different parts of the production area as are necessary to give due recognition to the difference in the production and marketing of fresh peaches grown in the production area; and

(5) All handling of fresh peaches grown in the production area defined in the order is in the current of interstate or foreign commerce or directly burdens, obstructs, or affects such commerce.

List of Subjects in 7 CFR Part 918

Marketing agreements and orders, Georgia, Peaches.

Order Relative to Handling

It is therefore ordered, than on and after the effective date hereof, the handling of fresh peaches grown in Georgia shall be in conformity to and in compliance with the terms and conditions of the order, as hereby amended, as follows:

With the exception of a conforming change in § 918.40, the provisions of the proposed marketing agreement and order, amending the order, contained in the Recommended Decision issued by the Administrator on April 12, 1989, and published in the **Federal Register** (54 FR 15218, April 17, 1989), shall be and are the terms and provisions of this order, amending the order, and are set forth in full herein.

PART 918—FRESH PEACHES GROWN IN GEORGIA

1. The authority citation for 7 CFR part 918 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

2. Section 918.26 is amended by changing the period at the end to a colon and adding a provisio to read as follows:

§ 918.26 Term of office.

* * * *Provided,* That no member shall serve more than six full consecutive terms starting with the term beginning March 1, 1989.

3. The last sentence of § 918.30(a) is revised to read as follows:

§ 918.30 Procedure.

(a) * * * For any recommendation of the Industry Committee to be valid, not less than five (5) affirmative votes shall be necessary: *Provided,* That any recommendation on minimum size regulations also shall require at least one (1) concurring vote from each district.

* * * * *

4. A sentence is added at the end of § 918.40 to read as follows:

§ 918.40 Expenses.

* * * For projects conducted pursuant to § 918.72, other funds approved by the Secretary may also be used.

5. A new § 918.61a is added to read as follows:

§ 918.61a Container regulation.

Whenever the Industry Committee deems it advisable to establish a container regulation for any variety or varieties of peaches, it shall recommend to the Secretary the size, capacity, weight, marking, or pack of the container, or containers, which may be used in the handling of these peaches. If the Secretary finds upon the basis of such recommendation or other information available that such container regulation would tend to effectuate the declared policy of the Act the Secretary shall establish such regulation. Notice thereof shall be sent by the Industry Committee to all handlers of record.

§ 918.63 [Amended]

6. Section 918.63 is amended by changing the words "pursuant to §§ 918.60 and 918.61," in the first sentence to "pursuant to §§ 918.60 through 918.61a."

7. Section 918.64 is amended by designating the current provisions as paragraph (a) and adding a new paragraph (b) to read as follows:

§ 918.64 Inspection.

* * * * *

(b) The Industry Committee may establish with the approval of the Secretary positive lot identification requirements for lots of peaches inspected and certified pursuant to this section. Whenever implemented, such requirements shall at least specify that upon inspection, all peaches shall be identified by tags, stamps, marks, or other means of identification recognized by the Federal Inspection Service or the Federal-State Inspection Service or any other inspection service designated by the Secretary; that such identification shall be affixed to the container by the handler under the supervision of the Federal Inspection Service or the Federal-State Inspection Service or any other inspection service designated by the Secretary; and that such identification shall not be altered or removed except as directed by the Federal Inspection Service or the Federal-State Inspection Service or any other inspection service designated by the Secretary. For the purposes of this section, lot means the aggregate quantity of peaches of the same variety, in like containers with like identification offered for inspection as a shipping unit.

8. Insert the undesignated center heading, "RESEARCH AND DEVELOPMENT," after § 918.71 and add § 918.72 to read as follows:

Research and Development

§ 918.72 Production research and market research and development.

The Industry Committee, with the approval of the Secretary, may establish or provide for the establishment of projects involving production research and marketing research and development designed to assist, improve or promote the marketing, distribution and consumption of peaches and the efficient production thereof. The expenses of such projects shall be paid from funds collected pursuant to § 918.41, or from any other sources approved by the Secretary.

9. A new § 918.76 is added to read as follows:

§ 918.76 Confidential information.

All data or other information constituting a trade secret or disclosing a trade position or business condition shall be received by, and kept in the custody of, one or more designated employees of the Industry Committee, and information which would reveal the circumstances of a single handler shall be disclosed to no person other than the Secretary.

10. A new § 918.77 is added to read as follows:

§ 918.77 Verification of reports and records.

For the purpose of checking compliance with recordkeeping requirements and verifying reports filed by handlers, the Secretary and the Industry Committee through its duly authorized employees shall have access to any premises where peaches are held and, at any time during reasonable business hours, shall be permitted to examine any peaches held and any and all records with respect to matters within the purview of this part. Handlers shall furnish labor necessary to facilitate such examinations at no expense to the Industry Committee. All handlers shall maintain complete records which accurately show the quantity of peaches held, sold, and shipped. The Industry Committee, with the approval of the Secretary, may establish the type of records to be maintained. Such records shall be retained by handlers for not less than two years subsequent to the termination of each fiscal period.

11. Section 918.81 is amended by redesignating paragraph (d) as paragraph (e) and adding a new paragraph (d) to read as follows:

§ 918.81 Termination.

* * * * *

(d) The Secretary shall conduct a referendum among growers every six years after the effective date of this amended subpart to ascertain whether continuance of this part is favored by growers. However, when a continuance referendum is conducted pursuant to paragraph (c) of this section, this referendum shall be conducted six years after the referendum conducted to paragraph (c) of this section. The Secretary may terminate the provisions of this part at the end of any fiscal period in which the Secretary has found that continuance of this part is not favored by growers who, during a representative period determined by the Secretary, have been engaged in the production for market of the fruit in the production area, except that termination of this part shall be effective only if announced on or before the last day of the then current fiscal period.

* * * * *

Dated: August 21, 1989.

JoAnn R. Smith,

Assistant Secretary for Marketing and Inspection Services.

OMB Approval No. 0581–0135
Expiration Date: 8/31/91

United States Department of Agriculture

Agricultural Marketing Service

Marketing Agreement, as Further Amended, Regulating the Handling of Fresh Peaches Grown in Georgia

The parties hereto, in order to effectuate the declared policy of the Agricultural Marketing Agreement Act of 1937, as amended (Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601 *et seq.*), and in accordance with the applicable rules of practice and procedure effective thereunder (7 CFR part 900) desire to enter into this agreement further amending the marketing agreement regulating the handling of fresh peaches grown in Georgia; and each party hereto agrees that such handling shall, from the effective date of this marketing agreement, be inconformity to and in compliance with the provisions of said marketing agreement as hereby further amended.

The provisions of §§ 918.1 through 918.92, inclusive, of Marketing Order 918 (7 CFR part 918) as amended, and as further amended by the order annexed to and made a part of the decision of the Secretary of Agriculture with respect to the marketing agreement and order regulating the handling of fresh peaches grown in Georgia, plus the following additional provisions shall be, and the same hereby are, the terms and conditions hereof; and the specified provisions of said annexed order are hereby incorporated into this marketing agreement as if set forth in full herein.

Section 918.93 Counterparts.

This agreement may be executed in multiple counterparts and when one counterpart is signed by the Secretary, all such counterparts shall constitute, when taken together, one and the same instrument as if all signatures were contained in one original.

Section 918.94 Additional parties.

After the effective date hereof, any handler may become a party to this agreement if a counterpart is executed by such handler and delivered to the Secretary. This agreement shall take effect as to such new contracting party at the time such counterpart is delivered to the Secretary, and the benefits, privileges, and immunities conferred by this agreement shall then be effective as to such new contracting party.

Section 918.95 Order with marketing agreement.

Each signatory handler requests the Secretary to issue, pursuant to the Act, an order providing for regulating the handling of peaches in the same manner as is provided for in this agreement.

The undersigned hereby authorizes the Director, or Acting Director, Fruit and Vegetable Division, Agricultural Marketing

Milk in the Nebraska-Western Iowa Marketing Area; Proposed Revision of Supply Plant Shipping Percentage and Diversion Limitation Percentage

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed revision of rules.

SUMMARY: This notice invites written comments on a proposal to revise certain provisions of the Nebraska-Western Iowa Federal milk order. The proposed action would reduce the shipping standard for pooling supply plants by 10 percentage points and increase by 20 percentage points the amount of milk that may be moved directly from farms to nonpool plants and still be priced under the order. The action was requested by Associated Milk Producers, Inc. (AMPI), which operates pool supply plants and represents a significant number of producers whose milk is pooled under the order. AMPI contends that the revisions are needed to maintain the pool status for producers who have historically been associated with the market and to prevent uneconomic movements of milk. AMPI has requested the action for the months of September 1989 through March 1990 and has also requested that consideration be given to indefinitely revising these standards because of the past history of revisions during the fall and spring months over the last five years.

DATES: Comments are due no later than September 1, 1989.

ADDRESSES: Comments (two copies) should be sent to: USDA/AMS/Dairy Division, Order Formulation Branch, Room 2968, South Building, P.O. Box 96456, Washington, DC 20090-6456.

FOR FURTHER INFORMATION CONTACT: John F. Borovies, Marketing Specialist, USDA/AMS/Dairy Division, Order Formulation Branch, Room 2968, South Building, P.O. Box 96456, Washington, DC 20090-6456 (202) 447-2089.

SUPPLEMENTARY INFORMATION: The Regulatory Flexibility Act (5 U.S.C. 601-612) requires the Agency to examine the impact of a proposed rule on small entities. Pursuant to 5 U.S.C. 605(b), the Administrator of the Agricultural Marketing Service has certified that this action will not have a significant economic impact on a substantial number of small entities. The action would lessen the regulatory impact of the order on milk handlers and would tend to ensure that dairy farmers will continue to have their milk priced under the order and thereby receive the benefits that accrue from such pricing.

This proposed rule has been reviewed under Executive Order 12291 and Departmental Regulation 1512-1 and has been determined to be a "non-major" rule under the criteria contained therein.

Notice is hereby given that, pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601-674), and the provisions of §§ 1065.7(b)(3) and 1065.13(d)(4) of the order, the revision of certain provisions of the order regulating the handling of milk in the Nebraska-Western Iowa marketing area is being considered.

All persons who desire to submit written data, views or arguments about the proposed revision should send two copies of their views to USDA/AMS/Dairy Division, Order Formulation Branch, Room 2968, South Building, P.O. Box 96456, Washington, DC 20090-6456 by the 7th day after publication of this notice in the **Federal Register**. The period for filing comments is limited to seven days because a longer period would not provide the time needed to complete the required procedures and include September in the temporary revision period.

All written submissions made pursuant to this notice will be made available for public inspection in the Dairy Division during regular business hours (7 CFR 1.27(b)).

Statement of Consideration

The provisions proposed to be revised are the shipping standards set forth in § 1065.7(b) and the diversion limitations set forth in § 1065.13(d) (2) and (3). The revision would be effective beginning with the month of September 1989. The specific revisions would reduce the supply plant shipping percentage by 10 percentage points, from the present 40 to 30 percent for the months of September through March. Also, the diversion limits on producer milk would be increased by 20 percentage points, from 40 to 60 percent for the months of September through March, and from 50 to 70 percent during other months.

Sections 1065.7(b)(3) and 1065.13(d)(4) of the Nebraska-Western Iowa order allow the Director of the Dairy Division to increase or reduce the shipping percentage standard and the diversion limitation percentage by up to 20 percentage points. The adjustments can be made to help encourage additional shipments of milk or to prevent uneconomic shipments of milk merely for the purpose of assuring that dairy farmers will continue to have their milk priced under the order.

Revision of the supply plant shipping standard and the diversion limitations was requested by Associated Milk Producers, Inc. (AMPI). AMPI operates supply plants that historically have been pooled under the order and represents a substantial number of the dairy farmers who supply the market.

AMPI requested that the revision be applicable during September 1989 through March 1990. AMPI indicates that for the first six months of 1989 producer milk on the market is about 5.9 percent above the same period of 1988, while Class I utilization is down by about one percent. In view of the supply/demand relationship, AMPI indicates that it would be very unlikely for the marketwide Class I utilization to be more than 35 percent during the fall of 1989 or the spring of 1990. As a result, AMPI contends that the supply plant shipping standard should be reduced and the diversion limits should be increased. Such revision, AMPI contends, will eliminate the need for unnecessary shipments of milk and provide for the efficient disposition of milk supplies that are in excess of fluid milk needs.

AMPI also requested that consideration be given to extending the revision for an indefinite period of time. Such an action would eliminate the need for repeating the revision process every spring and fall. AMPI indicates that such a process has been repeated to revise these standards over the past five years and that such a history of the actions provide a basis for longer term action.

---

[1] If one of the contracting parties to this agreement is a corporation, my signature constitutes certification that I have the power granted to me by the Board of Directors to bind this corporation to the marketing agreement.

Therefore, it may be appropriate to revise the aforementioned provisions of §§ 1065.7(d) and 1065.13(d)(2) and (3) to prevent uneconomic shipments of milk.

Milk in the Iowa Marketing Area; Proposed Revision of Supply Plant Shipping Percentage

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed revision of rules.

SUMMARY: This notice invites written comments on a proposal to revise certain provisions of the Iowa Federal milk order for the months of September through November. The proposal would reduce the shipping percentage for pool supply plants by 10 percentage points from 35 to 25 percent of receipts. The action was requested by Beatrice Cheese, Inc., a handler who operates a pool supply plant under the order. The handler contends that the action is necessary to prevent uneconomic shipments of milk from supply plants to distributing plants. The handler has also requested that consideration be given to lowering the shipping percentage during the months of September-November for an indefinite period in view of a four-year history of reducing the shipping percentages during these months.

DATES: Comments are due no later than September 1, 1989.

ADDRESSES: Comments (two copies) should be sent to: USDA/AMS/Dairy Division, Order Formulation Branch, Room 2968, South Building, P.O. Box 96456, Washington, DC 20090-6456.

FOR FURTHER INFORMATION CONTACT: John F. Borovies, Marketing Specialist, USDA/AMS/Dairy Division, Order Formulation Branch, Room 2968, South Building, P.O. Box 96456, Washington, DC 20090-6456 (202) 447-2089.

SUPPLEMENTARY INFORMATION: The Regulatory Flexibility Act (5 U.S.C. 601-612) requires the Agency to examine the impact of a proposed rule on small entities. Pursuant to 5 U.S.C. 605(b), the Administrator of the Agricultural Marketing Service has certified that this action will not have a significant economic impact on a substantial number of small entities. The action would reduce the regulatory impact on milk handlers and tend to ensure that the market would be adequately supplied with milk for fluid use with a smaller proportion of milk shipments from pool supply plants.

This proposed rule has been reviewed under Executive Order 12291 and Departmental Regulation 1512-1 and has been determined to be a "non-major" rule under the criteria contained therein.

Notice is hereby given that, pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601-674), and the provisions of § 1079.7(b)(1) of the order, the revision of certain provisions of the order regulating the handling of milk in the Iowa marketing area is being considered for the months of September-November.

All persons who desire to submit written data, views or arguments about the proposed revision should send two copies of their views to USDA/AMS/Dairy Division, Order Formulation Branch, Room 2968, South Building, P.O. Box 96456, Washington, DC 20090-6456 by the 7th day after publication of this notice in the **Federal Register**. The period for filing comments is limited to seven days because a longer period would not provide the time needed to complete the required procedures and include September in the revision period.

All written submissions made pursuant to this notice will be made available for public inspection in the Dairy Division during regular business hours (7 CFR 1.27(b)).

Statement of Consideration

The provisions proposed to be revised are the supply plant shipping percentages for the months of September through November. The proposed action would reduce the shipping percentage by 10 percentage points from the present 35 to 25 percent of receipts.

Section 1079.7(b)(1) of the Iowa order provides that the Director of the Dairy Division may increase or reduce the supply plant shipping percentage by up to 10 percentage points. The adjustments can be made to encourage additional milk shipments or to prevent uneconomic shipments.

The revision was proposed by Beatrice Cheese, Inc., a handler who operates a pool supply plant under the order. The handler contends that the reduction of the shipping standard is necessary to prevent uneconomic shipments from supply plants to distributing plants. The handler points out that receipts of producer milk under the order during the first six months of 1989 were up about 4.5 percent from the previous year. In addition, about 26.5 percent of producer milk pooled under the order was used in Class I during the first six months, compared to 27.3 percent the previous year. The handler also points out that receipts of milk at its supply plant during the first six months were about 3.4 percent greater than the previous year. Based on the relationship of fluid milk sales to the receipts of milk, the handler contends that a reduction of the supply plant shipping percentage is necessary to prevent uneconomic shipments during the months of September-November. Absent a reduction, the handler contends that it would have to engage in the uneconomic backhauling of 3.0 to 3.2 million pounds of milk per month in order to pool its supply of milk. The handler maintains that distributing plants would be adequately supplied with milk with a lowering of the supply plant shipping percentage by 10 percentage points to 25 percent of receipts.

The handler has also requested that consideration be given to reducing the shipping percentage during the months of September through November for an indefinite duration. It is pointed out that the supply plant shipping percentage has been reduced by 10 percentage points during these months for the last four years. As a result, it may be appropriate to indefinitely reduce the shipping percentage for the months of September through November.

[DA-89-031]

Milk in the Iowa Marketing Area; Notice of Proposed Suspension of Certain Provisions of the Order

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed suspension of rule.

SUMMARY: This notice invites written comments on a proposal to suspend certain provisions of the Iowa Federal milk marketing order for the months of September through November. The proposed suspension would increase the amount of milk not needed for fluid use that may be moved directly from farms to nonpool manufacturing plants and still be priced under the order. The action was requested by Associated Milk Producers, Inc. (AMPI), a cooperative association that represents producers who supply the market. AMPI contends that the action is necessary to avoid making costly and inefficient movements of milk that would otherwise be made to pool the milk of dairy farmers who have historically supplied the market. AMPI has requested that consideration be given to an indefinite duration of a suspension during these months to eliminate the subsequent need for suspension actions that have been made during the last five years.

DATES: Comments are due on or before September 1, 1989.

ADDRESSES: Comments (two copies) should be filed with the USDA/AMS/Dairy Division, Order Formulation Branch, Room 2968, South Building, P.O. Box 96456, Washington, DC 20090-6456.

FOR FURTHER INFORMATION CONTACT: John F. Borovies, Marketing Specialist, USDA/AMS/Dairy Division, Order Formulation Branch, Room 2968, South Building, P.O. Box 96456, Washington, DC 20090-6456, (202) 447-2089.

SUPPLEMENTARY INFORMATION: The Regulatory Flexibility Act (5 U.S.C. 601-612) requires the Agency to examine the impact of a proposed rule on small entities. Pursuant to 5 U.S.C. 605(b), the Administrator of the Agricultural Marketing Service has certified that this proposed action would not have a significant economic impact on a substantial number of small entities. Such action would lessen the regulatory impact of the order on certain milk handlers and would tend to ensure that dairy farmers would continue to have their milk priced under the order and thereby receive the benefits that accrue from such pricing.

This proposed rule has been reviewed under Executive Order 12291 and Departmental Regulation 1512-1 and has been determined to be a "non-major" rule under the criteria contained therein.

Notice is hereby given that, pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601-674), the suspension of the following provisions of the order regulating the handling of milk in the Iowa marketing area is being considered for September through November:

In § 1079.13(d)(2) and (3), the words "50 percent in the months of September through November and," and the words "in other months," as they appear in each such paragraph.

All persons who want to send written data, views or arguments about the proposed suspension should send two copies of them to the USDA/AMS/Dairy Division, Order Formulation Branch, Room 2968, South Building, P.O. Box 96456, Washington, DC 20090-6456, by the 7th day after publication of this notice in the **Federal Register**. The period for filing comments is limited to 7 days because longer period would not provide the time needed to complete the required procedures and include September 1989 in the suspension period.

The comments that are sent will be made available for public inspection in the Dairy Division during normal business hours (7 CFR 1.27(b)).

Statement of Consideration

The proposed suspension would allow more than 50 percent of a handler's producer milk receipts to be moved directly from farms to nonpool plants (diverted) and still be priced under the order during the months of September-November. The proposal was submitted by Associated Milk Producers, Inc. (AMPI), a cooperative association that represents producers who supply the market. AMPI maintains that the diversion limitations need to be relaxed, by a suspension action, to avoid the costs associated with receiving and transferring milk solely for the purpose of pooling the milk of dairy farmers who have historically supplied the market.

AMPI contends that the action is necessary because of the relationship between available milk production and fluid milk sales. AMPI points out that producer milk receipts during the first six months of 1989 are up about 4.7 percent from the previous year while fluid milk sales are at about the same level as a year earlier. As a result, the Class I utilization of producer milk for the first six months was about 26.5 percent, down slightly from the previous year. Consequently, AMPI projects that about 30 percent of the market's milk supply will be needed for Class I use during the September-November period this year. Thus, about 70 percent of the market's milk supply will be available for manufacturing uses, which AMPI contends can be most efficiently handled by diverting milk directly from farms to nonpool plants for processing. Absent a suspension action, AMPI maintains that the costly and inefficient marketing practices of receiving and transferring milk from pool plants would be undertaken to continue to pool the milk of dairy farmers who supply the market.

AMPI has also requested that consideration be given to suspending the 50 percent diversion limitation for the September through November period for an indefinite duration. AMPI points out that the same provisions have been suspended during each of the last five years. In view of this history, AMPI maintains that there is a sufficient basis for a suspension action of an indefinite duration that is more likely to reflect a diversion limitation that is more consistent with the market's supply and demand relationship during these months.

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

23 CFR Part 140

[FHWA Docket No. 89-14]

RIN 2125-AC07

Construction Engineering Costs

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: The FHWA proposes to implement changes mandated by section 133 of the Surface Transportation and Uniform Relocation Assistance Act (STURAA) of 1987 (Pub. L. 100-17, 101 Stat. 132) and to clarify the FHWA policy relating to the limitation for reimbursement of eligible construction engineering (CE) costs established in 23 U.S.C. 121(d). These changes will establish the limitation at 15 percent and will eliminate the administrative burden placed on State highway agencies to prepare justifications to increase the limitation.

DATES: Written comments are due on or before October 24, 1989.

ADDRESSES: Submit written, signed comments, to the FHWA Docket No. 89-14, Federal Highway Administration, HCC-10, Room 4232, 400 Seventh Street, SW., Washington, DC 20590. All comments received will be available for examination at the above address between 8:30 a.m. and 3:30 p.m., ET, Monday through Friday, except legal holidays. Those desiring notification of receipt of comments must include a self-addressed, stamped postcard.

FOR FURTHER INFORMATION CONTACT: Max I. Inman, Office of Fiscal Services, (202) 366-2853, or Michael J. Laska, Office of the Chief Counsel, (202) 366-1383, Federal Highway Administration, 400 Seventh Street, SW., Washington, DC 20590. Office hours are from 7:45 a.m. to 4:15 p.m., ET, Monday through Friday, except legal holidays.

SUPPLEMENTARY INFORMATION: Section 133 of the STURAA of 1987 revised 23 U.S.C. 121(d) by eliminating the 10 percent limitation on CE costs and increasing the limitation to 15 percent of construction costs.

Prior to the revision of 23 U.S.C. 121(d), reimbursement of CE costs to State highway agencies (SHA) was limited by law to 10 percent of construction costs. SHAs were required to submit a request to FHWA, along with adequate justification and supporting data, to demonstrate that a percentage increase in excess of 10 percent was necessary when actual eligible CE costs exceeed the limitation.

The current revision establishes the limitation at 15 percent and will eliminate the administrative burden placed on SHAs to prepare justifications to increase the limitation.

Other revisions are also being proposed to clarify current FHWA policy regarding CE costs. The specific changes proposed for each section of the regulation are as follows:

Section 140.201 Purpose

This section would be amended by removing the statement relating to increasing the statutory limitation from 10 to 15 percent.

Section 140.203 Definitions

This section would be revised by removing the definitions and adding a new section, Policy. This proposed new section includes provisions relating to the 15 percent limitation and also includes the following provisions which have been added to clarify existing FHWA policy on reimbursement of CE costs:

(1) Proposed § 140.203(d) requires that estimated CE costs approved at the time of project authorization be based on the amount of costs the SHA expects to incur, not to exceed the 15 percent limitation. The 15 percent is not a standard additive rate for project cost estimates.

(2) Proposed § 140.203(e) provides clarification of FHWA policy for determining CE costs when SHAs opt to use average rates in lieu of actual costs per project in accordance with the provisions of 23 U.S.C. 120 (h).

Section 140.205 Increase in Per Centum of Limitation

This section would be revised to remove the procedures for increasing the percentage limitation from 10 to 15 percent which are no longer applicable. The proposed revision to § 140.205 contains provisions relating to the application of the limitation.

Section 140.207 Categories of Funds Subject to Application of Limitation

Section 140.207 would be removed, but the provisions of this section would be included in the proposed revised § 140.205, Application of Limitation. The current regulation lists specific categories of funds subject to the limitation. Since most categories of funds are subject to the limitation, the proposed revised section lists only those categories of funds exempt from the limitation.

Regulatory Impact

The FHWA has determined that this document does not contain a major rule under Executive Order 12291 or a significant regulation under the regulatory policies and procedures of the Department of Transportation. This rulemaking action is being initiated in order to implement a statutory mandate. A regulatory evaluation is not required because of the ministerial nature of this action. However, this revision will eliminate the administrative burden upon SHAs which was necessary to justify an increase in the construction engineering limitation from 10 percent to 15 percent.

Based on the information available to the FHWA at this preliminary stage of the rulemaking, it does not appear that this action will have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act (Public Law 96-354).

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that the proposed rulemaking does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

A regulatory information number (RIN) is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN number contained in the heading of this document can be used to cross reference this action with the Unified Agenda.

In consideration of the foregoing, the FHWA proposes to amend Title 23, Code of Federal Regulations, by revising Part 140, Subpart B as set forth below.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

List of Subjects in 23 CFR Part 140

Accounting, Grant programs—transportation, Highways and roads.

Issued on: August 18, 1989.

Eugene R. McCormick,
Deputy Administrator.

The FHWA proposes to revise 23 CFR part 140, subpart B as follows:

PART 140—REIMBURSEMENT

1. The authority citation for part 140 is revised to read as follows and all other authority citations which appear following the subpart headings and at the end of sections throughout part 140 are removed:

Authority: 23 U.S.C. 101(e), 114(a), 120, 121, 122 and 315; and 49 CFR 1.48(b).

2. Subpart B of part 140 is revised to read as follows:

Subpart B—Construction Engineering Costs

Sec.
140.201 Purpose.
140.203 Policy.
140.205 Application of limitation.

§ 140.201 Purpose.

The purpose of this subpart is to

prescribe policies for claiming reimbursement for eligible construction engineering (CE) costs.

§ 140.203 Policy.

(a) States may be reimbursed for the Federal share of CE costs incurred in

(1) The supervision and inspection of construction activities,

(2) The additional staking functions considered necessary for effective control of the construction operations,

(3) The testing of materials incorporated into construction,

(4) The checking of shop drawings, and

(5) The taking of measurements needed for the preparation of pay estimates.

(b) Reimbursement of CE costs is limited to 15 percent of the costs of construction of a project, exclusive of the costs for preliminary engineering, CE, and rights-of-way.

(c) The 15 percent limitation applies to projects for which a final voucher was not approved prior to April 2, 1987.

(d) The estimated CE costs approved at the time of project authorization shall be based on the amount of costs the SHA expects to incur, not to exceed the 15 percent limitation.

(e) If the SHA claims CE costs as an average percentage of the actual construction costs in accordance with 23 U.S.C. 120(h), the average rate shall be determined based upon reimbursable CE costs. If the individual projects used in developing the average percentage contain CE costs exceeding the limitation established in 23 U.S.C. 121(d), then those excess costs shall not be included in determining the average percentage.

§ 140.205 Application of limitation.

All projects financed with Federal-aid highway funds are subject to the limitation except for projects funded from the following categories:

(a) Emergency Relief (23 U.S.C. 125),

(b) Federal Lands Highways (23 U.S.C. 204),

(c) Defense Access Roads (23 U.S.C. 210),

(d) Appalachian Development Highways (section 201 of Pub. L. 89–4, 79 Stat. 5),

(e) Public Lands Development Roads and Trails (23 U.S.C. 214), and

(f) Other categories determined by FHWA to be exempt from the limitation.

BILLING CODE 4910-22-M

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Part 75

Belt Entry Ventilation Review; Comment Period

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Notice of availability; comment period.

SUMMARY: The Mine Safety and Health Administration (MSHA) is announcing the availability of a report of findings and recommendations regarding belt conveyor entry ventilation in underground coal mines. Public comments may be submitted to the Agency on issues addressed in the report which are relevant to the Agency's ongoing rulemaking revision of existing mandatory safety standards for ventilation of underground coal mines in 30 CFR part 75. The report, along with the comments received, will become part of the rulemaking record for the proposed rules. Comments which address issues unrelated to the ventilation proposal will be considered by the Agency in identifying subjects for future rulemaking.

DATES: Written comments must be submitted on or before September 25, 1989.

ADDRESSES: The report may be obtained from the Business Office of the National Mine Health and Safety Academy, P.O. Box 1166, Beckley, West Virginia, 25802–1166. Phone (304) 256–3206. Send written comments to the Office of Standards, Regulations, and Variances; MSHA; Room 631; Ballston Tower No. 3; 4015 Wilson Boulevard, Arlington, Virginia 22203.

FOR FURTHER INFORMATION CONTACT: Patricia W. Silvey, Director, Office of Standards, Regulations, and Variances, MSHA, (703) 235–1910.

SUPPLEMENTARY INFORMATION: The Assistant Secretary of Labor for Mine Safety and Health formed a special committee on March 24, 1989, to review major aspects of the issues surrounding the use of air coursed through belt conveyor entries to ventilate working places in underground coal mines. The committee completed its report of findings and recommendations on July 31, 1989. The report analyzes three recognized methods of belt entry ventilation and makes recommendations for minimizing the hazard to miners of possible belt entry fires. Other recommendations include changes in mine ventilation design, further research, and improved training of miners. The report concludes that using belt air to ventilate working places, with proper monitoring for the products of combustion, is a safe method.

Belt conveyor entry ventilation and related matters addressed in the new report are subjects of MSHA's proposed ventilation standards for underground coal mines. The Agency is currently preparing the final rule and believes that public comments on these issues will be useful in drafting the final rule. Therefore, MSHA is making the report available to the public and is requesting comments. The comments submitted to the Agency, and the report, will be made a part of the rulemaking record for MSHA's proposed rules for ventilation of underground coal mines, published in the **Federal Register** on January 27, 1988 (53 FR 2382).

The Agency is especially interested in comments on the findings and conclusions in the report which directly relate to the ventilation proposal. At this stage in rulemaking, MSHA believes that these findings and conclusions must be considered in developing the final rule. The relevant findings and conclusions address these areas: (1) Protection of the intake escapeway from leakage from adjacent air courses; (2) belt entry ventilation where air from the belt entry will be used to ventilate working places, as well as where it will not be used to ventilate working places; (3) protection of the intake escapeway from fire sources in the escapeway; (4) smoke sensors; and (5) air velocities in belt entries. Comments, including technological and cost impact data, submitted to the Agency on these matters will assist MSHA in determining how the findings and conclusions in the report should be used in drafting the final rule.

Dated: August 23, 1989.

David C. O'Neal,

Assistant Secretary for Mine Safety and Health.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MM Docket No. 89–362, RM–6694, RM–6893]

Radio Broadcasting Services; Monroeville and Thomasville, AL

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: This document requests comments on two separately-filed rule making proposals. The first, filed on behalf of WJDB Radio, Inc., licensee of Station WJDB(FM), Channel 237A, Thomasville, Alabama, proposes the substitution of Channel 244C2 for Channel 237A and modification of its license accordingly (RM–6694). The second petition, filed on behalf of Hub City Broadcasting Corporation, proposes the allotment of Channel 237C3 to Monroeville, Alabama, in the event Channel 237A is relinquished at Thomasville (RM–6893). Coordinates for Channel 244C2 at Thomasville are 31–54–42 and 87–44–24. Coordinates for Channel 237C3 at Monroeville are 31–31–18 and 87–19–30.

DATES: Comments must be filed on or before October 10, 1989, and reply comments on or before October 25, 1989.

ADDRESS: Federal Communications Commission, Washington, DC 20554. In addition to filing comments with the FCC, interested parties should serve the petitioners' counsel, as follows: Jeffrey D. Southmayd, Esq., Southmayd, Powell & Taylor, 1764 Church St., NW, Washington, DC 20036 (WJDB Radio, Inc.); and M. Scott Johnson and Catherine M. Grofer, Esqs., Gardner, Carton & Douglas, 1000 Penn. Ave., NW, Suite 750–N, Washington, DC 20004 (Hub City Broadcasting Corporation).

FOR FURTHER INFORMATION CONTACT: Nancy Joyner, Mass Media Bureau, (202) 634–6530.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Notice of Proposed Rule Making, MM Docket No. 89–362, adopted August 1, 1989, and released August 18, 1989. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street, NW, Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractors, International Transcription Service, (202) 857–3800, 2100 M Street, NW, Suite 140, Washington, DC 20037.

Provisions of the Regulatory Flexibility Act of 1980 do not apply to this proceeding.

Members of the public should note that from the time a Notice of Proposed Rule Making is issued until the matter is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in Commission proceedings, such as this one, which involve channel allotments. See 47 CFR 1.1204(b) for rules governing permissible *ex parte* contact.

For information regarding proper filing procedures for comments, See 47 CFR 1.415 and 1.420.

47 CFR Part 73

[BC Docket No. 81–742; FCC 89–109]

Broadcast Service; Comparative Renewal Process

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: The Commission seeks comment on an additional proposal in its inquiry into reforms of the standards used in comparative hearings in the license renewal context. The proposal, which would adopt a new order of proof for determining entitlement to a renewal expectancy credit, may improve the Commission's current process for determining such an entitlement. Thus, the instant Third Further Notice of Inquiry and Notice of Proposed Rule Making (Third Further Notice) is issued to solicit comment on this proposal.

DATES: Comments are due by October 10, 1989, and reply comments are due by October 25, 1989.

ADDRESS: Federal Communications Commission, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Marilyn Mohrman-Gillis, Mass Media Burean, Policy and Rules Division, (202) 632–7792.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Third Further Notice of Inquiry and Notice of Proposed Rule Making in BC Docket No. 81–742, adopted March 30, 1989, and released August 16, 1989. The complete text of this Third Further Notice is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street, NW., Washington, DC, and also may be purchased from the

Commission's copy contractor, International Transcription Services, (202) 857–3800, 2100 M Street, NW., Suite 140, Washington, DC 20037.

Synopsis of Third Further Notice of Inquiry and Notice of Proposed Rule Making

1. This Third Further Notice is a continuation of a comprehensive inquiry into proposals for reforming the standards used for selecting among competing applicants and incumbent licensees in comparative hearings in the license renewal context. The Commission took the first step toward reforming the comparative renewal process by adopting the First Report and Order in this proceeding (54 FR 22506, May 25, 1989). This decision placed limitations on the payments competing applicants and petitioners to deny could receive in exchange for settling their license renewal challenges. A Report and Order in a separate proceeding (*see* the Report and Order in Gen. Docket 88–328, 54 FR 19951, May 9, 1989) enacted revisions to FCC Form 301, the form for construction permit applications. These revisions were intended, among other things, to weed out sham and abusive applicants in the license renewal context.

2. The instant Third Further Notice relates to the standards used for comparing incumbent licensees and competing applicants in the license renewal context. These standards, in their present format, are not ideal for application in the renewal context because they often involve subjective, program-based judgments by the trier of fact. In previous notices in this proceeding (Notice of Inquiry at 88 FCC 2d 120, 1981; Further Notice of Inquiry at 47 FR 46117, October 15, 1982; and Second Further Notice of Inquiry and Notice of Proposed Rule Making at 53 FR 31894, August 22, 1988) comments were solicited on proposals for modifying the criteria used for comparing incumbent licensees and competing applicants in a license renewal hearing, as well as the stanadards used for determining whether an incumbent licensee is entitled to a "renewal expectancy" credit.

3. Because of drawbacks associated with each of the proposals related to reforming the procedure for awarding a renewal expectancy, the Commission issued this Third Further Notice to obtain comment on an additional proposal. In issuing this Notice, the Commission is not rejecting any of its former proposals.

4. Under this additional proposal, the Commission would continue to use its current standard for awarding a renewal expectancy credit—"meritorious" service to the broadcaster's community of license— but would adopt a new order of proof for determining entitlement to the credit. Upon demonstrating certain clearly defined, objective evidence at the hearing, an incumbent licensee would be granted a rebuttal presumption that it has provided meritorious service sufficient to warrant a renewal expectancy credit. The challenger would than have the opportunity to rebut the presumption with a specific evidentiary showing. The Commission believes that this additional proposal may improve its current process for determining entitlement to a renewal expectancy credit by limiting the hearing issues and reducing the degree of government intrusion into the licensee's editorial judgments and journalistic discretion.

5. While the Commission invited comment as to what kinds of evidence should be sufficient to trigger the presumption of meritorious service, it proposed that a licensee could meet the burden of going forward if it presents its "issues/programs" list as provided for in §§ 73.3526(a) (8) and (9) and 73.3527(a)(7) of the Commission's Rules. Once an existing licensee has carried this burden of going forward, other applicants would have an opportunity to dispute the incumbent's evidentiary showing and the resulting rebuttable presumption. While the Commission also invited comment as to what kinds of evidence could rebut a presumption of entitlement to a renewal expectancy, it proposed that a presumption based on compliance with the issues/programs list requirement could be rebutted by demonstrating that: (1) The licensee did not broadcast programs listed on its issues/programs list; or (2) the programs listed were not responsive to issues of concern to the licensee's audience and the licensee's judgments in this regard were not reasonably made.

6. Should the judge in the hearing, determine that the licensee did not meet its burden of going forward on the renewal expectancy issue, or that it met its burden but the challenger succesfully rebutted the presumption, the issue of whether the incumbent should be awarded any preference for past service would be part of the comparative hearing, and the onus would fall upon the licensee to demonstrate that it should receive the preference. Should the judge determine that the challenger failed to sufficiently rebut the presumption of entitlement to a renewal expectancy credit or that a renewal expectancy was appropriate, the incumbent would be compared with the competing applicants with a preference for past meritorious service. This preference would be given significant weight *vis-a-vis* the other comparative criteria.

7. The Commission requested comment on whether this burden-shifting approach would be an improved method for applying the meritorious service renewal expectancy standard. The Commission specifically requested comment on the workability of the proposal. Will the procedure, in practice, narrow the hearing issues and reduce Commission involvement in scrutinizing broadcasters' program-related judgments? Will this proposal provide more certain guidelines for determining the likelihood that a license will or will not be renewed? Will this, in turn, encourage incumbents to invest in their broadcast facilities, and thereby ensure the quality of service rendered?

8. The Commission also requested comment on the type of evidence that should be required to grant an incumbent a presumption of entitlement to a renewal expectancy credit, as well as the type of showing that should be required by the challenger to rebut the presumption. The Commission specifically requested comment on its proposal that the incumbent's submission of its "issues/programs" list constitutes a *prima facie* showing, including comment on what, if any, rule changes are needed to implement the proposal. The Commission also urged commenters to suggest details as to how its proposal should be applied in practice.

9. Further, the Commission requested comment on whether this proposal is consistent with the comparative hearing requirement of section 309(e) as interpreted by the courts. Specifically, does the rebuttable presumption permit a fair and meaningful comparison between the incumbent and challengers? Finally, it asked commenters to evaluate the burden-shifting proposal described in this Third Further Notice *vis-a-vis* the other renewal expectancy reforms proposed in the Second Further Notice. Which of all of the proposals discussed do the commenters believe will best achieve the Commission's goals and why?

Paperwork Reduction Act Statement

10. The proposal contained herein has been analyzed with respect to the Paperwork Reduction Act of 1980 and found to contain no new or modified form, information collection, and/or

record keeping, labeling, disclosure, or record retention requirements; and will not increase or decrease burden hours imposed on the public.

Ex Parte Consideration

11. This is a non-restricted notice and comment rule making proceeding. *See* Section 1.1200 *et seq.* of the Commission's Rules, 47 CFR Section 1.1200 *et seq.*, for rules governing permissible *ex parte* contacts.

Comment Information

12. Pursuant to applicable procedures set forth in §§ 1.415 and 1.419 of the Commission's Rules, 47 CFR 1.415, 1.419, interested parties may file comments on or before October 10, 1989, and reply comments on or before October 25, 1989. All relevant and timely comments will be considered by the Commission before final action is taken in this proceeding.

Further Initial Regulatory Flexibility Analysis

13. Pursuant to the Regulatory Flexibility Act of 1980, 5 U.S.C. 603, this proceeding will affect broadcast licensees who are seeking license renewal and applicants for construction permits for broadcast facilities that are mutually exclusive with facilities subject to license renewal. All broadcasters and competing applicants, including small entities and entrepreneurs, could benefit from the additional proposal suggested in this decision. The new order of proof could limit the issues in some license renewal hearings, thereby making them simpler and less expensive, and could reduce unnecessary Commission oversight of broadcasters' program-related judgments. This proposal would shift the burden of proving meritorious service away from the incumbent licensee, and place the burden of proving failure to provide meritorious service on the competing applicant, thus impacting on both parties. Public comment is requested on the Further Initial Regulatory Flexibility Act Analysis set out in full in the Commission's complete decision.

14. As required by section 603 of the Regulatory Flexibility Act, a further initial regulatory flexibility analysis (FIRFA) of the expected impact of the proposed reform on small entities is set forth in summary above, and in full in the complete text of the Commission's decision. Written public comments are requested on the FIRFA. These comments must be filed in accordance with the same filing deadlines as comments on the rest of the Third Further Notice of Inquiry and Notice of Proposed Rule Making, but they must have a separate and distinct heading designating them as responses to the regulatory flexibility analysis. The Secretary shall cause a copy of this Further Notice, including the FIRFA, to be sent to the Chief Counsel for Advocacy of the Small Business Administration in accordance with section 603(a) of the Regulatory Flexibility Act, Pub. L. No. 96–354, 94 Stat. 1164, 5 U.S.C. Section 601 *et seq.* (1981).

47 CFR Part 90

[PR Docket No. 88–548; FCC 89–255]

Frequency Coordination in the Private Land Mobile Radio Services

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: This document proposes to revise the Commission's rules governing frequency coordination in the private land mobile radio services. Since the Commission changed these rules in 1986, some applicants have complained that they have no alternative to using the designated coordinator. The proposed rule changes would offer applicants two alternative ways of filing directly with the Commission.

DATES: Comments must be received by December 1, 1989; replies must be received by January 12, 1990.

ADDRESS: Comments should be sent to The Secretary, Federal Communications Commission, 1919 M Street, NW., Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Kent Nakamura at (202) 632–6940 or Joseph Levin at (202) 632–6497.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Notice of Proposed Rule Making, PR Docket 88–548, adopted August 2, 1989, released August 15, 1989.

The full text of this Commission document is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street, NW., Washington, DC. The complete text of the Notice of Proposed Rule Making may also be purchased from the Commission's copy contractor, International Transcription Service, (202) 857–3800, 2100 M Street, NW., Suite 140, Washington, DC 20037.

Summary of Notice of Proposed Rule Making

On December 5, 1988, the Commission released a report on its experience with frequency coordination in the private land mobile radio services since the current rules went into effect in October 1986. In it, the Commission stated its general satisfaction with the frequency coordination procedures. It did, however, solicit comments on several alternatives to the existing structure.

Based on the record of that proceeding, the Commission has adopted this Notice soliciting comment on specific alternatives to the existing frequency coordination strucure. The proposal would allow an applicant for a radio license in the private land mobile radio services to file an application directly with the Commission rather than through a coordinator. Such an applicant would select a frequency through monitoring or through a database search to identify all co-channel licensees within 75 miles of the proposed transmitter location. The Notice further proposes that such an alternative be authorized as a two year pilot program to allow the Commission to evaluate the success of the new procedure and to assess its impact on Commission resources and procedures before committing to it permanently.

Regulatory Flexibility Analysis

Pursuant to the Regulatory Flexibility Act of 1980, 5 U.S.C. 603, the Commission's initial regulatory flexibility analysis has been prepared. It is available for public viewing as part of the full text of this decision, which may be obtained from the Commission or its copy contractor.

Paperwork Reduction

The proposals contained herein have been analyzed with respect to the Paperwork Reduction Act of 1980 and contain new or modified form, information collection and/or recordkeeping, labeling, disclosure or record retention requirements, and may increase burden hours imposed on the public. Implementation of new or modified requirements will be subject to approval by the Office of Management and Budget as prescribed by the Act.

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

Peanut Price Support Adjustment for 1989 Crop

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Notice of determination.

SUMMARY: This notice sets forth a determination by the Executive Vice President, Commodity Credit Corporation, that the support rate for individual lots of 1989-crop quota and additional peanuts will be discounted by 100 percent from the support rate that otherwise would be applicable to such lots if a peanut producer is asked to certify whether a growth regulator has been applied with respect to the peanuts (1) refuses to make the certification; (2) certifies that a growth regulator has been used; or (3) supplies an inaccurate certification.

EFFECTIVE DATE: August 25, 1989.

FOR FURTHER INFORMATION CONTACT: Jack S. Forlines, Tobacco and Peanut Division, ASCS, USDA, P.O. Box 2415, Washington, DC 20013, telephone 202-382-0156.

SUPPLEMENTARY INFORMATION: Section 401 of the Agricultural Act of 1949 (the 1949 Act) authorizes the Secretary of Agriculture, except as otherwise provided in the 1949 Act, to determine the amounts, terms and conditions of price support operations and the extent to which such operations are carried out. Section 403 provides that appropriate adjustments may be made in the support price for any commodity for differences in grade, type, staple, quality, location, and other factors.

The adjustments to be made in determining the price support rate for the various types of 1989-crop peanuts were announced on April 19, 1989. The adjustments included premiums and discounts for differences in quality and location. Subsequent to the announcement, processors of peanuts have indicated that they will not purchase 1989-crop peanuts to which a growth regulator has been applied. Accordingly, a reduction in the commercial value of such peanuts may occur. In June the manufacturer voluntarily withdrew the product from the market and has written to all peanut producers notifying them that the company will buy back any stocks of the growth regulator. In addition, the Environmental Protection Agency is proposing to lower the legal residue level (tolerance) such growth regulator. The new tolerance (4 ppm) will cover any raw peanuts treated in 1989 and any processed products that may remain in channels of trade. The discount in the support rate that otherwise would be applicable to such peanuts prevents the Commodity Credit Corporation's price support program from becoming the "market" for peanuts to which a growth regulator was applied during production. Because of price support peanut pool accounting procedures and possible diminished selling prices for these peanuts out of the price support inventory, this could, unless a discount is implemented, result in losses to the Commodity Credit Corporation and/or losses to those peanut producers who pledge, as collateral for price support loans, peanuts that were produced without the use of a growth regulator.

Determination

The price support rate for an individual lot of 1989-crop quota and additional peanuts shall be discounted by 100 percent from the support rate that otherwise would be applicable to such peanuts if a peanut producer is asked to certify whether a growth regulator has been applied with respect to the peanuts and (1) refuses to make the certification; (2) certifies that a growth regulator has been used; or (3) supplies an inaccurate certification. If an inaccurate certification is made, a refund of the monies received as a result of the inaccurate certification will be required, and in addition, the producer may be assessed damages and other charges. If a producer offers to pledge peanuts as collateral for a price support loan but is not asked to provide a certification or other assurance that a growth regulator was not used to produce the peanuts, such discount shall not apply.

Authority: Sections 401 and 403 of the Agricultural Act of 1949 (7 U.S.C. 1421 and 1423).

Signed at Washington, DC on August 21, 1989.

Keith D. Bjerke,

Executive Vice President, Commodity Credit Corporation.

[FR Doc. 89-20029 Filed 8-24-89; 8:45 am]

BILLING CODE 3410-05-M

Forest Service

Rocky Mountain Region; Exemption of Fire Recovery Projects From Appeal

AGENCY: Forest Service, USDA.

ACTION: Notification that certain fire recovery projects are exempted from apeals under provisions of 36 CFR part 217.

SUMMARY: This is a notification that decisions to implement certain projects pertaining to recovery from the Clover-Mist fire on the Shoshone National Forest are exempted from appeal per provisions of 36 CFR Part 217.4 (a) (11) as published January 23, 1989, at Vol. 54, No. 13, page 3342.

EFFECTIVE DATE: Effective on August 25, 1989.

FOR FURTHER INFORMATION CONTACT: Barry Davis, Forest Supervisor, Shoshone National Forest, P.O. Box 2140, Cody, WY 82414-2140.

Background

In 1988, the Clover-Mist fire burned over 120,000 acres of the Shoshone National Forest. In September and October 1988, an interdisciplinary team surveyed much of the burned area, in part to identify emergency and long term rehabilitation needs. From this survey it was found that in many places, this fire burned hot enough to cause severe damage to vegetation, soil and water resources. Other burn damage includes: habitat essential to the endangered grizzly bears; habitat for other major species of wildlife; nursery streams for a Blue Ribbon Trout fishery; areas along a State and Nationally designated scenic By-way and an entrance to Yellowstone National Park; streams providing water for domestic and agricultural use; as well as structures for recreation and range management. The damage to soils is of greatest concern because this will affect the length of time necessary to achieve natural revegetation as well as quantity and quality of water run-off from the area.

The emergency rehabilitation interdisciplinary team concluded that there was risk of flooding and reduced water quality caused by this fire. If left "untreated" these problems will persist for several years and the resulting vegetation will provide no diversity necessary for habitat of most wildlife species. The risk of insect and disease infestations in both the short and long run are possible and were noted by the team. They also projected a substantial loss of timber values over the 9,000 acres to 11,000 acres of suited timber base that was burned.

Field surveys of the burned area during June and July of 1989 indicate that many of the predicted consequences of the fire are taking place. In many areas, stream courses and riparian vegetation were severely damaged and natural process will take as much as 10 years to stabilize these areas. Damage to vegetation is great enough that a return to the prefire conditions of species diversity may take as much as 350 years through natural processes. In one instance in July, a flash flood at least 3 times the size of a 500 year event was caused by less than ⅛ inch of rain in a drainage that had been burned by the fire. This washed out a temporary bridge and stream gauge, and caused damage on the Forest as well as on private land down stream.

Because of the drought leading up to the fires in 1988, trees were damaged more than anticipated and are losing their sawlog value quicker than anticipated. Insects that attack both dead and live trees have moved into the area and threaten those areas not burned by the fire. If left untreated, this will cause loss of much of the unburned vegetation, further degradating wildlife habitat, recreation opportunities, visual quality and soil and water resources. All of these factors could increase the possibility for "landslides" in response to summer storms for the next 5 to 10 years.

In response to this new information, an accelerated schedule of planned fire recovery efforts including salvage of burned timber is necessary to mitigate as much of the damage caused by the fire as possible.

Planned Actions

Emergency rehabilitation efforts were limited to seeing only the most severely burned areas and work along trails to provide better drainage and sediment traps (by felling trees along these trails) to reduce water quality degradation. This emergency work was accomplished in 1988. Beyond this, the emergency rehabilitation team recommended a number of actions for restoration of the entire burned area as well as mitigation of the effects of the fires. Among these recommendations were:

Stirring up the burned soils and breaking the existing crust to allow for water infiltration and plant growth;

Felling and leaving trees perpendicular to slopes to slow run-off and trap sediment;

Leaving tops and limbs of cut trees as well as other vegetation to provide sediment traps and/or filter out sediment;

Plant different types of vegetation in patches to provide filtration of run-off in the short term and diversity in the longer term;

Remove fire damaged trees to remove breeding areas for harmful insects, enhance visual resources as well as remove a potential hazard to forest visitors;

Create "brush piles" to provide cover for smaller species of wildlife; and

Rehabilitate roads and trails to lessen run-off and sediment production.

The acres to be treated and decisions on what to plant vary by location and with the extent of the fire damage over the 120,000 acres of burn depending on the severity of burn, habitat types/soils, geology and location within/outside of wilderness. A number of projects aimed at accomplishing recovery objectives as planned for the summer of 1989 are being implemented.

Recent information on the extent of damage to natural ecological processes indicates that there is a need for increasing the number and extent of fire recovery efforts this year. Conclusions from the interdisciplinary team preparing Environmental Assessments for the salvage sales planned for 1989 indicate that such operations when done in conjunction with other recovery efforts will assist mitigation of fire effects and speed recovery. For these reasons, some of the recovery work, including 3 possible timber salvage sales, originally planned for the summer of 1990 will be attempted in 1989. These three salvage sale/recovery projects will include all of the above recommendations as part of the work to be accomplished during and/or after removal of most of the fire damaged trees. The feasibility of these projects is being analyzed at this time and environmental analyses will be completed within the next two to three months. This will assure that the most cost efficient manner for accomplishing specific recovery objectives will be identified and documented in an Environmental Assessment for each project.

Because of the extensive damage done to all resources within this area there is a need to remedy this damage as quickly as possible. Further, to accomplish this work in a manner which recovers part of the cost requires that the fire damaged trees be of commercial sawlog value. Not only will removing these trees accomplish many of the actions listed above, but a significant portion of the receipts from these sales will provide funding for the other work planned through collection of KV funds. Some of the fire damaged trees are deteriorating to the point where they will have no commercial value and it is anticipated that much of the commercial value will be lost in the next 12 to 18 months.

For these reasons, the next 3 salvage sale projects designed to accomplish the above objectives must be undertaken as quickly as possible, if, through environmental analysis, it is found that all three projects are feasible. To expedite these sale projects and the accompanying work, I am exempting these projects from review (appeal) under 36 CFR Part 217.

These three salvage sales are:

Cathedral Salvage Sale;
One Mile Salvage Sale; and
Oliver Gulch Salvage Sale.

Dated: August 16, 1989.

Charles J. Hendricks,

Acting Regional Forester.

BILLING CODE 3410-11-M

National Agricultural Statistics Service

Proposed Change in Durum Wheat Estimating Program

Notice is hereby given that the National Agricultural Statistics Service (NASS) plans to change the Durum Wheat estimating program.

The proposed changes focus on Arizona and California. Estimates of Durum seeded acreage for these two States will be added to the *Wheat and Rye Seedings* report beginning with the January 1990 release. Forecasts of Durum production in Arizona and California will be added to the May and June 1 *Crop Production* reports. All six Durum estimating States will make July 1 production forecasts. Only the four northern Durum States will make new production forecasts for August 1 (Arizona and California estimates will be carried forward).

The Arizona and California changes are at the request of the Industry because of the large existing differences

in planting and harvesting dates between the northern and "Desert" Durum growing areas.

Comments from data users regarding the proposed modifications outlined should be addressed to Donald M. Bay, Director, Estimates Division, NASS/USDA, Washington, DC 20250.

Done at Washington, DC this 21st day of September 1989.

Charles E. Caudill,

Administrator.

[FR Doc. 89-20122 Filed 8-24-89; 8:45 am]

BILLING CODE 3410-20-M

Proposed Change in Unit of Measure for Sugar Deliveries

Notice is hereby given that the National Agricultural Statistics Service (NASS) plans to change the unit of measure for a portion of the data shown in the quarterly Sugar Market Statistics reports. Beginning with the first report of 1990, NASS plans to change the unit of measure for "sugar deliveries by type of product or business of buyer" from hundredweights, refined basis, to short tons, refined basis. Units of measure for all other tables in the publication are short tons, raw value.

This change is being proposed at the request of data users who historically have converted hundredweights in the publication to short tons in order to have all data in the same units.

Comments from data users regarding the proposed modifications outlined should be addressed to Donald M. Bay, Director, NASS/USDA, Washington, DC 20250.

Done at Washington, DC this 22nd day of August, 1989.

Charles E. Caudill,

Administrator.

BILLING CODE 3410-20-M

DEPARTMENT OF COMMERCE

International Trade Administration

[A-428-037]

Drycleaning Machinery From West Germany; Final Results of Antidumping Duty Administrative Review in Accordance With Decision Upon Remand

AGENCY: International Trade Administration/Import Administration, Department of Commerce.

ACTION: Notice of Amendment to Final Results of Antidumping Duty Administrative Review in Accordance with Decision upon Remand.

SUMMARY: On December 1, 1988, the United States Court of International Trade ("the Court") ordered the Department of Commerce ("the Department") to reconsider respondent Boewe Maschinenfabrik GmbH's ("Boewe") claim for a "level of trade" adjustment in the administrative review of drycleaning machinery from West Germany. *American Permac, Inc.* v. *United States,* 12 CIT ___, 703 F. Supp. 97 (1988). The Department filed the required remand results with the Court on March 20, 1989. On June 14, 1989, the Court affirmed, in its entirety, the remand determination by the Department. *American Permac, Inc.* v. *United States,* 13 CIT ___, Slip Op. 89-83 (1989). As a result the margin for Boewe was reduced from 30.05 percent to 15.85 percent.

EFFECTIVE DATE: August 25, 1989.

FOR FURTHER INFORMATION CONTACT: Arthur N. DuBois or Chip Hayes, Office of Antidumping Compliance, International Trade Administration, U.S. Department of Commerce, Washington, DC 20230, telephone: (202) 377-8312/2923.

SUPPLEMENTARY INFORMATION:

Background

On January 10, 1985, the Department published in the **Federal Register** (50 FR 1256) the final results of its administrative review of the antidumping duty finding on drycleaning machinery from West Germany. The review covered two producers and/or exporters of this merchandise to the United States and the period July 1, 1979 through June 30, 1980. That notice gave 30.05 percent as the margin for Boewe. The notice stated that the Department had compared sales through distributors in the United States with direct sales to end-users in the home market, with no adjustment for level of trade differences because the differences were not adequately quantified.

Respondent Boewe field a lawsuit challenging our denial of a level trade adjustment. Boewe alleged that it had, in fact, provided sufficient quantification of expenses attributable to level of trade differences.

On December 1, 1988, the Court remanded the final results of review to the Department for reconsideration of Boewe's level of trade claim. On March 20, 1989, the Department issued remand results that amended the final results of review on drycleaning machinery from West Germany. The Department determined that Boewe had adequately quantified certain level of trade differences that were claimed. The amended results were affirmed by the Court, in their entirety, as a result of the ruling issued on June 14, 1989. *American Permac, Inc.* v. *United States,* 13 CIT ___, Slip. Op. 89-83 (1989). We have changed the margin for Boewe from those presented in the final results to 15.85 percent.

Amended Final Results of the Review

The Department has amended the final results. The amended weighted-average margin for Boewe is 15.85 percent.

The Department will instruct the Customs Service to assess antidumping duties on all appropriate entries. Individual differences between United States price and foreign market value may vary from the percentages stated above. The Department will issue appraisement instructions directly to the Customs Service.

This amendment to final results of antidumping duty administrative review notice is in accordance with section 751(a)(1) of the Tariff Act (19 U.S.C. 1675(a)(1)) and § 353.22 of the new Commerce Regulations (19 CFR 353.22).

Dated: August 17, 1989.

Eric I. Garfinkel,

Assistant Secretary for Import Administration.

[A-588-811]

Preliminary Determination of Sales at Less Than Fair Value; Drafting Machines and Parts Thereof From Japan

AGENCY: Import Administration, International Trade Administration, Commerce.

ACTION: Notice.

SUMMARY: We preliminarily determine that drafting machines and parts thereof from Japan are being, or are likely to be, sold in the United States at less than fair value. We have notified the U.S. International Trade Commission (ITC) of our determination and have directed the U.S. Customs Service to suspend liquidation of all entries of drafting machines and parts thereof from Japan as described in the "Suspension of Liquidation" section of this notice. If this investigation proceeds normally, we will make a final determination by November 1, 1989.

EFFECTIVE DATE: August 25, 1989.

FOR FURTHER INFORMATION CONTACT: Mark Wells or Louis Apple, Office of Antidumping Investigations, Import Administration, International Trade

Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone: (202) 377–3798 and (202) 377–1769, respectively.

SUPPLEMENTARY INFORMATION:

Preliminary Determination

We preliminarily determine that drafting machines and parts thereof from Japan are being, or are likey to be, sold in the United States at less than fair value, as provided in section 733 of the Tariff Act of 1930, as amended (19 U.S.C. 1673b) (the Act). The estimated average margins are shown in the "Suspension of Liquidation" section of this notice.

Case History

Since the notice of initiation (54 FR 19424, May 5, 1989), the following events have occurred: On May 22, 1989, the ITC determined that there is a reasonable indication that an industry in the United States is threatened with material injury by reason of imports from Japan of drafting machines and parts thereof (USITC Pub. 2192, May 1989).

On May 26, 1989, the respondent in the investigation, Mutoh Industries, Ltd. and Mutoh America, Inc. (collectively Mutoh), asked for the exclusion of parts data from the questionnaire response.

On May 30, 1989, the Department presented sections A, B and C of the antidumping questionnaire to respondent.

On June 8, 1989, respondent requested an extension of the deadline for filing the response to sections B and C of the questionnaire. We also granted respondent's May 26, 1989 request for the exclusion of parts data from the questionnaire response.

On June 14, 1989, we granted respondent an extension to July 13, 1989 for filing the response to sections B and C of the questionnaire. We also received section A of the questionnaire response from respondent.

On July 13, 1989, counsel for respondent notified the Department that respondent has decided not to actively participate in the investigation. Respondent requested the return of all submissions made to the Department and asked the Department to instruct petitioner's counsel to return all materials released under the terms of the administrative protective order (APO).

On July 17, 1989, citing § 353.15(e) of the Department's regulations published in the **Federal Register** on March 28, 1989 (54 FR 12742) (to be codified at 19 CFR 353.15), counsel for Vemco, petitioner in this investigation, requested a disclosure conference and also inquired about the disposition of petitioner's business proprietary data that had been released to respondent's counsel under APO.

On July 19, 1989, counsel for petitioner informed the Department and the counsel for respondent that material and copies of material released under the APO had been destroyed pursuant to the Department's instructions.

On July 20, 1989, counsel for respondent informed the Department that, although respondent would not provide further factual information in the investigation, counsel for respondent still intended to participate in the proceeding and wanted to retain information released under the APO.

On August 4, 1989, we informed counsel for petitioner that counsel for respondent was still entitled to information released under the APO. We also determined that a disclosure conference as specified by § 353.15(e) of the Department's regulations, did not apply in this investigation.

Period of Investigation

The period of investigation (POI) is November 1, 1988 through April 30, 1989.

Scope of Investigation

The United States has developed a system of tariff classification based on the international harmonized system of Customs nomenclature. On January 1, 1989, the United States fully converted to the Harmonized Tariff Schedule (HTS), as provided for in section 1201 *et seq.* of the Omnibus Trade and Competitiveness Act of 1988. All merchandise entered or withdrawn from warehouse for consumption on or after this date is now classified solely according to the appropriate HTS item numbers. The HTS item numbers are provided for convenience and U.S. Customs Service purposes. The written description remains dispositive.

The products covered by this investigation include drafting machines and parts thereof from Japan, currently classifiable under the Harmonized Tariff Schedule sub-headings 9017.10.00, and 9017.90.00. Prior to January 1, 1989, such merchandise was classified under item 710.8025 of the Tariff Schedules of the United States Annotated (TSUSA).

The scope of this investigation includes drafting machines that are finished, unfinished, assembled, or unassembled, and drafting machine kits. For purposes of this investigation, "drafting machine" refers to "track" or "elbow-type" drafting machines used by designers, engineers, architects, layout artists, and others. Drafting machines are devices for aligning scales (or rulers) at a variety of angles anywhere on a drawing surface, generally a drafting board. A protractor head allows angles to be set and read and lines to be drawn at this angle. The machine is generally clamped to the board. Both "track" and elbow-type" drafting machines are classified under HTS 9017.10.00.

Also included within the scope of this investigation are parts of drafting machines classified under HTS 9017.90.00. Parts include, but are not limited to, horizontal and vertical tracks, parts of horizontal and vertical tracks, band and pulley mechanisms, parts of band and pulley mechanisms, protractor heads, and parts of protractor heads, destined for use in drafting machines. Accessories, such as parallel rulers, lamps and scales are not subject to this investigation.

Such or Similar Comparisons

For respondents, pursuant to section 771(16)(c), we established two categories of "such or similar" merchandise: (1) Track drafting machines and (2) elbow-type drafting machines.

Product comparisons for track and elbow-type drafting machines were based on information submitted in the petition.

Some Japanese models sold only in the home market during the period of investigation include a scale balancer, which is found only on track drafting machines. A scale balancer keeps the scale stationary and allows for added balance to the equipment, thus increasing the efficiency and precision of the drafting machine.

Fair Value Comparisons

To determine whether sales of drafting machines and parts thereof from Japan to the United States were made at less than fair value, we compared the United States price to the foreign market value, as specified in the "United States Price" and "Foreign Market Value" sections of this notice.

Since Mutoh Industries declined to participate in this investigation we used the best information available as required by section 776(c) of the Act. As best information available, we used data contained in the petition. Petitioner provided price data on five models of drafting machines exported to the United States and five comparable models sold in the home market. Some of petitioner's price adjustments were disallowed because sufficient documentation was not provided to support its allegations.

Since petitioner did not provide a 1988 price list for respondent's sales in the United States, price data from the petition over a thirty-four month period (January 1985–October 1987) was used to calculate an average yearly price increase for each model. This price increase was then applied to respondent's 1987 list prices for all five U.S. models to arrive at an estimated 1988 list price for each model. Deductions from the estimated 1988 list price were made for sales discounts to unrelated dealers, U.S. customs duties and fees, and U.S. warehousing fees, to arrive at an adjusted United States price for each model.

Prices contained in the petition for the only two alleged U.S. importers were used because the petitioner provided inadequate support for the derivation of estimated prices charged by Mutoh, Japan.

The Department's estimate of foreign market value was based on list prices in Japan as adjusted and explained above, less sales discounts to unrelated dealers and a difference in merchandise adjustment for Japanese models that include a scale balancer.

We took the highest margin for each such or similar category of merchandise and calculated a simple average of the values to determine the margin for Mutoh Industries and the All Other rate.

United States Price

United States price was based on the U.S. price information provided in the petition as adjusted and explained in the "Fair Value Comparisons" section of this notice.

Foreign Market Value

Foreign market value was based on home market prices provided in the petition as adjusted and explained in the "Fair Value Comparisons" section of this notice.

Verification

Since Mutoh did not furnish a complete response to the questionnaire, we will not conduct a verification.

Suspension of Liquidation

In accordance with section 733(d) of the Act, we are directing the U.S. Customs Service to suspend liquidation of all entries of drafting machines and parts thereof from Japan, as defined in the "Scope of Investigation" section of this notice, that are entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**. The U.S. Customs Service shall require a cash deposit or posting of a bond equal to the estimated amounts by which the foreign market value of the subject merchandise from Japan exceeds the United States price as shown below. This suspension of liquidation will remain in effect until further notice. The estimated less than fair value margins are shown below.

Manufacturer/Producer/Exporter	Margin percentage
Mutoh Industries, Ltd. (Mutoh)	66.91
All Others	66.91

ITC Notification

In accordance with section 733(f) of the Act, we have notified the ITC of our determination. In addition, we are making available to the ITC all nonprivileged and nonproprietary information relating to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under administrative protection order, without the written consent of the Assistant Secretary for Import Administration.

The ITC will determine whether these imports materially injury, or threaten material injure to, a U.S. industry before the later of 120 days after the date of this preliminary determination or 45 days after our final determination, if affirmative.

Public Comment

In accordance with § 353.38 of the Department's regulations, case briefs, and any other written comments, in at least ten copies must be submitted to the Assistant Secretary by October 2, 1989, and rebuttal briefs by October 10, 1989. In accordance with § 353.38(b) of the Department's regulations, we will hold a public hearing, if requested, to afford interested parties an opportunity to comment on arguments raised in case or rebuttal briefs at 10:00 a.m. on October 13, 1989, at the U.S. Department of Commerce, Room 3708, 14th Street and Constitution Avenue, NW., Washington, DC. 10230. Individuals who wish to participate in the hearing must submit a request to the Assistant Secretary for Import Administration, Room B–099, at the above address within ten days of the publication of this notice. Requests should contain: (1) The party's name, address and telephone number; (2) the number of participants; (3) the reasons for attending; and (4) a list of the arguments to be raised. In accordance with § 353.38(b) of the Department's regulations, presentations will be limited to issues raised in the briefs.

This determination is published pursuant to section 733(f) of the Act (19 U.S.C. 1673b(f)).

Dated: August 18, 1989.

Eric I. Garfinkel,

Assistant Secretary for Import Administration.

BILLING CODE 3510-DS-M

National Institute of Standards and Technology

Malcolm Balridge National Quality Award's Panel of Judges

AGENCY: National Institute for Standards and Technology, Commerce.

ACTION: Notice of closed meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act, 5 U.S.C. App., notice is hereby given that there will be a closed meeting of the Panel of Judges of the Malcolm Baldrige National Quality Award from Wednesday, October 4, through Friday, October 6, 1989. The Panel of Judges is composed of nine members prominent in the field of quality management and appointed by the Secretary of Commerce. The purpose of this meeting is to review the 1989 Award applications and to select applicants to be recommended for receipt of the Award. The applications under review contain trade secrets and proprietary commercial information submitted to the Government in confidence.

DATES: The meeting will convene October 4, 1989 at 8:30 a.m. and adjourn at approximately 2:00 p.m. on October 6, 1989. The entire meeting will be closed.

ADDRESSES: The meeting will be held in Lecture Room C, National Institute of Standards and Technology, Gaithersburg, MD 20899.

FOR FURTHER INFORMATION CONTACT: Dr. Curt W. Reimann, Associate Director for Quality Programs, National Institute for Standards and Technology, Gaithersburg, Maryland 20899, telephone number (301) 975–2036.

SUPPLEMENTARY INFORMATION: The Assistant Secretary for Administration, with the concurrence of the General Counsel, formally determined on May 19, 1989 that the meeting of the Panel of Judges will be closed pursuant to Section 10(d) of the Federal Advisory Committee Act, 5 U.S.C. App., as amended by Section 5(c) of the Government in the Sunshine Act, Public Law 94–409. The meeting, which involves examination of records and discussion of Award applicant data,

BEST COPY AVAILABLE

may be closed to the public in accordance with section 552b(c)(4) of Title 5, United States Code, since the meeting is likely to disclose trade secrets and commercial or financial information obtained from a person and privileged or confidential.

Dated: August 21, 1989.

Raymond G. Kammer,

Acting Director.

BILLING CODE 3510-13-M

National Telecommunications and Information Administration

Comprehensive Study of the Radio Frequency Spectrum

AGENCY: National Telecommunications and Information Administration (NTIA), Commerce.

ACTION: Notice.

Commencing this fall, the National Telecommunications and Information Administration (NTIA) will undertake a comprehensive policy review of the use and management of radio spectrum in the United States. While NTIA has previously analyzed and reviewed in detail many policy aspects of spectrum use and management, this announcement marks the start of the first fundamental reexamination of spectrum policy objectives and issues since NTIA's organization in 1978.

Such a review is timely in light of sweeping changes in demand for spectrum as well as the associated technology. These changes require the development and fostering of policies that will encourage the most effective, efficient, and fair use of spectrum.

For example, while demand for spectrum continues to expand dramatically, technological advances such as the widespread deployment of fiber optics and satellite technologies afford users the opportunity to shift among communications media and thereby free spectrum for other needs. Moreover, advanced management techniques could permit more efficient use of spectrum and exploitation of underutilized bands.

In the near future, NTIA intends to issue a Notice of Inquiry (NOI) to request public comment on specific economic, technical, and regulatory issues to be studied concerning U.S. spectrum policy. General policy goals for spectrum use and management include affording maximum opportunity for the development of innovative services; ensuring U.S. national defense, law enforcement and other essential government service requirements are met; ensuring that international frequency management accommodates U.S. interests; and providing U.S. spectrum users with fair and efficient access to this resource.

NTIA is the Executive Branch agency principally responsible for the development and presentation of domestic and international telecommunications policy. Under Executive Order 12046, NTIA acts as principal adviser to the President on telecommunication policy, and is directed to develop a long range U.S. spectrum management plan. NTIA also has statutory authority to license government radio frequency use.

ADDRESSES: National Telecommunications and Information Administration, Room HCH 4725, U.S. Department of Commerce, Washington, DC 20230.

FOR FURTHER INFORMATION CONTACT: Joseph L. Gattuso, Office of Policy Analysis and Development, 202-377-1880, or Fred Wentland, Office of Spectrum Management, 202-377-1850.

Janice Obuchowski,

Assistant Secretary of Commerce for Communications and Information.

BILLING CODE 3510-60-M

COMMITTEE FOR PURCHASE FROM THE BLIND AND OTHER SEVERELY HANDICAPPED

Procurement List 1989 Additions

AGENCY: Committee for Purchase from the Blind and Other Severely Handicapped.

ACTION: Additions to procurement list.

SUMMARY: This action adds to Procurement List 1989 commodities to be produced by workshops for the blind or other severely handicapped.

EFFECTIVE DATE: September 25, 1989.

ADDRESS: Committee for Purchase from the Blind and Other Severely Handicapped, Crystal Square 5, Suite 1107, 1755 Jefferson Davis Highway, Arlington, Virginia 22202-3509.

FOR FURTHER INFORMATION CONTACT: Beverly Milkman (703) 557-1145.

SUPPLEMENTARY INFORMATION: On April 28 and May 12, 1989 the Committee for Purchase from the Blind and Other Severely Handicapped published notices (54 FR 18324 and 20628) of the proposed addition of 100 percent of the total Government requirements for cold weather undershirts and cold weather drawers to Procurement List 1989, November 15, 1988 (53 FR 46018).

Comments were received from several firms and others on their behalf objecting to the addition of the total requirements for the undershirts and drawers to the Procurement List. The significant issues raised involved the firms' expenditure of substantial nonreimbursable funds to assist the Government in developing the specification for the items without the opportunity to compete for the initial quantity purchased under the finalized specification; the difficulty in producing the items involved; and adverse impact on the Defense Mobilization Base, the previous contractors, and a current subcontractor. In addition, comments were received from the workshops proposed to produce these items and from others on their behalf recommending that the drawers and undershirts be added to the Procurement List because of the employment and training opportunities that would be generated for persons with severe disabilities.

Lack of Opportunity To Compete Under Finalized Specification

Seven firms received contracts for these items during the 1986-1989 period. Of these, five received small contracts, and two received small contracts and substantial follow-ons to produce the items prior to the development of the final specifications.

Three of the five firms which had received small contracts during the 1986-1987 period but are not current contractors wrote to complain about the lack of opportunity to compete for future contracts under the finalized specification. These firms stated that they had expended significant nonreimbursable funds to test the Government specification and that the addition of the undershirt and drawers to the Procurement List would make it impossible for them to recoup costs incurred in working with suppliers, purchasing equipment, preproduction planning, start-up, and training workers to produce the items. They indicated that the lack of opportunity would cause irreparable harm to their firms.

For fixed price contracts of the type received by these firms, contractors are only guaranteed that the quantities included in the contracts will be procured. A firm that expends funds to develop its capability to produce an item for the Government does so with no guarantee that it will receive future contracts for the item involved. The former contractors in question expended funds of their own volition, knowing that they would not necessarily receive additional work. In fact, in each case, the firms did not receive any of the substantial follow-on purchases made during the 1988-1989 period. Consequently, since those firms do not currently hold contracts and have no guarantee that they will receive contracts in the future, adding 100 percent of the items to the Procurement List would not have a severe adverse impact on their operations.

Adverse Impact on Defense Mobilization Base

One commenter indicated that the Defense Mobilization Base for these items would be adversely affected if they were added to the Procurement List. There is no justification for this assertion, which assumes that work centers cannot meet Government needs for DOD Industrial Preparedness program items. In fact, there are a number of DOD Industrial Preparedness items on the Procurement List which workshops have been successfully producing in accordance with Government requirements.

Ability To Produce

One commenter indicated that some of the manufacturing operations require significant eye/hand coordination. Another stated that the items are highly specialized requiring extensive training of the labor force. In considering comments of this nature, the Committee relies primarily upon information provided by the appropriate central nonprofit agency (in this case, the National Industries for the Severely Handicapped) and the procuring agency (in this case, DPSC). The central nonprofit agency is charged with the responsibility of working closely with work centers to ensure that they will have the equipment and raw materials, the technical knowledge, and the quality assurance procedures needed to produce the commodity in compliance with Government specifications. The procuring agency is asked to review the workshops' capability and to conduct an on-site inspection if deemed necessary.

Information provided by these sources in this case led the Committee to conclude that the eye/hand coordination and labor force training requirements associated with these items can be handled by the workshops and, in fact, are not as significant as those required for other items being successfully provided by workshops. The Committee was influenced, however, by concerns expressed by DPSC about the workshops' abilities to produce the large volumes that will be required initially.

Impact on Current Contractors

Of the two contractors that received substantial awards for these items during the 1988-1989 period prior to finalization of the specifications, one submitted comments. The letter explained that the contractor did not intend to bid on future solicitations for the items but that its subcontractor, which had handled 100 percent of the production under earlier contracts, did. The contractor indicated that the addition would have a tremendous effect on the subcontractor and had the potential of forcing it to close. The contractor also expressed the hope that the subcontractor would have the opportunity to bid on at least a portion of future contracts.

The estimated annual values of the total Government requirements for the drawers and undershirts represent approximately 1.3 percent and 0.04 percent of the annual sales of the current contractor. This is not considered to be severe adverse impact.

Other Impact

The Committee's procedures require consideration of the impact of a proposed addition of the current or most recent contractor and not upon subcontractors. However, the Committee does take into account comments submitted by all parties, including subcontractors.

In this case, a subcontractor to one of the current contractors for both items submitted comments. The firm's vice-president expressed concern about the addition, indicating that it would be extremely harmful to the firm's business, resulting in the termination of a large number of employees and the possible closing of the firm. He indicated that sales of the two items represented more than half of the firm's business and that his firm intended to bid as a contractor on future procurements of the items. The subcontractor also indicated that a compromise could be reached by giving the "Handicapped" a portion of the future contracts.

In response to the subcontractor's compromise suggestion, the Committee asked the subcontractor what impact the addition to the Procurement List of 50 percent of each of the two items would have on his firm. The subcontractor indicated that a 50 percent addition would allow it an opportunity to bid on future contracts and that the economic impact on the firm would be less.

Committee Decision

After consideration of the material presented to it concerning the capability of qualified workshops to produce the drawers and undershirts at fair market prices and the impact of the addition on the current or most recent contractor, the Committee has determined that the undershirts and drawers are suitable for procurement by the Federal Government under 41 U.S.C. 46-48c and 41 CFR 51-2.6. Taking into account the circumstances of the subcontractor, the compromise suggestions, and the DPSC concerns about the work centers' capabilities to produce the entire initial amount, the Committee decided to add only 50 percent of the total Government requirements for each of the items to the Procurement List at this time.

I certify that the following actions will not have a significant impact on a substantial number of small entities. The major factors considered were:

a. The actions will not result in any additional reporting, recordkeeping or other compliance requirements.

b. The actions will not have a serious economic impact on any contractors for the commodities listed.

c. The actions will result in authorizing small entities to produce the commodities procured by the Government.

Accordingly, the following commodities are hereby added to Procurement List in 1989:

Drawers, Cold Weather, 8415-01-227-9542, 8415-01-227-9543, 8415-01-227-9544, 8415-01-227-9545, 8415-01-227-9546, (50 percent of the Government's requirement).

Undershirt, Cold Weather; 8415-01-227-9547, 8415-01-227-9548, 8415-01-227-9549, 8415-01-227-9550, 8415-01-227-9551, (50 percent of the Government's requirement).

E. R. Alley, Jr.,

Deputy Executive Director.

BILLING CODE 6820-33-M

Procurement List 1989 Additions

AGENCY: Committee for Purchase from the Blind and Other Severely Handicapped.

ACTION: Additions to procurement list.

SUMMARY: This action adds to Procurement List 1989 a commodity to be produced and services to be provided by workshops for the blind or other severely handicapped.

EFFECTIVE DATE: September 25, 1989.

ADDRESS: Committee for Purchase from the Blind and Other Severely Handicapped, Crystal Square 5, Suite 1107, 1755 Jefferson Davis Highway, Arlington, Virginia 22202-3509.

FOR FURTHER INFORMATION CONTACT: Beverly Milkman (703) 557–1145.

SUPPLEMENTARY INFORMATION: On June 16, 30 and July 10, 1989, the Committee for Purchase from the Blind and Other Severely Handicapped published notices (54 FR 25601, 27667 and 28632) of proposed additions to Procurement List 1989, which was published on November 15, 1988 (53 FR 46018).

After consideration of the material presented to it concerning capability of qualified workshops to produce the commodity and provide the services at a fair market price and impact of the addition on the current or most recent contractors, the Committee has determined that the commodity and services listed below are suitable for procurement by the Federal Government under 41 U.S.C. 46–48c and 41 CFR 51–2.6.

I certify that the following actions will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

a. The actions will not result in any additional reporting, recordkeeping or other compliance requirements.

b. The actions will not have a serious economic impact on any contractors for the commodity and services listed.

c. The actions will result in authorizing small entities to produce the commodity and provide the services procured by the Government.

Accordingly, the following commodity and services are hereby added to Procurement List 1989:

Commodity

Strap Assembly, Webbing

2540–00–894–9545

Services

Janitorial/Custodial
  Federal Building and U.S. Courthouse, 131 East Fourth Street, Davenport, Iowa
Janitorial/Custodial
  U.S. Army Corps of Engineers at the following Yakima, Washington locations:
  Fort Lewis Resident Office
  Project Office adjacent to Building 810
  Yakima Firing Center.

E.R. Alley, Jr.,
Deputy Executive Director.

BILLING CODE 6820–33–M

Procurement List 1989 Proposed Addition

AGENCY: Committee for Purchase from the Blind and Other Severely Handicapped.

ACTION: Proposed addition to procurement list.

SUMMARY: The Committee has received a proposal to add to Procurement List 1989 a commodity to be produced by workshops for the blind or other severely handicapped.

COMMENTS MUST BE RECEIVED ON OR BEFORE: September 25, 1989.

ADDRESS: Committee for Purchase from the Blind and Other Severely Handicapped, Crystal Square 5, Suite 1107, 1755 Jefferson Davis Highway, Arlington, Virginia 22202–3509.

FOR FURTHER INFORMATION CONTACT: Beverly Milkman (703) 557–1145.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 47(a)(2) and 41 CFR 51–2.6. Its purpose to provide interested persons an opportunity to submit comments on the possible impact of the proposed action.

If the Committee approves the proposed addition, all entities of the Federal Government will be required to procure the commodity listed below from workshops for the blind or other severely handicapped.

It is proposed to add the following commodity to Procurement List 1989, which was published on November 15, 1988 (53 FR 46018):

Cushion, Seat, Vehicular

2540–00–737–3309.

E. R. Alley, Jr.,
Deputy Executive Director.

BILLING CODE 6820–33–M

DEPARTMENT OF DEFENSE

Office of the Secretary

Establishment of the DoD Clothing and Textile Board

ACTION: Establishment of the DoD Clothing and Textile Board.

SUMMARY: Under the provisions of Public Law 92–463, "Federal Advisory Committee Act," notice is hereby given that the Department of Defense (DoD) Clothing and Textile Board has been determined to be in the public interest and has been established.

The DoD Clothing and Textile Board will provide the Under Secretary of Defense (Acquisition) and the Director, Defense Logistics Agency with advice on matters related to the acquisition of clothing and textile items for all the Military Services. The range of advice will include: Developing a strategy to broaden the production base for clothing and textile items and encourage more participation by a larger segment of the clothing and textile industry; recommending improvements to military specifications to achieve higher quality and productivity; and suggesting and evaluating improvements in contracting and contract administration to facilitate more effective Government and industry working relationships.

The DoD Clothing and Textile Board will be well balanced with respect to the types and diversity of the members appointed to serve. Candidates for membership will be selected from outstanding leaders in the clothing and textile industry, both fabric and clothing item manufacturers, and will also include academicians with expertise in the field, as well as Government members from the Military Services and the Defense Logistics Agency.

Dated: August 21, 1989.

Linda M. Bynum,
Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 3810–01–M

Defense Intelligence Agency Advisory Board; Closed Meeting

AGENCY: Defense Intelligence Agency Advisory Board.

ACTION: Notice of closed meeting.

SUMMARY: Pursuant to the provisions of subsection (d) of section 10 of Public Law 92–463, as amended by section 5 of Public Law 94–409, notice is hereby given that a closed meeting of a panel of the DIA Advisory Board has been scheduled as follows:

DATES: Wednesday, 13 September 1989 (8:30 a.m. to 4 p.m.)

ADDRESSES: The DIAC, Bolling AFB, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Lieutenant Colonel John E. Hatlelid, USAF, Executive Secretary, DIA Advisory Board, Washington, DC 20340–1328 (202/373–4930).

SUPPLEMENTARY INFORMATION: The entire meeting is devoted to the discussion of classified information as defined in Section 552b(c)(1), Title 5 of the U.S. Code and therefore will be

closed to the public. Subject matter will be used in a special study on HUMINT/Scientific and Technical Intelligence Interface.

Dated: August 21, 1989.

L.M. Bynum,
Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 3810–01–M

Defense Manufacturing Board Project on Defense Industrial Strategy; Planning Meeting

AGENCY: Under Secretary of Defense (Acquisition).

ACTION: Notice of open meeting.

SUMMARY: In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463), the Office of the Under Secretary of Defense for Acquisition announces a forthcoming planning meeting for a Defense Manufacturing Board project on Defense Industrial Strategy.

DATE AND TIME: 15 Sep 89, 0900–1630.

ADDRESS: Institute for Defense Analysis (Softech Building, 4th Floor), 2000 N. Beauregard, Alexandria, VA.

The agenda for the meeting will include a discussion of methods for identifying critical opportunities in the defense industry and ways of generating strategies for ensuring their viability.

FOR FURTHER INFORMATION CONTACT: Ms. Sherry Fitzpatrick of the DMB Secretariat, (202) 697–0957.

Dated: August 21, 1989.

L.M. Bynum,
Alternate OSD Federal Register Liaison Officer, Department of Defense.

DEPARTMENT OF EDUCATION

Notice of Proposed Information Collection Requests

AGENCY: Department of Education.

ACTION: Notice of proposed information collection requests.

SUMMARY: The Director, Office of Information Resources Management, invites comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1980.

DATES: Interested persons are invited to submit comments on or before September 25, 1989.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, Attention: Jim Houser, Desk Officer, Department of Education, Office of Management and Budget, 726 Jackson Place NW., Room 3208, New Executive Office Building, Washington, DC 20503. Requests for copies of the proposed information collection requests should be addressed to Margaret B. Webster, Department of Education, 400 Maryland Avenue SW., Room 5624, Regional Office Building 3, Washington, DC 20202.

FOR FURTHER INFORMATION CONTACT: Margaret B. Webster (202) 732–3915.

SUPPLEMENTARY INFORMATION: Section 3517 of the Paperwork Reduction Act of 1980 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations.

The Director, Office of Information Resources Management, publishes this notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following:

(1) Type of review requested, e.g., new, revision, extension, existing or reinstatement; (2) Title; (3) Frequency of collection; (4) The affected public; (5) Reporting burden; and/or (6) Recordkeeping burden; and (7) Abstract. OMB invites public comment at the address specified above. Copies of the requests available from Margaret Webster at the address specified above.

Dated: August 22, 1989.

Carlos U. Rice,
Director, for Office of Information Resources Management.

Office of Bilingual Education and Minority Languages Affairs

Type of Review: New.

Title: Descriptive Study of Significant Features of Exemplary Special Alternative Instructional Programs.

Frequency: Semi-Annually.

Affected Public: State or local governments; Federal agencies or employees; Non-profit institutions.

Reporting Burden:

Responses: 360
Burden Hours: 90

Recordkeeping Burden:

Recordkeepers: 0
Burden Hours: 0

Abstract: This study will provide the Department with data about exemplary Special Alternative Instructional Programs. A sample of teachers will be asked to provide data about a targeted population of students who exit SAIP programs and enter regular classroom activities.

Office of Planning, Budget, and Evaluation

Type of Review: New.

Title: Design for a Study of Chapter 1 Services in Secondary Schools.

Frequency: One time.

Affected Public: State or local governments.

Reporting Burden:

Responses: 240
Burden Hours: 160

Recordkeeping Burden:

Recordkeepers: 0
Burden Hours: 0

Abstract: The purpose of this study is to provide the Department with detailed information of Chapter 1 programs in secondary schools and to examine existing dropout rates or prevention programs that might serve as models for administering Chapter 1 services.

[FR Doc. 89-20113 Filed 8-24-89; 8:45 am]

BILLING CODE 4000-01-M

DEPARTMENT OF ENERGY

Financial Assistance Award; Intent To Award Grant to Grinding Consultants Company

AGENCY: Department of Energy.

ACTION: Notice of unsolicited financial assistance award.

SUMMARY: The Department of Energy announces that pursuant to 10 CFR 600.14, it is making a financial assistance award based on an unsolicited application under Grant Number DE-FG01-89CE15447 to Grinding Consultants Company to assist in the development of an invention entitled "Energy Predictive High Speed Grinding." The technology is a production metal grinding system based on predictive control of machine operating parameters to control the unit volume energy of high speed grinding.

SCOPE: This grant will aid in the assembly of a prototype of the inventor's self-truing grinding system and establish correct operating parameters to maintain grinding wheel temperatures between 300-400 degrees. Direct comparisons of production rates, part quality, and costs for conventional and this grinding system will also be made.

The current technology consists of machine mounted, organic- and vitreous-bonded grinding wheels which are used in the precision grinding of moving machine components. The amount of metal that can be removed per minute is a function of grinding wheel surface roughness (grade) and speed. The vitreous-bonded wheels are limited by internal strength to speeds of 6000 feet/minute. Organic bonded wheels have these same limits, since higher speeds cause the edges of the surface to break, causing fines which fill in surface pores, reducing the grade and efficiency.

The National Institute of Standards and Technology (NIST) estimates that 1.2 billion kWh (or 700,000 barrels of oil) per year would be saved at the powerplant. This assumes 25 percent market penetration and realization of 60 percent energy saving, as estimated by the inventor.

ELIGIBILITY: Based on receipt of an unsolicited application, eligibility of this award is being limited to Grinding Consultants Company. Mr. Roderick L. Smith, the inventor, is President of Grinding Consultants Company of Rockford, Illinois, and has 40 years of engineering and management experience with industrial machinery, and is the holder of more than 20 patents.

The term of this grant shall be two years from the effective date of award.

FOR FURTHER INFORMATION CONTACT: U.S. Department of Energy, Office of Procurement Operations, ATTN: Rosemarie H. Marshall, MA-453.2, 1000 Independence Avenue SW., Washington, DC 20585.

Thomas S. Keefe,

Director, Contract Operations Branch B, Office of Procurement Operations.

[FR Doc. 89-20124 Filed 8-24-89; 8:45 am]

BILLING CODE 6450-01-M

Secretarial Panel for the Evaluation of Epidemiologic Research Activities; Open Meeting

Pursuant to the provisions of the Federal Advisory Committee Act (Public Law 92-463, 86 Stat. 770), notice is hereby given of the following advisory committee meeting:

Name: Secretarial Panel for the Evaluation of Epidemiologic Research Activities.

Date and Time:

Tuesday, September 12, 1989, 1:30 p.m.—4:30 p.m.

Wednesday, September 13, 1989, 8:30 a.m.—5:30 p.m.

Place: Wyndham Bristol Hotel, 2430 Pennsylvania Ave. NW., Washington, DC 20037.

Contact: Steven F. Boedigheimer, Executive Director, S.P.E.E.R.A., 1000 Independence Ave. SW., Washington, DC 20585, Telephone: (202) 586-7304.

Purpose: The Panel was established to provide the Secretary with an independent evaluation of the Department of Energy's epidemiology program and the appropriateness, effectiveness, and overall quality of the Departments epidemiologic research activities.

Tentative Agenda:

Tuesday, September 12, 1989

1:30 p.m. *Panel Procedural Business*
- Introductions of members and staff
- Establishment of operational procedures
- Review of relevant rules governing advisory committee operations

2:30 p.m. *Overview of the Department of Energy*
- Officials of the Department of Energy

Purpose and Objectives of the Panel
- The Honorable James D. Watkins, Secretary, Department of Energy

Epidemiology Program of Department of Energy
- Robert Goldsmith, Ph.D.

4:30 p.m. Meeting adjourned until 8:30 a.m. September 13, 1989

Wednesday, September 13, 1989

8:30 a.m. *Epidemiology Program of Department of Energy (con't)*
- Robert Goldsmith, Ph.D.

10:30 a.m. *Invited Testimony*

12:00 p.m.-1:00 p.m. Lunch Break

1:00 p.m. *Invited Testimony (con't)*

3:00 p.m. *Public Comment*

4:00 p.m. *Panel Discussion of Work Plan*

5:30 p.m. Meeting adjourned.

Public Participation: The meeting is open to the public. The Chairperson of the Panel is empowered to conduct the meeting in a fashion that will, in the Chairperson's judgement, facilitate the orderly conduct of business. Any member of the public who wishes to make oral statements pertaining to agenda items should contact the Executive Director at the address or telephone number listed above. Requests must be received at least 5 days prior to the meeting and reasonable provision will be made to include the presentation on the agenda.

Minutes: Available for public review and copying approximately 30 days following the meeting at the Public Reading Room 1E-190, Forrestal Building, 1000 Independence Ave. SW., Washington, DC between 9:00 a.m. and 4:00 p.m., Monday through Friday except Federal holidays.

Issued: Washington, DC, on August 22, 1989.

J. Robert Franklin,

Deputy Advisory Committee Management Officer.

[FR Doc. 89-20128 Filed 8-24-89; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. FE C&E 89-16; Certification Notice—42]

Office of Fossil Energy

Filing Certification of Compliance; Coal Capability of New Electric Powerplant Pursuant to Provisions of the Powerplant and Industrial Fuel Use Act, as Amended

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of filing.

SUMMARY: Title II of the Powerplant and Industrial Fuel Use Act of 1978, as amended ("FUA" or "the Act") (42 U.S.C. 8301 *et seq.*) provides that no new electric powerplant may be constructed or operated as a base load powerplant without the capability to use coal or another alternate fuel as a primary energy source (section 201(a), 42 U.S.C. 8311 (a), Supp. V 1987). In order to meet the requirement of coal capability, the owner or operator of any new electric powerplant to be operated as a base load powerplant proposing to use natural gas or petroleum as its primary energy source may certify, pursuant to section 201(d), to the Secretary of Energy prior to construction, or prior to operation as to base load powerplant, that such powerplant has the capability to use coal or another alternate fuel. Such certification establishes compliance with section 201(a) as of the date it is filed with the Secretary. The Secretary is required to publish in the **Federal Register** a notice reciting that the certification has been filed. One owner and operator of proposed new electric base load powerplants has filed self certifications in accordance with section 201(d). Further information is provided in the "SUPPLEMENTARY INFORMATION" section below.

SUPPLEMENTARY INFORMATION: The following company has filed two self certifications:

Name	Date received	Type of facility	Megawatt capacity	Location
Florida Power & Light Company, Miami, FL	08-04-89	Combined Cycle	456-524	Ft. Lauderdale, FL
Florida Power & Light Company, Miami, FL	08-04-89	Combined Cycle	770	Indiantown, FL

Amendments to the FUA on May 21, 1987, (Pub. L. 100-42) altered the general prohibitions to include only new electric base load powerplants and to provide for the self certification procedure.

Issued in Washington, DC on August 21, 1989.

Constance L. Buckley,

Deputy Assistant Secretary for Fuels Programs, Office of Fossil Energy.

[FR Doc. 89-20123 Filed 8-24-89; 8:45 am]

BILLING CODE 6450-01-M

Economic Regulatory Administration

Proposed Consent Order With Occidental Petroleum Corp.

AGENCY: Economic Regulatory Administration, DOE.

ACTION: Additional notice and opportunity for public comment on proposed consent order.

SUMMARY: On May 24, 1989, the Economic Regulatory Administration (ERA) gave Notice in the **Federal Register** of a proposed Consent Order between the Department of Energy (DOE) and Occidental Petroleum Corporation (Occidental) which would resolve matters relating to Occidental's compliance with the federal petroleum price and allocation regulations during the period October 1979 through January 1981. 54 FR 22469. The proposed Consent Order requires Occidental to pay DOE $205,080,000, which includes interest over eight years, in settlement of Occidental's potential liability for $263.9 million in alleged overcharges, plus interest, found by DOE's Office of Hearings and Appeals (OHA) in a September 30, 1988, Remedial Order issued to Occidental's wholly-owned subsidiary, OXY USA Inc. (formerly Cities Service Oil and Gas Corporation, successor in interest to Cities Service Company). *Cities Service Oil and Gas Corp.*, 17 DOE ¶83,021 (1988). Under the proposed settlement, persons claiming to have been harmed by the overcharge claims resolved by the proposed Consent Order will be able to present applications for refunds in an administrative claims proceeding before OHA.

As of August 11, 1989, ERA had received eighteen submissions concerning the proposed Consent Order. After review of those submissions, ERA has determined to invite additional written comments addressed to certain issues raised in some of those submissions. ERA will consider any additional comments that are received from the public within thirty (30) days following publication of this Notice. Following this comment period, on September 27, 1989, at 10:30 a.m. in the Department of Energy Auditorium, Room GE-086, Forrestal Building, 1000 Independence Avenue SW., Washington, DC, ERA will conduct a public hearing to provide interested persons an additional opportunity to present comments on matters solicited for comment in this Notice.

Requests to make presentations must be received in writing by 5:00 p.m. September 25, 1989, and should be marked "Request To Make Oral Comments" and forwarded to the same address indicated for written comments.

The request should identify the person (with address and telephone number) who wishes to make a presentation and the amount of the time desired. Presentations should be limited to 15 minutes. ERA will consider the written and oral comments in determining whether to accept the settlement and issue a final Order, reject the settlement, or renegotiate the agreement and, if successful, issue a modified agreement as a final Order. In view of the public interest in a prompt determination on the proposed Consent Order, and because of the number and nature of the comments already received, the only additional comments that will be considered by ERA in making a determination on whether to finalize the proposed Consent Order will be those solicited by this Notice which are received within the additional 30-day comment period and oral comments presented at the September 27, 1989 hearing.

FOR FURTHER INFORMATION CONTACT: Dorothy Hamid, Economic Regulatory Administration, 1000 Independence Avenue SW., Washington, DC 20585, (202) 586-1699.

SUPPLEMENTARY INFORMATION:

I. Comments Received

II. Analysis of Comments

III. Submission of Additional Comments.

I. Comments Received

The May 24 Notice solicited written comments to enable the ERA to receive information from the public relevant to the decision whether the proposed Consent Order should be finalized as proposed, modified, or rejected. To ensure public understanding of the bases for the proposed settlement, the May 24 Notice provided detailed information regarding Occidental's potential liability for the matters resolved by the proposed Consent Order and the considerations which formed the bases of the ERA's preliminary agreement to the proposed settlement terms. ERA received eighteen written comments on behalf of various interests, eleven of which were received during the 30-day period prescribed by the May 24 Notice.

Three letters were received from the Honorable John D. Dingell, Chairman of the House Energy Subcommittee on

Oversight and Investigations. Two of those letters were written prior to publication of the May 24 Notice. The third letter commented upon some of the considerations outlined in the May 24 Notice, and addressed a number of matters contained in ERA's May 19, 1989, response to prior correspondence from Chairman Dingell concerning the proposed Consent Order. A filing and five letters were submitted on behalf of Chevron U.S.A., Inc. (Chevron). The last three letters were submitted after the expiration date of the comment period. A comment was filed by Energy Refunds, Inc. (ERI), and comments from the following were also received: (1) Alabama, California, Connecticut, Idaho, Indiana, Maryland, Michigan, Mississippi, Montana, Ohio, South Dakota, Vermont, Wisconsin, and Wyoming (hereinafter the States); (2) the Attorney General of Texas, on behalf of Texas, New Jersey, and New Mexico (hereinafter Texas comments) (New Jersey also filed a separate one-page letter endorsing the Texas comments); and (3) a group of five utilities, eighteen transporters, and four manufacturers (hereinafter UTM, for Utilities, Transporters and Manufacturers).

A series of written comments were filed after expiration of the 30-day public comment period. Late comments were filed by Occidental (on July 7, July 31 and August 4), Senator Don Nickles (on July 10) and Chevron (on July 28, August 2 and August 9). Copies of all of the written comments are available through the Public Reading Room of the DOE's Freedom of Information Act office, 1000 Independence Avenue SW., Washington, DC 20585.

The Texas comments urge ERA's withdrawal from the proposed Consent Order, the continuation of litigation on the *Cities* Remedial Order, and the issuance of a Proposed Remedial Order to Cities regarding the Entitlements Program reporting matter remanded to ERA by OHA's *Cities* Remedial Order decision. The States would support either the continuation of litigation of the *Cities* Remedial Order through the administrative and judicial appeals process or a settlement which considers both Cities' price violations adjudicated in the OHA Remedial Order and also the "full impact of [Cities'] pecuniary benefit from its entitlements participation." The UTM also take the position that the proposed settlement should be renegotiated, or rejected in favor of continuing the *Cities* litigation, on the basis that the proposed settlement amount is inadequate and not in line with other recent settlements, especially compared to the 1988 Consent Order with Texaco Inc. for $1.25 billion, and that the eight-year payment period is unwarranted. In addition, in undertaking a rebuttal of each of Cities' principal defenses to the overcharge claims adjudicated in the *Cities* Remedial Order, the foregoing commenters appear to take the position that there are few, if any, risks to the government in continuing the *Cities* litigation through the remaining levels of administrative review and judicial appeal.

Chairman Dingell and Chevron take the position that final action by ERA join the proposed Consent Order should be deferred. In his May 26, 1989, letter to ERA, the Chairman urges that "allegations of fraud" committed by Cities be fully investigated by DOE and resolved before the proposed settlement is finalized, and asserts that the eight-year payout period is not appropriate. Chevron suggests that ERA conduct "further proceedings" with regard to Cities' "fraud" on the Delaware district court and the DOE in connection with Cities' 1980–82 declaratory judgement action against DOE,[1] such further proceedings to include Cities' "full" production of documents (i) currently in Chevron's (but not DOE's) possession and under seal by order of a Tulsa, Oklahoma state court in private litigation between Cities and Chevron (successor in interest to Gulf Oil Corporation), and, (ii) currently the subject of attorney-client privilege claims by Cities in private litigation between Cities and Chevron in federal district court for the Southern District of New York. Both of these referenced lawsuits arise out of Gulf's 1982 tender offer to merge with Cities.[2]

In comments received after the June 23, 1989, expiration of the original public comment period, Occidental, in responding to the comments filed by Chevron and the States, asserted, among other arguments: (1) that it is appropriate for the ERA to recognize the "preliminary nature" of OHA's Remedial Order findings concerning Cities' lack of a good faith belief that the crude oil transactions at issue in the *Cities* litigation complied with DOE regulations, and to weigh the "additional record evidence" which assertedly shows that Cities made reasonable efforts to obtain DOE guidance while the regulations were still in effect;[3] (2) that Cities disclosed to the Delaware district court and to DOE in Cities' 1980 request for Interpretation the key characteristics of several illustrative crude oil transactions of the type at issue in the *Cities* litigation; (3) that in entering into the proposed settlement, DOE has had access to all relevant documents to which either the DOE itself or the courts have determined DOE is entitled;[4] and (4) that if, as Chevron asserts, the evidence is already "overwhelming" that Cities believed it was burying miscertified oil, then further evidence to the same effect which Chevron "speculates" is contained in the undisclosed documents currently the subject of discovery proceedings in the Gulf/Cities tender offer litigation would be merely cumulative.

By letter of July 10, 1989, Senator Nickles urged prompt finalization of the proposed Consent Order.

Chevron's later comments dated July 28, August 2, and August 9, 1989, and Occidental's later comments dated July 31, 1989, and August 4, 1989, each take issue with the other party's next preceding submission characterizing Cities' representations to the Delaware federal district court in 1980–81 and the import of the *Cities* Remedial Order's finding concerning Cities' lack of a good faith belief that its tie-in crude oil transactions complied with DOE regulations.

II. Analysis of Comments

A. Comments Related to Process

A number of comments received address the process utilized by the ERA in reaching the proposed settlement with Occidental. The States maintain that the May 24 Notice is so lacking in substance that it cannot be deemed to comply with the requirements of 10 CFR 205.199J, and that it fails to "fulfill the Department of Energy's promise to the Court—and the States and the public—in the *Stripper Well* Final Settlement Agreement, and to the Congress, that it would bring all violators to justice." The States' arguments are misplaced, and without foundation. The notice requirements of 10 CFR 205.199J(c) state in relevant part:

> The **Federal Register** * * * will state at a minimum the name of the company concerned, a brief summary of the Consent Order and other facts or allegations relevant thereto, the address and telephone number of the DOE office at which copies of the Consent Order will be available free of charge, the address to which comments on the Consent Order will be received by the DOE, and the date by which such comments should be submitted * * *

[4] *See United States v. Gulf Oil Corp.*, 760 F.2d 292 (TECA 1985); *United States v. Arthur Young & Co.*, 1 FR Serv. 3d 440 (N.D. Okla. 1984).

The May 24 Notice regarding the proposed Occidental Consent Order clearly exceeded these regulatory requirements. Not only was a summary of the proposed settlement terms provided, but the entirety of the Occidental Consent Order was published as well. The matter sought to be resolved by the proposed Consent Order were specifically identified, and the bases for the DOE's preliminary agreement to the proposed; settlement were explained.

Regarding the adequacy of the May 24 Notice as it relates to the Department's compliance with the terms of the Final Settlement Agreement in *In Re: The Department of Energy Stripper Well Exemption Litigation*, MDL No. 378 (D. Kan.), the States' comments fail to articulate any basis to support their conclusion concerning the alleged inadequacy of the May 24 Notice. As discussed above, the May 24 Notice exceeds the regulatory requirements of 10 CFR 205.199J(c). Whether Occidental is brought "to justice" is precisely the point in considering whether the proposed settlement is in the public interest, comment concerning which is what the May 24 Notice invites. And, while the States are accorded the opportunity by 10 CFR 205.199J(c) to comment on this or any other proposed Consent Order, paragraph IV.A.2 of the *Stripper Well* Final Settlement Agreement expressly provides that "it remains solely in the DOE's discretion to determine whether an enforcement proceeding should be initiated, settled, pursued on particular terms or terminated." The States and Texas were signatories to that agreement.

Texas takes the position that because the DOE has not yet responded to the Texas Attorney General's pending Freedom of Information Act request for documents relating to the proposed Consent Order, it was "unable to ascertain the full scope of ERA's proposed compromise consent agreement, its litigation risk analysis methodologies, and such other pertinent information as the documents may reveal." Texas comments at 14. In fact, the "full scope" of the proposed settlement is set forth in the proposed Consent Order, the entirety of which was published in the May 24 Notice. As to the assertion that Texas was unable to ascertain ERA's "litigation risk analysis methodologies" and "other pertinent information" without benefit of DOE's FOIA response, it appears that Texas fails to comprehend the purpose and nature of the Consent Order process. That process is designed to elicit public comment on and evaluation of the terms of the proposed agreement itself, not to probe the ERA's internal deliberations which preceded its decision to enter into the proposed Consent Order. In this case, as it has in the past, DOE generally described in its public notice the factors it considered in preliminarily agreeing to the particular proposed Consent Order.[5] However, the agency does not publicly disclose the relative weights it would assign to the generally described factors. Public disclosure of litigation risk analysis methodologies would impair DOE's litigation and/or bargaining positions both in the case proposed for resolution, as well as in other pending cases.

The States' comments regarding Occidental Chairman Armand Hammer's approach to the former Secretary of Energy regarding resolution of the *Cities* litigation and "concerns about government ethics" are also misplaced.[6] Citizens have a right to petition their government, and the States have availed themselves of that opportunity in the very matter under consideration by seeking a direct contact with the present Secretary of Energy to advance their own viewpoint regarding the proposed Consent Order. In any event, the States' comments are not relevant to the merits of the question whether the proposed Consent Order should be finalized.

The States also "formally request", pursuant to 10 CFR Part 205, Subpart H, that "this matter be decided directly by the Secretary without further involvement by ERA", and if this request is rejected for any reason, that the proposed order be modified to provide the following:

> [I]f within a period of not less than 90 days after payment, any interested party institutes proceedings to seek available administrative, judicial, or legislative review of the compliance of the substance and procedure of this proposal with applicable legal and regulatory standards, including 10 CFR Part 205 and the Stripper Well Agreement, then the effectiveness of the agreement will automatically be stayed and the money be held in escrow pending a further determination of the validity of the consent order.

The consent order process falls under the provisions of 10 CFR Part 20.5, Subpart O; and 10 CFR 205.199J(b) specifically prohibits appeals. The express regulatory prohibition reflects the considered policy that, ultimately, the enforcement branch of an agency is charged with the responsibility for case resolution. Case resolution might be accomplished through the initiation of litigation, settlement, or termination of a suit. The States' proposed modification is contrary to this policy and to the express regulatory prohibition of appeals of final Consent Orders. The proposed modification would shift case resolution authority and responsibility from enforcement officials to adjudicators and legislators. The States assert no cognizable basis for modifying the proposed Consent Order to provide for any judicial or legislative review, which in any event the States contend is already "available", and, moreover, the States' proposal would effectively negate the purpose of the notice and comment process prescribed by 10 CFR 205.199J. Accordingly, the proposed Consent Order will not be modified as the States request. Furthermore, inasmuch as the States provide no legally sufficient basis for excluding the ERA Administrator from involvement in this matter, and in light of the fact that the Administrator's exercise of authority is pursuant to direct delegation from the DOE Secretary, neither will ERA's "involvement" in the Occidental Consent Order process be terminated.

Chairman Dingell and Texas expressed concern regarding allegations that the ERA Administrator excluded ERA litigation staff from the settlement negotiations and process. These allegations are factually incorrect, and in any event are not relevant to the reasonableness of the proposed Consent Order itself.

Chevron, in its June 8, 1989, submission, questions the ERA Administrator's authority to enter into Consent Orders, and asserts that the explanatory rationale for the proposed settlement set forth in the May 24 Notice impermissibly contradicts OHA's adjudicatory findings in the *Cities* Remedial Order, thereby "invading" both OHA's and FERC's jurisdictions. Both claims are unfounded. First, in the eleven-year existence of the DOE, no settlement has been found wanting due to any lack of authority of the ERA Administrator. Many hundreds of enforcement cases, involving over $6 billion, have been resolved by way of settlement pursuant to the authority of the ERA Administrator as delegated by the Secretary of Energy. Indeed, Chevron itself has entered into such settlements with the ERA in the recent past, including resolution by settlement of matters that were the subject of adjudication by the OHA. See *Gulf Oil Corporation,* 12 DOE ¶ 83,004 (1984), 29 FERC ¶ 62,095 (1984), *appeal dismissed,* 32 FERC ¶ 63,010 (1985); *Gulf Oil Corporation,* 10 DOE ¶ 81,011 (1982), 27 FERC ¶ 62,172 (1984), *appeal dismissed,* 32 FERC ¶ 63,022 (1985).

---

[5] *See, e.g.*, 53 FR 48710 (December 2, 1988) (proposed Tesoro Consent Order notice); and 53 FR 15106 (April 27, 1988) (proposed Tesoro Consent Order notice).

[6] The States may be unaware of the facts that Mr. Hammer wrote to Chairman Dingell on two occasions and advised Chairman Dingell of the initial contact with former Secretary Herrington. Furthermore, during the comment period Chevron sought to meet with the DOE Deputy Secretary and Under Secretary to discuss its views on the proposed Consent Order with Occidental.

Second, just as ERA possesses authority to prosecute enforcement actions, it has concomitant authority to resolve them. Resolution can be accomplished by determining whether a proceeding should be pursued, terminated, or settled. In the case of settlements, all consent orders, including the one under consideration, represent compromises by both parties. Contrary to Chevron's assertion, ERA's agreement to particular settlement terms with Occidental does not constitute the "overruling" of OHA factual findings in the *Cities* Remedial Order concerning witness credibility or any other matter. By the express terms of the proposed Occidental Consent Order (Paragraph 303), the DOE and Occidental each asserted its belief that its respective legal and factual positions resolved by the Consent Order are meritorious. At the same time, both parties agreed to compromise their differences, to avoid protracted litigation of unknown outcome.

In conclusion, for the reasons stated, none of the foregoing comments related to process will be considered further in determining appropriate action with respect to the proposed settlement.

B. The Permian Corporation

ERI urged that a former subsidiary of Occidental, The Permian Corporation (Permian), should be made a party to the proposed Consent Order. ERI asserts without explanation that Occidental benefited from Permian's alleged regulatory violations and should therefore be held accountable for Permian's obligations. ERI submitted in 1989 on behalf of one of its clients a refund claim based on the Permian Consent Order that was made final by publication of notice in the **Federal Register** on June 25, 1982. Potential refund claimants in that proceeding were permitted three years in which to file their claims before any unclaimed amounts were finally distributed. ERI's refund claim was filed beyond the three-year claim period and its client's refund claim was rejected, inasmuch as the Permian settlement funds had been distributed in June 1985 pursuant to the Consent Order terms. By the terms of its Consent Order, Permian's compliance therewith was deemed to constitute full compliance with respect to all matters covered by the Consent Order. ERI's failure to file a timely refund claim for a portion of the Permian settlement monies is not an appropriate basis on which to modify the proposed Occidental Consent Order, which is based on resolution of an enforcement action against Cities arising out of transactions entirely unrelated to Permian's conduct. Accordingly, the proposed Consent Order will not be modified as requested by ERI.

C. Eight-Year Payout Terms

In his May 26, 1989, letter, Chairman Dingell expressed concern about the proposed Consent Order provisions which permit OXY USA Inc. extended time payments and urged that ERA "should *not* accept Oxy's *word* that it lacks 'sufficient cash reserves' to make payments immediately or at least earlier than the period specified." The UTM argue that a delay in payment "inflicts another injury upon consumers" inasumuch as interest at the rate of 10% "is no solace to a[n] electric utility who must pay a substantially higher rate of interest if he desires to obtain the benefit of the anticipated refunds at an earlier date." UTM comments at 4.

The ERA did not intend to rely, and has not relied, solely on the oral representations of OXY USA regarding the nature of its cash flow position. The ERA requested, and received, information from Occidental regarding the levels of OXY USA's recent cash flow experience. ERA is continuing its review of that information. Moreover, as an additional assurance of payment, Occidental, with stockholders' equity of $6.2 billion as of December 1988, is the signatory to the proposed Consent Order and therefore obligated to make the required payments.

The issue raised by Chairman Dingell and the UTM more appropriately focuses on the relative merits of an eight-year period for payments.[7] Although extended payments would include interest at an effective rate of 10% (as prescribed by DOE policy), the UTM argue that some customers who need the monies immediately may have to borrow against the anticipated refunds at a higher rate of interest. ERA has determined that additional comment on this subject is in order, and specifically requests comments addressing whether the eight-year payment period should be renegotiated.

D. Effect of OHA's Remedial Order

Several commenters provided extensive commentary regarding the *Cities* Remedial Order. Variously describing the OHA's decision as "well reasoned" (States comments at 2), and a "well conceived, immently [sic] logical and wholly defensible opinion" (Texas comments at 11), the States, Texas and Chevron used the language and findings in the Remedial Order or ERA's litigation pleadings to rebut the stated considerations in the May 24 Notice for the Department's preliminary agreement to the proposed settlement. These commenters apparently urge the ERA to conclude that its explanatory rationale for agreeing to the proposed Consent Order is improper or without merit.

Contrary to the assumption underlying these comments, ERA, the principal advocate of the factual findings and legal conclusions reflected in OHA's Remedial Order decision, fully endorses that decision. See Occidental Proposed Consent Order, Paragraph 303. That assessment, however, does not militate against settlement generally, or against the terms of the proposed Occidental Consent Order in particular. To the extent that the commenters appear to take the position that there is no litigation risk whatever to the government obtaining a final judgment in its favor in the *Cities* litigation, such a position is, in ERA's view, unrealistic. As to OHA's particular findings in the Remedial Order, including those dealing with Cities' defenses of good faith and estoppel, the assessment of litigation risk cannot appropriately focus on the OHA Remedial Order decision alone. That Order is subject to several additional levels of appeal, so it cannot represent the conclusive assessment of case value.

ERA recognizes that OHA, in ruling on Cities' affirmative defense of judicial estoppel, found that Cities did not hold a good faith belief that its crude oil transactions complied with the regulations and that Cities did not disclose in its request for Interpretation or in the Delaware declaratory judgment action the key characteristics of Cities' so-called "tier trades." Notwithstanding the commenters' general endorsement of the correctness of OHA's ruling in assessing the DOE's litigation risk, ERA invites additional comment as to whether, in a settlement context, it is appropriate to exclude consideration of all other factors in reaching an appropriate level of compromise with Occidental.

---

[7] The UTM comments erroneously stated the time period as being nine years.

E. Additional Documents

As noted in Section I of this Notice, Chevron has suggested that ERA conduct "further proceedings" with regard to Cities' "fraud" on the Delaware district court and the DOE in connection with Cities' 1980–82 declaratory judgment action against DOE, such proceedings to include Cities' production to DOE both of documents held under seal by order of a Tulsa, Oklahoma state court and documents currently the subject of attorney-client privilege claims by Cities in the Cities/Gulf tender offer litigation in a New York federal district court. Similarly, Chairman Dingell urges that no settlement be approved as long as DOE has not obtained those two categories of Cities documents which "reportedly" bear on the issue of fraud.

In light of OHA's Remedial Order findings regarding Cities' asserted good faith belief that entitlements exempt uses, rather than miscertification, explained the tie-in transactions, and the underlying evidence of record in the *Cities* litigation relating to the state of Cities officials' knowledge of this matter, all of which findings and submission of evidence predate the ERA's agreement to the proposed Consent Order, ERA also requests comment on the additional significance, if any, which should be attached to the undisclosed contents of documents that are currently subject to privilege claims or under seal in private litigation between Chevron and Cities in federal and state courts and are not in the DOE's possession.

Finally, Chairman Dingell's May 26 letter refers to "an allegation made to [his] staff that some of the documents obtained in discovery by Chev[]ron (which unquestionably has an important interest separate from that of the Government) may have been withheld from the [DOE] when DOE sought relevant documents." Chevron, in its August 2 comment, states that "there are documents which are *not* privileged which Chevron has and which Cities refuses to give to ERA" (emphasis in original). In view of the significance which Chairman Dingell and Chevron attach to ERA obtaining additional documents alleged to be relevant to ERA action on the proposed Consent Order, and in order to permit ERA to consider these allegations, ERA urges all persons with specific information concerning any relevant documents which Cities is alleged to have withheld from DOF to provide the particulars regarding the same to ERA during the 30-day additional comment period announced in this Notice.

III. Submission of Written Comments

The proposed Consent Order cannot be made effective until the conclusion of the public review process, of which this Notice is a part. The ERA continues to review the numerous comments received on the proposed Consent Order. In view of the diversity of the parties filing comments and the views expressed by them, ERA has determined to offer an additional opportunity to the submitters and other members of the public to file comments on the specific issues described above involving the proposed Consent Order.

Interested persons are invited to submit written comments to: Occidental Consent Order Comments, RG–30, Economic Regulatory Administration, 1000 Independence Avenue SW., Washington, DC 20585. Any information considered confidential by the person submitting it must be identified as such in accordance with the provisions of 10 CFR 205.9(f).

Although this proposed settlement does not resolve a wide range of issues within the meaning of the Notice published at 49 Fed. Reg. 12301 (March 29, 1984), DOE has determined it would be useful to hold a public hearing in this instance because the proposed Consent Order would resolve issues concerning a large monetary amount. Accordingly, interested persons are also invited to appear at a public hearing beginning at 10:30 a.m. on September 27, 1989. All comments received by the thirtieth day following publication of this Notice in the **Federal Register** and all comments made at the hearing will be considered before determining whether to adopt the proposed Consent Order as a final Order. Any modifications of the proposed Consent Order which significantly alter its terms or impact will be published for additional comment. If, after considering the comments it has received, ERA determines to issue the proposed Consent Order as a final Order, the proposed Order will be made final and effective by publication of notice in the **Federal Register.**

Issued in Washington, DC on August 22, 1989.

Chandler L. van Orman,

Administrator, Economic Regulatory Administration.

[FR Doc. 89–20129 Filed 8–24–89; 8:45 am]

BILLING CODE 6450-01-M

Federal Energy Regulatory Commission

[Docket No. ER89-255-001 et al.]

Arizona Public Service Co., et al.; Electric Rate, Small Power Production, and Interlocking Directorate Filings

Take notice that the following filings have been made with the Commission:

1. Arizona Public Service Company

[Docket No. ER89–255–001]

August 16, 1989.

Take notice that on August 14, 1989, Arizona Public Service Company (APS or Company) tendered for filing amendments affecting estimated contract demands or maximum demands in the following FPC/FERC Electric Service Rate Schedules:

FPC/FERC No.	Customer	Revised exhibit
56	Wellton-Mohawk	Exhibit B.
59	APA	Exhibit B.
65	CRIIP	Exhibit A.
66	SCIIP	Exhibit A.
74	Wickenburg	Exhibit B.
120	Southern California Edison.	Exhibit B.
126	ED–6	Exhibit "II".
126	ED–7	Exhibit "II".
140	ED–8	Exhibit "II".
141	AID	Exhibit "II".
142	McMullen Valley	Exhibit "II".
143	Tonopah	Exhibit "II".
149	Citizens Utility Company.	Exhibit B.
153	Harquahala	Exhibit "II".
155	Buckeye	Exhibit "II".
158	Roosevelt	Exhibit "II".
161	PTUA	Exhibit B.
170	Wickenburg	Exhibit A.

APS states no changes from the currently effective Wholesale Power or Transmission ("Wheeling") rate levels are proposed herein. No new facilities are required to provide these services.

A copy of this filing has been served on the above customers, the California Public Utilities Commission and the Arizona Corporation Commission.

Comment date: August 31, 1989, in accordance with Standard Paragraph E at the end of this document.

2. Florida Power & Light Corporation

[Docket No. ER89–357–000]

August 16, 1989.

Take notice that on August 10, 1989, Florida Power & Light Corporation (Florida Power) tendered for filing an amendment to its April 19, 1989 filing in this docket in order to withdraw a proposed amendment filed on June 15, 1989 in this docket and replace it with a similar amendment in order to clarify the charges under Schedule D, Long Term Firm Interchange for Kissimmee Utility Authority, the City of St. Cloud, and the Sebring Utility Commission. Florida Power states this amendment is being filed to provide a definition for hourly broker sell quotes during periods of firm commitment sales.

According to Florida Power, the filing has been served on each of the affected utilities and the Florida Public Service Commission.

Comment date: August 31, 1989, in accordance with Standard Paragraph E at the end of this notice.

3. Minnesota Power & Light Company

[Docket No. ER89-527-000]

August 16, 1989.

Take notice that on August 14, 1989, Minnesota Power & Light Company tendered for filing supplemental information relating to the rate charged for energy under the Participation Power Transaction Agreement between Minnesota Power & Light Company and Iowa Electric Light and Power Company. The agreement was tendered for filing on June 30, 1989. The parties request a waiver of the Commission's 60 day filing period for this Agreement and an effective date of May 1, 1989.

Comment date: August 31, 1989, in accordance with Standard Paragraph E at the end of this notice.

4. Leonard A. O'Connor

[Docket No. ID-1612-000]

August 16, 1989.

Take notice that on August 7, 1989, Leonard A. O'Connor (Applicant) tendered for filing a Notice of Change. The notice of change states that effective July 1, 1989, Applicant resigned from the position as Vice President of Connecticut Light and Power Company. The notice further states that applicant now holds no position with this company.

Comment date: August 31, 1989, in accordance with Standard Paragraph E at the end of this notice.

5. John J. Smith

[Docket No. ID-2002-001]

August 16, 1989.

Take notice that on August 7, 1989, John J. Smith (Applicant) tendered for filing a Notice of Change. The notice of change states that effective July 1, 1989, Applicant resigned from the position as Vice President of Connecticut Light and Power Company. The notice further states that applicant now holds no position with this company.

Comment date: August 31, 1989, in accordance with Standard Paragraph E at the end of this notice.

6. Philip T. Ashton

[Docket No. ID-1843-002]

August 16, 1989.

Take notice that on August 7, 1989, Philip T. Ashton (Applicant) tendered for filing a Notice of Change. The notice of change states that effective July 1, 1989, Applicant resigned from the following positions:

Senior Vice President & Director.	Connecticut Light and Power Company
Director	Western Massachusetts Electric Company
Director	Holyoke Water Power Company
Director	Holyoke Power and Electric Company

The notice further states that Applicant now holds no position with any of the above companies.

Comment date: August 31, 1989, in accordance with Standard Paragraph E at the end of this notice.

7. Interstate Power Company

[Docket No. ER89-524-000]

August 17, 1989.

Take notice that on August 16, 1989, Interstate Power Company (Interstate) tendered for filing an amendment to its June 27, 1989 filing in this docket.

Interstate's present fuel cost adjustment computation includes only fuel and energy related costs. The proposed change will update the fuel cost adjustment clause in accordance with FERC Order No. 352 in Docket No. RM83-62-000; allowing recovery of all expenses related to power or energy purchased over a period of twelve months or less where the total cost of the purchase is less than Interstate's total avoided variable cost and the purchase is not made to maintain reserve levels.

According to Interstate the purpose of this amendment is to revise the system reserve criteria, stated in the original filing, to include the method used to derive Interstate's daily operating reserve obligation.

Copies of the filing were served upon Interstate's jurisdictional customers and the State Commissions of Iowa, Illinois and Minnesota.

Comment date: September 1, 1989, in accordance with Standard Paragraph E at the end of this notice.

8. Ohio Edison Company

[Docket No. ER86-544-000]

August 17, 1989.

Take notice that on August 11, 1989, Ohio Edison Company (Ohio) tendered for its compliance refund report in this docket between Ohio and American Municipal Power-Ohio, Inc.

Comment date: September 1, 1989, in accordance with Standard Paragraph E at the end of this notice.

9. Idaho Power Company

[Docket No. ER89-472-000]

August 17, 1989.

Take notice that on July 31, 1989, Idaho Power Company (Idaho) tendered for filing a Notice of Cancellation of FERC Rate Schedule No. 78 between Idaho and Washington Water Power Company.

Comment date: August 31, 1989, in accordance with Standard Paragraph E at the end of this notice.

10. UNITIL Power Corporation

[Docket No. ER89-607-000]

August 17, 1989.

Take notice that on August 15, 1989, UNITIL Power Corporation (UNITIL) filed with the Commission an Electric Tariff No. 3, Sale of Electric Generating Capacity and Energy, for the sale of capacity and associated energy from UNITIL's excess capacity entitlements in various generating plants.

UNITIL requests an effective date of February 29, 1988 and states that waiver of the notice requirement will not adversely affect any of the utility customers.

Comment date: September 1, 1989, in accordance with Paragraph E at the end of this notice.

11. Consolidated Edison Company

[Docket No. ER89-606-000]

August 17, 1989.

Take notice that on August 15, 1989, Consolidated Edison Company of New York, Inc. (Con Edison) tendered for filing Supplements to its Rate Schedules FERC Nos. 60, 66 and 78, agreements to provide transmission service for the Power Authority of the State of New York (the Authority). The Supplements provide for an increase in the monthly transmission charge from $1.06 to $1.14 per kilowatt for transmission of power and energy sold by the Authority to Brookhaven National Laboratory, Grumman Corporation and the Long Island Municipal Distribution Agencies, thus increasing annual revenues under the Rate Schedules by a total of $42,587.38 Con Edison has requested waiver of notice requirements so that the increase can be made effective as of July 1, 1989.

Con Edison states that a copy of this filing has been served by mail upon the Authority.

Comment date: September 1, 1989, in accordance with Standard Paragraph E at the end of this notice.

12. Consolidated Edison Company of New York, Inc.

[Docket No. ER89-605-000]

August 17, 1989.

Take notice that on August 15, 1989, Consolidated Edison Company of New York, Inc. (Con Edison) tendered for filing a Supplement to its Rate schedule FERC No. 51, an agreement to provide transmission service for the Power Authority of the State of New York (the Authority). The Supplement provides for a decrease in the monthly transmission charge from $2.57 to $2.55 per kilowatt for transmission of power and energy sold by the Authority to the Long Island Village of Freeport, Greenport and Rockville Centre, thus decreasing annual revenues under the Rate Schedule by a total of $14,120.64 Con Edison has requested waiver of notice requirements so that the decrease can be made effective as of July 1, 1989.

Con Edison states that a copy of this filing has been served by mail upon the Authority and the Villages.

Comment date: September 1, 1989, in accordance with Standard Paragraph E at the end of this notice.

13. Mississippi Power & Light Company

[Docket No. ER89-604-000]

August 17, 1989.

Take notice that on August 14, 1989, Mississippi Power & Light Company (MP&L) tendered for filing a Notice of Cancellation of the following Rate Schedules:

Rate schedule	Termination date
Supplement No. 25 to MP&L Rate Schedule No. 35.	December 9, 1988.
Supplement No. 26 to MP&L Rate Schedule No. 35.	February 28, 1989.
Supplement No. 27 to MP&L Rate Schedule No. 35.	December 16, 1988.

MP&L states that copies of the filing have been mailed to the Mississippi Public Service Commission and TVA.

Comment date: September 1, 1989, in accordance with Standard Paragraph E at the end of this notice.

14. N. B. Partners, Ltd.—North Branch Power Project

[Docket No. QF86-412-001]

On August 1, 1989, N. B. Partners, Ltd., c/o EASE/NMI, Inc., (Applicant), of 9171 Towne Centre Drive, Suite 400, San Diego, California 92122, submitted for filing an application for certification of a facility as a qualifying cogeneration facility pursuant to § 292.207 of the Commission's regulations. No determination has been made that the submittal constitutes a complete filing.

The topping-cycle cogeneration facility will be located approximately two miles southeast of the town of Bayard, in Grant County, West Virginia. The facility will consist of two fluidized bed combustion boilers, an extraction/condensing steam turbine generator and approximately 6.7 miles of 115 kV transmission line. Applicant states that the thermal output of the facility, in the form of heated water, will be sold to a non-affiliated controlled environment growing facility primarily for use in growing tomatoes and bell peppers. The net electric power production capacity of the facility will be 80 MW. Construction of the facility began in December 1988.

Comment date: September 1, 1989, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraphs

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426 in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropirate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket Nos. ST89-4077-000 Through ST89-4358-000]

Natural Gas Pipeline Company of America et al.; Self-Implementing Transactions

August 18, 1989.

Take notice that the following transactions have been reported to the Commission as being implemented pursuant to Part 284 of the Commission's Regulations, sections 311 and 312 of the Natural Gas Policy Act of 1978 (NGPA) and section 5 of the Outer Continental Shelf Lands Act.[1]

The "Recipient" column in the following table indicates the entity receiving or purchasing the natural gas in each transaction.

The "Part 284 Subpart" column in the following table indicates the type of transaction. A "B" indicates transportation by an interstate pipeline on behalf of an intrastate pipeline or a local distribution company pursuant to § 284.102 of the Commission's Regulations and section 311(a)(1) of the NGPA.

A "C" indicates transportation by an intrastate pipeline on behalf of an interstate pipeline or a local distribution company served by an interstate pipeline pursuant to § 284.122 of the Commission's Regulations and section 311(a)(2) of the NGPA. In those cases where Commission approval of a transportation rate is sought pursuant to § 284.123(b)(2), the table lists the proposed rate and the expiration date of the 150-day period for staff action. Any person seeking to participate in the proceeding to approve a rate listed in the table should file a motion to intervene with the Secretary of the Commission on or before September 8, 1989.

A "D" indicates a sale by an intrastate pipeline to an interstate pipeline or a local distribution company served by an interstate pipeline pursuant to § 284.142 of the Commission's Regulations and section 311(b) of the NGPA. Any interested person may file a complaint concerning such sales pursuant to § 284.147(d) of the Commission's Regulations.

An "E" indicates an assignment by an intrastate pipeline to any interstate pipeline or local distribution company pursuant to § 284.163 of the Commission's Regulations and section 312 of the NGPA.

A "G" indicates transportation by an interstate pipeline on behalf of another interstate pipeline pursuant to § 284.222 and a blanket certificate issued under § 284.221 of the Commission's Regulations.

A "G-S" indicates transportation by interstate pipelines on behalf of shippers other than interstate pipelines—pursuant to § 284.223 and a blanket certificate issued under § 284.221 of the Commission's Regulations.

---

[1] Notice of a transaction does not constitute a determination that the terms and conditions of the proposed service will be approved or that the noticed filing is in compliance with the Commission's Regulations.

A "G–LT" or "G–LS" indicates transportation, sales or assignments by a local distribution company on behalf of or to an interstate pipeline or local distribution company pursuant to a blanket certificate issued under § 284.224 of the Commission's Regulations.

A "G–HT" or "G–HS" indicates transportation, sales or assignments by a Hinshaw Pipeline pursuant to a blanket certificate issued under § 284.224 of the Commission's Regulations.

A "K" indicates transportation of natural gas on the Outer Continental Shelf by an interstate pipeline on behalf of another interstate pipeline pursuant to § 284.303 of the Commission's Regulations.

A "K–S" indicates transporation of natural gas on the Outer Continental Shelf by an intrastate pipeline on behalf of shippers other than interstate pipelines—pursuant to § 284.303 of the Commission's Regulations.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Project No. 9697-001; Maryland]

Savage Hydro Associates; Surrender of Preliminary Permit

August 18, 1989.

Take notice that Savage Hydro Associates, permittee for the Savage River Dam Project, located on the Savage River in Garrett County, Maryland, has requested that its preliminary permit be terminated. The preliminary permit was issued on November 14, 1988, and would have expired on October 31, 1991. Following issuance of the preliminary permit, the permittee has pursued first round consultations with government agencies and concerned recreational interests, and explored power sales options and project financing alternatives. The permittee has determined that the construction and operation of this project is not feasible at this time.

The permittee filed the request on July 14, 1989, and the preliminary permit for Project No. 9697 shall remain in effect through the thirtieth day after issuance of this notice unless that day is a Saturday, Sunday or holiday as described in 18 CFR 385.2007, in which case the permit shall remain in effect through the first business day following that day. New applications involving this project site, to the extent provided for under 18 CFR Part 4, may be filed on the next business day.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Project No. 2368–001 Maine]

Maine Public Service Co.; Establishment of Procedures for Relicensing and a Deadline for Submission of Final Amendments

August 18, 1989.

The license for the Squa Pan Hydro Project No. 2368 located on the Squa Pan Stream in Aroostook County, Maine expires on December 31, 1990. The statutory deadline for filing applications for new license was December 31, 1988. An application for new license has been filed as follows:

Project No.	Applicant	Contact
2368–001	Maine Public Service Company, 209 State Street, P.O. Box 1209, Presque Isle, ME 04769.	Mr. Frederick C. Bustard, MPSC, (207) 768–5811 Ext. 122

Pursuant to section 15(c)(1) of the Federal Power Act, the deadline for the applicant to file final amendments, if any, to its application is October 1, 1989.

The following is the schedule and procedures that will be followed in processing the application.

Date	Action
July 31, 1989	The Commission notified the applicant that its application had been accepted.
August 8, 1989	The Commission issued public notice of application that had been accepted describing project and established October 12, 1989, as the date for filing motions to intervene, comments, protests, and agency recommendations.

Upon receipt of all additional information and the information filed in response to the public notice of the acceptance of the application, the Commission will evaluate the application in accordance with applicable statutory requirements and take appropriate action on the application.

Any questions concerning this notice should be directed to Ed Lee at (202) 376–5786.

Lois D. Cashell,
Secretary.

BILLING CODE 6717-01-M

Federal Energy Regulatory Commission

[Docket No. RP88–227–018]

Paiute Pipeline Co.; Compliance Filing

August 18, 1989.

Take notice that on August 14, 1989, Paiute Pipeline Company (Paiute), in compliance with the order issued by the Federal Energy Regulatory Commission on June 7, 1989, in Docket Nos. RP88–227–014 and –015, submitted Fourth Revised Sheet No. 99 to be a part of its FERC Gas Tariff, Original Volume No. 1.

Paiute states the purpose of this filing is to comply with the Commission's order to conform its Index of Purchasers to reflect service levels that are consistent with the D–2 nominations of Paiute's customers.

Paiute requests an effective date of February 1, 1989 for its proposed tariff sheet since said tariff sheet was submitted in response to the Commission's directive that Paiute revise Third Revised Sheet No 99, which the Commission accepted effective February 1, 1989, subject to modification.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such protests should be filed on or before August 25, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,
Secretary.

BILLING CODE 6717-01-M

[Docket No. RP89–8–002]

Pacific Interstate Transmission Co.; Filing

August 18, 1989.

Take notice that on August 11, 1989, Pacific Interstate Transmission Company (PITCO) filed Second Revised Sheet No. 7 and Fourth Revised Sheet No. 9 to its FERC Gas Tariff, Original Volume No. 1, to be effective August 1, 1989.

PITCO states these tariff sheets were originally submitted in its Offer of Settlement, and the Commission, on August 1, 1989, found the Offer of Settlement to be a reasonable resolution of the issues and in the public interest. PITCO states that it is now submitting these tariff sheets for final acceptance to be incorporated into its FERC Gas Tariff.

PITCO states that a copy of this filing has been served to the parties on the official service list.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance

with Rules 214 and 211 of the Commission's Rules of Practice and Procedure (18 CFR 385.214, 385.211 (1988)). All such protests should be filed on or before August 25, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,
Secretary.

[FR Doc. 89–20031 Filed 8–24–89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. TA90–1–40–000]

Raton Gas Transmission Co.; Filing of Annual Purchased Gas Adjustment

August 18, 1989.

Raton Gas Transmission Company (Raton) on August 11, 1989, tendered for filing proposed changes to its FERC Gas Tariff, Original Volume No. 1, to implement its annual purchased gas adjustment under the provisions of Order Nos. 483 and 483A. The proposed tariff sheets are to be effective October 1, 1989.

Raton states that the revised tariff sheets reflects a demand rate decrease of 28 cents and an increase in commodity rate of 22.4 cents to track rate changes filed by Colorado Interstate Gas Compnay (CIG) to be effective on October 1, 1989. CIG is the sole gas supplier to Raton.

Raton states that the filing also reflects an increase in surcharge rate from 1.09 cents to 2.92 cents for the twelve months period beginning October 1, 1989 due to increase in Account 191. Unrecovered Purchased Gas Costs as of May 31, 1989.

Raton also states that copies of this filing have been served on Raton's two customers and the New Mexico Public Service Commission.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington DC, 29426, in accordance with Rules 214 and 211 of the Commission's rules of practice and procedure (18 CFR 385.214, 385.11 (1989)). All such motions or protests shuld be filed on or before September 6, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,
Secretary.

[FR Doc. 89–20032 Filed 8–24–89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. RP89–147–005]

United Gas Pipe Line Co.; Filing

August 18, 1989.

Take notice that on August 11, 1989, United Gas Pipe Line Company (United) filed Third Substitute Original Sheet Nos. 4–M, 4–O, 4–Q and Second Substitute Original Sheet No. 4–Q1 to its FERC Gas Tariff, First Revised Volume No. 1, to be effective May 1, 1989.

United states that this filing corrects several clerical errors found in its July 31, 1989 filing.

United states it is serving this filing upon all parties listed on the official service list for this proceeding.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with Rules 214 and 211 of the Commission's Rules of Practice and Procedure [18 CFR 385.214, 385.211 (1988)]. All such protests should be filed on or before August 25, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,
Secretary.

Office of Hearings and Appeals

Cases Filed During the Week of July 14 Through July 21, 1989

During the Week of July 14 through July 21, 1989, the applications listed in the Appendix to this Notice were filed with the Office of Hearings and Appeals of the Department of Energy.

Under DOE procedural regulations, 10 CFR Part 205, any person who will be aggrieved by the DOE action sought in these cases may file written comments on the application within ten days of service of notice, as prescribed in the procedural regulations. For purposes of the regulations, the date of service of notice is deemed to be the date of publication of this Notice or the date of receipt by an aggrieved person of actual notice, whichever occurs first. All such comments shall be filed with the Office of Hearings and Appeals, Department of Energy, Washington, DC 20585.

Dated: August 16, 1989.

George B. Breznay,
Director, Office of Hearings and Appeals.

BILLING CODE 6450-01-M

Cases Filed During the Week of July 21 Through July 28, 1989

During the week of July 21 through July 28, 1989, the appeals and applications for other relief listed in the Appendix to this Notice were filed with the Office of Hearings and Appeals of the Department of Energy.

Under DOE procedural regulations, 10 CFR Part 205, any person who will be aggrieved by the DOE action sought in these cases may file written comments on the application within ten days of service of notice, as prescribed in the procedural regulations. For purposes of the regulations, the date of service of notice is deemed to be the date of publication of this Notice or the date of receipt by an aggrieved person of actual notice, whichever occurs first. All such comments shall be filed with the Office of Hearings and Appeals, Department of Energy, Washington, DC 20585.

Dated: August 16, 1989.

George B. Breznay,

Director, Office of Hearings and Appeals.

LIST OF CASES RECEIVED BY THE OFFICE OF HEARINGS AND APPEALS

[Week of July 21 Through July 28, 1989]

Date	Name and location of applicant	Case No.	Type of submission
July 21, 1989	Don Devereux, Phoenix, AZ	KFA-0307	Appeal of an information request denial. If granted: Don Devereux would receive access to information requested.
July 27, 1989	Boulder Scientific Company, Washington, DC	KFA-0308	Appeal of an information request denial. If granted: The June 12, 1989, Freedom of Information Request Denial issued by the Savannah River Operations Office would be rescinded and the Boulder Scientific Company would receive access to certain DOE documents.

REFUND APPLICATIONS RECEIVED

Cases Filed During the Week of July 7 Through July 14, 1989

During the Week of July 7 through July 14, 1989, the appeals and applications for exception or other relief listed in the Appendix to this Notice were filed with the Office of Hearings and Appeals of the Department of Energy.

Under DOE procedural regualtions, 10 CFR Part 205, any person who will be aggrieved by the DOE action sought in these cases may file written comments on the application within ten days of service of notice, as prescribed in the procedural regulations. For purposes of the regulations, the date of service of notice is deemed to be the date of publication of this Notice or the date of receipt by an aggrieved person of actual notice, whichever occurs first. All such comments shall be filed with the Office of Hearings and Appeals, Department of Energy, Washington, DC 20585.

Dated: August 15, 1989.

George B. Breznay,

Director, Office of Hearings and Appeals.

LIST OF CASES RECEIVED BY THE OFFICE OF HEARINGS AND APPEALS

[Week of July 7 through July 14, 1989]

Date	Name and location of applicant	Case No.	Type of submission
July 13, 1989	William R. Bowling, II, Rolla, Montana	KFA-0305	Freedom of information appeal. If granted: William R. Bowling, II would receive access to certain DOE documents.
July 14, 1989	Lynn K. Zusman & Associates, Washington, D.C.	KFA-0306	Appeal of an informaiton request denial. If granted: Lynne K. Zusman & Associates would receive access to documents in order to correct Seymour Kleiman's personnel records.
July 12, 1989	341 Tract Unit of Citronelle Field,	KEZ-0089	Supplemental order. If granted: The office of Hearings and Appeals would issue an Order (i) approving the settlement agreement concerning the exception relief granted to the 341 Tract of Citronelle Field and (ii) dismissing related OHA proceedings, Case Nos. HER-0050, HER-0108. Comments or requests for oral argument may be filed.
July 13, 1989	Gasoline Marketers of America, Washington, D.C.	KEF-0138	Implementation of special refund procedures. If granted: The Office of Hearings and Appeals would implement Special Refund Procedures pursuant to 10 C.F.R. Part 205, Subpart V, in connection with September 30, 1988 Remedial Order issued to Gasoline Marketers of America.

ENVIRONMENTAL PROTECTION AGENCY

[FRL-3635-6]

Agency Information Collection Activities Under Office of Management and Budget Review

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.)*, this notice announces that the Information Collection Request (ICR) abstracted below has been forwarded to the Office of Management and Budget (OMB) for review and comment. The ICR describes the nature of the information collection and its expected cost and burden; where appropriate, it includes the actual data collection instrument.

DATE: Comments must be submitted on or before September 25, 1989.

FOR FURTHER INFORMATION CONTACT: Sandy Farmer at EPA, (202) 382-2740.

SUPPLEMENTARY INFORMATION:

Office of Pesticides and Toxic Substances

Title: Notification of Substantial Risk under TSCA section 8(e) (EPA ICR # 0794.03, OMB Control # 2070-0046). This submission requests an extension of the expiration date for a currently approved collection.

Abstract: Under section 8(e) of TSCA, chemical manufacturers, importers, processors, and distributors must immediately inform EPA when they obtain information which indicates that their product(s) may present a substantial risk of injury to health or the environment. EPA and other federal agencies use this information to determine and control chemical risks.

Burden Statement: The public reporting burden for this collection of information is estimated to average 21 hours per response for initial submissions and 4 hours per response for follow-up submissions. This estimate includes the time for reviewing instructions, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Respondents: Chemical manufacturers, importers, processors, and distributors.

Estimated No. of Respondents: 250.

Estimated Total Annual Burden on Respondents: 2020 hours.

Frequency of Collection: On occasion.

Send comments regarding the burden estimate, or any other aspect of this information collection, including suggestions for reducing the burden, to:

Sandy Farmer, U.S. Environmental Protection Agency, Information Policy Branch (PM-223), 401 M Street, SW., Washington, DC 20460,

and,

Tim Hunt, Office of Management and Budget, Office of Information and Regulatory Affairs, 726 Jackson Place, NW., Washington, DC 20530.

Dated: August 17, 1989.

Paul Lapsley,

Director, Information and Regulatory Systems Division.

Environmental Impact Statements and Regulations; Availability of EPA Comments

Availability of EPA comments prepared August 7, 1989 through August 11, 1989 pursuant to the Environmental Review Process (ERP), under section 309

BEST COPY AVAILABLE

of the Clean Air Act and section 102(2)(c) of the National Environmental Policy Act as amended. Requests for copies of EPA comments can be directed to the Office of Federal Activities at (202) 382-5076.

An explanation of the ratings assigned to draft environmental impact statements (EISs) was published in FR dated April 7, 1989 (54 FR 15006).

Draft EISs

ERP No. D-COE-K32045-HI, Rating LO, Kahului Harbor Light Draft Navigation Improvement, Implementation, Island of Maui, Hawaiian Archipelago, HI.

Summary: EPA expressed a lack of objections with the proposed project, but requested that certain conditions be included in the Section 404/10 permit application to protect marine resource, and that the Army Corps coordinate with the Hawaii Health Department on the protection of water quality and beneficial uses.

Final EISs

ERP No. F-BLM-K65118-AZ, San Pedro River Riparian Resource Management Plan, Implementation, San Simon Resource Area, Safford District, Cochise County, AZ.

Summary: Review of the final EIS was not deemed necessary.

ERP No. F-FHW-D40229-MD, MD-228 Extension, US 301 to MD-210 and MD-210 Improvement, MD-228 Extended to Old Fort Road, Funding, Charles and Prince Georges Counties, MD.

Summary: EPA believes that most of the environmental concerns have been addressed in this document.

ERP No. FS-USA-K21000-00, Johnston Atoll Chemical Agent Disposal System (JACADS), Implementation, Updated Information, Johnston Island, TT.

Summary: EPA requested that the Record of Decision contain a commitment that JACADS liquid waste/waste brine will be dried to salts and disposed as solid waste in an approved landfill rather than disposed of in the ocean, in order to comply with the Ocean Dumping Ban Act of 1988.

Dated: August 22, 1989.

Richard E. Sanderson,

Director, Office of Federal Activities.

BILLING CODE 6560-50-M

[FRL-3635-5]

Science Advisory Board; Relative Risk Reduction Strategies Subcommittee; Public Meeting

SUMMARY: Pursuant to the Federal Advisory Committee Act, Public Law 92-463, notice is hereby given that the Environmental Protection Agency's Science Advisory Board (SAB) has formed a Relative Risk Reduction Strategies Subcommittee (RRRSS). This Subcommittee, along with various EPA sponsored workgroups, will meet during the coming months to provide technical advice to the EPA Administrator on strategic options that will assist EPA in assessing possible Agency actions to reduce relative risk. The RRRSS will hold its first meeting on October 25, 1989, from 8:30 a.m. to 12:30 p.m. in the Education Center Auditorium, U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460. Future meetings of the Subcommittee and the Workgroups will be announced in subsequent **Federal Register** Notices.

BACKGROUND: In its 1988 report on research strategies for the 1990's, "Future Risk", the SAB recommended that the concept of risk reduction be used more broadly in EPA. As a follow-up to that report, the EPA Administrator requested that the SAB develop risk reduction strategic options that will assist him in assessing possible Agency activities. As part of this process, the RRRSS will review an Agency report prepared two years ago by senior EPA Staff entitled "Unfinished Business: A comparative Assessment of Environmental Problems."

FOR FURTHER INFORMATION CONTACT: The meeting is open to the public. Any member of the public wishing further information or an agenda concerning the meeting, the role of the RRRSS, its Charge, and its membership, should contact Dr. Donald Barnes, Director, or Mrs. Joanna Foelmer, Secretary to the Director, Science Advisory Board (A-101F), U.S. EPA, 401 M Street, SW., Washington, DC 20460, (202) 382-4126, (FTS) 382-4126. Seating at the meeting will be on a first come basis.

Dated: August 16, 1989.

A. Robert Flaak,

Acting Deputy Director, Science Advisory Board.

BILLING CODE 6560-50-M

[OPP-00281; FRL-3636-3]

FIFRA Scientific Advisory Panel/Science Advisory Board; Open Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: There will be a 1-day meeting held jointly by the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Scientific Advisory Panel (SAP) and the Science Advisory Board (SAB) to review a set of scientific issues being considered by the Agency in connection with a draft report of Cholinesterase Inhibition as an Indication of Adverse Toxicological Effect.

DATE: Wednesday, September 27, 1989, from 8:30 a.m. to 5 p.m.

ADDRESS: The meeting will be held at: Holiday Inn/National Airport, 1489 Jefferson Davis Highway, Arlington, VA 22202, (703) 920-0772.

FOR FURTHER INFORMATION CONTACT:

By mail: Robert B. Jaeger, Executive Secretary, FIFRA Scientific Advisory Panel, Office of Pesticide Programs (H7509C), Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

Office location and telephone number: Room 816G, CM#2, Arlington, VA, (703) 557-4369.

And/or

Samuel R. Rondberg, Science Advisory Board (A101F), Environmental Protection Agency, 401 M Street SW., Washington, DC 20460, (202) 382-2552.

SUPPLEMENTARY INFORMATION: The agenda for the meeting will include the following topics:

Review a set of scientific issues in connection with a draft report prepared by the Risk Assessment Forum entitled, "Cholinesterase Inhibition as an Indication of Adverse Toxicological Effect." Clinical determination of cholinesterase enzyme changes in animal studies, and less frequently in human monitoring, are continually used to evaluate exposure to, and the degree of, absorption of cholinesterase inhibiting compounds. The degree of change and the specific cholinesterase enzyme involved may connote adverse effects on biological systems.

The SAP/SAB Joint Panel will review the scientific issues identified and provide comment which will assist the Agency in interpreting cholinesterase enzyme data derived from laboratory animal studies and human monitoring data. These comments will form the scientific basis toward developing a uniform Agency approach to regulating cholinesterase inhibiting compounds, such as carbamates and organophosphates.

Copies of documents relating to these items may be obtained by containing:

By mail: Information Services Branch, Program Management and Support Division (H7502C), Office of Pesticide Programs, Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

Office location and telephone number: Room 244 Bay, CM#2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703) 557-2805.

Any member of the public wishing to submit written comments should contact Robert B. Jaeger or Samuel R. Rondberg at the address or telephone number given above to be sure that the meeting is still scheduled and to confirm the Panel's agenda. Interested persons should file such statements before the meeting. To the extent that time permits and upon advance notice to the officials named above, interested persons may be permitted by the chairman of the Scientific Advisory Panel to present oral statements at the meeting. There is no limit on written comments for consideration by the Panel, but oral statements before the Panel should be limited due to time constraints. Since oral statements will be permitted only as time permits, the Agency urges the public to submit written comments in lieu of oral presentations. Information submitted as a comment in response to this notice may be claimed confidential by marking any part or all of that information as "Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public docket. Information not marked confidential will be included in the public docket without prior notice. The public docket will be available for public inspection in Room 240 Bay at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. All statements will be made part of the record and will be taken into consideration by the Panel. Persons wishing to make oral and/or written statements should notify the officials named above and submit ten copies of a summary no later than September 12, 1989, in order to ensure appropriate consideration by the Panel.

Dated: August 22, 1989.

Linda J. Fisher,

Assistant Administrator for Pesticides and Toxic Substances.

BILLING CODE 6560-50-M

[OPP-00280; FRL-3636-4]

FIFRA Scientific Advisory Panel; Open Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: There will be a 2-day meeting of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Scientific Advisory Panel (SAP) to review a set of scientific issues being considered by the Agency in connection with proposed guidelines for Neurotoxicity Testing and Mutagenicity Testing under FIFRA; to review a set of scientific issues being considered by the Agency in connection with the peer review of DDVP as a Class C oncogen; to review a set of scientific issues being considered by the Agency in connection with the peer review of Acetochlor as a Class B oncogen; and to review a set of scientific issues being considered by the Agency in connection with the peer review of Simazine as a Class C oncogen.

DATE: Thursday, September 28, 1989, from 8:30 a.m. to 5 p.m., and on Friday, September 29, 1989, from 8:30 a.m. to 11 a.m.

ADDRESS: The meeting will be held at: Holiday Inn/National Airport, 1489 Jefferson Davis Highway, Arlington, VA 22202, (703) 920-0772.

FOR FURTHER INFORMATION CONTACT:

By mail: Robert B. Jaeger, Executive Secretary, FIFRA Scientific Advisory Panel (H7509C), Office of Pesticide Programs, Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

Office location and telephone number: Room 816G, CM#2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703) 557-4369/2244.

SUPPLEMENTARY INFORMATION: The agenda for the meeting will include the following topics:

1. Review a set of scientific issues in connection with proposed guidelines for Neurotoxicity Testing under FIFRA, and to request the comments of the FIFRA Scientific Advisory Panel (SAP) on the technical merits of these methods and the desirability of combining certain related guidelines to achieve efficiency.

2. Review a set of scientific issues in connection with the Agency's classification of DDVP as a Class C oncogen based on the biological significance of forestomach tumors in B6C3F1 mice following exposure to DDVP.

3. Review a set of scientific issues in connection with the Agency's classification of Acetochlor as a Class B2 oncogen and request comments of the FIFRA SAP on the assessment of the weight of evidence, according to the Agency's guidelines for Carcinogen Risk Assessment.

4. Review a set of scientific issues in connection with the Agency's classification of Simazine as a Class C oncogen based on increased incidence of malignant mammary and pituitary tumors in female Sprague-Dawley mice.

5. Review a set of scientific issues in connection with proposed guidelines for Mutagenicity Testing under FIFRA to reflect the current science of mutagenicity testing and to incorporate a uniform testing approach with other Agency offices.

Copies of documents related to items 1-5 may be obtained by contacting:

By mail: Information Services Branch, Program Management and Support Division (H7502C), Office of Pesticide Programs, Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

Office location and telephone number: Room 244 Bay, CM#2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703) 557-2805.

Any member of the public wishing to submit written comments should contact Robert B. Jaeger at the address or the phone number given above to be sure that the meeting is still scheduled and to confirm the Panel's agenda. Interested persons are permitted to file such statements before the meeting. To the extent that time permits and upon advance notice to the Executive Secretary, interested persons may be permitted by the chairman of the Scientific Advisory Panel to present oral statements at the meeting. There is no limit on written comments for consideration by the Panel, but oral statements before the Panel are limited to about 5 minutes. Since oral statements will be permitted only as time permits, the Agency urges the public to submit written comments in lieu of oral presentations. Information submitted as a comment in response to this notice may be claimed confidential by marking any part or all of that information as "Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public docket. Information not marked confidential will be included in the public docket without prior notice. The public docket will be available for public inspection in Room 244 Bay at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. All statements will be made part of the record and will be taken into consideration by the Panel. Persons wishing to make oral and/or written statements should notify the Executive Secretary and submit ten copies of a summary no later than September 12, 1989, in order to ensure appropriate consideration by the Panel.

BILLING CODE 6560-50-M

FEDERAL ELECTION COMMISSION

[Notice 1989-14]

Filing Dates for Texas Special Runoff Election

AGENCY: Federal Election Commission.

ACTION: Notice of filing dates for Texas special runoff election.

SUMMARY: Texas has scheduled a special runoff election on September 12, 1989, in the 12th Congressional District to fill the seat that was held by Representative Jim Wright.

FOR FURTHER INFORMATION CONTACT: Ms. Bobby Werfel, Public Information Office, 999 E St., NW., Washington, DC 20463, Telephone: (202) 376-3120; Toll Free (800) 424-9530.

SUPPLEMENTARY INFORMATION: Principal campaign committees of candidates who participate in the Texas Special Runoff Election must file reports according to the schedule in the following chart. Party committees and PACs that make contributions or expenditures in connection with the Special Runoff Election during the coverage dates listed in the charts must file the appropriate reports. Monthly filers, however, do not file Special Pre- and Post-Election reports.

CALENDAR OF REPORTING DATES FOR TEXAS SPECIAL RUNOFF ELECTION

Report	Period covered [1]	Reg./Cert. mailing date [2]	Filing date
Pre-election	07/24/89-08/23/89	08/28/89	08/31/89
Post-election	08/24/89-10/02/89	10/12/89	10/12/89
Year-end	10/03/89-12/31/89	01/31/90	01/31/90

[1] The period begins with the close of the last report filed by the committee. If the committee has filed no previous reports, the period begins with the date of the committee's first activity.

[2] Reports sent by registered or certified mail must be postmarked by the mailing date. Otherwise, they must be received by the filing date.

Dated: August 21, 1989.

Danny L. McDonald,

Chairman, Federal Election Commission.

BILLING CODE 6715-01-M

FEDERAL MARITIME COMMISSION

Lloyd/Netumar Association Agreement Filed

The Federal Maritime Commission hereby gives notice of the filing of the following agreement(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of the Federal Maritime Commission, 1100 L Street, NW., Room 10325. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments are found in § 572.603 of Title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 212-009938-008.

Title: Lloyd/Netumar Association Agreement.

Parties: Compania de Navegacao Lloyd Brasileiro, Companhia de Navegacao Maritima Netumar.

Synopsis: The proposed modification would permit the parties to charter space from one another.

By Order of the Federal Maritime Commission.

Joseph C. Polking,

Secretary.

Dated: August 21, 1989.

BILLING CODE 6730-01-M

FEDERAL RESERVE SYSTEM

Draper Holding Co.; Acquisition of Company Engaged in Permissible Nonbanking Activities

The organization listed in this notice has applied under § 225.23 (a)(2) or (f) of the Board's Regulation Y (12 CFR 225.23 (a)(2) or (f)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to acquire or control voting securities or assets of a company engaged in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

The application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Comments regarding the application must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than September 15, 1989.

A. Federal Reserve Bank of Minneapolis (James M. Lyon, Vice President) 250 Marquette Avenue, Minneapolis, Minnesota 55480:

1. *Draper Holding Company*, Draper, South Dakota; to acquire Dave Moore Insurance Company, Vivian, South Dakota, and thereby engage in insurance activities in a town with a population of less than 5,000 pursuant to § 225.25(b)(8)(iii) of the Board's Regulation Y. These activities would be conducted in Vivian, South Dakota, and immediate environs.

Board of Governors of the Federal Reserve System, August 21, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

Consideration will be given to comments and suggestions received within 15 days of publication. Written comments and recommendations for the proposed information collections should be sent directly to the appropriate OMB Desk Officer designated above at the following address: OMB Reports Management Branch, New Executive Office Building, Room 3201, 725 17th Street, NW., Washington, DC 20503.

Dated: August 20, 1989.

Naomi B. Marr,

Associate Administrator, Office of Management and Information Systems.

BILLING CODE 4150-04-M

"DRAFT" FOR COMMENT ONLY

This is a two part survey consisting of 20 questions. The purpose of the survey is to determine the effectiveness of education, training, and employment programs available to American Indians and Alaskan Natives living on or near reservations/villages.

SURVEY OF JOBS PROGRAMS FOR INDIANS (FSA Form 105)
INSTRUCTIONS

- Identify all employment, training, and education programs that are currently available to Indians living on or near the reservation/village and answer questions related to each program.
- Part II of the Survey is for individual program evaluations. We have provided four copies of this section. However, if you have more than four programs to be evaluated, please make additional copies of Part II for your use.
- If additional space is needed for remarks/comments or to respond to any question, please use the back of the survey or attach additional sheets as necessary to explain circumstances. Be sure to clearly reference the question/item number on any additional sheets.
- When asked to rate the overall effectiveness of a program and related activities, please circle the number which best describes your opinion, assuming 5 as the highest and 1 as the lowest rating.
- **Use the enclosed Business Reply Envelope to return the survey** to the following address before **September 15, 1989** or as soon as possible thereafter:

Department of Health and Human Services
Family Support Administration
Office of Family Assistance
Attn: DPE/Indian Survey
370 L'Enfant Promenade, S.W.
Washington, D.C. 20447

BILLING CODE 4150-04-C

Forms Submitted to the Office of Management and Budget for Clearance

The Family Support Administration (FSA) will publish on Fridays information collection packages submitted to the Office of Management and Budget (OMB) for clearance, in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). Following are the packages submitted to OMB since the last publication on August 11, 1989.

(Call the FSA, Reports Clearance Officer on 202-252-5604 for copies of package)

1. Worksheet for Integrated AFDC, Food Stamp and Medicaid Quality Control Reviews—FSA-4340—0970-0072

The integrated worksheet serves to document the findings of State quality control reviewers who review the correctness of a sample of eligibility decisions made by the States for the AFDC, Food Stamp and Medicaid programs. The findings are used to identify areas where corrective action is needed. Respondents: State or local governments; Number of Respondents: 52,662; Frequency of Response: 1; Average Burden per Response: 11.0236 hours; Estimated Annual Burden: 580,525 hours.

2. Annual Statistical Report on Children in Foster Homes and Children in Families Receiving AFDC Payment In Excess of the Poverty Income Level—FSA-4125—0970-0004

The information collected by the use of this form is provided by State public assistance agencies. It is used in the Title I formula for computing entitlements to the States for educationally deprived children. Respondents: State or local governments; Number of Respondents: 52; Frequency of Response: 1; Average Burden per Response: 6 hours; Estimated Annual Burden: 312 hours.

OMB Desk Clearance Officer: Justin Kopca.

Consideration will be given to comments and suggestions received within 60 days of publication. Written comments and recommendations for the proposed information collections should be sent directly to the appropriate OMB Desk Officer designated above at the following address: OMB Reports Management Branch, New Executive Office Building, Room 3201, 725 17th Street, NW., Washington, DC 20503.

Dated: August 14, 1989.

Sylvia E. Vela,

Deputy Associate Administrator for Office of Management and Information Systems, FSA.

Health Care Financing Administration

[BERC 636-N]

Medicare Program; Employers and Duplicative Medicare Benefits; Clarification

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: General notice.

SUMMARY: On December 6, 1988, we published in the **Federal Register** (53 FR 49233) a notice that announced the national average actuarial value of additional Medicare Part A benefits available in 1989, as required by section 421 of the Medicare Catastrophic Coverage Act of 1988 (MCCA). The national average actuarial value of the Medicare Part A benefits added or increased by MCCA was $61 as of July 1, 1988. For 1989, the national average actuarial value is $65. The notice also contained guidelines to be used by employers to compute the actuarial value of duplicative benefits. As a result of inquiries from employers, insurers and others, we are providing clarification and further interpretation of our guidelines with regard to the requirement that employers must maintain levels of effort under their health benefit plans in cases where part A benefits expanded under MCCA duplicate benefits under the employers' health plans. We also are correcting and clarifying several items included in the original notice of December 6, 1988.

DATE: The effective date for the Maintenance of Effort Provision with regard to Part A duplicative benefits is January 1, 1989. The effective date for this clarification is also January 1, 1989.

FOR FURTHER INFORMATION, CONTACT: Kenneth Leong (for actuarial values and guidelines) (301) 966-7908. Morton Marcus (for all other information) (301) 966-4477.

SUPPLEMENTARY INFORMATION:

I. Background

On December 6, 1988, we published in the **Federal Register** (53 FR 49233) a notice implementing section 421, commonly referred to as the Maintenance of Effort (MOE) Provision, of the Medicare Catastrophic Coverage Act of 1988 (MCCA). Section 421 requires employers that provide health benefits to employees and retired former employees to determine the extent to which the new Medicare benefits available under MCCA duplicate benefits available under their health benefit plans, and provide additional, non-duplicative benefits and/or refunds under certain conditions. (The term "retiree" as used in this notice refers to both Medicare eligible retired former employees and Medicare eligible current employees. The MOE provision does not apply to most employees and their Medicare eligible dependents, since Medicare is secondary payer for such individuals, except in limited situations.)

Since the publication of the December 6, 1988 notice, we have received numerous telephone and written inquiries from employers, insurers, attorneys, benefit consultants, and others seeking clarification and further interpretation of the HCFA guidelines. The questions indicate that some provisions of the notice may be subject to differing interpretations.

Using a question and answer format, we address a number of areas that inquirers said were not clear in the notice published December 6, 1988. This clarifying information will be useful to employers with MOE responsibilities. Where applicable, we have cross referred to our December 6, 1988 notice. (In the future we will publish a **Federal Register** notice dealing with duplicative Part B benefits in accordance with section 421 of MCCA.)

II. Questions and Answers

Question 1: May an employer that is paying the Part B premium for its retirees as of July 1, 1988 consider its payment of the $4 per month catastrophic coverage premium as an "additional benefit"? (Top of column 1, p. 49234.)

Answer: The fact that an employer was paying the Part B premium prior to July 1, 1988 would not in itself preclude the employer from counting its payment of the $4 per month increase as an "additional benefit." There may be other factors, however, which lead retirees to believe that it is already the employer's obligation to pay the $4 per month catastrophic coverage premium, and that therefore the employer cannot consider payment of the $4 as an additional benefit which counts toward satisfying its MOE obligation. This could be the case, for example, if, prior to July 1, 1988, the employer had conveyed to its retirees, either implicitly or explicitly, that it would purchase Part B coverage for them. If, based on the nature of the communication or agreement between the employer and retirees, the retirees had a reasonable basis to expect the employer to bear the $4 per month premium increase, the employer would not be permitted to treat it as an "additional benefit." The question of whether or not the employer had committed itself to pay the $4 premium increase in a particular case depends on the factual situation, and would normally be settled by negotiation between the employer and retirees.

Question 2: Are dependents eligible to receive additional benefits and/or refunds if they are receiving duplicative benefits? (1st paragraph of SUMMARY, p. 49233.)

Answer: The law specifies that employers are to provide "employees" and "retired former employees" with additional benefits and/or refunds which are equivalent in actuarial value to any duplicative part A benefits they were providing their employees on July 1, 1988, the date of enactment of MCCA. The law does not mention the Medicare-eligible spouses and other dependents of employees and retirees. Nevertheless, duplicative part A benefits provided to a dependent constitute an employer benefit for the retiree and must be taken into account when computing additional benefits and/or refunds for the retiree. Therefore, if an employer decides to provide additional benefits instead of a refund, such benefits must be provided to dependents; and an employer that decides to provide cash refunds only must make an appropriate refund to retirees for dependents covered under the employer plan.

Example

Assuming a $65 refund amount, with the employer contributing 100 percent toward retiree and dependent health care benefits, the payout would work as follows:

100 retirees	at $65×100=	$6,500
Each retiree has one Medicare eligible dependent	at $65×100=	6,500
Total		13,000

In this example, the total payout pool amounts to $13,000, taking into consideration each retiree's Medicare-eligible dependent. Because the law is clear that the retiree receives the benefit, the employer must refund to each retiree $130, i.e., $65×2.

Question 3: Are employers precluded from increasing the cost of plan benefits to retirees if the retirees were not notified of such cost increase before July 1, 1988, the date of enactment of MCCA? (First column, last paragraph, p. 49234.)

Answer: With regard to MOE, an employer that did not notify its retirees of an increase in the cost of plan benefits may increase the cost only if, and to the extent that, such action is in response to increased costs to the employer of providing health plan benefits that were already being provided, and it does not have the effect of enabling the employer to circumvent its MOE obligation to provide additional benefits and/or refunds. The employer's reason for increasing the cost of plan benefits to retirees should be documented. If an employer has annually increased premiums to keep up with inflation, such an historic practice would serve as evidence that the employer did not intend to circumvent the MOE provision. When an employer cannot reasonably justify an increase in plan costs, the employer has not complied with its obligation to provide additional benefits and/or refunds.

Question 4: How does the employer determine if the duplicative Part A benefits it provided under its health plan had an actuarial value as of July 1, 1988 of at least 50 percent of the national average actuarial value of the benefits added or increased by MCCA? (Section B, first paragraph, p. 49233, and third column, p. 49235.)

Answer: The national average actuarial value of the Medicare benefits added or increased by MCCA was $61 as of July 1, 1988. Fifty percent of that amount is $30.50. The employer is responsible for paying cash refunds and/or additional benefits if, as of July 1, 1988, the duplicative Part A benefits it furnished the retirees and Medicare-eligible dependents enrolled in the employer's plan had an average actuarial value (on a per capita basis) at least equal to $30.50. If the actuarial value of the duplicative Part A benefits provided by the employer's plan equals or exceeds $30.50 on a per capita basis, the employer must then subtract from that value the average amount each retiree contributed toward the benefits package for his own benefits and any amount each retiree contributed toward his Medicare-eligible dependent's benefits. If the remaining amount is at least equal to $30.50, the employer is responsible for paying additional benefits and/or refunds.

Example

a. An employer determines that $60 is the average actuarial value of its duplicative Part A benefits on a per capita basis for each Medicare-eligible retiree and dependent enrolled in the plan. The average retiree contribution to the benefit package for his own and any dependent benefits is $15. The employer is therefore paying $45 toward the plan's duplicative part A benefits for retirees. Since this amount is more than $30.50, the employer has met the 50 percent test, and is responsible for paying cash refunds and/or providing additional benefits.

b. Assume, in the above example, that the average retiree contributes 60 percent of the cost of the health benefits the employer provides for the retiree and for the retiree's Medicare-eligible dependent. The employer contributes the remaining 40 percent, or $24 (40% of $60=$24). The employer is not responsible for paying any additional benefits and/or refunds, because $24 is lower than the threshold $30.50 level.

Question 5: How does an employer calculate the amount of cash refund for each individual when the retiree contributes a different amount toward his own health benefits plan than he does for his or her Medicare-eligible dependent?

Answer: Although there may be differences in the amount contributed by retirees for themselves and their dependents, the employer should determine the average per capita contribution of the retirees and Medicare-eligible dependents and subtract such amount from the average actuarial value of the duplicative Part A benefits (see previous answer). The remainder is what the employer should pay the retiree on behalf of each eligible individual.

Example

The employer chooses the national average actuarial value of $61 (1988) as the value of its duplicative Part A benefits. (a) If neither the retiree nor the Medicare-eligible dependent contributes toward the cost of the employer health plan, the employer is required to pay $65 per eligible individual in 1989. (b) If retirees and their Medicare-eligible dependents together, on the average, contribute 20 percent of the cost of the health benefits plan, the employer should pay $52 ($65×80 percent) per eligible individual.

Question 6: An employer provides a health plan which includes duplicative Part A benefits. Both the employer and employee contribute to the cost of the employer plan. The employer calculates the actual value of the Part A duplicative benefits under its health plan and this amount is greater than the national average actuarial value of the Part A duplicative benefits ($61). The employer elects the national average actuarial value, i.e., $61, as the value of its duplicative benefits. To determine if the employer is subject to the MOE provision, must the employer subtract the employee contribution from the actual value of the duplicative benefits, or may the employer subtract the employee contribution from the national average actuarial value?

Answer: Once the employer elects the national average actuarial value of duplicative part A benefits as the value of its plan's duplicative benefits, then

the national average actuarial value becomes the basis from which employee contributions must be subtracted. For example, an employer determines the actuarial value of its duplicative part A benefits to be $100 per individual enrolled in the plan and, as a result, chooses the lower value, the national average actuarial value, as the value of its duplicative benefits. The average contribution rate for retirees and Medicare-eligible dependents is 50 percent. The employer must take 50 percent of $61 (not 50 percent of $100) and subtract that amount, i.e., $30.50, from the national average actuarial value. Thus, in this example, the employer is subject to MOE because it is providing duplicative part A benefits that have an actuarial value equivalent at least to 50 percent of the national average actuarial value of the benefits added or increased by MCCA.

Question 7: How does an employer determine the amount of refund when the retiree and/or dependent is not entitled to Medicare throughout 1989, or where Medicare is not primary payer throughout 1989?

Answer: Following are examples that illustrate how an employer should determine the amount of refund in this type of situation:

Situation	Employer responsibility
1. Retiree is not eligible for Medicare throughout 1989. Dependent is Medicare-eligible.	Employer is responsible to provide additional benefits to dependent, or pay refund to retiree, because the law stipulates that the employer should pay the retiree.
2. Retiree dies after July 1, 1988, but before January 1, 1989, leaving Medicare-eligible dependent.	Employer is responsible to provide additional benefits and/or refunds to dependent.
3. Medicare-eligible dependent dies after July 1, 1988, but before January 1, 1989.	Employer not responsible to pay refund.
4. Retiree or Medicare-eligible dependent dies in 1989.	Employer responsible to provide additional benefits up to date of death of retiree or dependent or to refund prorated amount to the surviving retiree or dependent. Employer MOE obligation for duplicative benefits continues unchanged with respect to the surviving retiree or dependent. If retiree dies before additional benefits and/or refunds are provided, employer responsible to pay refund to surviving insured dependent unless State law requires a different disposition.
5. Retiree dies prior to July 1, 1988 Medicare-eligible dependent is receiving health benefits from employer as of July 1, 1988 and through 1989.	Employer responsible to provide additional benefits and/or refunds to dependent.
6. Medicare becomes secondary payer for an individual in 1989.	Employer responsible to provide additional benefits or prorated refunds only during period in which Medicare is primary payer.

Question 8: Is an employer required to provide MOE benefits to retirees/dependents who were not entitled to Medicare on July 1, 1988, but become eligible for Medicare sometime between August 1, 1988 and December 1, 1989?

Answer: Yes, an employer is responsible for full refunds/additional benefits if the retiree/dependent becomes Medicare-eligible by January 1, 1989. The employer is responsible for a prorated amount if the retiree/dependent becomes Medicare-eligible between February 1, 1989 and December 1, 1989.

Question 9: Is an employer required to provide MOE benefits to employees hired after July 1, 1988?

Answer: No.

Question 10: Is an employer required to provide MOE benefits to its former employees who are under 65 and entitled to Medicare based on disability?

Answer: Yes. The law specifies that employers must provide their "employees" and "retired former employees" with additional benefits and/or refunds. Disabled Medicare-eligible individuals for whom Medicare is primary payer and who were receiving health benefits from their former employer as of July 1, 1988 are entitled to MOE additional benefits and/or refunds. They are deemed to be "retired former employees" for MOE purposes. (Note, however, that disabled employees are not entitled to MOE refunds or additional benefits when Medicare is secondary payer for such individuals. (See section II.D.3., column 3, p. 49234.))

Question 11: Is the MOE provision applicable to all HMOs, or just to risk-based HMOs as discussed in the notice? (Section II.G., column 1, p. 49236.)

Answer: The discussion regarding MOE applicability to the HMOs in our December 6, 1988 notice dealt solely with risk-based HMOs. This was an oversight on our part. Employer responsibility under MOE is not confined to HMOs with a Medicare risk contract. An employer that contracts with an HMO, whether or not the HMO has a contract with Medicare, is responsible for determining the value of the duplicative benefits provided to its retirees by the HMO. The employer is expected to negotiate with the HMO for the provision of additional benefits and/or refunds to affected retirees.

Question 12: Does the law place any administrative sanctions on employers that fail to comply with the MOE provision? Are there any reporting or recordkeeping requirements?

Answer: The MOE provision is silent regarding administrative penalties on employers that fail to comply with the provision, and specific reporting or recordkeeping requirements. We anticipate that employee associations, retiree associations, labor unions and other employee groups will take an active interest in employer compliance, and that disputes that may arise between employers and retirees with respect to MOE will be resolved through negotiations between the parties.

Question 13: What are the components that constitute the national average actuarial value of $65 in 1989? Such information could be very helpful to employers to calculate the cost of the duplicative benefits.

Answer: The components that constitute the national average actuarial value of $65 in 1989 are as follows:

Inpatient hospital	$53.00
Skilled nursing	12.00
Total	65.00

The above component costs are determined as follows:

Inpatient hospital:	
Deductible change	19.70
Copayment elimination	22.70
Unlimited Days	10.60
Total	53.00
Skilled nursing:	
Coinsurance change	7.20
Eliminating prior hospitalization and providing 150 days of care	4.80
Total	12.00

III. Clarification of Previous Published Information

We are republishing portions of our notice published December 6, 1988 (53 FR 49233) to further clarify several items of information. On page 49233, column 3, in the last paragraph we incorrectly included the words "national average" in the fourth line. As corrected, the sentence reads: "If an employer provides only additional benefits, the benefits must be equal in value at least to the 1989 actuarial value of the duplicative part A benefits that were provided as of July 1, 1988." Additional benefits and/or refunds must total at least the actuarial value of the duplicative Part A benefits (see section 421(a)(1) of MCCA).

In the last sentence on page 49234, column 1, third full paragraph, we asserted that each employee and retired former employee will receive an equal refund, using the computation methodology contained in the previous sentence. However, the discussion does not take into account individuals with Medicare-eligible dependents. For example, a retiree whose spouse is Medicare-eligible and enrolled in the plan would receive double the refund of an employee who is single. To clarify this paragraph, in the second to last sentence, substitute "Medicare eligible employees, retired former employees and dependents" for "employees and retired former employees." As revised, the sentence reads: "The amount refunded to each individual should be determined by dividing the actuarial value of the duplicative benefits by the total number of Medicare-eligible employees, retired former employees and dependents enrolled in the plan." Also, the last sentence of that paragraph should be revised to read as follows: "Thus, each employee and retired former employee will receive an equal refund for each Medicare eligible individual covered by the employer's plan under the employee/retiree's enrollment."

The second bullet point on page 49234 at column 3 under "2. Part B" should be revised to read "Payment for home intravenous drug therapy services" instead of "Payment for home intravenous drug therapy and associated items and services." This correction conforms it to the term used in section 1861(jj) of the Social Security Act as amended by section 203(b) of MCCA. This same wording should be used in the next to the last bullet in the middle column on page 49235. That is, delete "Coverage for home intravenous drugs and associated items and services (including supplies, equipment, and nursing and pharmacy services)", and replace with "Coverage for home intravenous drug therapy services." (Note that this item does not include the drugs themselves. Section 1861(jj)(2) of the Social Security Act.)

On page 49235, column 3, there is a typographical error. The major heading after the bullet point should read "F. Determining the Actuarial Value of Duplicative Benefits" instead of "D. Determining the Actuarial Value of Duplicative Benefits."

On page 49238, column l, in line 7, first full paragraph, the word "above" should be replaced by "in section IV below." As corrected, the sentence reads "If a collective bargaining agreement provides that certain company paid health benefits are vested upon retirement of the employee, the employer is not required to provide additional benefits beyond the time periods stated in section IV below, i.e., until the later of 12/31/89 or the date of the expiration of the agreement for duplicative Part A benefits and until the later of 12/31/90 or the date of the expiration of the agreement for duplicative Part B benefits." While the time periods for providing additional benefits and/or refunds are addressed earlier in the notice, we feel that the discussion in section IV is more explicit.

(Section 421 of Pub. L. 100-360, as amended (42 U.S.C. 1395(b) Note))

(Catalog of Federal Domestic Assistance Program No. 13.773, Medicare-Hospital Insurance; and No. 13.774, Medicare-Supplementary Medical Insurance)

Dated: June 9, 1989.

BILLING CODE 4120-01-M

Food and Drug Administration

[Docket No. 89M-0302]

Wesley-Jessen; Premarket Approval of AQUAFLEX® (Tetrafilcon A) Hydrophilic Contact Lenses

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing its approval of the application by Wesley-Jessen, Chicago, IL, for premarket approval, under the Medical Device Amendments of 1976, of the spherical AQUAFLEX® (tetrafilcon A) Hydrophilic Contact Lenses for daily wear. The lenses are to be manufactured under an agreement with CooperVision, Inc., San Jose, CA, which has authorized Wesley-Jessen to incorporate information contained in its approved premarket approval application for the AQUAFLEX® (tetrafilcon A) Hydrophilic Contact Lenses. FDA's Center for Devices and Radiological Health (CDRH) notified the applicant, by letter of April 28, 1989, of the approval of the application.

DATES: Petitions for administrative review by September 25, 1989.

ADDRESSES: Written requests for copies of the summary of safety and effectiveness data and petitions for administrative review to the Dockets Management Branch (HFA-305), Food and Drug Administration, Rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: David M. Whipple, Center for Devices and Radiological Health (HFZ-460), Food and Drug Administration, 1390 Piccard Dr., Rockville, MD 20850, 301-427-1080.

SUPPLEMENTARY INFORMATION: On December 16, 1988, Wesley-Jessen, Chicago, IL 60610, submitted to CDRH an application for premarket approval of the spherical AQUAFLEX® (tetrafilcon A) Hydrophilic Contact Lenses. The lenses are indicated for daily wear use for the correction of visual acuity in not-aphakic patients with nondiseased eyes that are myopic or hyperopic. The lenses may be worn by persons who may exhibit astigmatism of 2.50 diopters (D) or less that does not interfere with visual acuity. The lenses are indicated in a power range of -20.00 D to +9.75 D and are to be disinfected using either a heat or chemical disinfection system. The application includes authorization from CooperVision, Inc., San Jose, CA 95134, to incorporate information contained in its approved premarket approval applications for the AQUAFLEX® (tetrafilcon A) Hydrophilic Contact Lenses.

On April 28, 1989, CDRH approved the application by letter to the applicant from the Acting Director of the Office of Device Evaluation, CDRH.

A summary of the safety and effectiveness data on which CDRH based its approval is on file in the Dockets Management Branch (address above) and is available from that office upon written request. Requests should be identified with the name of the device and the docket number found in brackets in the heading of this document.

A copy of all approved labeling is available for public inspection at CDRH—contact David M. Whipple (HFZ-460), address above. The labeling of the AQUAFLEX® (tetrafilcon A) Hydrophilic Contact Lenses states that the lens is to be used only with certain solutions for disinfection and other purposes. The restrictive labeling informs new users that they must avoid using certain products, such as solutions intended for use with hard contact lenses only.

Opportunity for Administrative Review

Section 515(d)(3) of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 360e(d)(3)) authorizes any interested person to petition, under section 515(g) of the act (21 U.S.C. 360e(g)), for administrative review of CDRH's decision to approve this application. A petitioner may request either a formal hearing under part 12 (21 CFR part 12) of FDA's administrative practices and procedures regulations or a review of the application and CDRH's action by an independent advisory committee of experts. A petition is to be in the form of a petition for reconsideration under § 10.33(b) (21 CFR 10.33(b)). A petitioner shall identify the form of review requested (hearing or independent advisory committee) and shall submit with the petition supporting data and information showing that there is a genuine and substantial issue of material fact for resolution through administrative review. After reviewing the petition, FDA will decide whether to grant or deny the petition and will publish a notice of its decision in the **Federal Register**. If FDA grants the petition, the notice will state the issue to be reviewed, the form of review to be used, the persons who may participate in the review, the time and place where the review will occur, and other details.

Petitioners may, at any time on or before September 25, 1989, file with the Dockets Management Branch (address above) two copies of each petition and supporting data and information, identified with the name of the device and the docket number found in brackets in the heading of this document. Received petitions may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

This notice is issued under the Federal Food, Drug, and Cosmetic Act (secs. 515(d), 520(h), 90 Stat. 554-555, 571 (21 U.S.C. 360e(d), 360j(h))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.10) and redelegated to the Director, Center for Devices and Radiological Health (21 CFR 5.53).

Dated: August 14, 1989.

Walter E. Gundaker,

Acting Deputy Director, Center for Devices and Radiological Health.

BILLING CODE 4160-01-M

[Docket No. 89M-0313]

Sola/Barnes-Hind; Premarket Approval of Fluorocon™-60 (Paflufocon B) Rigid Gas Permeable Contact Lens (Clear and Tinted)

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing its approval of the application by Sola/Barnes-Hind, sunnyvale, CA, for premarket approval, under the Medical Device Amendments of 1976, of the spherical Fluorocon™-60 (paflufocon B) Rigid Gas Permeable Contact Lens (Clear and Tinted) for daily wear. The lens is to be manufactured under an agreement with Paragon Optical, Mesa, AZ, which has authorized Sola/Barnes-Hind to incorporate information contained in its approved premarket approval application and related supplements for the FluoroPerm (paflufocon A), FluoroPerm 60 (paflufocon B) and FluoroPerm 30 (paflufocon C) Rigid Gas Permeable Contact Lenses. FDA's Center for Devices and Radiological Health (CDRH) notified the applicant, by letter of June 23, 1989, of the approval of the application.

DATES: Petitions for administrative review by September 25, 1989.

ADDRESSES: Written requests for copies of the summary of safety and effectiveness data and petitions for administrative review to the Dockets Management Branch (HFA-305), Food and Drug Administration, Rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: David M. Whipple, Center for Devices and Radiological Health (HFZ-460), Food and Drug Administration, 1390 Piccard Dr., Rockville, MD 20850, 301-427-1080.

SUPPLEMENTARY INFORMATION: On March 20, 1989, Sola/Barnes-Hind, Sunnyvale, CA 94086-5200, submitted to CDRH an application for premarket approval of the spherical Fluorocon™-60 (paflufocon B) Rigid Gas Permeable Contact Lens (Clear and Tinted). The lens is indicated for daily wear for the correction of visual acuity in not-aphakic persons with nondiseased eyes that are myopic or hyperopic. The lens may be worn by persons who may exhibit astigmatism of 4.00 diopters (D) or less that does not interfere with visual acuity. The lens is indicated in a power range of −20.00 D to +12.00 D and is to be disinfected using a chemical disinfection system. The lens is available in untinted (clear) and blue or green tints. The tinted lens contains one or both of the color additives, D&C Green No. 6 and D&C Yellow No. 10, in accordance with the color additive listing provisions of 21 CFR 74.3206 and 74.3710. The application includes authorization from Paragon Optical, Mesa, AZ 85204, to incorporate information contained in its approved premarket approval application and related supplements for the FluoroPerm (paflufocon A), FluoroPerm 60 (paflufocon B) and FluoroPerm 30 (paflufocon C) Rigid Gas Permeable Contact Lenses.

On June 23, 1989, CDRH approved the application by a letter to the applicant from the Acting Director of the Office of Device Evaluation, CDRH.

A summary of the safety and effectiveness data on which CDRH based its approval is on file in the Dockets Management Branch (address above) and is available from the office upon written request. Requests should be identified with the name of the device and the docket number found in brackets in the heading of this document.

A copy of all approved labeling is available for public inspection at CDRH—contact David M. Whipple (HFZ-460), address above. The labeling of the spherical Fluorocon™-60 (paflufocon B) Rigid Gas Permeable Contact Lens (Clear and Tinted) states that the lens is to be used only with certain solutions for disinfection and other purposes. The restrictive labeling informs new users that they must avoid using certain products, such as solutions intended for use with hard contact lenses only.

Opportunity for Administrative Review

Section 515(d)(3) of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 360e(d)(3)) authorizes any interested person to petition, under section 515(g) of the act (21 U.S.C. 360e(g)), for administrative review of CDRH's decision to approve this application. A petitioner may request either a formal hearing under part 12 (21 CFR part 12) of FDA's administrative practices and procedures regulations or a review of the application and CDRH's action by an independent advisory committee of experts. A petition is to be in the form of a petition for reconsideration under § 10.33(b) (21 CFR 10.33(b)). A petitioner shall identify the form of review requested (hearing or independent advisory committee) and shall submit with the petition supporting data and information showing that there is a genuine and substantial issue of material fact for resolution through administrative review. After reviewing the petition, FDA will decide whether to grant or deny the petition and will publish a notice of its decision in the **Federal Register.** If FDA grants the petition, the notice will state the issue to be reviewed, the form of review to be used, the persons who may participate in the review, the time and place where the review will occur, and other details.

Petitioners may, at any time on or before September 25, 1989, file with the Dockets Management Branch (address above) two copies of each petition and supporting data and information, identified with the name of the device and the docket number found in brackets in the heading of this document. Received petitions may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

This notice is issued under the Federal Food, Drug, and Cosmetic Act (secs. 515(d), 520(h), 90 Stat. 554–555, 571 (21 U.S.C. 360e(d), 360j(h))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.10) and redelegated to the Director, Center for Devices and Radiological Health (21 CFR 5.53).

Dated: August 14, 1989.

Walter E. Gundaker,

Acting Deputy Director, Center for Devices and Radiological Health.

BILLING CODE 4160-01-M

[Docket No. 89N–0332]

Evaluation of Incentives for Development of Orphan Medical Foods; Announcement of Study; Request for Scientific Data and Information

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that the Life Sciences Research Office (LSRO) of the Federation of American Societies for Experimental Biology (FASEB) is conducting a study to evaluate incentives for development of orphan medical foods. FASEB is inviting submission of scientific data and information on this topic. The purpose of the information request is to obtain public comment on needs and incentives for, and barriers to, development and use of orphan medical foods. In addition, interested persons and organizations with questions regarding this study are invited to communicate with the LSRO contact person identified below.

DATES: Scientific data and information should be received by September 25, 1989.

ADDRESSES: Scientific data and information to the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857, and the Life Sciences Research Office, Federation of American Societies for Experimental Biology, 9650 Rockville Pike, Bethesda, MD 20814. Two copies of the information should be submitted to each office.

FOR FURTHER INFORMATION CONTACT: Kenneth D. Fisher, Life Sciences Research Office, Federation of American Societies for Experimental Biology, 9650 Rockville Pike, Bethesda, MD 20814, 301–530–7030.

SUPPLEMENTARY INFORMATION: FDA has a contract (223–88–2124) with FASEB concerning the analysis of scientific issues in food and cosmetic safety. The objective of this contract is to provide information to FDA on general and specific issues of scientific fact associated with the safety of foods and cosmetics.

An orphan medical product is one which is required for the treatment of a rare medical condition and, consequently, has very limited marketability. A medical food is defined as "a food which is formulated to be consumed or administered enterally under the supervision of a physician and which is intended for the specific dietary management of a disease or condition for which distinctive nutritional requirements, based on recognized scientific principles, are established by medical evaluation." (the Orphan Drug Amendments of 1988 (21 U.S.C. 360ee(b))). An orphan medical food, then, is a medical food used in the dietary management of a rare medical condition.

FDA is announcing that it has asked LSRO of FASEB, as a task under the contract, to determine the need for incentives useful in, and barriers to, the development of medical food products with orphan status. Such guidance should include identification of human diseases and disorders that may benefit from orphan medical foods; criteria for defining orphan status; identification of incentives to enhance development of orphan medical foods; the scope of research and development efforts necessary to permit routine use of such foods; the impact of barriers to product development; and a comparison between development of these products in the United States and in other countries.

This notice also invites submission of other information that should be considered in the development of orphan medical foods. Two copies of any ge scientific data and information should be submitted to both LSRO of FASEB and the Dockets Management Branch (addresses above). The deadline for receipt of such submissions is September 25, 1989. Pursuant to its contract with FDA, FASEB will provide the agency with a scientific reprot on these issues concerning orphan medical foods.

Dated: August 21, 1989.

Alan L. Hoeting,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4160-01-M

National Institutes of Health

National Cancer Institute; Opportunity for a Cooperative Research and Development Agreement (CRADA) To Develop and Maintain a Human Tissue Bank

AGENCY: National Institutes of Health, Public Health Service, HHS.

ACTION: Notice.

SUMMARY: The National Cancer Institute (NCI) desires to enter into a Cooperative Research and Development Agreement (CRADA) to develop, maintain and use a bank of human tumor tissue with associated clinical follow-up information. The bank will be used to study the utility of selected oncogene markers in the diagnosis and prognosis of human cancer. The commercial organization will support all aspects of (a) tumor tissue procurement, (b) frozen tissue storage, (c) computerized retrieval of associated clinical data, and (d) case reviews by a board certified pathologist. The NCI will provide putative markers in the form of molecular probes or antibodies. The commercial organization will then work together with NCI's Oncogene Working Group to measure the level of the marker in portions of the specimens derived from the tumor bank and compare the clinical outcome or treatment response with the level of the marker.

It is anticipated that all interventions which may arise from this CRADA will be jointly owned and licensed on a royalty-bearing basis exclusively to the company with which the CRADA is made. The CRADA will be executed for a five-year period with the possibility of renewal for another five-year period.

Nothing in this CRADA will prohibit or prevent the company from dealing with scientists who are not parties to this project per se. For example, a nonparticipating scientist may wish the company to screen markers furnished by his/her laboratory on a fee-for-service basis, said markers to remain the property of the scientist and/or organization which submits them. However, such ancillary non-CRADA activity may not interfere with the parties' carrying out the CRADA expeditiously.

SUPPLEMENTARY INFORMATION: This opportunity is available until October 10, 1989. For additional information contact: Alan S. Rabson, M.D., Director, Division of Cancer Biology and Diagnosis, National Cancer Institute, Building 31, Room 3A03, Bethesda, Maryland 20892–3100 (301) 496–4346. Late response will not be considered. Respondents may be provided an additional opportunity to furnish additional information if the NCI finds this necessary.

Applicants will be judged according to the following criteria: (1) Full-time board-certified pathologist on company staff; (2) full-time molecular biologist on company staff; (3) full-time biostatistician experienced in compiling tumor bank data on company staff; (4) management and logistic capabilities suited to this CRADA; (5) facilities for storage of tissue and extraction of RNA and DNA; (6) fully equipped and staffed immunohistology laboratory; (7) network of potentially participating academic collaborators established; (8) demonstrated scientific credibility, commitment to publications, and academic excellence demonstrated; (9) commitment and ability to develop rapidly newly validated probes to the level of a product which benefits the oncology patient.

Dated: August 18, 1989.

William F. Raub,

Acting Director, National Institutes of Health.

BILLING CODE 4140-01-M

National Cancer Institute; Meeting of Board of Scientific Counselors, Division of Cancer Biology and Diagnosis

Pursuant to Public Law 92–463, notice is hereby given of the meeting of the Board of Scientific Counselors, Division of Cancer Biology and Diagnosis, National Cancer Institute, October 27, 1989. The meeting will be held in Building 31C, Conference Room 7, National Institutes of Health, Bethesda, Maryland 20892.

The entire meeting will be open to the public on October 27 from 8:30 a.m. to adjournment for concept review of proposed projects and administrative details. Attendance by the public will be limited to space available.

Mrs. Winifred Lumsden, Committee Management Officer, National Cancer Institute, Building 31, Room 10A06, National Institutes of Health, Bethesda, Maryland 20892 (301/496–5708) will provide summary minutes of the meeting and roster of committee members.

Dr. Ihor J. Masnyk, Deputy Director, Division of Cancer Biology and Diagnosis, National Cancer Institute, Building 31, Room 3A03, National Institutes of Health, Bethesda, Maryland 20892 (301/496–3251) will provide substantive program information.

Dated: August 21, 1989.

Betty J. Beveridge,

Committee Management Officer, NIH.

BILLING CODE 4140-01-M

Programs for Support of Minorities in Biomedical Research; Meetings

Notice is hereby given that the National Institutes of Health (NIH) will hold the fourth and fifth of a series of five regional public hearings to be conducted under the auspices of the Office of the Director, NIH, on "Programs for Support of Minorities in Biomedical Research." The purpose of the hearings is two-fold:

(1) To provide current information concerning the activities of the NIH by describing in broad terms existing programs offered by NIH, and

(2) To solicit through public testimony the views of biomedical researchers, university faculty and administrators, students, representatives of professional societies, and other interested parties regarding the nature and scope of programs to attract and support minorities in biomedical research.

The fourth hearing will be held on Sunday, September 24, 1989 from 10 a.m. to 4 p.m. in the Doubletree Suite Hotel, Phoenix Gateway Center, Phoenix, Arizona, preceding the annual meeting of the Hispanic Association of Colleges and Universities. The fifth hearing will be held on October 9, 1989, from 9 a.m. to 4 p.m. at the Anchorage Hilton Hotel, Anchorage, Alaska, in conjunction with the National Indian Education Association Annual Meeting.

Following presentations by senior NIH staff, a panel composed of NIH program administrators will spend the remainder of each day receiving testimony from public witnesses. Each witness will be limited to a maximum of ten minutes. Attendance and the number of presentations will be limited to the time and space available. Consequently, all individuals wishing to attend or to present a statement at either of these public hearings should notify, in writing, William H. Pitlick, Ph.D., Executive Secretary, National Institutes of Health, Shannon Building, Room 252, Bethesda, Maryland, 20892. Those planning to make a presentation should file a one-page summary of their remarks with Dr. Pitlick by September 15, 1989. A copy of the full text should be submitted for the record at the time of the meeting. Additional information may be obtained by calling Ms. Loretta Beuchert, Office of Extramural Research, National Institutes of Health, at (301) 496–9743.

Dated: August 18, 1989.

William F. Raub,

Acting Director, National Institutes of Health.

BILLING CODE 4140-01-M

Public Health Service

National Toxicology Program; Board of Scientific Counselors Meeting

Pursuant to Public Law 92–463, notice is hereby given of a meeting on September 20, 1989, of the National Toxicology Program (NTP) Board of Scientific Counselors, Reproductive and Developmental Toxicology Program Review Subcommittee. The meeting will be held at the National Institute of Environmental Health Sciences, Building 101, South Campus, Conference Room B204, 111 Alexander Drive, Research Triangle Park, North Carolina.

The meeting is from 8:15 a.m. to 5:30 p.m., and will be open to the public. The primary agenda topics are reviews of the research efforts and reproductive and developmental toxicity contracts of the staffs at the National Institute of Environmental Health Sciences (NIEHS) and the National Institute for Occupational Safety and Health (NIOSH).

The Executive Secretary, Dr. Larry Hart, Office of the Director, National Toxicology Program, P.O. Box 12233, Research Triangle Park, North Carolina 27709, Telephone (919) 541–3971, FTS 629–3971, will furnish the final agenda. The roster of Subcommittee members and other program information will be available prior to and at the meeting, and summary minutes will be available subsequent to the meeting.

Dated: August 22, 1989.

David P. Rall,

Director, National Toxicology Program.

BILLING CODE 4140-01-M

Agency Forms Submitted to the Office of Management and Budget for Clearance

Each Friday the Public Health Service (PHS) publishes a list of information collection packages it has submitted to the Office of Management and Budget (OMB) for clearance in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). The following requests have been submitted to OMB since the list was last published on Friday, August 11, 1989.

Call the PHS Reports Clearance Officer on 202-245-2100 for copies of package.

1. Survey and Instrument for Assessing the Impact of the 1990 Medicare Legislation on Mammography Usage in the NCI Mammography Consortium—NEW. Starting January 1, 1990, Medicare will pay $50.00 towards the cost of biennial screening mammograms for covered females age 65 and over. This request is for the pretesting and fielding of surveys to assess mammography usage before and after this benefit takes effect, in order to determine its impact and to assess other barriers to mammography use which may exist in this population. Respondents: Individuals or households; Number of Respondents: 5,359; Number of Responses per Respondent: 1; Average Burden per Response: .283 hours; Estimated Annual Burden: 1,517 hours.

2. HRSA Competing Training Grant Application—Revision—0915-0060. The Health Resources and Services Administration uses this information to determine the eligibility of applicants for awards, to calculate the amount of each award, and to judge the relative merit of applications. The purpose of this revision is to add one new program as user of the application: Retention Programs for Health Professions Schools with Individuals from Disadvantaged Backgrounds Grant Program. Respondents: Nonprofit institutions; Number of Respondents: 275; Number of Responses per Respondent: 1; Average Burden per Response: 56.26 hours; Estimated Annual Burden: 15,472 hours.

3. National Survey of Uses of Animals in Research (CONCEPT)—NEW. The National Institutes of Health is requesting concept approval for a national survey of who uses animals in research, education, and testing; how many are used, and for what purposes; their sources and care; and how legal requirements governing animal use and care are met. This information will enable Federal agencies which conduct, support, or regulate research involving animals to identify and allocate scarce resources and review policies on laboratory animals. Respondents: State or local governments; businesses or other for-profit; Federal agencies or employees; non-profit institutions; small businesses or organizations. Annual Reporting Burden: Since this is a concept clearance, definitive burden estimates are not yet available. These estimates will be provided when the study design and questionnaire are final and the final clearance request is submitted.

4. Labeling of Weight Control Foods—0910-0218. Obesity is a major health problem in the United States. These regulations provide for labeling to enable those persons who need to control their weight to identify and evaluate particular foods which may help them to attain and maintain desired weight within the limits of a balanced and nutritious diet program. Respondents: Businesses or other for-profit; Number of Respondents: 82; Number of Responses per Respondent 18.3; Average Burden per Response; 200 hours; Estimated Annual Burden 300,025.

OMB Desk Officer: Shannah Koss-McCallum.

Written comments and recommendations for the proposed information collections should be sent directly to the OMB Desk Officer designated above at the following address: OMB Reports Management Branch, New Executive Office Building, Room 3208, Washington, DC 20503.

Dated: August 22, 1989.

James M. Friedman,

Acting Deputy Assistant Secretary for Health (Planning and Evaluation).

Bureau of Land Management

Montana; Notice of Butte District Grazing Advisory Board Meeting

[MT-070-09-4050-91]

AGENCY: Bureau of Land Management, Butte District Office.

ACTION: Notice of meeting.

SUMMARY: A meeting of the Butte District Grazing Advisory Board will be held Thursday, September 21 in the conference room of the Dillon Resource Area office, 730 N. Montana Street in Dillon, Montana. The meeting will begin at 8 a.m. On the agenda will be a review of proposed range projects throughout the district and discussion of the district's weed program. At about 9 a.m., the board will depart on a field tour in conjunction with the Butte District Advisory Council of points of interest in the Dillon Resource Area.

The meeting and the field tour are open to the public although transportation will not be provided on the field tour for members of the public. Interested persons may make oral statements to the board or file written statements for the board's consideration. Anyone wishing to make oral statements should make prior arrangements with the district manager. Summary minutes of the meeting will be maintained in the district office and will be available for public inspection and reproduction during regular business hours within 30 days following the meeting.

FOR FURTHER INFORMATION CONTACT: Orval L. Hadley, Acting District Manager, Butte District, Bureau of Land Management, Box 3388, Butte, Montana 59702.

Dated: August 17, 1989.

Montana; Notice of Butte District Advisory Council Meeting

[MT-070-09-4050-91]

AGENCY: Bureau of Land Management, Butte District Office.

ACTION: Notice of meeting.

SUMMARY: A meeting of the Butte District Advisory Council will be held Wednesday and Thursday, September 20 and 21. The meeting will begin at 1:00 p.m. on September 20 in the Butte District conference room, 106 North Parkmont (Industrial Park), Butte, Montana. The agenda will include; 1) strategic goals for BLM in Montana, 2) rights-of-way procedures, 3) the bureau's Recreation 2000 program in the Butte district, 4) the weed program, including a cooperative weed free hay area in Madison County and 5) council topics. On September 21 the council will go on a field tour in conjunction with the Butte District Grazing Advisory Board of various points of interest in the Dillon Resource Area. The field tour will depart at 9:00 a.m. from the Dillon

Resource Area office, 730 N. Montana Street in Dillon, Montana.

The meeting and the field tour are open to the public although transportation will not be provided on the field tour for members of the public. Interested persons may make oral statements to the council or file written statements for the council's consideration. Anyone wishing to make oral statements should make prior arrangements with the district manager. Summary minutes of the meeting will be maintained in the district office and will be available for public inspection and reproduction during regular business hours within 30 days following the meeting.

Intent To Prepare Resource Management Plan and Invitation To Participate in Identification of Issues and Planning Criteria

AGENCY: Bureau of Land Management, Roswell District, New Mexico.

ACTION: Notice of intent to prepare resource management plan.

SUMMARY: The BLM, Roswell Resource Area, Roswell, New Mexico, is initiating the preparation of a Resource Management Plan (RMP) which will include an Environmental Impact Statement (EIS). The plan will guide and control future management actions on approximately 1.5 million acres of public land and 2.4 million acres of subsurface, mineral resources managed by the BLM's Roswell Resource Area. The Code of Federal Regulations, title 43, subpart 1600, will be followed for this planning effort. The public is invited to participate in the planning process, beginning with the identification of issues and planning criteria in April 1991.

DATE: Comments relating to the identification of issues and planning criteria will be accepted until September 1991.

ADDRESS: Send comments to Pat Kelley, RMP Team Leader, Bureau of Land Management, Roswell Resource Area, P.O. Drawer 1857, Roswell, New Mexico 88202.

FOR FURTHER INFORMATION CONTACT: Phil Kirk, Area Manager or Pat Kelley, RMP Team Leader, Roswell Resource Area, (505) 624-1790.

SUPPLEMENTARY INFORMATION: The planning area includes the public land and Federal mineral ownership in Quay, Guadalupe, Curry, De Baca, Roosevelt, Lincoln and Chaves Counties in southeastern New Mexico. Anticipated issues to be addressed during development of the RMP include, but are not limited to, the following: (1) Lands in the Roswell Resource Area which could be transferred to other then BLM administration or may require further study, and which lands would be beneficial to BLM programs if acquired; (2) Public land which requires special management practices to protect or enhance significant scenic, riparian, natural, cultural, plant, wildlife, or other values; (3) Public land which requires that legal access be acquired, and on which land should vehicular access be provided.

Management concerns and opportunities include but are not limited to, (1) How the on-going oil and gas activities and operations should be managed; (2) What types of recreation opportunities, settings, and activities should be provided; (3) How the wildlife habitat will be managed; and (4) What the future management of Fort Stanton should be. These preliminary issues, management concerns, and management opportunities are not final. They may be further refined, or additional issues identified through active public participation. The RMP will be developed by an Interdisciplinary Team.

The team will include specialists representing Range, Oil & Gas, Wildlife, Recreation, Archaeology, Lands, Surface Protection, Soils & Watershed, Fire Management, and Non-Energy Minerals. A comprehensive public participation plan has been prepared. It is intended to involve interested or affected parties early and continuously throughout the planning process. The plan emphasizes localized one-to-one contacts, media coverage, direct mailings, and continued coordination with local, State, and other Federal agencies. Meetings to determine the scope of the RMP and to obtain input on the issues will tentatively be held in Roswell, Capitan, and other locations as necessary in April 1990. A scoping package will be issued in early March 1990, giving the times and location for these meetings.

A second set of public meetings will be held in April 1991 for final public input on the issues and planning criteria. Meeting dates and locations will be announced in the planning newsletter which will be issued on at least a bi-yearly basis.

An individual may protest approval of a Proposed Plan only with respect to those items submitted in writing to the Area Manager during the planning process.

Complete records of all phases of the planning process will be available for public review at the Roswell Resource Area located in the Federal Building, 5th and Richardson, Roswell, New Mexico throughout development of the RMP.

A Draft and Proposed Plan including a Draft and Final EIS will be published. This will be followed at the completion of this project by the publication of a Record of Decision and Approved Plan.

Larry L. Woodard,

State Director.

T. 18 N., R. 25 E., secs. 18, 30.
T. 19 N., R. 24 E., sec. 22.

Containing 2,627.52 acres, more or less.

Other realty actions published in the **Federal Register** for exchange of land in these counties are:

Navajo County

A 20346-O published October 20, 1988 affecting 6,356.11 acres.

A 20346-V published April 14, 1989 affecting 959.94 acres.

Apache County

A 23376 published July 6, 1988 affecting 117,430.26 acres.

Excluded from exchange will be lands in proximity to the Petrified National Park proposed for inclusion in the park.

Final determination on disposal will await completion of an environmental analysis.

Individual exchanges will be completed on an equal value basis as determined by appraisal.

All grazing lessees and other affected parties will be notified of pending exchanges.

Copies of the complete legal descriptions may be obtained from the Phoenix District Office, address shown below.

In accordance with the regulations of 43 CFR 2201.1(b), publication of this Notice will segregate the land in (a) and (b) above from appropriation under the public land laws, and the mining laws, but not the mineral leasing laws or Geothermal Steam Act.

The segregation of the above-mentioned land shall terminate upon issuance of a document conveying such land or upon publication in the **Federal Register** of a notice of termination of the segregation; or the expiration of two years from the date of publication, whichever occurs first.

For a period of forty-five (45) days, interested parties may submit comments to the District Manager, Phoenix District Office, 2015 West Deer Valley Road, Phoenix, Arizona 85027.

Dated: August 18, 1989.

Henri R. Bisson,

District Manager.

BILLING CODE 4310-32-M

[AZ-050-4333-12]

Arizona; Yuma District Resource Management Plan

AGENCY: Bureau of Land Management, Interior.

ACTION: Corrections and supplement to notice of intent to prepare Category I amendment to the Yuma District Resource Management Plan, Yuma District, Arizona.

This notice corrects and supplements a **Federal Register** Notice printed in Vol. 54, No. 136, July 18, 1989, p. 30113.

The corrections, which pertain to the changes in the Land Ownership Adjustment and Recreation sections of the Yuma District RMP, are as follows—(a) the changes in the Land Ownership Adjustment section will allow for the disposal through sale or exchange of approximately 3,635 acres of public land not previously identified for disposal, instead of the 4,317.5 acres originally identified in the notice of intent; and (b) the changes in the Recreation section will allow for classification of approximately 610 acres as limited for off-road vehicle use to designated roads and trails, instead of the 560 acres originally identified in the notice of intent.

As a result of the corrections, the lands proposed to be available for disposal through sale or exchange are limited to sections 15, 17, 20, 21, 22, 23, 26, 28, and 29 of T. 4 N., R. 19 W., G&SRM.

The supplement pertains to additional changes in the Recreation section of the

Yuma District RMP. These new changes will allow for withdrawal of the La Posa Long-Term Visitor Area (LTVA) from entry for exploration and development of locatable minerals.

The La Posa LTVA (located south of Quartzsite, Arizona) covers approximately 10,920 acres in sections 1, 2, 3, 4, 5, 8, 9, 10, 11, 12, 14, 15, 16, and 17 of T. 3 N., R. 19 W., and sections 26, 27, 28, 32, 33, 34, 35, and 36 of T. 4 N., R. 19 W., G&SRM. Final acreage and boundaries for this area will be determined at a later date.

A public meeting on the proposed amendment will be held in Quartzsite during the 30-day public comment period.

Dated: August 17, 1989.

Herman L. Kast,

District Manager.

INTERNATIONAL DEVELOPMENT COOPERATION AGENCY

Establishment of the Advisory Committee for the U.S. Trade and Development Program

Pursuant to the provisions of the Federal Advisory Committee Act, notice is hereby given of the establishment of the Advisory Committee for the U.S. Trade and Development Program.

The purpose of the committee is to provide a forum through which TDP and others, including representatives from the private sector, can exchange information, review strategies, and explore areas of mutual interest to assist TDP in being an effective agency for export promotion.

It has been determined by TDP that the committee is necessary and that establishment of the committee is in the public interest.

It is suggested that those who wish more specific information concerning the advisory committee contact Ms. Priscilla Rabb, Director, TDP, Rm 309, S.A.-16, Washington, DC 20523.

Dated: August 11, 1989.

Priscilla Rabb,

Director, TDP.

BILLING CODE 7035-01-M

DEPARTMENT OF JUSTICE

Lodging a Final Judgment by Consent Pursuant to the Comprehensive Environmental Response, Compensation and Liability Act; Champion International Corp.

Notice is hereby given that on August 15, 1989, a proposed Consent Decree in *United States of America* v. *Champion International Corporation,* Civil Action No. CV-89-127-M-CCL, was lodged with the United States District Court for the District of Montana.

The proposed consent decree requires Champion International Corporation to implement the December 1988 Record of Decision of the United States Environmental Protection Agency (EPA) to address the release and threatened release of hazardous substances at the Champion Lumber Mill, U.S. Highway 2, Libby, Montana. The remedy to be conducted by Champion includes clean up of contaminated soils and shallow groundwater, and study of the deep groundwater contamination at the site for possible future clean up. The decree also requires Champion to pay $585,000 toward the federal government's past costs incurred in connection with the site, and to pay all future oversight costs to be incurred by the United States at the site.

The Department of Justice will receive comments relating to the proposed Consent Decree for a period of thirty days from the date of publication of this notice. Comments should be addressed to the Acting Assistant Attorney General, Land and Natural Resources Division, Department of Justice, Washington, DC, 20530, and should refer to *United States* v. *Champion International Corporation,* Civil Action No. CV-89-127-M-CCL, DOJ Ref. No. 90-11-3-379. The proposed Consent Decree may be examined at the office of the United States Attorney, District of Montana, Room 564, Federal Building, 301 S. Park Avenue, Helena, Montana, or at the office of the Lincoln County Sanitarian, 418 Mineral Avenue, Libby, Montana. Copies of the Consent Decree may also be examined and obtained in person at the Environmental Enforcement Section, Land and Natural Resources Division, Department of Justice, Room 1517, Tenth and Pennsylvania Avenue, NW., Washington, DC. A copy of the proposed Consent Decree may be obtained by mail from the Environmental Enforcement Section, Land and Natural Resources Division, Department of Justice, Box 7611, Ben Franklin Station, Washington, DC 20044. When requesting a copy, please present or enclose a check in the amount of $5.40 (ten cents per page reproduction costs) payable to the Treasurer of the United States.

Donald A Carr,

Acting Assistant Attorney General Land and Natural Resources Division.

BILLING CODE 4410-01-7

Lodging of Consent Decree Pursuant to the Clean Water Act; Gardinier, Inc., et al.

In accordance with Departmental Policy, 28 CFR 50.7, notice is hereby given that a proposed consent decree in *United States* v. *Gardinier, Inc., et al.,* Civil Action No. 89-1120-CIV-T-10B, was lodged with the United States District Court for the Middle District of Florida, Tampa Division, on August 11, 1989. This agreement resolves a judicial enforcement action brought by the United States against the defendants which alleged violations of the Clean Water Act arising from the discharge of a hazardous substance into the Alafia River near Tampa Bay.

The proposed consent decree provides for payment of $40,000 in civil penalties in settlement of the action.

The Department of Justice will receive for a period of thirty (30) days from the date of this publication, comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justics, Washington, DC 20530, and should refer to *United States* v. *Gardinier, Inc., et al.,* D.J. Ref. 90-5-1-1-3319.

The proposed consent decree maybe examined at the office of the United States Attorney, Middle District of Florida, Robert Timberlake Bldg., Rm. 410, 500 Zack Street, Tampa, Florida 33602. Copies of the consent decree may be examined at the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice, Room 1517, Ninth Street and Pennsylvania Avenue, NW., Washington, DC 20530. A copy of the proposed consent decree may be obtained in person or by mail from the Environmental Enforcement Section of the Department of Justice. In requesting a copy, please enclose a check in the amount of sixty (60) cents (10 cents per page reproduction cost) payable to the Treasurer of the United States.

Donald A. Carr,

Acting Assistant Attorney General, Land and Natural Resources Division.

BILLING CODE 4410-01-M

Lodging of Final Consent Decree Pursuant to the Clean Water Act; City of Neptune Beach, FL, and the State of Florida

In accordance with Department policy, 28 CFR 50.7, notice is hereby given that on the 14th day of August, 1989, a proposed final consent decree in *United States* v. *City of Neptune Beach, Florida, and the State of Florida,* (M.D. Fla.), was lodged with the United States District Court for the Middle District of Florida. The complaint sought the imposition of injunctive relief and civil penalties against the City of Neptune Beach ("City") and the State of Florida for violations of sections 301 and 402 of the Clean Water Act, 33 U.S.C. 1311 and 1342.

The proposed consent decree imposes a permanent injunction against future violations of the Clean Water Act, and establishes a court-ordered compliance schedule to require the City to complete the necessary construction and improvements to bring its discharges within the terms and limitations of a valid National Pollution Elimination System ("NPDES" permit). It also imposes a civil penalty of $18,300.

The Department of Justice will receive for a period of thirty (30) days from the date of this publication comments relating to the proposed consent decree. Comments should be addressed to the Acting Assistant Attorney General, Land and Natural Resources Division, Department of Justice, Washington, D.C. 20530, and should refer to *United States* v. *City of Neptune Beach, Florida, and the State of Florida,* D.J. Ref. 90-5-1-1-3199.

The proposed consent decree may be examined at the Office of the United States Attorney, 409 Post Office Building, 311 West Monroe Street, Jacksonville, Florida 32201 and at the U.S. Environmental Protection Agency, 345 Courtland Street, NE., Atlanta, Georgia 30364. Copies of the consent decree may also be examined at the Environmental Enforcement Section, Land and Natural Resources Division, Department of Justice, Room 1647, Ninth Street and Pennsylvania Avenue, NW., Washington, DC 20530. Copies of the proposed consent decree may be obtained in person or by mail from the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice.

In requesting a copy, please enclose a check in the amount of $2.90 (10 cents per page reproduction cost) payable to the "Treasurer of the United States".

Donald A. Carr,

Acting Assistant Attorney General, Land and Natural Resources Division.

BILLING CODE 4410-01-M

DEPARTMENT OF LABOR

Employment Standards Administration, Wage and Hour Division

Minimum Wages for Federal and Federally Assisted Construction; General Wage Determination Decisions

General wage determination decisions of the Secretary of Labor are issued in accordance with applicable law and are based on the information obtained by the Department of Labor from its study of local wage conditions and data made available from other sources. They specify the basic hourly wage rates and fringe benefits which are determined to be prevailing for the described classes of laborers and mechanics employed on construction projects of a similar character and in the localities specified therein.

The determinations in these decisions of prevailing rates and fringe benefits have been made in accordance with 29 CFR Part 1, by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended, 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR part 1, Appendix, as well as such additional statutes as may from time to time be enacted containing provisions for the payment of wages determined to be prevailing by the Secretary of Labor in accordance with the Davis-Bacon Act. The prevailing rates and fringe benefits determined in these decisions shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged on contract work of the character and in the localities described therein.

Good cause is hereby found for not utilizing notice and public comment procedure thereon prior to the issuance of these determinations as prescribed in 5 U.S.C. 553 and not providing for delay in the effective date as prescribed in that section, because the necessity to issue current construction industry wage determinations frequently and in large volume causes procedures to be impractical and contrary to the public interest.

General wage determination decisions, and modifications and supersedeas decisions thereto, contain no expiration dates and are effective from their date of notice in the **Federal Register**, or on the date written notice is

received by the agency, whichever is earlier. These decisions are to be used in accordance with the provisions of 29 CFR parts 1 and 5. Accordingly, the applicable decision, together with any modifications issued, must be made a part of every contract for performance of the described work within the geographic area indicated as required by an applicable Federal prevailing wage law and 29 CFR part 5. The wage rates and fringe benefits, notice of which is published herein, and which are contained in the Government Printing Office (GPO) document entitled "General Wage Determinations Issued Under The Davis-Bacon And Related Acts," shall be the minimum paid by contractors and subcontractors to laborers and mechanics.

Any person, organization, or governmental agency having an interest in the rates determined as prevailing is encouraged to submit wage rate and fringe benefit information for consideration by the Department. Further information and self-explanatory forms for the purpose of submitting this data may be obtained by writing to the U.S. Department of Labor, Employment Standards Administration, Wage and Hour Division, Division of Wage Determinations, 200 Constitution Avenue, NW., Room S-3504, Washington, DC 20210.

Modifications to General Wage Determination Decisions

The numbers of the decisions listed in the Government Printing Office document entitled "General Wage Determinations Issued Under the Davis-Bacon and Related Acts" being modified are listed by Volume, State, and page number(s). Dates of publication in the **Federal Register** are in parentheses following the decisions being modified.

General Wage Determination Publication

General wage determinations issued under the Davis-Bacon and related Acts, including those noted above, may be found in the Government Printing Office (GPO) document entitled "General Wage Determinations Issued Under The Davis-Bacon And Related Acts". This publication is available at each of the 50 Regional Government Depository Libraries and many of the 1,400 Government Depository Libraries across the country. Subscriptions may be purchased from: Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, (202) 783-3138.

When ordering subscription(s), be sure to specify the State(s) of interest, since subscriptions may be ordered off for any or all of the three separate volumes, arranged by State. Subscriptions include an annual edition (issued on or about January 1) which includes all current general wage determinations for the States covered by each volume. Throughout the remainder of the year, regular weekly updates will be distributed to subscribers.

Signed at Washington, DC this 18th day of August 1989.

Robert V. Setera,

Acting Director, Division of Wage Determinations.

Employment and Training Administration

Indian and Native American Programs; Final Total Allocations, Allocation Formulas, and Formula Rationales for Job Training Partnership Act Program Year 1989 Title IV-A, Regular Program, and Calendar Year 1989 (Program Year 1988) Summer Youth Employment and Training Program

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice.

SUMMARY: The Employment and Training Administration of the Department of Labor is publishing the final Native American allocations, allocation formulas and formula rationales for the Program Year 1989 (July 1, 1989-June 30, 1990) Title IV-A regular program funded under the Job Training Partnership Act and for the Calendar Year 1989 Summer Youth Employment and Training Program funded under Title II-B of the Job Training Partnership Act.

FOR FURTHER INFORMATION CONTACT: Mr. Carmelo J. Milici. Telephone: (202) 535-0507.

SUPPLEMENTARY INFORMATION: Pursuant to section 162 of the Job Training Partnership Act (JTPA), the Employment and Training Administration (ETA) of the Department of Labor (DOL) publishes the final allocations.

U.S. DEPARTMENT OF LABOR—EMPLOYMENT AND TRAINING ADMINISTRATION PY 1989 TITLE IV-A AND PY 1988 II-B (SUMMER 1989) allocation formulas and rationales for those formulas for Native American grantees to be funded under JTPA, Title IV–A, Section 401 and JTPA Title II–B. The total amounts to be allocated are $58,998,000 for the Program Year 1989 JTPA, Title IV–A, Section 401 regular program, and $13,058,321 for the Calendar Year 1989 JTPA, Title II–B, Summer Youth Employment and Training Program (SYETP).

This information, along with individual grantee planning estimates, was published in the **Federal Register** as a proposal on December 6, 1988. 53 FR 49250.

Written comments were invited from the public. One was received regarding the inadvertent omissions of a Title II–B planning estimate of $2,370.00 for one grantee. The inclusion of this amount in the final allocations resulted in a minor reduction in the final Title II–B allocations to all eligible grantees. Certain grantees gained or lost all or part of their proposed allocations as a result of the grantee designation process for Program Years 1989/90. The planning estimates published as a Notice in the **Federal Register** of December 6, 1988 have been changed to account for the above conditions and are published here as final allocations.

The formula for JTPA, Title IV–A, Section 401 provides that 25 percent of the funding will be based on the number of unemployed Native Americans in the grantee's area, and 75 percent will be based on the number of poverty-level Native Americans in the grantee's area.

The formula for allocating the JTPA, Title II–B, SYETP funds divides the funds among eligible recipients based on the proportion that the number of Native American youths in a recipient's area bears to the total number of Native American youths in all eligible recipients' areas.

The rationale for the above formulas is that the number of poverty-level persons, unemployed persons and youth among the Native American population is indicative of the need for training and employment funds.

Statistics on poverty-level persons, unemployed persons and youth among Native Americans used in the above programs are derived from the Decennial Census of the population, 1980.

Signed at Washington, DC, this 10th day of August 1989.

Roberts T. Jones,

Assistant Secretary of Labor.

BILLING CODE 4510-30-M

Labor Surplus Area Classifications Under Executive Orders 12073 and 10582; Addition to the List of Labor Surplus Areas

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice.

DATE: The addition to the list of labor surplus areas is effective June 1, 1989.

SUMMARY: The purpose of this notice is to announce an addition to the list of labor surplus areas.

FOR FURTHER INFORMATION CONTACT: William J. McGarrity, Labor Economist, Employment and Training Administration, 200 Constitution Avenue, NW., Room N4470, Attention: TEESS, Washington, DC 20210. Telephone: 202-535-0185.

SUPPLEMENTARY INFORMATION: Executive Order 12073 requires executive agencies to emphasize procurement set-asides in labor surplus areas. The Secretary of Labor is responsible under that Order for classifying and designating areas as labor surplus areas. Executive agencies should refer to Federal Acquisition Regulation Part 20 (48 CFR Part 20) in order to assess the impact of the labor surplus area program on particular procurements.

Under Executive Order 10582 executive agencies may reject bids or offers of foreign materials in favor of the lowest offer by a domestic supplier, provided that the domestic supplier undertakes to produce substantially all of the materials in areas of substantial unemployment as defined by the Secretary of Labor. The preference given to domestic suppliers under Executive Order 10582 has been modified by Executive Order 12260. Federal Acquisition Regulation Part 25 (48 CFR part 25) implements Executive Order 12260. Executive agencies should refer to Federal Acquisition Regulation Part 25 in procurements involving foreign businesses or products in order to assess its impact on the particular procurements.

The Department of Labor regulations implementing Executive Orders 12073 and 10582 are set forth at 20 CFR part 654, Subparts A and B. Subpart A requires the Assistant Secretary of Labor to classify jurisdictions as labor surplus areas pursuant to the criteria specified in the regulations and to publish annually a list of labor surplus areas. Pursuant to those regulations the Assistant Secretary of Labor published the annual list of labor surplus areas on October 6, 1988 (53 FR 39367).

Subpart B of part 654 states that an area of substantial unemployment for purposes of Executive Order 10582 is any area classified as a labor surplus area under Subpart A. Thus, labor surplus areas under Executive Order 12073 are also areas of substantial unemployment under Executive Order 10582.

The area described below has been classified by the Assistant Secretary of Labor as a labor surplus area pursuant to 20 CFR 654.5(b) (48 FR 15615 April 12, 1983) and is effective June 1, 1989.

The list of labor surplus areas is published for the use of all Federal agencies in directing procurement activities and locating new plants or facilities.

Signed at Washington, DC on May 31, 1989.

Roberts T. Jones,

Assistant Secretary of Labor.

ADDITION TO THE ANNUAL LIST OF LABOR SURPLUS AREAS

[June 1, 1989]

Pension and Welfare Benefits Administration

Advisory Council on Employee Welfare and Pension Benefits Plans; Work Group Meeting

Pursuant to the authority contained in section 512 of the Employee Retirement Income Security Act of 1974 (ERISA), 29 U.S.C. 1142, a public meeting of the Work Group on Enforcement of the Advisory Council on Employee Welfare and Pension Benefit Plans will be held at 9:00 a.m., Tuesday, September 12, 1989, in Suite N-3437, U.S. Department of Labor Building, Third and Constitution Avenue, NW., Washington, DC 20210.

This seven member work group was formed by the Advisory Council to study issues relating to enforcement for employee welfare plans covered by ERISA.

It is anticipated that the twelve month

3:00 p.m.—Adjourn.

for recent Ph.D.'s who specialize or wish

The purpose of the meeting will be to organize the Work Group, set its agenda for the year, discuss the October 1988-March 1989 Semiannual Report of the Labor Department's Inspector General to Congress concerning the ERISA enforcement plan, and to accept comments on the Report from the organizations described below which have been invited to participate.

The agenda will include the following items:

1. Organization of the Work Group;
2. Discussion of the Work Group's purpose and agenda for the year;
3. Work Group Members' statements regarding the Inspector General's Semiannual Report;
4. Comments by representatives of the Office of the Inspector General (invited);
5. Comments by representatives of the Pension and Welfare Benefit Administration;
6. Comments by representatives of the Office of the Solicitor of Labor;
7. Comments by representatives of the U.S. Department of Justice (invited);
8. Comments by representatives of the American Institute of Certified Public Accountants;
9. Statements from the Public;
10. Adjourn.

The work group will also take testimony and or submissions from employee representatives, employer representatives and other interested individuals and groups regarding the subject matter.

Individuals, or representatives of organizations, wishing to address the work group should submit written requests on or before September 7, 1989 to William E. Morrow, Executive Secretary, ERISA Advisory Council, U.S. Department of Labor, Suite N–5677, 200 Constitution Avenue, NW., Washington, DC 20210. Oral presentations will be limited to ten minutes, but witnesses may submit an extended statement for the record.

Organizations or individuals may also submit statements for the record without testifying. Twenty (20) copies or such statements should be sent to the Executive Secretary of the Advisory Council at the above address. Papers will be accepted and included in the record of the meeting if received on or before September 7, 1989.

Signed at Washington, DC this 21st day of August, 1989.

Ann L. Combs,

Deputy Assistant Secretary for Policy, Pension and Welfare Benefits Administration.

BILLING CODE 4510-29-M

Advisory Council on Employee Welfare and Pension Benefits Plans; Work Group Meeting

Pursuant to the authority contained in section 512 of the Employee Retirement Income Security Act of 1974 (ERISA), 29 U.S.C. 1142, a public meeting of the Work Group on Access to Health Care of the Advisory Council on Employee Welfare and Pension Benefits Plans will be held at 10:00 a.m., Monday, September 11, 1989, in Suite S–4215, Department of Labor Building, Third and Constitution Avenue, NW., Washington, DC 20210.

This six member work group was reconstituted by the Advisory Council to continue to study issues relating to access to health care, and is a carry over from a similar work group that was initially formed by the Advisory Council in 1988 to pursue this subject.

In 1988, the prior work group held hearings on March 24, 1988, July 13, 1988 and September 9, 1988—at which testimony was received from governmental and labor-management witnesses concerning universal health access legislation at the federal and state level—and subsequently identified three initial areas of concern that pertain to regulatory governance under ERISA: (1) The scope of federal preemption under mandatory employer health plan legislation, (2) potential governmental jurisdictional conflicts and duplication with respect to the enforcement of access to health care legislation, and (3) the continued appropriateness of ERISA benefit claim dispute procedures with respect to health benefit claims arising directly from mandated statutory provisions. In the latter part of 1988 the Work Group prepared and submitted to the Advisory Council a preliminary discussion paper with respect to issues arising under (1), the scope of federal preemption under mandatory employer health plan legislation.

At its September 11, 1989 meeting, the Access to Health Care Work Group will resume its endeavor to identify issues and options for solutions in connection with the three areas of concern outlined above. Also, the work group will attempt to determine whether areas of concern in addition to the three outlined above require their study. Finally, the work group will attempt to formalize its agenda and procedure for the remainder of 1989 and 1990.

Individuals, or representatives of organizations, wishing to address the work group should submit written requests on or before September 6, 1989 to William E. Morrow, Executive Secretary, ERISA Advisory Council, U.S. Department of Labor, Suite N–5677, 200 Constitution Avenue, NW., Washington, DC 20210. Oral presentations will be limited to ten minutes, but witnesses may submit an extended statement for the record.

Organizations or individuals may also submit statements for the record without testifying. Twenty (20) copies of such statements should be sent to the Executive Secretary of the Advisory Council at the above address. Papers will be accepted and included in the record of the meeting if received on or before September 6, 1989.

Signed at Washington, DC this 21st day of August, 1989.

Ann L. Combs,

Deputy Assistant Secretary for Policy, Pension and Welfare Benefits Administration.

BILLING CODE 4510-29-M

LEGAL SERVICES CORPORATION

Request for Comments on a Grant Award to SUPPORT

AGENCY: Legal Services Corporation.

ACTION: The Legal Services Corporation (LSC) announces its intention to award a one-time, non-recurring grant of $50,000 in fiscal year 1989 to SUPPORT. The purpose for making this grant is to provide legal services in child support cases pending in the Allegheny County Family Division courts. These services will be provided to client eligible residents residing in or near Allegheny County, Pennsylvania.

DATE: All comments and recommendations must be received by the Office of Field Services of LSC on or before September 25, 1989.

FOR FURTHER INFORMATION CONTACT: Victoria O'Brien, Counsel to the Director, or Charles T. Moses, Associate Director, Legal Services Corporation, Office of Field Services, 400 Virginia Ave., SW., Washington, DC 20024–2751, (202) 863–1837.

SUPPLEMENTARY INFORMATION: The Legal Services Corporation is the national independent organization charged with implementing the federally funded system of legal services for low-income people. It hereby announces its intention to award a grant in the amount of $50,000 to SUPPORT. The grantee will use this grant to finance the provision of legal services by law students supervised by a licensed attorney. These services will assist the client eligible population residing in or near Allegheny County, Pennsylvania with child support matters.

It is anticipated that the twelve month term of this grant will extend from September 25, 1989 to September 24, 1990.

Interested persons are invited to submit written comments and/or recommendations concerning the above to Victoria O'Brien or Charles T. Moses.

Dated: August 21, 1989.

Ellen J. Smead,

Acting Director, Office of Field Services.

BILLING CODE 7536-01-M

NATIONAL SCIENCE FOUNDATION

[OMB Number 3145–0058]

Postdoctoral Fellowships and Professional Development Awards in Science, Technology and Society

Objectives and Scope

The Program for Studies in Science, Technology, & Society (SSTS) is pleased to issue guidelines for postdoctoral fellowships and professional development awards. SSTS considers proposals for projects that examine the social, economic, intellectual and political contexts that govern the development and use of science and technology. Postdoctoral fellowships and professional development awards are made to scholars who wish to improve and expand their skills in historical, philosophical, ethical, normative, or social science studies of science, engineering and technology.

The major purpose of these awards is to link opportunities for original research to further training and study experiences. Proposals are expected to have both a research component and an educational plan which is developed in conjunction with a host scholar.

Two kinds of awards will be made: postdoctoral fellowships and professional development awards. Postdoctoral fellowships are intended for recent Ph.D.'s who specialize or wish to specialize in an area of science, technology and society studies (for instance, history and philosophy, ethics, sociology, psychology, or anthropology of science or technology). Professional development awards are intended to support established scholars from the field of science, technology and society studies to improve their understanding of science and technology *or* to support experienced scientists, social scientists and engineers wishing to develop or improve science or technology studies skills. Depending on recipients' backgrounds, these awards should (1) enhance methodological and technical skills in science, technology and society studies or in areas of natural or physical sciences, mathematics or engineering; (2) allow recipients to undertake original independent research; and (3) pursue special studies while working with a senior sponsoring scholar or scholars.

Eligibility

The research and educational activities proposed for the awards may be in any SSTS field. Projects in twentieth century science and technology, including science and technology policy, are especially encouraged. Projects examining social, economic, intellectual and political issues for science and engineering education are eligible. Specifically ineligible are studies in medicine and society which have a public health or clinical orientation.

To be eligible for fellowships or professional development awards in SSTS, applicants must be nationals of the United States, that is, citizens of the United States or native residents of a possession of the United States. Citizens of other countries who have applied for United States citizenship or who have permanent residency status are not eligible.

Applicants for postdoctoral fellowships must have been awarded their first doctoral degree within five years of the deadline for application or realistically expect to earn this degree by no later than one year after the deadline. Postdoctoral fellows must have earned the Ph.D. degree before tenure may begin. Persons with pre-doctoral degrees may be eligible for doctoral dissertation support through the Foundation's doctoral dissertation research support programs, explained in NSF publication 89–32.

Normally applicants for professional development awards must have at least five years of advanced teaching and/or research experience in science, social science or engineering, history, philosophy, ethics, or the social study of science, engineering or technology. Scholars without Ph.D.'s who wish to be considered for professional development awards must demonstrate to the satisfaction of an external review panel that their training, professional status, and experience are equivalent to the requirement for the Ph.D., and that their credentials include at least five years of postdoctoral-level research experience and a record of publications or comparable professional accomplishment.

Project Sites

During the tenure of their awards, recipients must work in established and fiscally responsible nonprofit host institutions (U.S. or foreign). The institutions should clearly offer the opportunity to enhance the training and methodological sophistication of the award recipients or offer exceptional tutorial or collaborative relationships consistent with enhancement of research quality. Accessibility to laboratories and other research sites, or to relevant archival materials should also be taken into consideration in selecting institutional affiliations.

All arrangements for affiliations with senior scholars and institutions are the responsibility of the applicant. Applications must include letters from the host institutions, signed by authorized officials, affirming that the applicant will be welcome and will be provided with adequate space and basic services. Applicants must provide statements from the senior scholars with whom they plan to work, indicating a commitment to consultation and assistance in the applicant's research and learning program during the requested tenure period. Applicants who need assistance in identifying suitable hosts are encouraged to contact the SSTS Program to discuss possibilities. For information, write or call 202–357–9894.

Preference will be given to applicants who move to new institutions and research environments with which they have not been affiliated at the graduate or postgraduate level, or with which they will have been affiliated for no more than three months prior to the start of fellowship tenure. Applicants who wish to affiliate with institutions with which they have had prior association should have special justification for such arrangements in their proposals.

Preference among professional development applicants will be given those who affiliate with host scholars from disciplines different from the category in which they have their degree or equivalent. Thus, a natural scientist who affiliates with a philosopher would be preferred to one who affiliates with another natural scientist. Similarly, an historian who affiliates with an engineer would be preferred to one who affiliates with another historian.

Tenure, Stipends, and Allowances

Postdoctoral fellowships are generally awarded for one year of full-time research though the funds may be used over a two year period. Fellowships provide stipends of $24,000, payable at the rate of $2,000 per month; special allowances of $2,000 for supplies, special travel, publication expenses, and other research related costs; and separate institutional allowances of $2,000 (for domestic host institutions only). Institutional allowances will be paid directly to U.S. host institutions to partially defray administrative costs incurred in conjunction with the fellowships. No allowances for dependents are available.

Professional development awards may be used to support full or half-time activities for up to two years. Plans for less than half-time or for intermittent tenures should provide special justification. Total stipends will not exceed $36,000. Applicants are encouraged to supplement this support from sabbatical pay and other souces. Special allowances of $2,000 are available for supplies, special travel, publication expenses and other research related costs. Institutional allowances of $2,000 (for domestic host institutions only) will be paid directly to U.S. host institutions to defray costs incurred in conjunction with the awards. Up to $3,000 will be available for moving expenses if necessary.

Evaluation and Selection of Awardees

Evaluation criteria include: the merit of the educational program that is proposed; the degree of enhancement of the applicant's methodological skills and/or knowledge of science and technology; the significance and intrinsic merit of the proposed research; the perceived research competence and potential of the applicant; and the suitability and availability of the sponsoring senior scholar at the host institution. The nature and degree of cross-disciplinary interchange and interaction will be given significant weight, especially for professional development awards. Judicious selection of a research problem, logical organization of the learning program, clarity in project design and description, and lucid writing will weigh heavily in the evaluation process. Additional factors include: evidence of past research accomplishments (especially those documented through papers published in high-quality, peer-reviewed journals); suitability of the host institution; likely effect of the proposed project on the future research development of the applicant; and the potential impact of the project.

Awards will be made by the National Science Foundation on the basis of the recommendations of a panel of experts applying the above criteria, with due consideration of impact of the awards on studies in science, technology and society. Successful applicants will be notified by letter six months after the closing date.

Conditions of Appointment

Unless explained in the proposal and approved by NSF, postdoctoral fellows will be expected to devote full time to appropriate research and studies during the tenure of the Fellowship; recipients of professional development awards will generally be expected to devote at least half-time during their tenures. All recipients of awards are expected to pursue the program for which the award was granted. Major changes in the research or learning plan, in tenure, or in institutional affiliation will require prior Foundation approval. Under exceptional circumstances, with NSF concurrence, research sites or host institutions may be changed.

The annualized salaries of the recipients cannot be augmented by receipt of the award. Professional Development Award recipients may use sabbatical leave pay along with this award. Alternatively or additionally, institutions may supplement stipends for both fellows and professional development award recipients without prior permission from the Foundation, provided that such supplements accord with established institutional policies. Supplements may not be conditioned on any requirement for duties in addition to normal activities of the recipients and may involve teaching only to the extent that the recipients conduct or participate in seminars clearly related to their programs. In the context of these guidelines, funds that the institution has obtained from external (including Federal) sources may be considered institutional funds. When appropriate, NSF project grants may be used for supplementation to recipients of these awards for duties which are related to their award programs.

Within 90 days of the conclusion of the tenure of each award, a brief final report using NSF Form 98A must be submitted to SSTS.

Intellectual Property Rights

The National Science Foundation claims no rights to any inventions or writings that might result from these awards. Recipients should note their obligation to include an acknowledgement of NSF support (citing an award number) and a disclaimer of NSF responsibility for the impact of any inventions or writing that might result from these awards.

Privacy Act Notice

The application forms request certain information pursuant to the National Science Foundation Act of 1950, as amended (42 U.S.C. 1861 et seq.). The information concerning citizenship, field of study, and prior educational experience is used to determine eligibility for this competition. Personal data such as social security numbers are used in correlating application information and materials, and for distinguishing applicants with similar names. The remaining information assists reviewing panelists in evaluating qualifications for the awards. The information supplied will be used and disclused only in connection with the evaluation of projects, the selection of award recipients, and the administration of awards. It will be used for statistical reports in a form that will not allow identification of individual applicants. Other than these uses, the information will be held in confidence to the extent permitted by law.

Post-Project Review

Selected award recipients may be invited to participate in a special NSF-sponsored symposium focused on their activities under this program's support. They may be asked either to present papers or participate as discussants.

Application Procedures and Materials

To be eligible for consideration, as application must be complete. The signed original and all copies should be printed on only one side of the paper. Except as may be modified by this announcement, all applications should follow the standard NSF guidelines in "Grants for Research and Education in Science and Engineering," (GRESE, NSF 83–57, rev. March, 1989). Reproductions of all forms are acceptable. Except for the "Statement from Senior Advisor", all forms are contained in GRESE.

NSF should be sent ten (10) collated sets of the proposal containing (in the order listed below):

(a) The application cover page [Appendix III of GRESE]. In the upper left box, indicate for consideration by "SSTS Postdoctoral Fellowship Award", or "SSTS Professional Development Award", depending on which is being applied for. In the upper right box, indicate the number of this announcement, NSF 89– . In the box marked submitting organization, put "Individual Award". Complete the questions at the bottom of the form concerning drug-free work place, delinquency, etc. Applicants should sign the cover page in the space marked "Authorized Oraganizational Rep.";

(b) A project summary of 200 words or less written to stand alone;

(c) The proposal text containing a training/study and research plan. This section should not exceed eight (8) single-spaced typewritten pages. The text should include a discussion of the objectives, methods and significance of the research during the tenure period, and the studies in the host discipline or related disciplines that will be undertaken over the period of the award;

(d) A personal statement of no more than one single-spaced typewritten page. This statement should describe the applicant's career goals in the research areas covered by SSTS, and the role that the project, sponsoring senior scholar, and host institution will play in enhancing those goals;

(e) A Summary Proposal Budget [Appendix IV, GRESE]. Use the feft column. List number of Calendar Months and total stipend request under "Senior Personnel" A–1. List special allowance and, for Professional Development Awards, moving expenses under "Other Direct Costs" G–6. List the Institutional Allowance for domestic institutions under "Indirect Costs (I.);

(f) The statement, [Appendix I in this Announcement] from the senior scholar at the proposed host institution indicating agreement to work with the applicant if the award is made;

(g) A letter from the host institution, signed by an authorized official, affirming that if the award is made, the applicant will be provided with adequate space and basic services.

(h) Complete, up-to-date *curriculums vitae* for the applicant and the host scholar;

(i) If the applicant has received an NSF award in the past five years, a section entitled "Results from Prior NSF Support" is required, consisting of no more than a single additional page for each prior award. Each statement should include the award number, amount and duration of support, title of the project, summary of results, and list of publications acknowledging the NSF award;

(j) Postdoctoral applicants should provide a copy of their dissertation abstract, the date Ph.D was or is expected to be received, and a statement of the relationship (if any) of the proposed award to the applicant's dissertation work;

(k) A "Current and Pending Support" Statement [Appendix VI, GRESE];

(l) Three letters of recommendation may be attached. New Ph.D's should, in general, obtain one of these letters from their thesis adviser. A copy of the applicant's training/study and research plan should be provided to these referees;

(m) A copy of NSF Form 1225, "Information about Principal Investigators/Project Directors" [Appendix II, GRESE] should be clipped to the cover page of the original signed proposal.

Timetable

Proposal submission deadline: Proposals must be received in NSF by November 15 of each year.

Award announcement: During the following May.

Tenure may begin any time after June 1 of the award year and before June 1 of the following year.

Address

Send the original and 8 copies of the application to: Proposal Processing Unit, Room 223, National Science Foundation, 1800 G St. NW., Washington DC 20550.

Send one information copy directly to: Studies in Science, Technology and Society (SSTS) Program, Division of Instrumentation and Resources, Room 312, National Science Foundation, Washington DC 20550.

The Foundation welcomes proposals on behalf of all qualified scholars, and strongly encourages women, minorities and persons with disabilities to compete fully in the program described in this document. Facilitation Awards for Handicapped Scientists and Engineers (FAH) provide support for special assistance or equipment to enable investigators, students, or staff with disabilities to work on an NSF-supported project. See the FAH announcement (NSF 89–), or contact the FAH coordinator (202/357–7456).

In accordance with Federal statutes and regulations and NSF policies, race, color, age, sex, national origin, or disability shall not be used against, deny benefits to, or exclude any person from participation in any program or activity receiving financial assistance from the National Science Foundation.

The foundation provides awards for research in the sciences and engineering. Award recipients are wholly responsible for the conduct of such research and preparation of the results for publication. The foundation, therefore, does not assume responsibility for such findings or their interpretation.

NSF has TDD (Telephonic Device for the Deaf) capability which enables individuals with hearing impairment to communicate with the Division of Personnel and Management for information relating to NSF programs, employment, or general information. This number is (202) 357-7492.

(Catalogue of Federal Domestic Assistance: 47.051 Biological, Behavioral and Social Sciences)

Appendix I—National Science Foundation, Studies in Science, Technology and Society; Information From Scholarly Advisor

__________ has applied for an NSF Postdoctoral or Professional Development Award in Science, Technology and Society and proposes to conduct a research and study project at your institution. Selection of award recipients will be based on the value of the educational and study program you will undertake with the applicant, the significance and intrinsic merit of the proposed project, the perceived research competence and potential of the applicant, and the suitability and availability of the sponsoring senior scholar and host institution. On an attached page, please briefly describe your qualifications and current research and explain how the applicant's project and the study plan which you have developed with the applicant would fit into your program. It would be helpful to describe other persons with whom the awardee would work both in research and study. Also needed is an abbreviated version of your *curriculum vitae* (limit publication list to the past five years).

Typed Name, Title and Institutional Affiliation: ______________________________

BILLING CODE 7555-01-M

NUCLEAR REGULATORY COMMISSION

Boston Edison Co. Pilgrim Nuclear Power Station; Environmental Assessment and Finding of No Significant Impact Relating to the Restart of Pilgrim Nuclear Power Station

Introduction

In April 1986 the Boston Edison Company, after discussion with NRC Region I officials, decided to keep the Pilgrim Nuclear Power Station shut down and to undertake a substantial corrective action program aimed at ensuring compliance with NRC requirements and enhancing overall plant operational safety. After substantial corrective actions had been taken, the Pilgrim plant resumed operation in December 1988, with the concurrence of the NRC.

Need for the Proposed Action

The restart of the facility was challenged in *Commonwealth of Massachusetts* v. *NRC*, NO. 88-2211 (1st. Cir.). In its decision upholding the restart, the Court concluded that the Pilgrim restart involved NRC action to reinstate the license. The Court went on to hold the NRC actions actions against other related challenges. The case did not raise, nor did the Court address, any National Environmental Protection Act (NEPA) related issued in connection with this matter.

Although the reinstatment action may well be considered part of an overall enforcement process, so that NEPA consideration is not required, the Commission has determined that it is desirable to document the absense of environmental impacts associated with the resumption of licensed operations at the Pilgrim facility.

Environmental Impacts of the Proposed Action

The environmental impacts associated with operation of the Pilgrim Station are thoroughly documented in the Final Environmental Statement (FES) issued by the NRC in connection with the issuance of the full power operating license for the Pilgrim Station in May 1972.

The FES discusses site characteristics, general plant design, and operating characteristics, as well as the environmental impacts of plant construction, the impacts of plant operation, and the impacts of postulated accidents. The FES also discusses a number of other NEPA considerations, including the need for power and alternatives to the facility. The environmental impacts of operation discussed in the FES include land use, water use including biological aquatic impacts, radiological impacts of routine operation, and fuel and solid radioactive waste transportation impacts.

The reinstatement of the license does not affect the site characteristics or basic plant design, although the licensee's corrective actions program included a number of plant improvements designed to enhance the safety of plant operation. These included a self initiated re-review of emergency planning; plant hardware improvements in accordance with the requirements of 10 CFR 50.62 (the Anticipated Transients Without Scram (ATWS) Rule); and significant improvements in containment integrity through the addition of a torus vent and an on-site emergency diesel generator as part of the Pilgrim Safety Enhancement Program (SEP). The SEP is a licensee initiated program which included several modifications, in addition to those identified, to enhance overall plant safety.

1. *Land Use and Water Use Impacts*

The reinstatement of the license does not affect land use in any way other than that addressed in the FES. Land use was evaluated in the FES and has not changed.

Water Use, including aquatic impacts, are discussed at length in the FES. The use of Cape Cod Bay waters for the resumed operation of the facility remains the same as when the plant was licensed in 1972. Operation of the facility produces thermal and other water discharges from the plant. These were evaluated in the FES. Discharges to Cape Cod Bay from resumed plant operation will be consistent with those previously evaluated.

2. *Radiological Impacts*

Routine operations affecting radiological impacts have significantly improved over the past few years as a result of improved effluent release systems and closer control of radioactive effluents as noted in NUREG/CR-2850 (Vol. 7) and NUREG/CR-2907 (Vol. 7). Plant restart does not adversely affect or change routine releases from the facility from those described in the FES. One area of further improvement, which was the subject of plant corrective actions during the shutdown, included plant health physics and improved effluent release controls. The improvements were noted in the most recent NRC report on the Safety Assessment of Licensee Performance (SALP) for Pilgrim, SALP Report No. 50-293/87-99, provided by letter to Boston Edison Company dated July 27, 1988.

Radiological impacts of plant accidents due to plant restart are not increased over those described in the FES. None of the previously analyzed postulated accidents are adversely affected by the resumption of operations at the facility. Indeed, as set forth in the NRC letters to the licensee dated August 21, 1987, and October 12, 1988, related to our assessment of the Pilgrim SEP, there have been significant improvements in plant safety features, procedures, and control. These improvements inlcude additional sources of water to the reactor pressure vessel, containment enhancements, a back-up nitrogen supply, and improvements in the Reactor Core Isolation Cooling System.

3. *Fuel and Solid Radioactive Waste Transportation Impacts*

Impacts associated with fuel and solid radioactive waste transportation are unchanged from those described in the FES except for spent fuel. Transportation impacts associated with spent fuel shipments from the facility are different from those described in the FES because of the modification in spent fuel processing capability in the United States since that time. Fuel is now stored on site until a permanent respository is established. The impacts associated with storage of fuel, however, were considered in the Environmental Assessment (EA) of August 17, 1978, issued in support of Amendment Number 33 to Facility Operating License No. DPR-35 for the Pilgrim Nuclear Power Station. This amendment authorized an increase in the spent fuel storage capacity at the site. The supporting EA concluded that the increased storage capacity will not significantly affect the quality of the human environment and that there will be no environmental impacts attributable to the proposed action other than those described in the FES.

Alternatives to the Proposed Action

The principal alternatives would be to deny restart of the plant. Since plant problems which lead to the shut down have been corrected, and since restart will be controlled through a carefully phased power ascension program with adequate hold points to assure safe resumption of full power operations, there is no safety or environmental reason to deny the phased restart. Power from the Pilgrim facility is still needed for Massachusetts and the New England area. Last summer (1988) the New England Power Pool called for five percent voltage reductions on 10 occasions. Eight of the reductions took place in eastern Massachusetts.

Alternatives Use of Resources

This action does not involve the use of resources not previously related to the operation of the plant.

Agencies and persons Consulted

This assessment was prepared entirely by the NRC staff. No other agencies nor persons were consulted.

Basis and Conclusion for not Preparing an Environmental Impact Statement

Based on this assessment, the staff concludes that there are no significant radiological or nonradiological impacts associated with the restart and operation to licensed power levels of the Pilgrim Station and that the restart and operation to licensed power levels will have no significant impact on the quality of the human environment. Accordingly, the Commission has determined not to prepare an environmental impact statement for this action.

Dated at Rockville, Maryland, this 18th day of August 1989.

For the Nuclear Regulatory Commission.

Daniel G. McDonald,

Acting Director, Project Directorate I-3, Division of Reactor Projects I/II, Office of Nuclear Reactor Regulation.

[FR Doc. 89-20117 Filed 8-24-89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50-247]

Consolidated Edison Co. of New York, Inc.; Consideration of Issuance of Amendment to Facility Operating License and Opportunity for Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR-26, issued to Consolidated Edison Company of New York, Inc. (the licensee), for operation of Indian Point Nuclear Generating Unit No. 2, located in Westchester County, New York. The application for amendment is dated June 20, 1989.

The proposed amendment would authorize expansion of the spent fuel pool storage capacity from its current 980 storage locations to 1,376 storage locations. The increase in storage capacity would be accomplished by replacing the existing free-standing and self supporting fuel storage racks with new high density, free-standing and self supporting fuel storage racks that incorporate a neutron absorber material. The licensee's proposal does not include plans for fuel assembly consolidation. This expansion of the spent fuel pool storage capacity will provide full core off load capability until approximately 2,007.

The proposed amendment would revise Technical Specification (TS) 3.8.B.4 to prohibit movement of fuel out of the reactor core until the reactor has been subcritical for at least 174 hours (a longer delay would be required by proposed TS Figure 3.8-1 if the Hudson River water temperature was above 70°F); add TS 3.8.C.2, which specifies a maximum spent fuel storage pit bulk temperature; modify TS 3.8.D.1 to reflect the analysis for the expanded spent fuel storage capacity; add TS 3.8.D.2, which specifies a minimum spent fuel storage pit boron concentration; relocate the refueling boron concentration requirements for the spent fuel storage pit from TS 5.4.3 to TS 3.8.D.3 with the other requirements for spent fuel storage pit boron concentration; add TS 3.8.E; revise the basis for TS 3.8 to reflect the above; revise TS Table 4.1-2 to reflect the above by requiring a monthly boron concentration sampling frequency for the spent fuel storage pit; and revise TS 5.4.2.B to include the increase in fuel initial enrichment to be stored in the spent fuel storage pit.

Prior to issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

By September 25, 1989, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for a hearing and a petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR part 2. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition; and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first pre-hearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene, which must include a list of the contentions that are sought to be litigated in the matter, and the bases for each contention set forth with reasonable specificity. Contentions shall be limited to matters within the scope of the amendment under consideration. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1-(800) 325-6000 (in Missouri 1-(800) 342-6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to Mr. Robert A. Capra: petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Mr. Brent L. Brandenburg, Esq., 4 Irving Place, New York, New York 10003.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)–(v) and 2.714(d).

If a request for a hearing is received, the Commission's staff may issue the amendment after it completes its technical review and prior to the completion of any required hearing if it publishes a further notice for public comment of its proposed finding of no significant hazards considerations in accordance with 10 CFR 50.91 and 50.92.

The Commission hereby provides notice that this is a proceeding on an application for a license amendment falling within the scope of section 134 of the Nuclear Waste Policy Act of 1982 (NWPA), 42 U.S.C. 10154. Under section 134 of the NWPA, the Commission, at the request of any party to the proceeding, must use hybrid hearing procedures with respect to "any matter which the Commission determines to be in controversy among the parties." The hybrid procedures in section 134 provide for oral argument on matters in controversy, preceded by discovery under the Commission's rules, and the designation, following argument, of only those factual issues that involve a genuine and substantial dispute, together with any remaining questions of law, to be resolved in an adjudicatory hearing. Actual adjudicatory hearings are to be held on only those issues found to meet the criteria of section 134 and set for hearing after oral argument.

The Commission's rules implementing section 134 of the NWPA are found in 10 CFR part 2, Subpart K, "Hybrid Hearing Procedures for Expansion of Spent Nuclear Fuel Storage Capacity at Civilian Nuclear Power Reactors" (published at 50 FR 41662, October 15, 1985) 10 CFR 2.1101 *et seq.* Under those rules, any party to the proceeding may invoke the hybrid hearing procedures by filing with the presiding officer a written request for oral argument under 10 CFR 2.1109. To be timely, the request must be filed within ten (10) days of an order granting a request for hearing or petition to intervene. (As outlined above, the Commission's rules in 10 CFR part 2, Subpart G, and § 2.714 in particular, continue to govern the filing of requests for a hearing or petitions to intervene, as well as the admission of contentions). The presiding officer shall grant a timely request for oral argument. The presiding officer may grant an untimely request for oral argument only upon showing of good cause by the requesting party for the failure to file on time and after providing the other parties an opportunity to respond to the untimely request. If the presiding officer grants a request for oral argument, any hearing held on the application shall be conducted in accordance with the hybrid hearing procedures. In essence, those procedures limit the time available for discovery and require that an oral argument be held to determine whether any contentions must be resolved in an adjudicatory hearing. If no party to the proceeding requests oral argument, or if all untimely requests for oral argument are denied, then the usual procedures in 10 CFR part 2, Subpart G apply.

For further details with respect to this action, see the application for amendment dated June 20, 1989, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555, and at the Local Public Document Room, White Plains Public Library, 100 Martine Avenue, White Plains, New York 10610.

Dated at Rockville, Maryland, this 16th day of August 1989.

For the Nuclear Regulatory Commission

Robert A. Capra,

Director Project Directorate I-1 Division of Reactor Projects I/II Office of Nuclear Reactor Regulation.

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

[Docket No. 301-65]

Proposed Determination Under Section 304 of the Trade Act of 1974, as Amended, Regarding the Republic of Korea's Restrictions on Imports of Beef; Request for Public Comment

AGENCY: Office of the United States Trade Representative.

ACTION: Notice of, and request for written comments on, proposed determination under section 304 of the Trade Act of 1974 (the "Trade Act"), as amended, 19 U.S.C. 2414.

SUMMARY: Pursuant to section 304(a)(2) of the Trade Act, 19 U.S.C. 2414, as amended by section 1301 of the Omnibus Trade and Competitiveness Act of 1988, the United States Trade Representative ("USTR") is required to determine on or before September 28, 1989, whether United States' rights under a trade agreement are being denied by Korea's restrictions on the import of beef and whether the Korean practices at issue are injustifiable or unreasonable, and burden or restrict U.S. commerce, within the meaning of section 301(a)(1)(B) or 301(b)(1), 19 U.S.C. 2411(a)(1)(B) and 19 U.S.C. 2411(b)(1), respectively. The Trade Representative is also considering appropriate action (subject to the specific direction, if any, of the President) in response to Korea's practices. The USTR welcomes written comments regarding such determination or responsive action with respect to the subject Korean practices.

DATES: Written comments from interested persons are due September 25, 1989.

ADDRESS: Comments should be addressed to the Chairman, Section 301 Committee, Office of the United States Trade Representative, Room 223, 600 17th Street, NW., Washington, DC 20506.

FOR FURTHER INFORMATION CONTACT: Gordana Earp, (202) 395-6813, or Les Glad, (202) 395-3077.

SUPPLEMENTARY INFORMATION: On February 16, 1988, the American Meat Institute (AMI) filed a petition under section 302(a) of the Trade Act of 1974, as amended, 19 U.S.C. 2412(a), alleging that the Government of the Republic of Korea maintains a restrictive import licensing system covering all bovine meat, including high-quality beef, and noting that on May 21, 1985, the Korean Government had banned the importation of beef. AMI maintained that this prohibition violates Article XI of the General Agreement on Tariffs and Trade (GATT), nullifies and impairs tariff concessions on beef made by Korea under the GATT, and is otherwise unjustifiable and unreasonable and burdens or restricts U.S. commerce.

On March 28, 1988, the Trade Representative initiated an investigation of these practices (53 FR 16995). On May 4, 1988, the GATT council of Representatives ("GATT Council") authorized establishment of a dispute settlement panel, under GATT Article XXIII:2, to examine the United States complaint regarding Korea's import restrictions on beef.

In July 1988 Korea announced a 14,500 MT quota for beef imports for the second half of 1988, during which period the value of U.S. beef exports to Korea was approximately $25.6 million. The 1989 quota was set at 50,000 MT. In the period January-May, 1989, the value of U.S. beef exports to Korea was approximately $41.1 million. (Source: U.S. Census data.)

On May 24, 1989, the GATT dispute settlement panel issued a report concluding that Korea's import restrictions on beef are contrary to the provisions of GATT Article XI:1, and not justified for balance-of-payments purposes in light of the continued improvement of the Korean balance-of-payments situation. The panel recommended prompt establishment of a timetable for phasing out Korea's restrictions on beef. At meetings of the GATT Council on June 21 and July 19, 1989, Korea declined to agree to adoption of the panel report. Adoption will be reviewed again in October. However, on August 21–22, 1989, bilateral consultations were held between representatives of the Governments of Korea and the United States, to discuss removal of Korea's import restrictions on beef.

Pursuant to 19 U.S.C. 2414, as amended by section 1301 of the Omnibus Trade and Competitiveness Act of 1988, the USTR is required to determine whether Korea's import restrictions deny "rights to which the United States is entitled" under the GATT and whether such practices are unjustifiable or unreasonable and burden or restrict U.S. commerce. This determination must be made no later than September 28, 1989, which is 18 months after the date of initiation of this investigation. (This notice amends a previous notice published at 54 FR 11105, which identified the determination date erroneously as September 18.)

In light of the GATT panel report on this matter, the Trade Representative proposes to determine that rights to which the United States is entitled under a trade agreement are violated by Korea's restrictions on imports of beef.

Public Comment

The public is invited to comment on this proposed determination and on appropriate action that should be taken in response to Korea's restrictions. The comments submitted will be considered in determining actionability under section 301 and in recommending any action under section 301 to the USTR. All written submissions must be filed in accordance with 15 U.S.C. part 2006.8. Submissions are to be made in twenty (20) copies, in English, by noon Monday, September 25, 1989 to Chairman, Section 301 Committee, Office of the U.S. Trade Representative, Room 222, 600 17th Street, NW., Washington, DC 20506.

A. Jane Bradley,

Chairman, Section 301 Committee.

BILLING CODE 3190-01-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-27149; File No. SR-Phlx-89-39]

Self-Regulatory Organizations; Proposed Rule Change By the Philadelphia Stock Exchange, Inc. Relating to Tape Indications and Pre-Opening Procedures

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s (b)(1), notice is hereby given that on June 26, 1989, the Philadelphia Stock Exchange, Inc. filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Philadelphia Stock Exchange, Inc. ("PHLX" or "Exchange"), pursuant to Rule 19b-4, hereby proposes to adopt an equity floor procedure advice respecting procedures governing the commencement of trading on the PHLX when an opening is arranged in an ITS security ahead of another market center. The text of the proposed floor procedure advice is as follows: Italics indicates additions.

Equity Floor Procedure Advice E-4 The "Three by Three" Requirement Applicable To Tape Indications and Pre-Openings

An appropriate tape indication must precede the initiation of an ITS Pre-Opening Administrative Message (PODADM). Requirements in this regard are as follows:

(i) the tape indication shall be submitted to the correction post and shall be legible as to ticker symbol, previous consolidated close, and price range of no more than 5 points.

(ii) the floor member initiating the tape indication must record the time the indication prints on the tape.

(iii) three minutes or longer after the tape indication has been disseminated, a POADM must be sent (if arranging an opening transaction at a price requiring a POADM). In which case the Pre-Opening process shall be conducted in accordance with ITS plan provisions and Exchange Rules.

(iv) three minutes after issuance of the Pre-Opening Admin. (or longer if required in the event of additional POADMs), the issue may be opened.

Fine Schedule (Violations compound daily only when they occur within one year of each other)

1st Occurrance—$100.00

2nd Occurrence—$500.00

3rd and Thereafter Occurrence—Sanction is Discretionary with Business Conduct Committee.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statements of the Purpose of, and Statutory Basis for the Proposed Rule Change

The purpose of the proposed rule change is to provide procedures governing the commencement of trading on PHLX when it arranges an opening in an ITS stock ahead of any other market. The rule provides what is called a "three by three" requirement because it generally provides for two separate waiting periods that are each a minimum of three minutes. First, the floor member seeking to open the stock before the primary market must initiate a tape indication specifying the stock to be opened, its previous night's close, and the price range in which it is anticipated to open. After a minimum of three minutes, an ITS pre-opening administrative message must be sent. Three minutes after that, the issue may be opened.

The only exception to these requirements is that, if a stock is to be opened within a specified range from the previous close (generally, 3/8 point for stocks trading above $15; 1/4 point for stocks below $15), an ITS administrative message need not be sent and only the first three minute waiting period need be observed.

The proposed rule change is based on Section 6(b)(5) of the Securities Exchange Act of 1934 in that it is designed to further promote the mechanism of a free and open market and to protect investors and the public interest.

B. Self-Regulatory Organizations Statement on Burden on Competition

The PHLX does not believe that the proposed rule change will impose any burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days or such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or,

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC 20549. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number in the caption above and should be submitted within 21 days after the date of the publication.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

Dated: August 18, 1989.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

SMALL BUSINESS ADMINISTRATION

[Declaration of Disaster Loan Area #2353; Amdt. 7]

Texas; (And Contiguous Counties in the State of Oklahoma); Declaration of Disaster Loan Area

The above-numbered Declaration is hereby amended in accordance with the Notice of Amendment to the President's declaration, dated July 24, 1989, to include the counties of Blanco, Burnet, Comanche, Lamar, Mason, Red River, and Somervell, in the State of Texas, as a result of damages from severe storms, tornadoes, and flooding which occurred May 4 through June 15, 1989.

In addition, applications for economic injury from small businesses located in the contiguous counties of Comal, Gillespie, Hays, Hopkins, Kendall, Kimble, and Llano, in the State of Texas, and McCurtain County in the State of Oklahoma, may be filed until the specified date at the previously designated location.

Any counties contiguous to the above-named primary counties and not listed herein have previously been named as contiguous or primary counties for the same occurrence.

As the termination date for filing applications for physical damage closed on July 18, 1989, prior to the Notice of Amendment cited above, the termination date for filing applications for physical damage is extended to September 20, 1989, 30 days from the date of this action. The termination date for filing applications for economic injury remains the close of business on February 20, 1990.

(Catalog of Federal Domestic Assistance Program Nos. 59002 and 59008.)

Dated: August 21, 1989.

Bernard Kulik,

Deputy Associate Administrator for Disaster Assistance.

BILLING CODE 4710-10-M

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket No. S-851]

American President Lines, Ltd.; Application for a Waiver

American President Lines, Ltd. (APL), by application dated August 14, 1989, requests an amendment of the waiver of the provisions of section 804(a) of the Merchant Marine Act, 1936, as amended (Act), as previously granted for foreign-flag feeder operations to the People's Republic of China (PRC).

APL's Existing Services

APL now performs four subsidized containership services. Its two transpacific services cover the range of former Trade Route (TR) 29 to/from California on up to 108 annual sailings (Line A) and to/from Oregon-Washington on up to 80 annual sailings (Line B). Former TR 29 includes ports in the Far East on the continent of Asia from the U.S.S.R. to Thailand, inclusive, Japan, Taiwan, Hong Kong, and the Philippines. APL's two extension services add authority to serve the ports of Southeast and South Asia and the Persian Gulf on up to 28 sailings to/from California (Line A Extension) and up to 80 sailings to/from Oregon-Washington (Line B Extension) annually. APL is permitted by its contract to provide any part of the service by transfer or relay of cargo between subsidized vessels at any foreign port on the authorized services.

APL performs its Line A and Line B services primarily with line-haul vessels making direct calls at most major foreign TR 29 ports, including Yokohama, Kobe, and Nagoya, Japan; Kaohsiung and Chi-lung, Taiwan; and Hong Kong. Korea and the Philippines are served by APL subsidized feeder vessels.

The APL Extension services are currently performed by a feeder network that includes five subsidized U.S.-flag APL owned vessels: four providing service on a relay basis to Singapore and Colombo via Kaohsiung, and one vessel to Masqat and Karachi via Fujayrah. The remaining feeder services in the area of the contractual service are with APL chartered foreign-flag vessels.

APL's Existing Waivers

APL has section 804 waiver authority to operate four foreign-flag vessels on weekly service between a foreign port on Line A or Line B as described in Appendix A of Contract MA/MSB-417, including Singapore, and Manila and Thailand.

APL also has waiver authority to operate 10 foreign-flag vessels in six feeder services in southern and southwestern Asia.

APL's waiver authority for the PRC permits APL to own or charter and operate two foreign-flag vessels of approximately 200 FEU capacity each, said vessels to be operated between a foreign port on Line A or Line B as described in Contract MA/MSB-417, including Singapore, and a port or ports in the People's Republic of China.

The Requested Waiver

The applicant requests the PRC waiver be amended to authorize APL to own or charter and operate six foreign-flag vessels of up to approximately 400 FEU capacity each, said vessels to be operated between a foreign port or ports on Line A or Line B as described in Appendix A of Contract MA/MSB-417, including Singapore, and a port or ports in the People's Republic of China.

This application may be inspected in the Office of the Secretary, Maritime Administration. Any person, firm, or corporation having any interest in such request within the meaning of section 804 of the Act and desiring to submit comments concerning the application must file written comments in triplicate with the Secretary, Maritime Administration, Room 7300, Nassif Building, 400 Seventh Street SW., Washington, DC 20590. Comments must be received no later than 5:00 p.m. on Sept. 11, 1989. This notice is published as a matter of discretion and publication should in no way be considered a favorable or unfavorable decision on the application, as filed or as may be amended. The Maritime Administrator will consider any comments submitted and take such action with respect thereto as may be deemed appropriate.

(Catalog of Federal Domestic Assistance Program No. 20.804 (Operating-Differential Subsidies))

Dated: August 22, 1989.

By Order of the Maritime Administrator.

James E. Saari,

Secretary, Maritime Administration.

BILLING CODE 4810-25-M

Comptroller of the Currency

Office of the Assistant Secretary for International Affairs

[Document No. 89–12]

Foreign Treatment of United States Financial Institutions

AGENCY: Comptroller of the Currency and Office of the Assistant Secretary for International Affairs, U.S. Treasury.

ACTION: Notice of study and request for comments.

SUMMARY: Section 3602 of the Omnibus Trade and Competitiveness Act of 1988, Public Law 100–418, requires that a quadrennial report on the foreign treatment of United States financial institutions be submitted to Congress by the Department of the Treasury, working with other agencies. The first report is due no later than December 1, 1990. This report will describe, *inter alia*, "the extent to which foreign countries deny national treatment to United States banking organizations and securities companies." Public comment is requested on significant denials of national treatment to United States banking organizations and securities companies.

DATES: Comments must be delivered on or before September 30, 1989.

ADDRESSES: Comments regarding banking market activities should be directed to: Communications Division, Office of the Comptroller of the Currency, 5th Floor, 490 L'Enfant Plaza East, SW., Washington, DC 20219; Attention: Jacqueline England; Docket No. 89–12. Comments will be available for inspection and photocopying at the same location.

Comments regarding securities market activities should be directed to: Office of International Banking and Portfolio Investment, Office of the Assistant Secretary for International Affairs, Room 5323, U.S. Treasury Department, Washington, DC 20220.

These comments will be available for public inspection and photocopying during the hours that the Treasury Department Library is open (by appointment) to members of the public. The Treasury Library is located in Room 5030, 1500 Pennsylvania Avenue, NW., Washington, DC 20220. Appointments can be made by calling the Treasury Library at (202) 566–2777.

FOR FURTHER INFORMATION CONTACT: William Albrecht, Study Director (Banking) or Jose Tuya, Senior Advisor, International Banking and Finance, Office of the Comptroller of the

Currency (202–447–1700) and James Ammerman, Study Director (Securities), Report on Foreign Treatment of United States Financial Institutions, Office of International Banking and Portfolio Investment, Treasury Department (202–566–5628).

SUPPLEMENTARY INFORMATION: In September 1979, 1984, and 1986, Treasury, working with other interested departments and agencies, prepared reports on the treatment of U.S. commercial banks by foreign governments. (The 1986 report also covered securities markets). In 1988, Congress passed the Financial Reports Act as part of the Omnibus Trade and Competitiveness Act, which in section 3602 requires that Treasury, working with other agencies, report to the Congress on (1) the foreign countries from which foreign financial services institutions have entered into the business of providing financial services in the United States, (2) the kinds of financial services which are being offered, (3) the extent to which foreign countries deny national treatment to United States banking organizations and securities companies, and (4) the efforts undertaken by the United States to eliminate such discrimination. The report shall focus on those countries in which there are significant denials of national treatment which impact United States financial firms.

The policy of providing foreign financial firms an opportunity to compete on an equal basis with local domestic firms is known as "national treatment" or "equality of competitive opportunity."

Treasury would welcome specific comments on:

(a) Those markets which deny national treatment to U.S. banking organizations and securities companies in banking and/or securities activities;

(b) The laws, regulations, restrictions, or practices which result in the denial of equality of competitive opportunity; and

(c) The seriousness of such obstacles to business operations.

Dated: August 22, 1989.

Robert L. Clarke,

Comptroller of the Currency.

Dated: August 22, 1989.

Robert M. Bestani,

Acting Assistant Secretary for International Affairs.

Internal Revenue Service

[Delegation Order No. 11 (Rev. 19)]

Organization Functions, and Authority Delegations: District Director

AGENCY: Internal Revenue Service, Treasury.

ACTION: Delegation of authority.

SUMMARY: Allows redelegation of authority from the District Director to accept or reject offers in compromise to the level of Division Chief or Chief Collection Section in streamlined districts where this position exists.

EFFECTIVE DATE: August 25, 1989.

FOR FURTHER INFORMATION CONTACT: Don Schumacher, CO:O, Room 7535, 1111 Constitution Avenue, NW., Washington, DC 20224, Telephone Number (202) 566–4471, (not a toll-free number).

Order No. 11 (Rev. 19)
Effective date: 8–25–89

Authority to Accept or Reject Offers in Compromise

The authority vested in the Commissioner of Internal Revenue by Treasury Order Nos. 150–04 and 150–09, 26 CFR 301.7122–1 and 26 CFR 301.7701–9, and Treasury Order No. 150–13 is hereby delegated as follows:

1. The Deputy Assistant Commissioner (International), the Associate Chief Counsel (Technical and International), Assistant District Directors, Regional Counsel, Chiefs and Associate Chiefs, Appeals Offices, are delegated authority, under Section 7122 of the Internal Revenue Code, to accept offers in compromise and to reject offers in compromise regardless of the amount of the liability sought to be compromised. This authority does not pertain to offers in compromise of liabilities arising under laws relating to alcohol, tobacco, and firearms taxes. The authority delegated to District Directors may not be redelegated lower than Division Chief (Chief, Collection Section, in streamlined districts where the position exists); except that the authority with respect to the withdrawal of an offer in compromise based upon doubt as to collectibility may be redelegated to Chief, Special Procedures. The authority delegated to Regional Counsel may not be redelegated, except that the authority to reject offers in compromise may be redelegated, but not lower than to District Counsel. Regional Director of Appeals, Chiefs and Associate Chiefs, Appeals Offices, may not redelegate this authority.

2. Assistant Service Center Directors are delegated authority, under Section 7122 of the Internal Revenue Code, to accept offers in compromise, limited to penalties based solely on doubt as to liability, and to reject offers in compromise, limited to penalties, regardless of the amount of the liability sought to be compromised, and to summarily reject without further investigation, offers based solely on doubt as to liability regardless of the amount of the liability sought to be compromised, limited to obvious offers that are frivolous, groundless or dilatory, or where the liability has been finally determined by the Tax Court or other courts, or by a Commissioner's final closing agreement, or where the offer is based upon an agreed liability in which administrative appeal rights have

been exercised or waived. This authority does not pertain to offers in compromise of liabilities arising under laws relating to alcohol, tobacco, and firearms taxes. This authority may be redelegated only to the Chief, Compliance Division.

3. Delegation Order No. 11 (Rev. 18), effective May 10, 1988, is superseded.

Dated: August 7, 1989.

Approved Date: August 7, 1989.

Charles H. Brennan,

Deputy Commissioner (Operations).

RIN 1215-AA

Reporting and Employment Requirements for Employers of Certain Workers Employed in Seasonal Agricultural Services

AGENCY: Wage and Hour Division, Employment Standards Administration, Labor

ACTION: Final Rule.

SUMMARY: This rule amends the regulations to specify the INS Alien Registration Number series announced by INS for replenishment agricultural workers. A replenishment agricultural worker (RAW) is one who, pursuant to section 210A of the Immigration and Nationality Act (INA), is admitted to the United States or otherwise acquires the status of alien lawfully admitted for temporary residence, to meet a shortage of agricultural workers during the period beginning October 1, 1989 through September 30, 1993.

EFFECTIVE DATE: October 1, 1989.

FOR FURTHER INFORMATION CONTACT: Paula V. Smith, Administrator, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Telephone (202) 523–8305. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: In the Federal Register of September 9, 1988 (53 FR 35154), the Department of Labor issued final regulations, 29 CFR Part 502, entitled "Reporting and Employment Requirements for Employers of Certain Workers Employed in Seasonal Agricultural Services." These regulations were effective October 1, 1988.

Section 502.1(b)(2) of the regulations referred to above, provided that a technical amendment to the regulations would be issued to specify the Alien Registration Number ("A" number) series announced by the Immigration and Naturalization Service (INS) for replenishment agricultural workers. Accordingly, this document revises the regulations at § 502.2(m) to specify that a "replenishment agricultural worker" is identified by an "A" number beginning with A94 and followed by any six digits. In this regard, conforming changes are made to §§ 502.1 (b)(2), (d), and (f), 502.10(c)(1), and 502.13(a).

The "A" number is utilized by employers pursuant to section 502.10 of the regulations in identifying "reportable workers" for whom reports are required to be submitted to the Government. In addition, the "A" number will identify which of the reportable workers are replenishment agricultural workers (who are identified by an INS Alien Registration Number beginning with A94 and followed by any six digits) for whom additional labor standard protections are afforded, as discussed below. The "A" number can be ascertained when an employer completes the INS Form I–9, as required for all persons hired after November 6, 1986. When completing the top portion of the I–9 Form, a prospective employee who is not a U.S. citizen must provide an "A" number in completing Part 1 of the form.

Pursuant to section 210A of the INA, § 502.13 of these regulations requires that for the period beginning October 1, 1989, through September 30, 1992, any person employing any replenishment agricultural worker (who is identified by an INS Alien Registration Number beginning with A94 and followed by any six digits) in seasonal agricultural services for one or more work-day(s) during any pay period shall provide such worker, with each wage payment—but no less than twice per month, a complete, accurate, and legible report certifying such reportable worker's employment. The employment information reported to the replenishment agricultural worker documents the worker's employment history for retention of legal status and avoidance of deportation, and makes it possible for workers with the required work in seasonal agricultural services to apply for and be granted permanent residency in the U.S. after three years, and to apply for naturalization after five years. Properly filled out, optional Form WH–501R, attached as an appendix hereto, will satisfy the requirements of section 210A of the INA and will also satisfy the requirements of sections 201(d)(2) and (c)(2) of the Migrant and Seasonal Agricultural Worker Protection Act (MSPA).

In addition to the reporting requirement, employers of replenishment agricultural workers (who are identified by an INS Alien Registration Number beginning with A94 and followed by any six digits) must: (1) Provide the same transportation arrangements to other workers as are provided to any replenishment agricultural worker, and (2) not discriminate against any replenishment agricultural worker. In addition, any employer who would otherwise be exempt from MSPA pursuant to section 4(a) (1) or (2) of that Act, shall not knowingly provide false or misleading information to a replenishment worker concerning the terms, conditions, or existence of agricultural employment.

Publication in Final

The Department of Labor has determined, pursuant to 5 U.S.C. 553(b)(B), that good cause exists for waiving public comment on these amendments to the regulations. Such comment is unnecessary because the Department is performing a ministerial act pursuant to a previously announced intention to make a technical amendment to the regulations to specify the "A" number series announced by INS for replenishment agricultural workers.

Executive Order 11291

The Department has determined that this rule is not classified as a "major rule" under Executive Order 12291 on Federal Regulations, because it will have no substantive impact and therefore is not likely to result in (1) an annual effect on the economy of $100 million or more; (2) a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign based enterprises in domestic or export markets. Accordingly, no regulatory impact analysis is required.

Regulatory Flexibility Act

Because no notice of proposed rulemaking is required for the rule under 5 U.S.C. 553(b), the requirements of the Regulatory Flexibility Act, Public Law 96–354, Stat. 1165, 5 U.S.C. 601 *et seq.* pertaining to regulatory flexibility analysis, do not apply to this rule. See 5 U.S.C. 601(2). In any event, the rule will not have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

As the amendments to this rule require the collection of no additional information, additional approval of the Office of Management and Budget is not required. See 44 U.S.C. 3501 *et seq.* Prior OMB approval was obtained under OMB Control Number 1215–0148.

For reasons set out in the above preamble, Part 502 of Chapter V of Title 29 of the Code of Federal Regulations, is amended as set forth below:

PART 502—REPORTING AND EMPLOYMENT REQUIREMENTS FOR EMPLOYERS OF CERTAIN WORKERS EMPLOYED IN SEASONAL AGRICULTURAL SERVICES

1. The authority citation for Part 502 continues to read as follows:

Authority: 8 U.S.C. 1160, 1161; 29 U.S.C. 1801 et seq. Section 502.6 also issued under 29 U.S.C. 49k.

2. In section 502.1, paragraphs (b)(2), (d), and (f) are revised to read as follows:

§ 502.1 Purpose and scope.

* * * * *

(b) * * *

(2) Section 210A of the INA provides that before the beginning of each fiscal year (beginning 1990 and ending 1993), the Secretaries of Labor and Agriculture shall jointly determine the number (if any) of replenishment agricultural workers (RAWS) to be admitted to the United States, or otherwise acquire the status of aliens lawfully admitted for temporary residence, to meet a shortage of agricultural workers. A replenishment agricultural worker is identified by an INS Alien Registration Number beginning with A94 and followed by any six digits.

* * * * *

(d) Any person who hires any worker must complete the Employment Eligibility Verification Form (INS Form I–9). Any resident alien who is identified with an Alien Registration Number ("A" number) in the A90000000 series on the I–9 Form (including any replenishment agricultural worker, who is identified by an INS Alien Registration Number beginning with A94 and followed by any six digits) and who is employed in seasonal agricultural services, is an employee subject to this part (termed "reportable worker"). Employers cannot reliably determine whether such an employee is a special agricultural worker since employees cannot be required to document such status to anyone other than INS (see 8 CFR 274a.2(b)(v)).

* * * * *

(f) Any employment of a reportable worker for at least one work-day in seasonal agricultural services is subject to reporting to the Federal Government. Additionally, any employment of a replenishment agricultural worker (who is identified by an INS Alien Registration Number beginning with A94 and followed by any six digits) in seasonal agricultural services is subject to both the reporting requirements to the Federal Government and to the individual worker.

* * * * *

2. In § 502.2, paragraph (m) is revised to read as follows:

§ 502.2. Definitions pertaining solely to a reportable worker employed in seasonal agricultural services.

* * * * *

(m) "Replenishment Agricultural Worker" (RAW) is an individual with an INS Alien Registration Number beginning with A94 and followed by any six digits who was admitted to the United States during FY 1990 through FY 1993 for lawful temporary resident status or whose status was adjusted to lawful temporary residency to meet a shortage of workers employed in seasonal agricultural services.

* * * * *

3. In § 502.10, paragraph (c)(1) is revised to read as follows:

§ 502.10 Requirements for reporting and employing a reportable worker in seasonal agricultural services.

* * * * *

(c) * * * (1) For the period October 1, 1989, through September 30, 1992, furnish to any reportable worker who is a replenishment agricultural worker (identified by an INS Alien Registration Number beginning with A94 and followed by any six digits) and who is employed for at least one work-day in seasonal agricultural services during the pay period, a report on each pay day containing the information specified in this part (see § 502.13), formulated from employment records maintained (see § 502.11; and

* * * * *

4. In § 502.13, paragraph (a) is revised to read as follows:

§ 502.13 Reporting to the replenishment agricultural worker.

* * * * *

(a) For the period beginning October 1, 1989, through September 30, 1992, any person employing any reportable worker who is a replenishment agricultural worker (identified as an INS Alien Registration Number beginning with A94 and ending with any six digits) in seasonal agricultural services for one or more work-day(s) during any pay period shall provide such worker, with each wage payment, no less than twice per month, a complete, accurate, and legible report certifying such reportable worker's employment.

Note: The Department presents a form in the Appendix which satisfies certain recordkeeping aspects of the Act and regulations. This form, however, will not appear in the Code of Federal Regulations.

	Net Pay (Amount Due Employees)	Date Paid:

Optional Form WH-501R (Sept. 1988)

Properly filled out, this optional form will satisfy the requirements of sections 201(d)(2) and (c)(2) of the Migrant and Seasonal Agricultural Worker Protection Act (MSPA) and will also satisfy the requirements of section 210A of the Immigration and Nationality Act (INA).

PAYROLL INFORMATION: Enter the month, day and year on which the employee's payroll workweek ends. Enter the calendar date of the day worked. Enter the time work started and ended each day. Enter the total time actually worked each day. Subtract bonafide meal periods. Crop/Task - Units done - Enter the kind of work (such as picking oranges per bin). Enter the number of units produced if the employee is paid on a piece work or task basis. Enter the hourly or piece rate of pay. Enter the amount of daily pay computed at the hourly and/or piece rate.

NUMBER OF WORK-DAYS: For resident alien workers with INS registration number (a series that INS will announce at a later date) and performing work in seasonal agricultural services, enter the number of days that the worker worked at least four (4) hours.

ITEMIZED DEDUCTIONS: In addition to FICA (Social Security), federal tax, state and rent, food, and transportation deductions (if any), enter any other deductions and identify the purpose of each other deduction. Total Deductions - Enter total deductions in right column and then transfer to left. Subtract total deductions from total Gross Pay - Enter the result as Net Pay (Amount Due Employee). Enter date worker is paid.

Public reporting burden for this collection of information under both MSPA and the INA is estimated to average 2 minutes per response in addition to that incurred in the normal course of business, including the time for reviewing instruction, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Information Management, Department of Labor, Room N-1301, 200 Constitution Ave., NW., Washington, DC 20210; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Assistant Secretary for Community Planning and Development

[Docket No. N-89-1716; FR-2386]

Delaying Submission of Comprehensive Homeless Assistance Plans

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice is intended to inform grantees under Titles IV and VII of the Stewart B. McKinney Homeless Assistance Act that they need not submit their Comprehensive Homeless Assistance Plans (CHAP) to HUD by the October 1, 1989 deadline, as previously requested. Instead, Emergency Shelter Grants (ESG) formula cities and counties should submit their CHAPs to the Department by July 15, 1990, and simultaneously send an information copy to the State in which they are located. State grantees should submit their CHAPs to HUD by August 30, 1990, and simultaneously send information copies to the formula jurisdictions in their state. Thereafter, CHAPS should be annually submitted to HUD in accordance with the July 15 and August 30 deadlines.

FOR FURTHER INFORMATION CONTACT: For information concerning HUD provisions under Title IV of the McKinney Act, James N. Forsberg, Coordinator, Special Needs Assistance (Homeless Programs, Room 7228, (202) 755-6300.
